Mr. WADDILL. As a friend of your amendment I wish to know whether you and your party associates, as far as you can speak for them, mean to vote for this bill if you succeed in getting your amendment adopted? [Cries of "No!" on the Democratic side.]

Mr. TUCKER. Well, ask me another one. Ask a hard one.

Mr. WADDILL. I want an answer to that.

Mr. TUCKER. Now, when we get to that point we will answer it. I will answer for myself, but my party associates are of age and they can answer for themselves. I say for myself I will not vote for this or any bill that puts taxes upon the people of this country upon the absolute necessaries of life and removes them from luxuries. [Applause on the Democratic side.]

I say that the Democratic party in the last House of Representatives answered this cry of the people for free tobacco, and put it in the Mills bill, and it was passed by a Democratic House and by a Democratic majority. [Applause on the Democratic side.]

I have said the tax on tobacco is mostly paid by the producer. Any argument on this subject would be useless to convince our friends upon the other side of the House, for in their last national Republican platform, on which we have so often, during this debate, heard it said Mr. Harrison had carried the country, we find the following:

The Republican party would effect all needed reduction of the national revenue by repealing the taxes on tobacco, which are an annoyance and *burden* to agriculture.

A clear, emphatic admission that the tax is paid by the agriculturists who produce it. A tax is necessarily a restraint upon the production of any article upon which it is imposed, just as commerce is sensitive to the touch of taxation. The tax upon tobacco increases its cost to the consumer; where the cost is increased consumption is diminished; where consumption is diminished production decreases; so that the tobacco-grower pays the tax, indirectly it may be, in the loss of production arising from diminished demand.

Again, the manufacture of tobacco requires capital for the payment of the tax, licenses, etc. This fact encourages the concentration of large capital in such business, while the poor, and especially the farmer who produces the tobacco, is not able to manufacture his own product, which, but for the tax, he might do to great advantage. By the imposition of the tax the farmer loses the possible profits arising from the manufacture of his own product and he sees this business by the taxing power of the Government transferred to capitalists alone.

For the same reasons we find the large manufacturers of cigars do not desire the tax removed. They can crowd out the small dealers and monopolize the trade.

The effect of the tax on tobacco on the producer is so clearly and ably put by my colleague from Virginia, Mr. VENABLE, that I beg to quote what he says:

Virginia has asked for the abolition of the tax on tobacco for years past, and I now ask it of this Congress.

It is a tax that is hateful to my people and hurtful to their interest.

It restricts the sale of their leaf-tobacco to a few customers, and thus, by destroying competition, tends to make the raiser of tobacco receive less for his product.

The majority report of the Ways and Means Committee says that to prevent the increase of prices due to the tariff the country will have to rely upon the unchecked competition among the protected industries.

It thus says that this Government must yield up its right and duty to give the people the protection of equal and just laws. It turns over the American public to the uncovenanted mercies of the protected classes. It denies to the people in their purchases the benefit of free competition in the open markets of the world. When they come to deal with the tax on tobacco they deny to the tobacco-grower the benefit of free competition for an increase in the price of his product. The tax they impose restricts the buyers and accordingly lowers the price.

This is the height of injustice to the tobacco-planter. He is made to bear the double burden of protection. He is not free either in his purchases of the necessaries of life or in the sale of his products. I protest against this unjust discrimination against him and appeal to this House for justice.

If the tobacco-raiser were allowed to buy what he wants in the open markets of the world, he would have less ground of complaint. But he is not. The Government ties his hands both when he buys and when he sells. There is no other class of farmers thus unjustly hampered.

The Treasury vaults are loaded with the people's money, taken from them beyond the needs of the Government, and it is the duty of the Government to relieve every class of its citizens of every dollar of taxation possible. The tobacco-planters have been taxed on every article upon which the tariff is laid as well as upon their product, and they now ask a relief that takes not one dollar from the Government which it needs.

By the imposition and continuation of this tax the tobacco lands in Virginia are greatly depreciating in value and the crop is gradually diminishing, and the result is that the Government is using its taxing power to *confiscate* the lands of the people.

The tobacco-growers in Virginia ask no protection from foreign competition; the products are entirely different; but they do ask and demand protection from the legislative power of the Government that would use the taxing power of the Government for the purpose of *confiscating their lands.*

But see how unjustly this bill deals with tobacco in comparison with two other agricultural products, silk and sugar. The tax on tobacco is retained at 4 cents per pound—this is trifling with the people, for they demand its total abolition—while the producers of silk and sugar are to be paid a bounty out of the Treasury. In the minority report on this bill Mr. CARLISLE says on the subject of the bounty on silk:

Again, there are a few persons in the United States who claim that if they had what they call "proper encouragement" they could produce raw silk here, and accordingly this bill proposes to compel all the people to pay out of the public Treasury a bounty of $1 a pound, or $2,240 per ton, on all the raw silk reeled from cocoons and 7 cents on every pound, or $156.80 per ton, of fresh cocoons, including the worms, produced in the United States. Raw silk and cocoons are now on the free-list, and last year we imported 5,329,646 pounds of silk and 101,647 pounds of cocoons. The object of the proposed bounty is to discourage those importations, which cost the people nothing unless they saw proper to use silk goods, and to encourage the production of those articles here at an expense of $1 a pound for the silk and 7 cents a pound for the cocoons, in addition to the actual value of the articles themselves; and this expense is to be charged to all the people whether they use silk goods or not, and be paid out of the public Treasury.

At the same time the bill proposes to make enormous increases in the rates on woolen goods, which all our people are compelled to purchase and use, and very large increases in the rates on some kinds of cotton and linen goods which are absolutely necessary for the health and comfort of all classes.

And on the subject of the sugar bounty he says, in the same able paper:

The bill proposes to admit, free of duty, all sugar up to and including No. 16

Dutch standard in color, and pay to the sugar-producers in this country a bounty of 2 cents per pound each year until July 1, 1905, on their product. Last year these grades of sugar, which are now made free, yielded to the Government $54,894,181, all of which is now to be surrendered, and the sugar industry is to become an annual charge upon all the people who are engaged in other occupations, some of which are far more important and all of which are fully as meritorious as this one.

In 1888, which is the last year for which we have complete returns, the sugar product in this country was 375,855,877 pounds, so that even if there should be no increased production under the bounty system the sum which the people are to be compelled to donate each year for the support of this favored industry will be $7,520,000, or $113,000,000 during the fifteen years. But the very object of the bounty is to encourage the production of this article, and its advocates claim that in a few years it will result in a domestic supply equal to the whole demand for home consumption. In addition to the home product we imported and consumed during the last fiscal year 2,700,421,302 pounds of sugar not above No. 16 in color, making a total annual consumption, including domestic and imported, of 3,076,277,079 pounds, and therefore, if the system results as its advocates predict, the annual payment out of the Treasury will be $61,528,426, even without any increase in the amount now consumed.

We protest against the gross favoritism and injustice of such a policy, and we deny the moral or constitutional right of the Government to tax the people who grow corn, wheat, cotton, rye, oats, and other agricultural products for the purpose of raising money to be given to those who produce sugar or any other article. The bounty provisions contained in this bill are confessions that the whole system which it seeks to strengthen and extend is a system of discriminations between the various productive industries of the country, a system which imposes charges upon some for the support of others and disregards every principle of justice and equality in distributing the burdens of taxation.

The duties imposed upon imported sugar, even at the present rates, are mainly for revenue, and about nine-tenths of the charge upon the people on account of these duties goes into the public Treasury for the support of the Government, and only one-tenth can be added to the prices of the domestic product. The tax, therefore, is far more just and equitable than the taxes on cotton and woolen goods, linen goods, and many other articles now subject to high rates of duty, and which this bill proposes to make still higher, because in these cases the conditions are reversed, and the Government receives a small proportion only of the total amount the people are compelled to pay. While we believe the duties on sugar are too high and that a reduction ought to be made, we can not see the justice or propriety of making this revenue article entirely free and paying bounties upon its production, in order to afford an excuse for the imposition of additional taxes to the amount of about $65,000,000 on the necessaries of life embraced in the other schedules.

To illustrate: A and B are farmers; A raises tobacco and B cocoons from which silk is produced. A raises 1,000 pounds of tobacco; the tax at 4 cents amounts to $40, the most of which, if not all, as we have shown, comes out of A. B raises 1,000 pounds of cocoons; the Government under this bill promises to pay him 7 cents for each pound raised. On his crop of 1,000 pounds he would therefore realize from the Treasury alone $70, and still he has his cocoons to sell in the markets at the market price. How does the account stand between them?

A works hard for twelve and even fourteen months on his tobacco crop. Before it is marketed it is mortgaged to the Government for $40 of tax. B sells his crop of cocoons and puts the money in his pocket, and then walks up to the Treasury of the United States and demands his $70 bounty granted under this bill; that is, he gets the $40 that A's tobacco had to pay in tax to the Government and $30 additional, which also is partly paid by A.

Can such a monstrous system of taxation as this receive the sanction of the people of the country, by which one man is impoverished to enrich another and under which the people of Virginia, white and black, who make their scant but honest livelihood from tobacco, are compelled thus to pay tribute of their penury that the silk-growers, clad in purple and fine linen, may "fare sumptuously every day" and build up their colossal fortunes?

So with sugar. Under this bill the Government makes you pay 4 cents if you raise a pound of tobacco and it gives you 2 cents if you raise a pound of sugar. Is this right and fair to the tobacco-grower? Why should he be less favored than the sugar or silk grower? Or if the Government is going into the bounty business what greater right has the silk producer to $1 a pound out the Treasury on his product of reeled silk or the sugar producer to 2 cents a pound out of the Treasury on every pound of sugar he produces than the tobacco-grower to 5 cents a pound to be paid him out of the Treasury on every pound of tobacco he raises. Indeed the claim of tobacco is stronger, for sugar production in this country has increased of late years, while in Virginia at least, for whose oppressed people I lift my voice on this floor, the annexed table taken from the annual reports of the Commissioner of Agriculture will show that the acreage, the product, and the value in gross and per pound of the tobacco crop (except in the year 1887, when the price was a little better) from the year 1885 up to and including 1888 have all steadily declined:

Estimated annual product, acreage, and value of the tobacco crop in the State of Virginia from 1885 *to* 1888, *inclusive.*

Year.	Area.	Product.	Value.	Average price per pound.
	Acres.	*Pounds.*	*Dollars.*	*Cents.*
1885	164,445	107,711,000	7,970,649	7.4
1886	161,397	91,189,000	6,383,230	6.9
1887	132,346	79,408,000	6,352,608	7.9
1888	127,052	64,034,000	3,842,032	5.9

Such a system as this bill presents of compelling the tobacco-grower to pay money out of his already sadly depleted pocket-book to the silk-grower and sugar-producer, that they may grow richer while he grows poorer, is unfair and without the semblance of justice, and unworthy of the American Congress, and against it, in behalf of my hard-working, tax-ridden people, I most earnestly protest.

The bill proposes to give the sugar bounty for fifteen years and the silk bounty for ten years, as to the cost of which to the people of the country I beg to quote from the accurate statement of my colleague from Virginia [Mr. BUCHANAN], where he says:

The people can now understand better what they pay to the specially favored industries of the country. I have made an approximate calculation of what the sugar and silk bounties will cost the people of this country during the period they are to continue under the provisions of this bill. Estimating the population of this country now at 62,000,000 and that it will reach 80,000,000 by the time the bounty to sugar-growers is to cease, and that each person on an average will consume the same amount of sugar as he now consumes, the following table shows what the sugar bounty alone will cost the people during its existence under this bill.

Year.	Sugar produced, in pounds.	Bounty paid.
1891	380,000,000	$7,600,000.00
1892	449,090,909	8,981,981.80
1893	530,753,470	10,615,069.41
1894	627,254,101	12,545,182.03
1895	741,301,210	14,826,024.20
1896	876,183,248	17,523,664.96
1897	1,030,943,838	20,618,876.76
1898	1,218,388,172	24,367,763.44
1899	1,439,913,294	28,798,265.88
1900	1,701,715,711	34,034,314.22
1901	2,011,118,567	40,222,371.34
1902	2,376,776,488	47,535,529.76
1903	2,808,917,667	56,178,353.34
1904	3,319,629,970	66,392,599.40
1905	3,923,199,055	78,463,981.10
Total	.....	468,681,977.64

From this table it appears that the sugar bounty during the fifteen years it is to be paid aggregates the enormous sum of $468,000,000 and that for the last of the fifteen years the bounty will cost nearly $80,000,000.

The silk bounty will cost, by a like calculation, not less than $50,000,000 during the ten years it is to exist. I have made these calculations upon the assumption that these bounties will accomplish the objects which the majority of the committee reporting this bill think they will, namely, to establish the sugar and silk industries in this country so that our own people will produce both articles in quantities sufficient to supply the requirements of our own country.

I had supposed that if there was one subject to which the Republican party was thoroughly committed it was the entire abolition of the tobacco tax. The platform upon which Mr. Harrison was elected and from which I have quoted unmistakably proclaims it, and there are gentlemen now in this House, filling seats on the Republican side of the House, who, with unselfish desire to enlighten the good people of Virginia in the doctrines of the Republican party, came to our State in the fall of 1888.

I refer to the gentleman from Illinois [Mr. HOPKINS], who spoke from the same platform with me in the town of Lexington and in favor of my opponent; the gentleman from Michigan [Mr. BURROWS], a member of the committee that reported this bill, and who spoke at my own home (Staunton, Va.) and advocated, as I am reliably informed, the total abolition of the tax on tobacco; the gentleman from Indiana [Mr. CHEADLE], and if I mistake not the gentlemen from Kansas [Mr. PETERS and Mr. PERKINS] and others, some of whom, if not all, as I am informed, declared that the Republican party was committed to the abolition of, and if it secured power would abolish, this tax on tobacco. And now when you have an opportunity to abolish the tax and redeem your promise to the Virginia people you are found vigorously opposing it.

So anxious, too, was the present Speaker of this House [Mr. REED], the then defiant leader of his party in the minority, to see the tax on tobacco taken off in the last Congress that he was unwilling to wait for the report of the committee on the revenue bill and used the following language in this House December 16, 1887:

We are all agreed, at least upon this side of the House, that the surplus should be reduced, and we stand ready now before the holidays to make one reduction in which the other side of the House are agreed, and that is in relation to the tobacco tax; and I hope that an opportunity will be given us before we separate, by the powers that be and are to be, to vote thereon and show to the country some disposition proper and suitable in this matter.

Contrasted with his action during the present Congress we are prepared to exclaim, "*Quantum mutatus ab illo Hectore, qui redit exuvias indutus Achilli!*"

With these facts before me I can not adequately express my surprise at the speech of the gentleman from Iowa [Mr. HENDERSON] who has just taken his seat, a justly distinguished member of his party, and who was a prominent candidate for the Speakership of this House, as

was also the gentleman from Michigan [Mr. BURROWS]. The gentleman says it may be that the Republican party is committed to the removal of the internal-revenue taxes, but "as to the time when that is to be done we are not committed." Such a position is simply trifling with the people and is unworthy of comment.

The gentleman's additional excuse is found in his subsequent language:

As long as the soldiers of this Union are appealing to Congress for relief and for justice, to be taking off the tax on tobacco while these and other important demands are pressing upon us, is something that I, for one, can not acquiesce in. [Applause.]

That is, as I understand the gentleman's position, you will not deny that you promised the abolition of the tax on tobacco and at the same time you promised to comply with the demands of the soldiers. Your party knew when it made its promise to the tobacco-growers that it would not be kept; and you are now trying to shield yourselves behind the claim of the soldier and thereby justify your breach of faith to the tobacco-grower. Such an excuse will not be accepted. You will doubtless try to keep your promises to the soldiers until (as is now anticipated) a deficiency, rather than a surplus, of one hundred millions will be had; but it will be of little comfort to the tobacco-grower to be told that in order for you to keep faith with the soldier you were compelled to continue to lay tribute upon his meager substance, and that, too, for soldiers, many and many of whom never saw a battle-field nor heard a gun fire, deserters from both armies, camp-followers, spies, informers, and dead-beats, besides 12,000 dishonorably discharged soldiers, all of whom have joine i the noble army of martyrs and claim their reward in a pension from the Government they never served.

The people of Virginia and the South have never murmured at the tax for pensioning in a proper measure the true soldier of the Union who bravely fought the battles of his country, but they protest against the premium to rascality offered by the pension legislation of this Republican Congress, which knows no distinction between the brave and the cowardly, between patriotism and treachery.

In order to show that my colleagues from Virginia and North Carolina and myself have left no stone unturned to accomplish the abolition of this tax, I will read the following paper and letter, which explain themselves:

WASHINGTON, D. C., *April* 3, 1890.

DEAR SIR: I herewith inclose a request of certain members of the House of Representatives that one of their number be recognized on the first Monday of April, 1890, for the purpose of moving a suspension of the rules and put upon its passage a bill abolishing the entire tax on tobacco, etc.

Very respectfully,

H. ST. GEORGE TUCKER.

Hon. THOMAS B. REED,
Speaker House of Representatives, Fifty-first Congress.

Hon. THOMAS B. REED,
Speaker of the House of Representatives:

The undersigned members of the House of Representatives of the Fifty-first Congress respectfully ask that one of their number or some other member of the House of Representatives be recognized, on the first Monday of April, 1890 (that being suspension day, under Rule XXVIII, for individual members), for the purpose of moving a suspension of the rules to put upon its passage a bill to repeal the internal-revenue tax on tobacco.

Paul C. Edmunds, Charles T. O'Ferrall, John A. Buchanan, Thomas G. Skinner, George D. Wise, H. St. George Tucker, Edward C. Venable, P. G. Lester, John S. Henderson, B. H. Bunn, W. H. F. Lee, William H. H. Cowles, Alfred Rowland.

This paper contains the name of every Democrat from Virginia and North Carolina except that of the Hon. CHARLES W. MCCLAMMY, and the omission of his name is due to an oversight of my own in failing to present it to him for his signature. I feel that this statement is due the honorable gentleman by me, as it is well known to this House that he has been a persistent and able champion of the cause of untaxed tobacco at all times and under all circumstances.

To the above request the Speaker never condescended to make a reply, nor did he acknowledge even the receipt of my letter, though both the request and letter were put into his hands, with the request for an answer, by an officer of the House of Representatives. When the first Monday in April arrived, I stood in my place for two hours or more trying to catch the Speaker's eye, but it was always turned in a different direction, away from the appeals of the people for relief from taxation.

In striking contrast with this record of the Republicans on this question may be found that of the Democratic party in the Forty-ninth Congress (see volume 86, RECORD, page 2681), where, on a motion to suspend the rules and put upon its passage a bill to abolish the tax on tobacco, 130 Democrats and 9 Republicans voted for it and 106 Republicans and 6 Democrats against it, while in the Mills bill, which was passed by the Democrats during the last Congress, the entire tax was wiped out.

We appeal to the people of Virginia to judge between us in the records of the two parties: the Republican full of promises only to be broken, the Democratic bright in its fulfillment of every pledge to the people.

The Tariff.

SPEECH
OF
HON. LITTLETON W. MOORE,
OF TEXAS.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 10, 1890.

The House being in Committee of the Whole and having under consideration the bill (H. R. 9416) to reduce the revenue and equalize duties on imports—

Mr. MOORE, of Texas, said:

Mr. CHAIRMAN: The grave question of the fiscal policy of the Government is now under discussion, and Messrs. REED, MCKINLEY, and CANNON have permitted us twelve days to consider it; twelve days to expose the enormities of a bill which is concocted in the interests of manufacturers and to further cripple and destroy the farmers of the country.

For thirty years the thrifty agriculturists—the men who rise with the dawn of the day, and every day in the year, "from the rising of the sun to the going down thereof," except that set apart by divine ordinance for rest, to battle with the soil to extract from it the food and clothing for all the people of the country—these men for thirty years have been made to pay tribute to the manufacturers and capitalists of the country. And now this Republican cabal comes here and demands that they shall pay more; that they must give up more of their muscle and sweat; that their bones must be made to ache harder and longer for the good of the Carnegies, the Singers, the Pullmans, the cotton lords, the woolen masters, the iron and coal barons, that they may own enchanted palaces at sea-sides or mountain and lake resorts, or deer parks and castles in Scotland.

They are going "to protect American labor and American capital." Yes, as the wolf "protects" the lamb, as the thief "protects" the man from whose pocket he extracts the pocket-book, as the highwayman "protects" the victim he calls upon "to stand and deliver." That is the kind of "protection" this bill affords to "the labor" of the country.

In 1880, of the 36,800,000 population over ten years of age, 17,400,000 were engaged in occupations of all kinds; that is, 47 per cent. of the whole. Of the total laboring population, 7,600,000, or 44 per cent., were "engaged in agriculture." Four millions, or 23 per cent., were "engaged in professional and personal services." One million eight hundred thousand, or 10 per cent., were "engaged in trade and transportation," and 3,837,000 were "engaged in manufactures and mechanical and mining industries;" that is, 23 per cent. Of the entire population of 50,000,000, a little over 74 per cent., that is, 36,800,000, were over ten years of age, and none under that age were classed as being engaged in any occupation, and certainly not over 3,000,000, or 17 per cent. of them were engaged in manufactures.

The population is now estimated to be 66,000,000, and it is not probable that the ratio of those over ten years of age has changed since 1880. As the ratio of them was a little over 73 per cent., we now have a population of 48,000,000 over ten years of age. In 1880, 45 per cent. of those over that age were engaged in occupations of some kind. That would give us 23,000,000 "workers" in the country. Of these "workers" 10,100,000 are engaged in agriculture, 23 per cent. or 5,300,000 in "professional or personal services," 10 per cent. or 2,300,000 in "trade and transportation," and 17 per cent. or 3,900,000 in "manufactures," and the remainder in "mechanical and mining industries."

This bill professes to protect "4,000,000 workers" and the capital which employs them, out of 23,000,000. It taxes almost beyond endurance 19,000,000 laboring people for the benefit of less than 4,000,000. And yet these gentlemen say they "want to protect American labor."

And they talk to you about "protecting American capital." What humbugs they are. Let the figures tell. The total assessed valuation of all the property of the United States in 1870 was $14,178,986,000; in 1880 it was $16,902,993,543, an increase of 20 per cent. Now look at these figures:

	1870.	1880.
Total valuation	$14,178,986,982	$16,902,993,543
Farm values, including implements	$9,599,792,290	$10,663,616,831
Per cent. of whole	67.7	62.7
Capital in manufactures	$2,118,298,769	$2,790,272,606
Per cent. of whole	15.0	16.5

The farms, with the implements of agriculture, represented 67.7 per cent. of the whole in 1870, whilst the capital in manufactures, buildings, machinery, and everything else was only 15 per cent., and yet in 1870 these same gentlemen who are engaged in "protecting American capital" now were in the same business then and in the same way;

they were piling on taxes upon 67.7 per cent. of "American capital" for the benefit of 15 per cent. of "American capital." The result to some extent is shown in the figures for 1880. The farm values then only represented 62.7 of the whole wealth of the country, whilst the parties who owned the manufactories, and whom these gentlemen are so busy in "protecting," had increased their wealth to 16.5 per cent. of the whole.

Let us examine further into these figures:

Items.	1870.	1880.
Capital in manufactures	$2,118,298,769	$2,790,272,606
Value of product	4,232,325,442	5,369,579,191
Value of farms, including implements	9,599,792,299	10,603,616,831
Total value farm products	2,994,785,051	2,213,402,564

This small proportion of protected capital produced almost twice as much as the amount invested. Of course that was not all profit, because the value of the material and the labor had to be deducted, but the fostering care of the gentlemen on the other side who are so solicitous "to protect American capital" was very visible in the enormous increase in the output of the manufactories.

Now see how these other capitalists—the farmers of the country—fare, and, mind you, Mr. Chairman, I am using official figures. In 1870 the gross value of the farm products was over 30 per cent. of the value of the farms, as against 199 per cent. gross value of the product of the factories. In 1880 the product of the farmers had decreased in value to less than 21 per cent. of the farm values. The number of farms had largely increased, there being 4,008,000 in 1880 as against 2,660,000 in 1870, and the improved land had increased in area from 188,921,099 acres in 1870 to 284,771,042 in 1880, that is over 50 per cent. added to the land in cultivation, and yet the value of the products had decreased the enormous sum of $761,382,487. Three acres of land were in cultivation in 1880 for every 2 acres in 1870, and the value of the product had decreased over 25 per cent.

"A bad year for crops in comparison with the previous census year," some one will say. Oh, no; here is the production for each of these years of some of the principal agricultural products of the country:

Articles.	1870.	1880.	Increase.	Per cent.
Wheat.....bushels	287,745,626	459,483,157	171,737,531	60
Indian corn.....do	760,944,549	1,754,591,676	993,647,127	130

The farmers produced more of everything in the last year than they did in the previous one, but it brought them less. Ten years longer had been spent in building up "the home market," of which we hear so much, and the value of the farmer's products, though he cultivated more land and produced more, was steadily decreasing. In 1870 the average value of the product from the cultivated land of the country was $15.79 to the acre; in 1880 it was $7.77 to the acre. "The home market" had done that much for the farmer—that is, it had reduced the value of the product of every acre of land in the country more than one-half. Mr. Chairman, I defy any gentleman on the other side of the House to deny the correctness of these figures. Every one of them came from the official publications of the Government. They show how capital is being protected and how "a home market" is being built up for the farmers.

The honorable chairman of the Committee on Ways and Means, in reporting this bill, says:

> One of the chief complaints now prevalent among our farmers is that they can get no price for their crops at all commensurate to the labor and capital invested in their production.

After considering the figures, the official figures, which I have given, I would submit, Mr. Chairman, that there is excellent cause for "the chief complaints now prevalent." The gentleman from Ohio also quotes from the message of President Harrison the following words:

> The inequalities of the law should be adjusted, but the protective principle should be maintained and fairly applied to the products of our farms as well as of our shops.

And he says for the committee:

> The committee have given months of investigation to the existing conditions of agriculture and matters connected therewith. This great industry is foremost in magnitude and importance in our country. Its success and prosperity are vital to the nation. No prosperity is possible to other industries if agriculture languish. In so far as the fostering care of Government can be helpful, it must be faithfully and forcefully exerted to build up and strengthen agriculture. That there is widespread depression in this industry to-day can not be doubted. Every remedy within the scope of practical legislation known to your committee has been recommended in the proposed measure to meet the urgent requirements of the situation.

The gentlemen who constitute the majority have heard "the complaint." They recognize "that there is widespread depression" and they present a remedy. Here it is from their own report:

> We advance the rates upon the products of the soil which either do supply or can be brought to supply the home consumption. Horses, cattle, hogs, sheep, bacon, barley, beans, pease, beef, mutton, pork, buckwheat, butter, cheese, eggs, hay, hops, milk, poultry, flaxseed, vegetables, potatoes, flax, hemp, hides, wool, tobacco, and many other products are advanced with a view to save this entire market to the American farmer.

They have actually "protected" the products of the farm; they intend to keep the pauper-raised horses, cattle, hogs, sheep, bacon, barley, beans, pease, beef, mutton, pork, buckwheat, butter, cheese, eggs, hay, hops, milk, poultry, flaxseed, vegetables, potatoes, flax, hemp, hides, wool, and tobacco from coming into competition with similar articles raised by our farmers. That is the remedy which the Committee on Ways and Means and the Republican party offer to the American farmer. They have driven the farmer to poverty by protection, and now they propose "to protect" the farmer. From whom, in God's name?

Mr. Chairman, I regret to find such a paragraph as the one I shall now quote in the report of a committee of this House. It reads thus:

> A critical examination of the subject will show that agriculture is suffering chiefly from a most damaging foreign competition in our home market. The increase in importations of agricultural products since 1850 has been enormous, mounting from $40,000,000 to more than $356,000,000 in 1889.

I said that it was a cause of regret to me that such a paragraph should be found in any committee's report. The reason is, Mr. Chairman, that both the statements and the deductions in that paragraph are untrue, absolutely false. This is strong language; but, sir, I intend to prove my assertion. "A critical examination of the subject will show agriculture is suffering chiefly from a most damaging foreign competition in our home market." That is the deduction that the committee makes from the statement which follows, reading thus: "The increase in importations of agricultural products since 1850 has been enormous, mounting from $40,000,000 to more than $356,000,000 in 1889."

The inference is that this $356,000,000 worth of "agricultural products" imported in 1889 came into "damaging competition" with our own agricultural products, and is therefore "chiefly" responsible for the "suffering" which it is admitted exists among our agriculturists. No other possible inference can be drawn from this statement. For the credit of the gentleman who made it and that of this House I wish that some other meaning could attach to it. But there can not. There it stands, a bold assertion from the principal committee of the House of Representatives.

It does not require "a critical examination" to tell how many dollars' worth of "agricultural products" are imported into this country every month and every year and the exact value of them. Every month, every quarter, and every year the Secretary of the Treasury issues a book which contains the amount and value of every article imported into the United States. Any one who can read good, plain print and figures, and who knows what are "agricultural products," can tell exactly how much we import without "a critical examination." Any intelligent boy twelve years of age at the public schools of this city can make all the "critical examination" necessary to tell the value of the "agricultural products" we import, and if he should make the mistake in addition made by the committee in the statement, unless corporal punishment is abolished in the schools, the teacher would administer a sound and deserved castigation.

Mr. Chairman, here is the quarterly report issued by the Treasury Department, which contains, commencing on page 722, the "Imports of merchandise for the year ending June 30, 1889." The name of the article, the quantity, and the value is shown from that book. I have made a table, selecting everything that could possibly be classed as an "agricultural product," taking under this head preserved fruits, tanned leather, olive-oil, pickles and sauces, and wines, and the whole value of the imports proved to be $328,931,740, an amount considerably less than that stated by the chairman. I have classified these agricultural products into two classes, "competing" and "non-competing," and I find that $117,638,903 worth of them do not "compete" with any American product. Amongst this class is coffee, cocoa, tea, pepper, etc., leaving $211,292,837 that do in some sense "compete."

Chief among these items is $81,313,199 worth of sugar and molasses imported into Atlantic and Gulf ports, from which the committee has removed the duties that are now levied. These duties are protective only to a very small section—are, in fact, a revenue duty, as we only produce one-eleventh of the amount consumed. Again, I find $10,868,226 worth of "tobacco leaf." It is true that we raise a large amount of tobacco, but this imported leaf is for cigar wrappings and only competes with a small quantity of tobacco raised for that purpose in Connecticut, Wisconsin, and Florida, not 5 per cent. altogether of the amount we raise. Then there is "champagne wine," $4,254,413 worth for the benefit of California wine-growers; oranges, lemons, raisins, almonds, and other nuts, that are only produced in California and Florida; rice, only produced in Louisiana and South Carolina.

This class of articles altogether amount to $100,947,721 in value, leaving only $110,345,116 in "damaging competition" with our principal agricultural products and which produce the "suffering" that the committee says, very truly, exists.

Mr. Chairman, here is the table:

Imports year ending June 30, 1889.

Articles.	Value of competing.	Value of non-competing.	Remarks.
FREE.			
Animals:			
Cattle, 4,440	$152,582		
Horses, 9,930	2,709,887		
Sheep, 5,926	69,824		
All others, including fowls	355,245		
Cocoa		$2,142,161	
Coffee		74,724,882	
Eggs	2,418,976		
Farinaceous substances	941,998		
Bananas		3,571,024	
Cocoanuts		782,706	
All others		1,597,632	
Goat-skins	7,668,472		
All others	17,459,278		
Seeds, not medicinal	658,792		
Nutmegs		514,888	
Pepper		1,578,421	
All other spices		890,889	
Tea		12,654,640	
Rice from Hawaii		491,167	These goods can not be affected by any change in tariff laws, as they are admitted free under reciprocity treaty.
Molasses from Hawaii		6,148	
Sugar from Hawaii		12,078,518	
Other goods from Hawaii		9,761	
Cotton, 7,973,039 pounds	1,194,505		Exports, 2,384,816,669 pounds, valued at $237,775,270.
DUTIABLE.			
Cattle, 57,351	530,887		Exports, $16,616,917.
Horses, 48,784	2,158,975		
Sheep, 398,891	1,189,176		
All other animals	37,467		
Barley	7,723,838		
Corn, 2,401 bushels	1,216		Exports, 69,592,929 bushels; value, $32,982,277.
Oats, 22,210 bushels	10,178		Exports, 634,226 bushels; value, $245,502.
Oatmeal	56,002		Exports, 287,252 bushels; value, $158,917.
Rye, 16 bushels	24		
Wheat, 130,649 bushels	119,017		Exports, 46,414,169 bushels; value, $46,652,701.
Wheat flour, 1,156 barrels	5,792		Exports, 9,774,803 barrels; value, $45,296,485.
All other breadstuffs	113,657		
Potash	209,424		
Sumac, ground	206,643		
Flax	2,070,729		
Hemp, and substitutes for	9,433,174		
Jute	2,853,064		
Sisal grass		6,110,308	
Figs		482,759	
Lemons	3,189,534		Benefit of California and Florida.
Oranges	1,961,889		Do.
Plums and prunes	1,423,304		Do.
Raisins	1,736,786		Do.
Preserved fruits	1,042,846		
All other fruits	1,764,393		
Almonds	595,227		Benefit of California.
All other nuts	508,317		Do.
Hay, 105,395 tons	1,082,585		
Hops	1,155,472		
Band or belting leather	21,112		
Calf skins, dressed or tanned	1,172,080		
Skins for morocco	3,416,935		
Upper leather	1,399,605		
Malt, barley	$111,381		
Olive oil	696,065		Benefits California.
Other vegetable oils	395,490		
Meats, prepared and extracts	329,411		Exports of meat products, $93,403,418.
All other meats	199,734		
Butter, 178,851 pounds	24,577		Exports, 15,504,978 pounds; value, $2,568,765.
Cheese, 8,207,026 pounds	1,135,184		Exports, 84,999,828 pounds; value, $7,889,671.
Milk, preserved or condensed	85,485		
Rice	2,106,983		Benefit of Louisiana and South Carolina.
Rice, granulated or meal	898,238		Do.
Linseed or flaxseed	3,851,685		
All other seed	586,746		
Molasses	4,747,749		
Beet sugar	6,957,883		
Cane and other sugar	69,493,455		
Sugar above 13 standard	12,112		
Tobacco, leaf	10,868,226		
Beans and peas	736,343		
Potatoes, 882,380 bushels	321,106		
Pickles and sauces	349,422		
All other vegetables	812,928		

Imports year ending June 30, 1889—Continued.

Articles.	Value of competing.	Value of non-competing.	Remarks.
DUTIABLE—continued.			
Champagne wines	$4,254,413		Benefits California.
Still wines	3,452,359		
Clothing wools	5,971,631		
Combing wools	1,586,294		
Carpet and similar wools	10,417,190		

That table is worthy of examination. It completely refutes the statement made by the committee which I have quoted. The Kansas farmer, for instance, who is burning his corn because he can obtain nothing for it, is reduced to this condition because of the importation of 2,401 bushels of corn costing $1,216. It is true we exported nearly 70,000,000 bushels of corn, nearly thirty thousand times as much as imported, but the committee gravely tells us that this 2,401 bushels of imported corn is "a most damaging foreign competition in our home market."

We imported 130,649 bushels of wheat and 1,156 barrels of flour, worth together $124,809, and we exported 46,414,169 bushels of wheat and 374,803 barrels of flour, worth $91,959,186, and our wheat-growers are told that this "most damaging foreign competition in our home market," amounting to a little over one-tenth of 1 per cent. of the value of our exports and to one one-hundredth of 1 per cent. of our production, is "chiefly" responsible for "the suffering" which exists with them, for the low prices they obtain, and the heavy mortgages which cover their farms.

We imported altogether 61,791 cattle, valued at $703,469, and the committee tells the cattle-men of the country that it is these imports which has reduced the value of their 50,000,000 head of cattle to starvation prices. We imported meat products to the value of $529,145, and we exported of the same products $93,403,418 worth, and the Committee on Ways and Means, with tears in its eyes and this bill in its hands, tells the meat-producers of this country, "You are ruined by foreign competition."

I can almost see the agonized expression which came over the committee's faces when they, during that "critical examination," found that 16 bushels of imported rye, valued at $24, had been brought into "damaging competition in our home market" with the 25,000,000 bushels which our farmers produced. And then how they must have suffered over the condition of the poor cotton farmers, toiling beneath an almost tropical sun and all their labor rendered valueless by the importation of 7,973,039 pounds of cotton, costing over 12 cents a pound.

It is true the cotton farmers produced about 3,500,000,000 pounds of cotton, of which 2,384,816,669 pounds were exported, bringing $237,775,270 into the country, paying for 32 per cent., nearly one-third, of all our $745,000,000 worth of imports; but it was that importation of two-tenths of 1 per cent. of what they raised, which cost 12½ cents a pound, that reduced the price of our farmers' cotton to less than 10 cents a pound.

From close to the spot where the stormy Atlantic lashes itself into foam upon the eastern promontory of rock-ribbed Maine to where the rolling waves of the Pacific wash the golden sands of California, from near the site of "the zenith city of the unsalted seas," where the thermometer is placed in the tea-kettle every morning to thaw out the mercury, to the banks of the Lower Rio Grande, in my own proud State, where eggs are boiled by the heat of the noonday sun, there are men who engage at the proper season of the year in cutting hay. They are so successful that during each calendar year they gather in about 50,000,000 tons of the succulent food for cattle and horses.

But the thousands and tens of thousands whose strong arms are engaged in this labor are oppressed and depressed because the Committee on Ways and Means, after "a critical examination," concluded that "agriculture is suffering chiefly from a most damaging foreign competition in our home market" and some wicked and designing men have actually imported to this country 105,395 tons of hay, thereby wonderfully reducing the price of 50,000,000 tons produced at home.

Mr. Chairman, was ever such folly, such misrepresentation, attempted to be palmed upon a people as this sentence from the report of the Committee on Ways and Means: "A critical examination of the subject will show that agriculture is suffering chiefly from a most damaging foreign competition in our home market?" An examination shows nothing of the kind; it shows what everybody knows, even the members of the Committee on Ways and Means, that in the principal agricultural products of this country there is and there can be no foreign competition "in our home markets." The committee has not found, or if they have found they have not stated, the reasons for the "decline in prices of the home-grown products."

Mr. Chairman, we who were not permitted to know what was being done within the inner sanctuary, where the Republican members were preparing this bill, heard many rumors of decisions arrived at and changed and yet again changed to suit the political exigencies of various sections. Of course no one believed that a number of Represent-

atives of the people, selected because of their prominence, ability, and knowledge of the subject to prepare the measure through which the revenues of this great Government were to be raised, would allow petty local political considerations to influence their action.

But, sir, the report which I hold here compels us to change that opinion. We were told that the committee, in the interest of the farmers, for whom they express such solicitude, had determined to put a duty on hides, and this would prevent the importation of the hides of "the pauper-fed" cattle of foreign countries, and would, therefore, benefit the farmers, though it would necessarily increase the price of every pair of shoes they wore. Then we were told that certain Republican members of this body, coming from districts where shoes are manufactured, informed members of the committee that the levying of such a duty would surely result in the return of Democrats from these districts to the next Congress. At once we heard that hides were returned to the free-list. Now, sir, I find on page 17 of this report the committee says:

We advance the rates upon the products of the soil which either do supply or can be brought to supply the home consumption. Horses, cattle, hogs, sheep, bacon, barley, beans, pease, beef, mutton, pork, buckwheat, butter, cheese, eggs, hay, hops, milk, poultry, flaxseed, vegetables, potatoes, flax, hemp, HIDES, wool, tobacco, and many other products are advanced with a view to save this entire market to the American farmer.

Under the head of "Free-list," on page 76, I find the following:

SEC. 2. The following articles when imported shall be exempt from duty.

And on page 80, under that head, I find this:

608. Hides, raw or uncured, whether dry, salted, or pickled, and skins, except sheep-skins with the wool on, Angora goat-skins, raw, without the wool, unmanufactured, asses' skins, raw or unmanufactured.
609. Hide-cuttings, raw, with or without hair, and all other glue-stock.
610. Hide rope.

It is very evident, Mr. Chairman, from these extracts, that the committee did place a duty on hides, and prepared its report whilst that duty was on, and that they afterwards, to save some Republican members from Massachusetts from defeat and in the interest of the manufacturers of shoes and leather goods, took off the duty that was to benefit the farmer and forgot to change the report.

But enough of this. I have established my proposition that the reasons for the depression of the agricultural interests made by the committee are untrue, and in doing that have shown that the remedy proposed is even worse than ridiculous. The committee, however, has only done what it was compelled to do, that is, reported a bill in favor of the manufacturers; in favor of the classes and against the masses; in favor of the rich and against the poor; in favor of the system which robs the farmer for the benefit of others.

That, sir, is what a protective tariff means, and that is what the committee and the party to which it belongs was pledged. Why, sir, the very name "tariff" is in perpetuation of a system of robbery established centuries ago. When most of the commerce of the world was on the Mediterranean Sea vessels trading to it had to pass through the Straits of Gibraltar. Upon one of the high promontories which bound that narrow outlet was a town and fortress called Tarifa, with a seaport at its base, and this port was filled with piratical craft that lay in wait to prey upon the vessels that were compelled to pass through the straits. A look-out upon the summit of the hill signaled to the port below, "A vessel in sight," and at once the piratical crews hoisted sail and started out to plunder and murder.

The result was that the nations trading through the straits agreed, upon the condition that their vessels should not be intercepted and destroyed, a certain percentage of the value of the cargo should be paid to the chief bandit, and this was called a tariff. That is the origin of the word, and the system is the same now that it was then. That was a "protective tariff." It protected the crews from murder and the ship from destruction, saved a part by the surrender of a part, and of course the consumer who bought the remainder of the cargo had to pay an enhanced value for it to make up for the part surrendered to the robbers.

The same condition exists to-day. The consumer pays an enhanced value and the protected robber pockets what the tariff exacts from the consumer.

Mr. Chairman, the Democratic party was always opposed to this system of robbery. The first declaration of principles which can be called a platform for the party was that of a Congressional caucus, which was known as Republican at that day, as distinguishing it from Federalist, adopted at Philadelphia, on which Jefferson was first elected to the Presidency. It declared in the sixth resolution for "free commerce with all nations."

The next Democratic platform was that of 1840, adopted by the Presidential convention at Baltimore, which contained these resolutions:

4. *Resolved*, That justice and sound policy forbid the Federal Government to foster one branch of industry to the detriment of another or to cherish the interests of one portion to the injury of another portion of our common country.

The Democratic convention of 1844 reaffirmed the fourth and fifth resolutions of the convention of 1840.

The Democratic national convention of 1848—

Resolved, That the fruits of the great political triumph of 1844 have fulfilled the hopes of the Democracy of the Union in the noble impulse given to the cause of free trade by the repeal of the tariff of 1842 and the creation of the more equal, honest, and protective tariff of 1846, and that, in our opinion, it would be a fatal error to weaken the bands of a political organization by which these great reforms have been achieved and risk them in the hands of their known adversaries, with whatever delusive appeals they may solicit our surrender of that vigilance which is the only safeguard of liberty.

In 1856 the Democratic national convention—

Resolved, The time has come for the people of the United States to declare themselves in favor of free seas and progressive free trade throughout the world.

In 1860 both the Douglas and Breckinridge platforms reaffirmed the resolutions of 1856, quoted above.

In 1872 the Democratic convention (so called) at Baltimore—which was, in fact, a Greeley and not a Democratic convention at all—did not adopt any Democratic resolutions, but indorsed the platform of the Liberal Republican convention held at Cincinnati, which contained the following curious declaration, making the tariff a "local issue:"

* * * We remit the discussion of the subject (protection and free trade) to the people in their Congressional districts, and the decision of Congress thereon, wholly free from executive interference or dictation.

This is the only hiatus in the chain of assertions by the Democratic party of the doctrine of a tariff for revenue only or directly for free trade. It resulted in the shameful defeat of a candidate supported by the party in defiance alike of principle and of policy.

In 1876 the Democratic convention spoke with no uncertain voice:

We demand that all custom-house taxation shall be only for revenue.

In the Democratic platform of 1880 the old doctrine was tersely reproclaimed:

Home rule, honest money, consisting of gold, silver, and paper convertible on demand; the strict maintenance of the public faith, State and national, and a tariff for revenue only.

In 1884 the Democratic convention declared in favor of lower duties and a largely increased free-list.

In 1888 the platform was explicit. It said:

Of all the industrious freemen of our land an immense majority, including every tiller of the soil, gain no advantage from excessive tax laws; but the price of everything they buy is increased by the favoritism of an unequal system of tax legislation.

All unnecessary taxation is unjust taxation.

It is repugnant to the creed of Democracy that by such taxation the cost of the necessaries of life should be unjustifiably increased to all our people.

In the interest of American labor, which should in no event be neglected, the revision of our tax laws contemplated by the Democratic party would promote the advantage of such labor by cheapening the cost of the necessaries of life in the home of every workingman and at the same time securing to him steady and remunerative employment.

Mr. Chairman, I stand by the principles of the Democratic party as enumerated in the Constitution of the United States and the platforms of the party. There is no warrant in the Constitution for the exercise of the power of protection—protecting one class of people to the injury of another. We see the manufacturers of all kinds coming here and asking for protection and claiming that it will benefit the country. They say nothing of the benefits to themselves, but their advocates here on this floor and in the press of the country continually harp upon the benefits that are to be conferred on the people by protection.

This cry for "protection" is no new one. It commenced almost the day the nation was born and has continued ever since, increasing with what it fed on, as the nation grows older. Mr. Chairman, in 1842 a tariff bill was being discussed in the Senate of the United States and it was advocated upon precisely the same grounds this is. Speaking against it John C. Calhoun said:

Why should such a bill pass? Who asks for it and on what ground? It comes ostensibly from the manufacturing interest. I say ostensibly, for I shall show in the sequel that there are other and more powerful interests among its advocates and supporters. And on what grounds do they ask it? It is on that of protection. Protection against what? Against violence, oppression, or fraud? If so, government is bound to afford it if it comes within the sphere of its powers, cost what it may. It is the object for which government is instituted, and if it fails in this, it fails in the highest point of duty. No; it is against neither violence, oppression, nor fraud. There is no complaint of being disturbed in property or pursuits or of being defrauded out of the proceeds of industry. Against what, then, is protection asked? It is against low prices.

The manufacturers complain that they can not afford to carry on their pursuits at prices as low as the present, and that unless they can get higher they must give up manufacturing. The evil then is low prices, and what they ask of Government is to give them higher. But how do they ask it to be done? Do they ask Government to compel those who may want to purchase to give them higher? No; that would be a hard task, and not a little odious; difficult to be defended on the principles of equity, justice, or the Constitution, or to be enforced if it could be.

Do they ask that a tax should be laid on the rest of the community, and the proceeds divided among them, to make up for low prices? Or, in other words, do they ask for a bounty? No; that would be too open, oppressive, and indefensible. How, then, do they ask it to be done? By putting down competition, by the imposition of taxes on the products of others, so as to give them the exclusion of the market, or at least a decided advantage over others, and thereby enable them to sell at higher prices.

Stripped of all disguise, this is their request; and this they call protection. Protection, indeed! Call it tribute, levy, exaction, monopoly, plunder; or, if these be too harsh, call it charity, assistance, aid, anything rather than protection, with which it has not a feature in common.

Every word uttered on this occasion by that great statesman and pure patriot was true. He portrayed "protection" in its true colors. To-day the farmers of the country are suffering, not from "foreign competition," but from home robbery. The pirates who rob them are not

perched upon the rocks of Tarifa, but in the manufactories of the country, intrenched and defended by the Committee on Ways and Means of this House. They give every reason but the right one for the condition of the farming community. Foreign competition I have shown to be false. They advance another; "overproduction," they tell us is one of the causes of the depression. That very same reason was advanced in 1842, and I will let Calhoun answer it. Here is what he says:

We are told by those who pretend to understand our interest better than we do that the excess of production, and not the tariff, is the evil which afflicts us, and that our true remedy is a reduction of the quantity of cotton, rice, and tobacco which we raise, and not a repeal of the tariff. They assert that low prices are the necessary consequence of excess of supply, and that the only proper correction is in diminishing the quantity. We would feel more disposed to respect the spirit in which the advice is offered if those from whom it comes accompanied it with the weight of their example. They also occasionally complain of low prices; but, instead of diminishing the supply, as a remedy for the evil, demand an enlargement of the market, by the exclusion of all competition.

Should we reduce our production others stand ready, by increasing theirs, to take our place; and instead of raising prices we would only diminish our share of the supply. We are thus compelled to produce, on the penalty of losing our hold on the general market.

Once lost it may be lost forever; and lose it we must if we continue to be constrained, as we now are, on the one hand by the general competition of the world to sell low, and on the other by the tariff to buy high. We can not stand this double action. Our ruin must follow. In fact our only permanent and safe remedy is, not in the rise in the price of what we sell, in which we can receive but little aid from the Government, but a reduction in the price of what we buy, which is prevented by the interference of the Government.

Give us a free and open competition in our own market, and we fear not to encounter like competition in the general market of the world.

If, under all our discouragement by the acts of our Government, we are still able to contend there against the world, can it be doubted, if this impediment were removed, we would force out all competition and thus also enlarge our market, not by the oppression of our fellow-citizens of other States, but by our industry, enterprise, and natural advantages.

But while the system prevents this great enlargement of our foreign market and endangers what remains to us, its advocates attempt to console us by the growth of the home market for our products, which, according to their calculation, is to compensate us amply for our losses, though in the leading article of our products, cotton, the home market now consumes but a sixth; and if the prohibitory system as to cotton goods were perfected by the exclusion of all importations the entire consumption of cotton goods would not raise the home consumption of cotton above a fifth of what we raise.

Mr. Chairman, it is neither "overproduction" nor "damaging foreign competition in our own home markets" that causes the widespread, the universal, distress in the agricultural communities, and which, striking thus at the foundation-stone of prosperity, spreads through the entire community, affecting the interests of all, excepting only those of the money-lender and capitalist. The trouble is that through this false system of so-called protection the farmer and the workingman are compelled to pay higher prices for what they are forced to buy, the increased price going into the pockets of "the protected few" to the distress of the "unprotected many." That and a system which collects into the Treasury of the United States every year more than a hundred million dollars in excess of the revenue needed for the Government are the causes of the "widespread depression" of which the Committee on Ways and Means admits the existence.

No remedy which fails to remove these evils will restore prosperity. We must have more currency and less taxation. The farmers of the country have "asked for bread" and the Committee on Ways and Means has "given them a stone." The farmers have asked for relief, and this committee has insulted their intelligence by offering duties on agricultural products we do not import and which form our principal exports. No one has asked that additional taxes should be levied; all are clamoring for the repeal of those now in existence.

What the people want is more money and less taxation, and what the committee offers is less money and more taxation. Our currency is less than $8 per capita and over $1,000,000 is daily (including Sundays) drawn into the Treasury, the surplus there to be handed over to the money-lenders for them to profit by. And yet this committee offers no relief, but endeavors to deceive the people as to the cause of their troubles. Mr. Chairman, the people are not fools. The Secretary of the Treasury may send out his report, declaring the currency abundant and equal to all the demands of trade, basing his estimates on known falsehoods, but the people know that, with abundant crops, with everything seemingly prosperous, money is scarcer than ever it was known before.

The Secretary makes a roseate statement. The people know the hard, bitter facts. The Committee on Ways and Means tells the farmers that it is foreign oats, wheat, corn, rye, hay, cotton, tobacco, wool, butter, and cheese which reduce the price of what they produce. The people know that it is because there is no money to buy with that the price is reduced. And the people of the country will resent the imputation cast upon their common sense by the Secretary and the committee in setting up these false and silly explanations. The storm is coming. The cloud now is not much larger than a man's hand. The mutterings of its thunder can be heard from every agricultural community. Let no man mistake the meaning. The voice of the people will be heard and must be heeded. Slow to anger and long suffering, the American farmer, the honest toiler who labors from the time "when the sun's first rays gild the mountain tops" till the stars twinkle in the east, is at last aroused. And he knows his strength.

The nations trading through the Straits of Gibraltar submitted to the exactions of the pirates of Tarifa until they were strong enough to resist and then they abolished "that tariff for protection" (that is, the protection of the robbers of Tarifa). The farmers will follow their example. Not content, as he of Tarifa was, with the amount agreed upon, enormous though it is, these modern Tarifaites are demanding more and more and still more. They see and feel that there is danger and are endeavoring to emulate the wisdom of the serpent by using nice words to soothe their victims, but their words are only the slime with which the boa-constrictor covers his victim before crushing his bones and swallowing him. The farmers know this, but these modern Tarifaites go on and on and on. Emboldened by success they seek to enlarge their fields for plunder and propose to tax everything that enters into the life of the farmer. But their day of doom has come.

This iniquitous bill or something like it may pass this House and may become a law, but the farmers—people of the country, will strike down the men who make it. They will not be treated as the original Tarifaites were when caught, placed upon high gibbets along the coasts of the strait as a warning to their fellows, but will be retired to the sweet quietude of private life, there to muse on the certainty of justice and to repeat those oft-quoted lines of the distinguished poet:

Though the mills of God grind slowly, yet they grind exceeding small;
Though with patience He stands waiting, with exactness grinds He all.

Mr. Speaker, looking at the schedules as prepared and presented in this bill, we find the rate of taxation is increased in all of them. For what purpose? To procure more revenue for the support of the Government? Sir, we already have a plethoric Treasury, full to overflowing. Why do you insist upon collecting from the people and the wage-earners of the country these enormous taxes which the Government does not need?

Take your tax upon tin-plate; you increase by this bill that tax 115 per cent., taking from the consumers of this necessary article nearly $15,000,000. You place upon cotton-producers, in the single item of cotton-ties, a tax of $1,000,000, which is three times the amount of the present law. Not a single cotton-tie is made in the United States. What industry do you protect? Why, I ask again, do you impose this tax upon the men who are clothing the world by their labor? These laborers receive no protection. Yet in order to prepare for a foreign market this product they are required to expend nearly $1,000,000, for which, as in the case of manufactures, they are not allowed any drawback or rebate.

Are we surprised, therefore, Mr. Speaker, to find unrest and dissatisfaction among our farmers? Sir, they are organizing throughout the country, not as other organizations, for raiding the Treasury and securing undue advantage as against other classes, but, sir, they demand to be relieved of these oppressive taxes and that there be a larger volume of money. For one I rejoice to see the interest our farmers are taking in these great economic and financial questions. Want and oppression having driven them into organizations for their protection, they will be heard. You will act wisely if you grant them relief, for I tell you they are here to stay, for sooner or later the tax-eater will give place to the tax-payer.

The Tariff.

SPEECH
OF
HON. JOHN F. LACEY,
OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 20, 1890,

On the bill (H. R. 9416) to reduce the revenue and equalize duties on imports.

Mr. LACEY said:

Mr. CHAIRMAN: It is greatly to be regretted that the inequalities of the present bill have not been pointed out upon the floor of the House and an earnest effort made to render the bill more perfect.

No tariff bill ever came full-grown and perfect from the Committee on Ways and Means like Pallas from the head of Jove, and this bill is no exception to the rule.

It has its imperfections which ought to be cured in the Committee of the Whole, but with the opposition that has met every feature from the other side of the House the attempt to render it more perfect is unavailing.

The contest over formal amendments in striking out the last word has degenerated into an unseemly wrangle as to who should have the last word, and the issues discussed have been, not the schedule itself, but the general principles of a revenue and protective tariff.

Upon this issue the two parties are so hopelessly divided that there is no likelihood of agreement upon anything. I would be glad to see some of the schedules reduced that have been raised by the Committee on Ways and Means. But while I must dissent from some of the duties laid by the bill I must yield my hearty assent to the general

doctrines upon which the bill is founded, and shall vote for the bill, imperfect as I believe it to be, because it is a revision in the interests of American labor in its general effect.

The tobacco tax I would be glad to see unchanged. It is a tax upon a luxury, and upon an injurious one at that. The tobacco consumers, as the ashes of their extravagance are turned into revenue to the Government, are making no complaint, and it seems to me, Mr. Chairman, that this tax might be permitted to remain. In France and Italy the tobacco manufacture constitutes the great feature of their revenue. It is not a burdensome tax, and there has been no pressing demand for its reduction or repeal.

I wish, however, to yield my hearty assent to the placing of sugar upon the free-list. The repeal or a heavy reduction of that duty has been imperatively demanded.

The Mills bill, in which rice and sugar were the great industries which were taken under the fatherly care of the committee, was tried in the balance by the people and found wanting. The entire country in which sugar is now produced is not much greater than an ordinary-sized county, and no amount of protection can extend the area in which the sugar-cane can grow in perfection. The substitution of a bounty for the duty will stimulate the sorghum and beet growers of Kansas, Nebraska, Iowa, and other States in the great West to build up an industry that will provide the tables of all with this article, not of luxury, but of necessity.

About $1 a head is paid for this tax by every man, woman, and child in America, and there is no item which can be reduced and the effect reach so equally and generally all classes of people, both rich and poor.

The advance in duties under the bill upon many items does not meet my assent, but all tariff bills must be in the nature of a compromise. In the conflicting opinions which exist, the bill must either not pass at all or must be a compromise measure.

The prophecy of the gentleman from Alabama that the bill will be amended and improved when it reaches the Senate is probably entitled to more consideration than the predictions that have come so plenteously from the other side of this House during the present session. It is as superior to the so-called Mills bill as an angel of light is superior to an imp of darkness. It is not drawn in the interests of Canada or England. The agricultural products of the great Northwest are favored as against our good neighbors in the Dominion of Canada, and the heresy that what the farmer produces is raw material is not recognized.

Mr. Chairman, in the constant struggle in this committee to strike out the last word two expressions have constantly been ringing upon the silvery tongues of the orators upon the other side of the House. Ordinarily Kansas has but seven Representatives, but during the present session she has been represented by almost the entire Democratic contingent from the South.

Districts where a yield of 20 bushels of corn to the acre is looked upon as a dispensation of Providence have been represented by gentlemen who have led us to think that the coat-of-arms of Kansas ought to be changed from a farmer plowing in the field to that of a farmer burning his corn. And some of our friends from the South, who live in districts where they gather their corn in haversacks, have constantly held up the Kansas farmer as the object of pity to their admiring constituents.

The Kansas mortgage is another one of our friends' favorite subjects of discussion. Let me say to you that when the great Northwest turns her undivided attention to growing any particular article of farm products she has it in her power to produce it in such quantities as to break the back-bone of any market.

Our Democratic friends seem to find delight in the misfortunes of their countrymen. The Kansas grasshopper was their pet ally. Let misfortune come when it will and where it will, let hard times come from any cause whatever, and you may expect to see them proudly rising in their places and giving its details with a relish that shows that they hope for political capital to arise from individual bankruptcy.

The farmer understands where his interest lies and knows full well that relief can not come through the destruction of his home market.

Is it for the interest of the farmer that the iron-maker, the glass-blower, the weaver, the manufacturer generally, should turn aside from their present avocations, and whilst the farmer sells his goods to the European have these industrial laborers enter upon the production of more corn and hogs?

Our Democratic friends were surprised at the verdict of the intelligent farmers of this country in 1888. But those men knew that six-sevenths of the farmers' products are consumed in America, and only one-seventh abroad.

As long as farmers have the good judgment to prefer the home market to the foreign one, so long will the farmers of this country favor protection.

If the demand could be sufficiently increased so that the home market would consume still more of the product, so much the better for the farmer. Why should America give up to foreigners the home markets of this country?

The South before the war was a free-trade country, and the force of habit is strong among them. With the examples of what a protective tariff is doing for East Tennessee, for Northern Alabama, and Northwestern Georgia we find the free-trade doctrines still preached by their statesmen. With such object lessons as Atlanta, Birmingham, Knoxville, and Chattanooga before their eyes, with cotton mills and iron mills springing up on every hand, still the back-country Democrat is as impenetrable as ever to such lessons springing up under his own eyes.

But there is hope for our Southern brethren. With the industrial invasion that is now to be seen in Tennessee, Alabama, and Georgia a change must come over their views. Let me say to my friends from Alabama and Georgia who have had so much to say for the people of Iowa, the day is at hand when your States shall stand in the very front of the column of wage-earners; that in the near future the voice of the leader in industry must be heard, and when the man who dares as a Democrat to assail the growing prosperity of the diversified manufacturing enterprises of your States will no longer be allowed to represent the old idea of the ante-war times, when it was your great desire to produce raw material for the laborers of Europe.

Those times were well described by Mr. Grady when he told of the days when a grave was quarried in the native marble on the hillside and a white Vermont monument reared over the departed free-trader to commemorate his departed virtues. Over the tomb of the free-trade idea in those great States a monument in Tennessee marble should be erected with the hand of Hope inscribed, pointing to the great future when protection to American industries shall be as dear in Georgia as it now is in the great industrial centers of the North.

Mr. Chairman, I have the honor to represent a district where agriculture, manufactures, and mining go hand in hand. The prosperity of each of these industries is for the best interests of all. If the miner prospers, so much the better for the farmer. If the manufacturer flourishes, the farmer finds his home market the best of all. The man who endeavors to raise the hand of one of these industries against the other strikes at the common prosperity of all.

Our farmers have largely learned the necessity of diversifying their interests. They no longer plant their fields in corn alone, but the blue-grass of Southern Iowa invites to its succulent pasturage herds of cattle that would be the envy of Kentucky herself.

And what is good for the individual farmer, a diversity of products, is in like manner for the good of this country as a whole.

Mr. Chairman, I trust that the inequalities in this bill will be remedied before it finally becomes a law. But every tariff bill must be the result of mutual compromise and concession. One industry must help another, and a bill which is founded upon principles of protection brings the greatest good to the nation as a whole.

The Tariff.

SPEECH

OF

HON. ELIJAH A. MORSE,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 17, 1890,

On the bill (H. R. 9416) to reduce the revenue and equalize duties on imports.

Mr. MORSE said:

Mr. CHAIRMAN: Under the permission of the House to print and in answer to the circular offered by the gentleman from Kentucky [Mr. CARUTH], I desire to extend my remarks with the following circular from one of the great labor organizations of the country:

OFFICE OF THE GRANITE CUTTERS' NATIONAL UNION OF THE UNITED STATES OF AMERICA,
Barre, Vt., February 3, 1890.

SIR: Understanding that an effort is being made in the interests of importers and foreign manufacturers to have the tariff on granite reduced, I am instructed to protest against any reduction whatever being made in the tariff on granite, manufactured or unmanufactured, and to ask you to use your influence to have the tariff on the same increased to 60 per cent. The State you represent is interested in the prosperity and development of the granite industry, and therefore we ask you to assist us against the unfair competition of foreign manufacturers. Monuments are being imported into this State from Europe cheaper than can be manufactured here. There are probably millions of dollars invested in the granite trade in this State alone, and to hand this trade over to foreign manufacturers, who have no interest in the development of the country, is not wise statesmanship, and we hope you will, in so far as it lies in your power, aid us against those mercenaries in the granite business who, for the few dollars they can make as importers, are endeavoring to destroy our trade in this country. Our manufacturers are also handicapped in this matter by the freight rates they are compelled to pay, as the freight rate from Liverpool, England, to New York is 75 per cent. less than from Barre, Vt., to New York, which you will readily perceive is a great advantage to foreign manufacturers over our own.

The foreign manufacturer can undersell our own 30 per cent. at the present tariff, and therefore we ask for an increase to 60 per cent., which we consider only fair and just to preserve to American citizens the freedom we enjoy, inasmuch as enterprising men who engage in business must necessarily have a certain profit to insure themselves against risks, and, if in unfair competition with low-paid countries that profit is wiped out, then the workman must suffer by reduced wages in order to meet that competition, and in all low-paid countries the workmen are practically serfs, devoid of ambition, as you are well aware. In our trade there are a class of wreckers whose only stock in trade consists of an office-room, or desk-room in somebody else's office, in some office building in a city, a few designs, and a great deal of cheek. They have their so-called agents scouring the country, competing at every point with bona fide manu-

facturers who have hundreds of thousands of dollars invested in quarries and works which require a great amount of machinery, thus giving employment to other trades besides our own. Yet these manufacturers who have thus invested their capital are undersold by people whose whole outfit would not fetch a hundred dollars if sold at auction. Believing, therefore, in the old maxim that "charity begins at home," we believe that all, whether native-born or adopted citizens, who have the prosperity of the country at heart should see to it that our citizens are not impoverished by the unfair competition of these importers, as we hold that one manufacturer doing a legitimate business is worth more to the country than fifty importers with their sheets of electrotyped or lithographed designs. And so, in the interests of our trade generally, many of whom are your constituents, we ask you to assist us in raising the tariff so as to preserve fair wages to our workmen, fair profits to our employers, and happy homes for all.

Yours, respectfully,

JOSIAH B. DYER, *N. U. Secretary.*

It is proper to add that I hold a petition from one single city in my district bearing the signatures of 691 members of the above great organization, praying for an advance of the duty on granite; and it is proper to add further that since this bill was reported, increasing the duty, with the prospect of relieving this great industry from foreign competition, these men have demanded and secured from the manufacturers an advance in wages of 5 to 10 per cent.

I desire also to submit the following communication, showing the cost of American and foreign monuments, and showing the necessity of the increased duty as called for by this bill:

QUINCY, *April* 2, 1890.

DEAR SIR: At a meeting of the Granite Manufacturers' Association last evening a portion of your letter to Mr. Shaw, referring to letter received from dealers, stating that the resolutions sent you some time since asking an advance in duties on foreign-dressed granites, was read, and the inclosed prepared and signed, as you will see, by forty-nine firms. There being about sixty-five firms engaged in the business here, this certainly represents the majority in numbers, and a very large majority in amount of business. And of the balance we could have secured the names of all but four or five, who are interested in selling foreign granites, if we could have seen them. So that you will see that, as I wrote you before, the resolutions before sent you practically represent the whole granite industry here, in the published edition on revision of the tariff which you were kind enough to send me.

I notice letters on the subjects protesting against the increase asked. The four firms are all large importers of foreign granites, and while they deal in American granites the fact that they can supply the general demand for monumental work with foreign granites when the native granites are not demanded, at a much greater profit to themselves, unquestionably influences their action in this respect. That you may be able to make comparison of the cost of both granites, I inclose you designs of a few ordinary monuments and give prices on same.

No. 318 is 3 feet 1 inch square, base 7 feet 6 inches high; is all polished, composed of 5 pieces; price of same in Scotch granite, duty paid, delivered in New York	$214.00
In Quincy granite material would cost	45.00
Labor cost	225.00
	265.00
Add for profits, etc., 10 per cent	26.50
	291.50

We can not afford to do business on this margin, but you can see the difference even at that.

No. 25 (4 pieces), 2 feet 2 inches square at bottom, 10 feet 8 inches high, all polished; price at New York in Scotch granite, duty paid	$137.00
Material	25.25
Would cost in Quincy granite, labor	156.00
	181.25
Ten per cent	18.13
	199.38
No. 25 (6 pieces), 4 feet 2 inches at base, 13 feet high, all polished except drapery; price in Scotch granite at New York	760.00
Material	121.00
Quincy labor	784.00
Ten per cent	90.50
	990.50
No. 24 (3 pieces), round, 2 feet 8 inches diameter at base, 8 feet 8 inches high, polished where shaded; price in Scotch granite at New York	93.00
Material	33.00
American labor	158.00
Ten per cent	19.00
	210.00

This last is hardly a fair sample, as being round they cut it by machinery there, which not having the machinery here we can not do, but the others would be cut and finished under the same conditions except as regards cost of labor, or day pay. The case quoted by Jones Bros. is not a fair one, it being one almost entirely out of the question, since little, if any, work of this kind is imported. The ordinary run of monumental work is composed of stone containing from 5 to 20 cubic feet, costing in Barre granite 80 cents per foot; costing in Quincy $1 to $1.20 per foot; costing in Quincy $1.14 to $1.62 per foot. So that we have no fear of the raw material. The proportionate cost of labor in the class of work sent here is from five to six times that of the material, depending on the design, whereas in the case mentioned by Jones it is about being simply a plain block, without polish, of which I doubt there being twenty-five pieces received here in a year.

I notice by last night's paper an increase on granite reported, so do not know as this will be of service to you, but trust you may be successful in securing the passage of the bill.

Yours, respectfully,

WM. H. MITCHELL,
Secretary Granite Manufacturers' Association.

Hon. ELIJAH A. MORSE, M. C.

I desire also to submit the following statement from the granite manufacturers of Quincy to refute certain misstatements of a few importers whose only interest is the commission they get from the foreign manufacturers:

QUINCY, MASS., *April* 1, 1890.

DEAR SIR: Understanding that letters have been sent to you by individual firms, members of this association, stating that the resolutions sent you by the secretary asking for an increase in the duty on foreign granites do not fairly represent the granite industry of this city, we take this means to contradict that statement and state that by their signatures hereto they heartily support the resolutions sent you, and renew their request for an increase of duty on foreign granites to 50 per cent. ad valorem.

Mitchell Granite Works, M. Gratto Bros., O. T. Rogers Granite Company, Milne Chalmers & Co., John Thompson & Sons, Field L. Wild, McKenzie Patterson, William T. Spargo, McIntosh & Son, John S. Pool, O'Brien & Co., Elcock & Sons, McDonnell & Sons, Adams Granite Works, Turner & More, McGilloway & Jones, Malnocte Bros., Swithin Bros., John Smith, T. F. Mannex, Bizzozero & Mouti, Falconer & Marnock, McDonnell & Kelley, Nicolls Granite Works, Thomas & Miller, Merry Mount Granite Company, Allen C. Walker, McDonnell & Cook, Norfolk Granite Company, Burke Bros., Miller & Leuli, Frederick Field, Joseph H. Vogel, Craig & Richards Granite Company, McDonnell Bros., Joss Bros., F. Hardwick & Son, C. H. Hardwick & Co., John Fallow & Sons, Lewis Dell & Co., James F. Desmond, Jones & Desmond, James N. White, Daniel Hayes, Adam Vogel & Son, Badger Bros., Fuller, Haley & Co., F. J. Fuller & Son, Carey Bros.

Hon. ELIJAH A. MORSE, M. C.

The Tariff.

SPEECH

OF

HON. JOSEPH E. WASHINGTON,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 19, 1890.

The House being in Committee of the Whole and having under consideration the bill (H. R. 9416) to reduce the revenue and equalize duties on imports—

Mr. WASHINGTON said:

Mr. CHAIRMAN: In explanation of this amendment, which, owing to the very limited time allowed to complete the bill, I know can not be voted on, I will say that it repeals all taxes of every kind on the manufacture and sale of his tobacco by the farmer. It places the farmer and planter back in the same position he occupied before the establishment of the internal-revenue system. The tax on tobacco is the only tax which is levied on an agricultural crop. The revenue derived from it is no longer needed for the uses of the Government. Its continuance restricts production and hampers trade. As it increases the cost it necessarily decreases the consumption of the article, and therefore ought to be entirely abolished.

I do not deem it necessary to indulge in a lengthy discussion of the question as to whether the producer or the consumer pays the tax on tobacco. It matters very little who pays it ultimately. It is a tax and a tax is a burden. The tobacco-grower is suffering from chronic low prices and I for one wish to give him relief to the extent of taking all the tax off of tobacco instead of only half, as the bill proposes to do. To take off half the tax is to reduce the revenue that much, it is true, but this retains all of the costly and vexatious machinery, penalties, fines, prosecutions, and officers necessary to collect the tax, nearly every dollar of which will be expended in the cost of collection.

It comes with poor grace from our Republican friends to say that the tobacco tax is paid by the consumer, and does not come out of the profits of the farmer and laborer. They proclaim the very opposite theory regarding the tariff tax. The millions exacted by the tariff they say is paid by the European pauper laborers and foreign manufacturer as a penalty for bringing their goods into this country, and not by the thousands of poor people who consume or wear them and pay the increased cost.

Sir, if the 8 cents per pound tax on tobacco is paid by the consumer who smokes it, then the tariff tax of 50 to 250 per cent. on all manufactured products is paid by the consumer who finally wears out the hat or shoes or clothes. On the other hand, if the tariff tax is paid by the European laborer as a penalty for sending his goods here, then the tax on tobacco of 8 cents per pound is a grievous and unnecessary penalty paid by the farmer and laborer for making and selling his tobacco to the man who smokes or chews it in the United States.

Some gentleman on the other side said it made no difference in the price to the consumer whether the tax was left on or taken off. That is not true. Every one who is posted in these matters knows that the price of manufactured tobacco decreased materially when the tax was reduced in the past from 24 to 12 and then to 8 cents per pound.

During the discussion of this bill I have had numerous letters from my constitutents interested in the manufacture of tobacco, inquiring about the provisions of the bill and the probability of its passage.

They all state that ample time should be allowed between the passage of the bill and the date the reduction in the tax takes effect to permit manufacturers to change the size and style of plug boxes and packages so as to conform to the expected reduction in price and demands of the trade.

The tobacco-grower, under the present revenue system, bears a double burden of taxation. He is taxed on his product and then on all his necessaries of life. Tobacco is his staple or money crop. It is that product of his year's labor which he must exchange for his boots, shoes, clothing, and groceries. Out of it he pays his "store account" and his doctor's bills. You tax him 8 cents per pound on all that part of his crop which goes into home consumption as a manufactured article and on all of those things for which at the end of the year he pays with the proceeds of his labor, you tax him under a protective tariff of from 50 to 300 per cent. Between the two schemes of governmental spoliation and robbery he has nothing left.

Sir, I appeal here and now for relief for the tobacco-grower. No laborer works so long or so hard to produce his product. It requires from fourteen to sixteen months to raise and market a crop of tobacco. The seed in Tennessee and Kentucky are put in the plant beds in February or March. The crop is transplanted to the field in May or June. The tobacco ripens and is put in the barn in August and September. It must then be dried, or "cured," as it is called, and prepared for the market.

The condition of the winter weather will greatly control this process; but as a rule the crop is not finished, sold, and delivered before March, and much of it not until June. All of these weary months must the poor cropper or tenant or maybe the proprietor himself labor with the help of his children and all of his dependents over this crop upon which the Government levies a tax amounting to more than the average value of the tobacco itself when it leaves the hand of the farmer. And yet those whose bowels of compunction yearn over the struggles of the poor laboring men of this country seem to have no mercy for the tobacco-grower of Tennessee, Kentucky, Virginia, and North Carolina.

Ah! they say, but we have put a tax of $2 per pound on imported tobacco to protect you. Sir, that class of tobacco does not come in competition with the tobacco of my district. On the contrary, the Sumatra and Cuban wrapper, if cheap, would add to the value of and the demand for such of our tobacco as would make good fillers. The greater part of the tobacco from my district has to seek a foreign market, and there again it meets with the most exorbitant taxation.

That which goes to England is bought and sold in an open market, but it must pay an import duty of between 75 and 80 cents per pound. That which goes to Austria, France, Italy, and Spain is sold in a closed market controlled by a Government monopoly known as a *régie* contractor, who has, as the lowest, not as the highest bidder, been awarded a contract to supply the Government with a certain number of hogsheads of tobacco of peculiar types and classes at a fixed price. His profit therefore depends upon his ability to buy this tobacco in the American market at a less price than that at which he has agreed to deliver it.

In these days of great combinations and aggregations of capital, one syndicate usually takes all four of these *régie* contracts, hence the competition for that class of tobacco in our home market is practically stifled; there is but one contractor, therefore but one bidder; his agents will not run up the price of tobacco on themselves. All that is necessary for them to do in order to take the American farmer's tobacco at their own price is to sit quietly at the several boards and buy only when prices and offerings suit them.

This foreign purchaser of our tobacco might be able and doubtless would pay us more for it if instead of paying cash with bills of exchange he could bring here the products of the labor of France, Austria, Italy, and Spain and exchange them for our tobacco without paying such an enormous custom-house or tariff tax as a penalty for doing so. A small profit on his imports would make him content with a smaller profit on his tobacco; hence the higher the price he could afford to and would pay the farmer.

When closely analyzed such things as these show the great injustice of this McKinley tariff bill, which has been so framed as to almost annihilate all foreign trade.

PROTECTION TO THE FARMER.

We are told that it has been constructed with reference to protecting the farmer above all others. This is the first and only farmers' tariff bill, according to the professions of its authors.

Let us see what it does for the farmer. At the dictate of a well known combination of chemical manufacturers it puts a tax of one-fourth of a cent per pound, or about 30 per cent., on sulphuric acid, which under existing law is free. At the same time one of the products of which the acid is made is put off the dutiable on to the free list, still further favoring the manufacturer. Sulphuric acid enters largely into the manufacture of fertilizers used by the farmers, but especially by the tobacco-growers.

The increase in the cost of fertilizers, if full advantage should be taken of the duty, would be about $2 per ton. About 800,000 tons of fertilizers were used in 1889; an increased cost of $2 per ton on this would rob the farmer of $1,600,000 for the benefit of a combination already enjoying a rich profit. Sulphuric acid to the extent of about 100,000 tons is also used in refining coal-oil; at a tax of one-fourth of a cent per pound, this would add at least $500,000 to the cost of the oil which furnishes the light in the poor man's house.

Fully $2,000,000 will be gathered into the coffers of monopolists and trusts by this one increase, without a single dollar of corresponding benefit to the Treasury. Yes; but the bill increases the duty on corn from 10 to 15 cents per bushel; on corn-meal, from 10 to 20 cents; on oats, from 10 cents to 15 cents; on wheat, from 20 cents to 25 cents. A duty to protect must keep out something. What are the facts?

The following table shows our imports and exports of grain, meal, and flour for 1889:

Products.		Imports.	Exports.
Corn	bushels	2,401	69,302,929
Corn-meal	do	396	1,560,930
Oats	do	22,310	614,226
Rye	do	None.	287,352
Wheat	do	130,649	45,414,129
Wheat flour	barrels	1,156	9,374,803

Comment on this showing is entirely unnecessary.

Wheat flour is to pay an ad valorem duty of 25 per cent. instead of 20 per cent. The imports were 1,156 barrels and exports 9,374,803 barrels.

The American apple crop must be protected. There has been no duty on apples, green, ripe, or dried, but the American orchard is to have the protection of 2 cents a pound on dried apples. Last year we exported 942,408 barrels of green apples and 22,102,579 pounds of dried apples. We imported not an apple nor a pound of dried apples.

The duty on bacon and hams has been increased from 2 cents to 5 cents per pound. The imports were 272,130 pounds and the exports 400,224,646 pounds.

On beef, pork, and mutton the present duty is 1 cent per pound; the proposed duty is 2 cents. The imports were 215,575 pounds and the exports 280,991,121 pounds.

It is as plain as a pikestaff that the farmers are suffering because of want of protection on their corn, wheat, oats, rye, bacon, beef, pork, corn-meal, and apples. They are burning their corn in Kansas because 2,401 bushels imported last year spoiled their home market; they are scattering their corn-meal on the ground because 396 bushels of foreign meal found its way into the country; they blew themselves to pieces with dried apples and water because they had no tariff fence to keep out the foreign apples that had not sought admittance. They mortgaged their farms because one pound of bacon was imported for every 1,500 pounds exported. The McKinley tariff bill will save them from further misery by increasing the protection against agricultural products that have not and can not come into competition with them in the home market, whilst compelling them to pay more for articles they have to buy.

What a howling farce the McKinley farmer's "protection" bill is! What idiots it assumes farmers to be!

THE MERCHANTS.

The importers and merchants have been singled out as special objects of affection and fostering care by the framers of this bill. Innumerable protests have reached me.

The dealers in china, glassware, and crockery cry out that they will be ruined or left at the tender mercies of the pottery trust.

CUTLERY AND HARDWARE.

The hardware men declare that the proposed rates on pocket-knives, razors, carving-knives, butcher-knives, scissors, and shears are absolutely prohibitory and will shut out grades and patterns not made here, which can not be made here for years and which are largely purchased by laborers. I shall print with my remarks a statement showing the present and the proposed duty and some facts given by those interested who protest against the proposed increase.

CUTLERY.

The following rates of duty are proposed by the Committee on Ways and Means, namely:

Pocket cutlery.—Present duty, 50 per cent. ad valorem. Proposed duty: costing not more than 50 cents per dozen, 12 cents per dozen and 50 per cent. ad valorem; costing from 50 cents per dozen to $1.50 per dozen, 50 cents per dozen and 50 per cent. ad valorem; costing from $1.50 per dozen to $3 per dozen, $1 per dozen and 50 per cent. ad valorem; costing from $3 per dozen and up, $2 per dozen and 50 per cent. ad valorem.

Razors.—Present duty, 50 per cent. ad valorem. Proposed duty: costing less than $3 per dozen, 50 cents per dozen and 30 per cent. ad valorem; costing $3 to $4 per dozen, $1.25 per dozen and 30 per cent. ad valorem; costing $4 and up per dozen, $1.75 per dozen and 30 per cent. ad valorem. We think this is a clerical error and that the intention is to make the ad valorem duty 50 per cent. instead of 30 per cent.

Carving and cooks' knives.—Present duty, 35 per cent. ad valorem. Proposed duty: costing $4 and less per dozen pieces, $1 per dozen and 30 per cent. ad valorem; costing from $4 to $8 per dozen pieces, $2 per dozen and 30 per cent. ad valorem; costing $8 to $12 per dozen pieces, $3 per dozen and 30 per cent. ad valorem; costing from $12 and up per dozen pieces, $5 per dozen and 30 per cent. ad valorem.

Table cutlery and butcher knives.—Present duty, 35 per cent. ad valorem. Proposed duty: costing $1 and under per dozen pieces, 10 cents per dozen and 30 per cent. ad valorem; costing $1 to $2 per dozen pieces, 35 cents per dozen and 30 per cent. ad valorem; costing $2 to $3 per dozen pieces, 40 cents per dozen and 30 per cent. ad valorem; costing $3 to $8 per dozen pieces, $1 per dozen and 30 per cent.

ad valorem; costing $8 up per dozen pieces, $2 per dozen and 30 per cent. ad valorem.

Scissors and shears.—Present duty, 35 per cent. ad valorem. Proposed duty: 45 per cent. ad valorem.

The average rates of duty as proposed in the new bill, reckoning for like quantities of each grade, are as follows, namely: Pocket cutlery 100 per cent. ad valorem; razors, 75 per cent. ad valorem; carving and cooks' knives, 70 per cent. ad valorem: table cutlery, 50 per cent. ad valorem; butcher knives, 55 per cent. ad valorem; scissors and shears, 45 per cent. ad valorem.

If the proper proportions of different-priced goods are calculated, the average rates will considerably exceed those above named.

The heaviest duty is on the lower-priced goods, the highest rate being, on pocket-knives, 132 per cent.; on razors, 100 per cent.; on carvers, 99 per cent.: on table cutlery, 70 per cent.; on butcher knives, 65 per cent.

The above enormous increases of rates have been obtained by the grossest misrepresentations and false statements of interested parties.

Take pocket cutlery.—It was stated by a committee of manufacturers that the difference between the cost of the imported article and the domestic cost of production was 250 per cent. in favor of the imported lower priced knives, and that difference averaged 200 per cent. on the whole line.

The Committee on Ways and Means were shown—taking a comparative table submitted by the domestic manufacturers—that the real difference was only 50 per cent. (the present duty), and this result was demonstrated by affidavits of well known jobbers and importers and can not be successfully challenged.

It is a well known fact that the bulk of the pocket cutlery imported is exclusively such as is not made in this country and which this country is not prepared to make. It must be remembered that the manufacture of pocket cutlery in this country is only confined to limited branches and patterns. So far as it has gone, the result has been more than successful in controlling the market against foreign goods. But there are thousands of patterns and grades—an outcome of two hundred to three hundred years' experience—that no attempt has yet been made to manufacture in this country, and it is now proposed to put on those patterns and grades a prohibitory duty to enable the domestic manufacturers to compel purchasers to accept their limited patterns and at their prices. It is perfectly clear from the past success of the domestic manufacturers under the present tariff of 50 per cent. that it is only a question of time and increased intelligence when they will control the trade in these goods, and it is a question whether the country is prepared under governmental compulsion to contribute to them 50 per cent. additional bounty in the interim.

Razors.—The duty of 100 per cent. on razors is put on at the instance of substantially one manufacturer, and the cheaper razors used by the poorer classes will cost under this duty double what they now cost.

Carving and cooks' knives.—A few of these goods are imported because they are better quality than are made in this country, and by putting up the rates it is proposed to compel the people to take inferior goods at much higher prices.

Table cutlery.—It is a well known fact that nineteen-twentieths of all the table cutlery marketed in this country for the past twenty years has been made here, and the only known reason for the advance in duty is to enable the table-cutlery combination to still further advance their prices. The Committee on Ways and Means were shown by evidence that can not be disproved that the difference between the domestic cost of production and the cost of the foreign article under the present duty of 35 per cent. ad valorem is 77 per cent. in favor of the domestic, and they were not only shown this, but a statement of results for 1889 from one of the members of the combination was submitted showing earnings of about 21 per cent. on the capital employed.

If the Committee on Ways and Means had put table cutlery on the free-list nothing could have been imported except a few high-priced goods like Rodgers's, which sell on their reputation. This action on table cutlery shows the foolishness of this whole business.

Butcher-knives.—It is well known that very few of these goods are imported except well known brands that sell on their quality and reputation. These brands will continue to be sold under a higher duty, the extra cost coming out of the pockets of the butchers throughout the country. Does not this seem nonsense, when it is considered the Government does not need additional revenue?

Surely all this is protection run mad. No consideration whatever is given to the people who buy these goods. Everything is in the interest of the manufacturers, and unless we personally protest and persuade others to do the same, our interests and the consumers' interests will not be considered or thought of.

NEW YORK, *May* 10, 1890.

DEAR SIR: We desire to make our final appeal in opposition to any increase of duties on cutlery and guns.

You stated to the delegation of Western wholesale jobbers of hardware, who appeared before the majority members of your committee on Thursday, May 8, that the matter seemed to hinge on a question of veracity. This, Major MCKINLEY, is the exact issue, and has been from the very first. The president of this association said to you, when before the majority members of your committee the latter part of April, that if the statements on the other side were the truth, or anywhere near approaching the truth, he would not, for one, come before your committee or trespass on one moment of your valuable time, because, from a protectionist standpoint, we would have no case, but because of the gross misrepresentations of the other side we have appeared before the honorable gentlemen of your committee several times and endeavored to convince you that there is no reason or necessity whatever for any increase of duties on these goods.

May we be permitted to very briefly compare statements? First: The American manufacturers of cutlery submitted a table of relative costs of cutlery in the three different markets of Germany, England, and the United States, by which they attempted to show that the difference between the foreign cost and the American cost averaged 200 per cent. in favor of the foreign (see pages, Tariff Hearings, 66 and 71). It must have occurred to your committee that with such a difference of cost against them, how it has been possible for them to do any business whatever under a 50 per cent. tariff, and yet, on page 72, they give you as the capital invested in this business, $2,720,000.

Our reply to the above statement is found in Tables A and B, on pages 81 and 82, which tables are supported by unquestionable affidavits, and which tables show conclusively that the real difference of cost between the foreign article and the domestic is as near as possible 50 per cent., the present duty, and that the knives that come here from abroad are those that are sold on their reputation and those that are taken on account of the variety of the pattern, an outcome of a great many years' experience.

Second. The American manufacturers inform you that from 1882 to 1887 their product has decreased from $1,320,000 in 1882 to $815,000 in 1887, showing a loss of product in six years of $505,000.

What are the facts? Let the following exhibit answer:

Pocket-knives.

1882. American product, as per their table, page 72		$1,320,000
Imports, as per Government statistics	$1,238,198	
Add duty, 50 per cent	619,099	
		1,857,297
Total for 1882		3,177,297
Add for estimated increase of consumption from 1882 to 1887, inclusive, 6 years, at 2½ per cent. per annum=15 per cent		$476,693
Total for 1887		3,653,890
According to manufacturers' table, 1887 figures out as follows:		
Importations	$1,419,861	
Less razors, which are included	250,000	
	1,169,861	
Add duty, 50 per cent	548,930	
	1,754,791	
American product for 1887, as per their table on page 72	815,000	
		2,569,791
Amount unaccounted for by American manufacturers		1,084,099

The figures in above statement are not ours, with the exception of the estimated increase of consumption for the six years. With this exception the statement is entirely made up with Government statistics and the American manufacturers' statements, and there is no other possible deduction to be made from this statement and these figures but the one that the million dollars unaccounted for should be added to the manufacturers' statement of product for 1887, making that amount $1,899,099 instead of $815,000, as stated by them. We say there is no other deduction to be made than the above unless it can be shown that the consumption of these goods for the six years from 1882 to 1887 declined to the extent of over $600,000, which is simply preposterous.

We are informed by the chief jobbers in cutlery in the West that the estimate of 2½ per cent. per annum for natural increase of consumption is distinctly conservative, and that, in their experience and opinion, it is considerably over the estimate we put down.

Third. The manufacturers have tried to create the impression before your committee that the jobbing hardware trade of the United States did not only not antagonize the advances proposed, but that these proposed advances met with their approval. Your committee are aware that there is not a word of truth in this statement, that there has been only one house in the trade who has indorsed the advance, and that house is violently opposed to the advance proposed on guns, and only indorses the advance on cutlery because they are stockholders in a cutlery manufactory.

There has been over 2,000 protests against any advance from as many hardware houses sent to your committee and to individual members of Congress, and the delegation of representative wholesale jobbers who appeared before the majority members of your committee on May 8 emphasizes the opposition to any increase by the jobbing trade of the country.

Fourth. The table-cutlery manufacturers have wisely refrained from putting themselves on record as to figures. They content themselves with making the most extraordinary assertion that unless they can obtain a large advance in duty they must quit the business or be driven out of business (see pages 77 and 78). We have shown that out of a carefully estimated consumption of about $3,000,000 there is only $200,000 imported, and that this has been the condition for nearly twenty years past; that outside this $200,000, if table cutlery was placed on the free-list, none could be imported, and that the whole aim and endeavor is to shut out the $200,000 of table cutlery and butcher knives that are now being imported. The reason that even these goods come in is because they sell on their reputation, as has been shown. (See testimony page 1128.)

It is therefore perfectly clear that under the present tariff the imported goods are gradually losing ground; that in six years, from 1882 to 1887, inclusive, the American pocket-cutlery manufacturers have not only not lost $500,000, as they claim, but have in reality increased their product $579,000 in those six years, while the importation of this article has decreased during this period nearly $100,000. It is also true that the importation of fire-arms has decreased from 1882 to 1889 $282,757, and that the proposed duty would simply affect the cheaper grades of guns, and make the prices so high that the class of people who are compelled to buy these grades of guns can not pay the price and must do without them.

It is estimated by competent people that the domestic manufacturers turn out over $2,500,000 as their product for the year against imports in 1889 of $1,159,157, and it is known that the manufacture of guns in this country is on the increase, and that the bulk of the people engaged in their manufacture have a satisfactory business, and no competition on the guns they make except between themselves, and also that only a few of the manufacturers of guns have asked for an advance of duty, and these few have not been able to submit any arguments for an advance that they are willing to let go into print.

We therefore much hope that your committee will so amend your bill as to leave cutlery and guns as under the present law.

Very respectfully yours,

A. H. SAXTON,
President Wholesale Hardware Association.

Hon. WILLIAM MCKINLEY, JR.,
Chairman Committee on Ways and Means, Washington, D. C.

Memorandum.—The analysis of cutlery paying 35 per cent. duty can be found on page 1228 Tariff Hearings, and is as follows:

Butcher-knives and steels	$75,000
Table cutlery and carvers, etc	125,000
Scissors, farriers' knives, etc	357,000
	557,000

which is the average imports for last seven years.

SHOTGUNS.

Should the bill become a law it will increase the duty from 80 to 100 per cent. ad valorem on common double-barrel breech-loading guns. A gun which can now be bought at from $8 to $25 will then cost from $15 to $40. This will have to be paid by the one who purchases from the retail dealer. What will be the result? Not half as many of this class of guns will be sold. Many people can pay $12 for a gun who can not and will not pay $25. For whose benefit is this duty imposed?

It is for a few manufacturers who have already grown rich and prosperous under a tariff of 35 per cent. They now wish to tax cheap guns out of the country, so that all must either buy their protected home-made guns which cost from $35 to $100 or go without. What crime has the farmer's boy or the laboring man of the country committed or how has he so offended the Republican party that the Ways and Means Committee should say he shall no longer have the privilege or the opportunity to buy a cheap gun with which to shoot the squirrels that are eating his corn or kill the "varmints" that are destroying his chickens or his pigs.

TIN-PLATE.

Numerous protests have come against the proposed increase in the

tariff from 1 to 2½ cents per pound on tin-plate. Sir, tin-plate is not now made in the United States. This "infant industry" which the bill would protect has not even been begotten as yet. Accepting as true (which I deny) the Republican theory that a high tariff cheapens goods by stimulating the home competition, there is no man so silly as to publicly maintain that an increase in the duty of 1½ cents per pound will cheapen the price of tin-plate, when there is none and can not be any made here for several years to come.

Factories must be built, machinery procured, and men employed to do the work. Meanwhile every pound of tin used in making the cooking-vessels, milk-cans, and tin dippers, found in every humble home; every square foot of tin roofing laid to shelter the family hearthstone from the rains and snows of heaven; every can which contains meat, fruit, vegetables, or oysters is to be enhanced in price to the enormous extent of 125 per cent. increase over the duty which has existed since 1883.

It is said the increase is so slight no one will feel it. Sir, in each individual case and on each particular item in detail all through this bill the increase is comparatively slight I grant. But it is the multitude of increases and the aggregate whole which make a burden greater than we can bear, which causes me to protest. If one ant should sting you it would amount to little. If a thousand ants should swarm on a man's body they could quickly sting him to a painful death. This protective-tariff system in the end amounts to a million pismires stinging and worrying the life out of the tax-ridden laborers and farmers.

To show how much the proposed increase in the tariff will be on a box of tin I will read a table which I have prepared.

Duties on tin-plate.

Description.		Present duty.	Proposed duty by McKinley bill.
IC, 14 by 20	per box	$1.08	$2.43
IX, 14 by 20	do	1.36	3.06
IXX, 14 by 20	do	1.57	3.54
IXXX, 14 by 20	do	1.78	4.01
IXXXX	do	2.00	4.50
IC, 20 by 28	do	2.16	4.86
IX, 20 by 28	do	2.72	6.12
IXX, 20 by 28	do	3.14	7.08
IXXX, 20 by 28	do	3.56	8.02
IXXXX	do	4.00	9.00
ROOFING PLATES.			
IC, 14 by 20	per box	1.08	2.43
IC, 20 by 28	do	2.16	4.86

An increase of over 125 per cent. in amount of duty to be paid.

Now turn to the small items, those little things which the broad-minded statesmen on the other side think are too insignificant to be taken into account.

The tariff raises the wholesale price of stamped ware about 23 per cent. and of pieced ware about 10 per cent.

The following list of ordinary household and dairy utensils will show to what extent the present tariff on tinned plate increases the retail price of each article, what it could be sold for without any tariff, and to what further extent the Senate tariff bill would increase the retail price. The list comprises both stamped and pieced ware, and in each case the plainest and most inexpensive article is taken, so that it fairly represents the kind of tinware which the ordinary purchaser would buy.

The poor man's tinware.

Article.	Retail price.	Amount of increase owing to tariff.	Retail price, if there were no duty.	Retail price, if Senate bill were law.	Present tariff raises prices.
					Per cent.
4-quart coffee-pot	$0.20	$0.02	$0.18	$0.22	11
4-quart saucepan	.16	.02	.14	.18	11
4-quart oil-can	.20	.02	.18	.22	9
Pint drinking-cup	.05	.01	.04	.06	11
12-quart dish-pan	.20	.02	.18	.22	12
12-quart dish-kettle	.20	.02	.18	.21	13
6-quart milk-kettle	.30	.02	.28	.33	6
11½-inch colander	.15	.01	.14	.16	10
4-quart tea-kettle	.25	.01	.24	.26	5
8-inch wash-boiler	.80	.06	.74	.86	9
Bread-pan	.10	.01	.09	.11	14
5-pound lard-can	.10	.01	.09	.11	12
4-quart dairy-pan	.08	.02	.06	.10	33
10-quart dairy-pan	.15	.03	.12	.18	22
4-quart dairy-pail	.08	.02	.06	.10	33
Wash-basin	.06	.01	.05	.07	23
9-inch pie-plate	.05	.01	.04	.06	25
10-inch milk-strainer	.20	.03	.17	.23	15
4-quart dinner-kettle	.25	.03	.22	.28	13
Total	3.58	.38	3.20	3.96	

This is an interesting table. Let us compile from it an ordinary kitchen outfit for a workingman's family, in order that we may see to what extent the tariff increases the cost of some of his necessary household articles.

His good wife will not be satisfied with less than a cheap coffee-pot, a couple of sauce-pans (which she would use in cooking vegetables), an oil-can for the kerosene, one tin cup, a dish-pan, one colander, a tea-kettle, a wash-boiler, four bread-pans, a lard-pail (which could be used for a butter-kettle), one wash-basin, four pie-plates, and a dinner-kettle for her husband. These modest purchases she could make at a retail store for $3.18. If there were no tariff on tinned plate she could buy them for $2.86—a saving of 32 cents, a sum which a man living on a dollar a day would be glad to save. If the Senate bill became law, what she now can buy for $3.18 would cost her $3.50.

Who asks this increase? Is it the laboring man? No, sir. It is the sheet-iron and sheet-steel barons of Pennsylvania, those who make corrugated iron for roofing and siding, with whose product the imported tin now comes into competition. No estimate of the increased cost to consumers by this proposed tariff on tin will be complete which does not include all the advance that will take place in every kind and quality of sheet-iron, sheet-steel, and galvanized iron. Sir, I will print in my remarks a letter received from one of my constituents on this subject. It is full to overflowing with facts and arguments. I will not take time to read it:

ERIN, TENN., *May* 1, 1890.

To Hon. JOSEPH E. WASHINGTON, *Washington, D. C.:*

The undersigned, workingmen and manufacturers of tinware, cans, and consumers of roofing tin, employing large numbers of hands and having invested a large capital in the business, respectfully protest against any increase of the present duty on tin-plates and urge some reduction in that duty to comply with the universal demand that all raw material should be taxed as lightly as possible.

Your attention is briefly called to the following facts: The large increase in the consumption of tin-plate in the United States has been caused solely by its absolute cheapness bringing it into universal use. It is in no sense whatever an article of luxury. Its lightness and wonderful durability have made it the one material for a roof. It furnishes our kitchens. Two-thirds of the importations are made up into cans for our products, and these indispensable adjuncts to our daily life have been placed within the reach of the humblest purchaser. It gives employment to hundreds of thousands of busy hands in all the varied industries of our country. It is essentially a raw material, which is worked up here.

A reduction of the duty would cheapen it to the consumer. An increase of the duty would check its consumption, rendering necessary a variety of substitutes, revolutionizing the whole trade, and bringing untold disaster upon thousands of industries that have been established.

It is important to bear in mind that the multitudinous uses to which this article has been put have been in almost every instance started and developed by our own country. The farmer has probably been the principal one benefited, as the extension of canning factories all over the country has enabled him to find a market for his fruits and garden products which would otherwise either rot or never be raised. The canning business is absolutely dependent on the low price of tin-plate, and it is this low price, which has existed for the last ten years, that has caused the enormous increase in the canned-goods trade.

Our imports and increase of tin-plates is shown in the following figures:

	Boxes.		Boxes.
1852	477,714	1887	4,619,368
1862	546,493	1888	5,085,313
1872	1,531,895	1889	5,659,734
1882	3,603,764		

Some years ago canned goods were more or less delicacies. Now they are the poor man's food, being cheaper in the cans than the green article can generally be obtained for. Favored as we are above all other countries in our products, the only question to be solved was how to preserve perishable ones, which otherwise would be lost to the consumer and be unmarketable to the farmer, and this has been solved by cheap tin-plate. Another wonderful growth, consequent upon the cheapness of this article, has been in the line of cans and packages of all kinds, for other than for fruits and vegetables, and if the duty is increased many articles stand prepared to entirely take the place of tin-plates and to render their use a thing of the past.

Glass jars will take the place of tin-cans. Wood, paper, pasteboard, sheet-iron, sheet-zinc, etc., will be used for packages, increasing their cost to the consumer. The present light and durable article of roofing-tin will be supplanted by heavy sheets of iron or steel, coated with some metal like zinc, tin, or lead, the high cost of which will enable other articles to be used for a roof, deteriorating its usefulness and greatly increasing the risk of fire. Tin-plates will cease to be used for kitchen utensils, and that business, now in the hands of probably tens of thousands of small shops throughout the country, will be destroyed, and all kitchen utensils will be stamped from iron or steel by large manufacturing concerns, and tinned afterwards. Tin-plate is in fact a part of every household in some shape or form, solely on account of its cheapness, and more so by the poorer and working class, than by those who are more well-to-do, and a further tax on it, therefore, becomes a direct tax on every individual, as he will either be obliged to use it in some shape or form or will pay the higher cost of its substitute. To increase the duty, therefore, means that every household shall be taxed, that industries national to our country, representing millions of dollars and employing hundreds of thousands of hands, shall be crippled, embarrassed, and perhaps ruined, simply in order that a few iron or steel manufacturers may be put in a position to experiment in the manufacture of this commodity. It is only an experiment, as it is a further attempt to do what they have signally failed to accomplish at various times, under more favorable circumstances, and under the protection of a higher duty than is even proposed by the advance. We need not dwell upon the fact that an American tin-plate trust of some kind will inevitably follow, in addition to the burdens we already suffer of that character.

Mr. W. C. Cronemeyer, secretary of the American Tinned-Plate Association, appeared before the Subcommittee of Ways and Means on December 27, 1889, arguing on behalf of the American Tinned-Plate Association, of Pittsburgh, and for an increase on the duty on tin-plates, and stated that if the tin-plate industry could be built up in this country it would support a number of people nearly equal to the population of New York City. When we state as a fact that 26,000 men, women, and children, or possibly as many as 50,000, represent the whole number of workpeople engaged in making tin-plates from the finished bars in

Wales, where all tin-plates are manufactured, it will be seen how absurd is Mr. Cronemeyer's statement, and as the trade would be entirely changed and revolutionized by the imposition of the proposed duty, a very small number of workmen would be required to make what tin-plates might be necessary in America. But the American laborer would not be benefited in the least. Welshmen would be imported who understand this foreign industry, just as foreign workmen are imported to-day in other industries, and just as Cornish miners were imported to work our Lake Superior copper mines.

Various attempts have been made to make tin-plates in America, but they have not failed through ample protection in the tariff. They have failed because the Welsh tin-plate trade is a most peculiar one, subject to keen and widespread competition, and always laboring under the excessive power of production that has kept down the price to a uniform low level during the last ten years, with scarcely an exception, and in favor of American consumers. Tin-plates are made only in Wales. The Welsh have such peculiar aptitude and skill for making tin-plates that all attempts to establish their manufacture in other parts of Great Britain, or in any continental countries, have never succeeded. The production has always exceeded the demand. Within a period of fifteen or twenty years almost three-fourths of the makers have failed, and half this number have failed more than once. We desire to call your attention to the following sentence in the circular of this same American Tinned-Plate Association, over the signature of its secretary, Mr. W. C. Cronemeyer, and under date of September 26, 1889. This sentence is on the third page, officially stated by an officer of this association:

"And it is a fact, and we can prove it by figures, that they [tin-plates] can be made here [in Pittsburgh] and sold with profit at present selling prices."

This is a most remarkable statement, as, at that time, tin-plates were selling in Philadelphia, New York, and Baltimore at lower prices than they were ever sold before in the history of the trade.

The demand for tin-plates has been unprecedentedly vigorous and healthy, occurring conspicuously over periods when other languishing and expiring enterprises were frequent in all directions, and we ask that the large investments in the use of this article shall not be jeopardized by at least any increase in the duty.

Tin-plate now pays a higher rate of duty than was imposed upon it under any previous tariff, while in the various changes in the tariff the duty on other articles has been reduced. It is the raw material entering into the manufacture of the common necessaries of life. The duty is now so high as to prevent all export trade in stamped goods and manufactured ware, the law respecting rebates being so complicated as not to apply to these, in the interest of the American manufacturer. The Government allows a rebate of 90 per cent. of the duty on tin-plate used in making cans in which products are actually exported. As a practical matter the rebate does not affect the packing industry to any great extent, though the industry is increasing every year, but, if the duty is further advanced, the Government, by allowing this rebate, discriminates largely against its own citizens, in favor of cheap supplies for foreigners.

We give below a table showing the average price at which I C 14 by 20 bright tin for canning purposes could be purchased in the Eastern importing cities during the following years:

Months.	1884.	1885.	1886.	1887.	1888.	1889.
January	$4.75	$4.44	$4.43	$4.24	$4.75	$4.21½
February	4.66	4.41	4.36	4.25	4.79	4.20½
March	4.66	4.39	4.38	4.24	4.74	4.22
April	4.77½	4.36	4.43¾	4.30	4.69½	4.28
May	4.78½	4.30	4.38	4.28	4.53	4.27½
June	4.76½	4.29	4.33½	4.29	4.46	4.25
July	4.86	4.50	4.36	4.37	4.51	4.25
August	4.85	4.51	4.30	4.50½	4.58	4.25½
September	4.80	4.51	4.23	4.46	4.62	4.32
October	4.69	4.56	4.25½	4.46½	4.47	4.51¼
November	4.60	4.52	4.19½	4.53½	4.29½	4.73
December	4.50	4.51	4.17	4.79	4.24	4.60

It will be noticed how uniform the price has been, notwithstanding the official statement of the American Tinned-Plate Association in this same circular of September 26, where they use the following language:

"But if any one would attempt to manufacture now (September 26, 1889) he would share the same fate as those who, tempted by the enormous prices which have at times been charged to the consumers by the importers' monopoly, built works, and at first made money, but soon found that they could not withstand the pressure of the monopolists, who had temporarily, but long enough, reduced the price so low that competition meant ruin."

In further refutation of this absurd statement, it may be mentioned as a fact that the price of tin-plates has scarcely varied to any appreciable extent over a period of eight or nine years. We believe that Mr. Cronemeyer, representing the American Tinned-Plate Association, of Pittsburgh, is the only person that appeared before the Subcommittee on Ways and Means in the interest of any increase in the duty, and we have yet to learn of any workman, dealer, or consumer of the article, who wants it increased. We deem it our duty to call your attention to the fact that an attempt to increase the duty on tin-plates would be most inconsistent, and we also deem it necessary that you should have all the facts and information that we can briefly give you, so that you will be enabled to vote intelligently and understandingly upon this important matter. In every former tariff bill which has been enacted, tin-plate has occupied a specific and independent place, and has never been taken in conjunction with any other article, as it is in fact a raw material, furnishing, as already pointed out, a basis for a very large and widespread industry, which has grown to enormous proportions, and upon which depends the entire population of the United States. To curtail this industry would strike a severe blow to the manufacturing and agricultural industries of our country, and any advance in the duty would open the door and simply encourage the importation of ware and various articles manufactured by foreign mechanics, to the injury of our own established industries. The sentiment of the entire country is in favor of such an adjustment of the tariff to our established industries that they will be protected, but the universal sentiment is against the imposition of prohibitive duties in favor of monopolies or trusts. We have now the bulk of the canned goods trade. An increase of the duty would cripple that trade, which would go to more favored countries, which are at present anxiously waiting to take advantage of such an opportunity, and, once lost, that trade we should never be able to regain.

There is a popular impression that a great difference in wages exists between the rates ruling in Wales and the corresponding amounts paid the workers in iron and steel in our own country, but Mr. D. Whitehouse, of South Wales, in an address delivered November 30, 1886, stated the wages paid by him at his tin-plate works, from which it will be seen that they are good wages, particularly when the reduced cost of living in that district is taken into account, and it must be borne in mind that these wages have been advanced since, with every prospect of further advances being established from time to time as the condition of the working people is improved.

Employés.	Per week.	Per working hour.
EIGHT-HOUR SHIFTS.		*Cents.*
Rollermen	$11.84	30
Doublers	9.60	24
Furnacemen	8.69	22
Behinders (boys)	4.59	12
TWELVE-HOUR SHIFTS.		
Shearers	15.92	33
Tinmen	14.10	26
Washmen	14.10	26
Drawers (boys)	4.79	9

About five years ago an endeavor was made to ascertain how many men were employed in actual labor on tin and terne-plates in the United States. This was an exceedingly difficult thing to accomplish, but letters were sent to all parties interested, from names registered in all of the commercial books, inclosing a postal card and asking how many hands they employed. On the receipt of these postal cards it was found that 380,000 men were employed in the United States. Of course the answers were not full, and the list was incomplete, and it was estimated that there were at least 150,000 more working in small shops. It is, therefore, safe to estimate that there are now over 600,000 men in the United States who are employed directly or indirectly in the manipulation of tin-plate in its varied forms. These men have all learned this trade, and are earning good wages. It would compel most of them to seek some other employment, for which they would be almost incapacitated, if the duty were advanced.

Hundreds of thousands of American workmen would be thrown out of employment for the sake of a few thousand Welshmen, who would be brought over to make what tin-plate would be required.

The purity and safety of tin-plate should be considered in the interest of every consumer. No metal is as pure and as safe from every injurious quality as tin. It is serious to contemplate the substitution of other articles which an increased duty would encourage.

We feel obliged again to refute a further statement in this same circular of the American Tinned-Plate Association, under date of September 26, 1889. It is therein stated that the valuation of the tin-plates consumed in the United States is $35,000,000, but the official statistics show that for the fiscal year ending June 30, 1889, $21,002,209.15 of tin and terne-plates were imported, on which a duty of $7,279,459.72 was paid, making the value of tin-plate imported into the United States, less the duty, $13,722,749.43, and not $35,000,000, as stated in the Pittsburgh circular.

An adequate conception is hardly possible of the extent to which cheap tin-plate is used for packages and cans, but some idea can be had from the fact that the official statistics give the exports of beef, salmon, matches, gunpowder and other explosives, spices, lard, fancy goods, cosmetics, patent medicines, fish, oysters, and petroleum, paints and painters' colors, prepared coffee and cocoa, vegetables, milk and fruits, the value of $72,699,553 for the fiscal year ending June 30, 1888. The brief time necessary to prepare this paper for your consideration has not allowed us to obtain later statistics, which, of course, would be more favorable. As, therefore, no tin-plate is made in the United States and has never been made, except as a matter of curiosity; as pig-tin is on the free-list to encourage the manufacture of tin-plate; as the present duty is an equivalent ad valorem one, of 34.66 per cent., more than double what it formerly was; as no class of people have asked for an increase in the duty on tin-plates; as public opinion favors the reduction in the burdens of taxation upon the people, and as an advance in the duty would be a serious blow to millions of dollars invested in industries depending on cheap tin-plate, we respectfully request that no advance shall be made in the present rate of duty.

Very respectfully submitted.

HOPPES & EDWARDS.

Mr. Chairman, my time would expire and my strength would be exhausted did I attempt at one time to voice all the protests which have come to me against the passage of this most unjust measure of purely class legislation. It raises the duties on almost every article of home consumption, whether made of fiber, of wool, of metal, of glass, or of wood—every article which covers the body or is used to minister to its comforts.

LINEN GOODS.

The following will give some idea of the increased duties and costs on linen goods:

The McKinley tariff bill proposes to raise the duty on most of the linen goods imported from 35 per cent. to 50 per cent. ad valorem and 3 cents per pound additional. This would make the following changes in the cost of such goods:

Articles.	Costing now.	McKinley bill cost.
Russia crash, per yard	$0.05¾	$0.07½
Canvas for ladies' dress facings or tailors' trimmings, per yard	.08½	.10
Padding for clothiers' or tailors' trimmings, per yard	.08½	.11½
Farmers' drill, do	.10	.12
Brown duster linens, do	.11½	.13½
Lawns for dresses, do	.09	.11
Unbleached table damask, do	.27	.33
Bleached table damask, do	.42	.51
Huck towels, per dozen	1.12½	1.38
Do, do	2.25	2.75
Ladies' and children's linen handkerchiefs, do	.54	.63
Do, do	4.50	5.50
Men's linen handkerchiefs, do	2.25	2.70

It is claimed by some that linen goods can be made in this country, but past experience of those who have tried has demonstrated the impossibility of making any except the coarsest fabrics, such as crashes, which least show the imperfections of manufacture.

If the duties should be raised as proposed there would be confusion and loss of business for years, until prices could be adjusted, during which the linen trade would be very unprofitable.

In connection with this, I want to read a protest from a large manu-

facturer of shirts at Nashville. His letter shows how one industry and one set of laborers are ruined in the effort to protect another. It is as follows:

NASHVILLE, TENN., *May* 14, 1890.

DEAR SIR: The "McKinley tariff bill" proposes to raise the duty on imported linen goods from 35 to 50 per cent. If this bill is passed it will seriously damage our business. Hope you will do all in your power to defeat the bill.

Yours very truly,

A. FISH, *Manager.*

Hon. JOSEPH E. WASHINGTON,
Washington, D. C.

Coming in close connection with this let me show how the bill proposes to enhance the cost of the very buttons to be used on these shirts, but especially that class of cheaper buttons which are used by the poorer people. A protective tariff bill never fulfills its functions so thoroughly as when it lays its exactions with a heavy hand on the poor in order to give to the rich.

We are informed—

Say these merchants—

that Schedule N, clause 422, of the McKinley bill provides for an increase of duty on pearl or shell buttons of 4 cents a line, or from 103 to 358 per cent. average increase on the great bulk of pearl buttons used in, and imported into, this country, as shown by the following scale of the four chief grades used by the masses:

SCALE.

Line.	Quality No. 1.		Quality No. 2.		Quality No. 3.		Quality No. 4.	
	Present cost per gross.	Proposed cost per gross.	Present cost per gross.	Proposed cost per gross.	Present cost per gross.	Proposed cost per gross.	Present cost per gross.	Proposed cost per gross.
18	$0.58	$1.30	$0.30	$1.02	$0.19	$0.91	$0.14	$0.86
20	.65	1.45	.35	1.15	.22	1.02	.16	.96
22	.76	1.64	.40	1.28	.28	1.16	.21	1.09
24	.87	1.83	.47	1.43	.33	1.29	.24	1.20
26	1.02	2.06	.56	1.60	.39	1.43	.30	1.34
28	1.20	2.32	.66	1.80	.50	1.62	.38	1.50
30	1.39	2.59	.83	2.03	.55	1.75	.45	1.65
Proposed increase	103 per cent.		167 per cent.		273 per cent.		358 per cent.	

The scale above shows the proposed increase to be disproportionate, and we, the subscribers, respectfully beg to recommend and request that no change be made on the present tariff rate.

It is evidently to the interest of the general public that any industry which may require protection by such enormous rates as shown above had better be abandoned altogether for the general good and a tariff for revenue only be applied.

A tariff per line is a prohibitory and unreasonable tariff, and the poorer classes of citizens would suffer most from its enforcement.

For example, take a twenty-line now costing 16 cents per gross, used by the poorer classes, and a button of same size now costing 65 cents per gross, used by the wealthier classes; the specific or line duty as proposed would make the poor man pay 80 cents per gross more than it now costs him, or 500 per cent., whereas the wealthy man pays only the same specific duty of 80 cents per gross, or 123 per cent.

This example alone shows the absurdity of specific duty; but specific duty would also place disproportionate profits in the hands of a few domestic button-makers, to the disadvantage of the public. We pray, therefore, that the tariff by line or specific duty be struck from the proposed bill and only an ad valorem one be enforced, unless the articles be placed upon the free-list.

Mr. Chairman, as others have gone thoroughly through the woolen schedule, I will not consume time by discussing it, but I can not refrain from pointing out the features of the bill which tax the cheap covering of the poor man's floor. The rich who use Brussels and plush carpets can afford to pay the duty on them, but it does seem to me that the remorseless hand of the tax-gatherer might spare the covering of the humble cottage floor. As usual, the largest increase is on the cheapest goods.

	Present duty, 40 per cent. ad valorem, equal to—	McKinley bill, 15 cents per square yard and 30 per cent. ad valorem on cloth costing above 25 cents, equal to—	Increase.
On oil-cloth and linoleum:	*Cents per sq. yd.*	*Cents per sq. yd.*	*Per cent.*
Costing 10 to 25 cents per square yard	4 to 10	4 to 10	None.
Costing 30 cents per square yard	12	24	100
Costing 37½ cents per square yard	16	26½	75
Costing 50 cents per square yard	20	30	50

One hundred per cent. advance on the buyer of 30-cent goods; 50 per cent. advance on the buyer of 50-cent goods; this, too, in the face of the following concessions to manufacturers contained in the bill, namely:

A reduction of 20 per cent. on jute (placed on free-list, section 505), affording cheaper foundations.

Reduction of 50 per cent. in the duty on ochers (section 56).

Reduction of 75 per cent. in the duty on Paris white (section 61), which, taken in connection with free cork and free gums, and turpentine, rosin, and lamp-black cheaper here than abroad, makes our sixteen manufacturers a highly favored and protected class.

Under the protection the present duty of 40 per cent. ad valorem affords, and without the foregoing concessions, manufacturers have increased, multiplied, and highly prospered.

One of the largest, wealthiest, and most progressive makers in his statement before the Ways and Means Committee, page 572, admitted that "makers were very anxious to form a trust, and one could be formed in a few days with his consent."

He estimated the quantity the trade (sixteen manufacturers, located in Pennsylvania, New Jersey, New York, Massachusetts, and Maine) could produce at 22,500,000 square yards.

Increase the duty as provided in the McKinley bill and a trust can quickly compel consumers to pay the entire advance.

An advance of but 5 cents per square yard on the estimated 22,500,000 square yards yields $1,125,000 per annum.

IMPORTATIONS.

Treasury statistics for 1889 show a decline of about 20 per cent. in the importations of oil-cloth and linoleum compared with 1888. The home market is and has been for several years in the control of home makers. These are facts that challenge contradiction.

An equitable change in the duty would be to reduce it to 25 per cent. ad valorem on all cloths costing 25 cents per square yard or less, and let it remain as it is, namely, 40 per cent. ad valorem on cloths costing over 25 cents per square yard.

As the consumption of these goods increases year by year the possibilities of the profits to be derived from further protection are gigantic, and to poor consumers appalling. I appeal to your sense of justice, and all the kindly feelings you have for the humble homes of our land, the very foundation of our strength, and I submit that the time has come to reduce rather than increase their burdens.

Jute, now dutiable at 20 per cent., is to be free. (See section 592.)

Jute carpets are to be kept at 6 cents per square yard. (See section 362.) This is equal to 100 per cent. on low grades costing in Dundee 6 cents and largely used by people who can afford no better. On high grades, costing 80 cents per square yard, the tax of 6 cents is equal to but 7½ per cent ad valorem. If not amended, poor consumers are to pay 100 per cent. while others pay but 7½ per cent.

A duty of 30 per cent. ad valorem, to agree with the duty on burlaps, will amply protect manufacturers, and no higher duty should be imposed.

Cocoa matting and mats now paying 20 per cent. will be increased to 12 cents per square yard on matting and 8 cents per square foot (or 72 cents per square yard) on mats. (See section 465.) This is an increase to 80 per cent. on matting costing 15 cents per square yard; 200 per cent. on mats costing 4 cents per square foot.

The raw material is known as coir yarn and fiber, comes from India, and has been on the free-list since 1883. No higher duty than now existing should be enforced.

From jute it is but an easy step to corks. No corkwood is grown in this country. It is on the free-list. The manufactured corks ready for use have been on the dutiable list at 25 per cent. ad valorem. This has given the home manufacturers the privilege of making and selling more than three-fourths of all the corks consumed in this country, and 15 cents per pound duty would give them the absolute monopoly of the trade and absolutely prevent importation, the goal they aim for.

A duty of 5 cents per pound would be full and more than full duty, and it is by far more than any other country imposes, as can be seen by the following table:

In England corks are free.		Cents.
Corks pay—		
In France	large sizes, per pound	1½
Do	other sizes, per pound	1.1
In Holland	all sizes, per pound	1.9
In Switzerland	do	½
In Norway and Sweden	do	1
In Denmark	do	1½
In Germany	do	1½
In Austria	do	2
In Italy	do	1½
In Russia	do	4½
In Belgium	per cent. ad valorem	10
McKinley bill	per pound	15

This duty is unnecessary as a measure of protection. It is a gratuity bestowed on the manufacturer at the expense of every one who uses a cork.

Not content with taxing all the realities and necessities of life, the framers of this bill have even gone out to tax the shadows, as will be seen by the protest which I will read, sent to me by nearly every photographer in my district.

MARCH 31, 1890.

DEAR SIR: We beg to urge your strong opposition to the clause in the new tariff bill which increases the duty on photographic albumen paper from its present rate, 15 per cent., to 35 per cent. This increase will take at least $100,000 annually from the pockets of photographers through the country and increase the surplus in the Treasury by that amount without benefiting any one, for the Dresden albumen paper being far superior in its quality to any other make will be used by photographers generally throughout the country notwithstanding increased duty, since photographers can not trifle with materials actually used in the manufacture of photographs where chemical reagents are involved, but will always require the very best article that can be produced, as the quality of their work depends upon the quality of the materials they employ in producing it. It would benefit a very large class of persons if the duty were removed altogether, but if this can not be done we certainly can see no reason for increasing the duty beyond 15 per cent. If American albumenizers can not produce a satisfactory article with that amount of protection they can not do so at 25 per cent., and experience has shown that the best paper comes from abroad.

We trust that you will not fail to consider us in this matter and remain,

Respectfully yours,

Hon. JOSEPH E. WASHINGTON,
Representative of Davidson County, State of Tennessee,
House of Representatives, Washington, D. C.

Mr. Chairman, I have at last found one industry which the bill does not protect. There is the same good Republican reason for not protecting the laborers in this calling which has dictated every line of the bill.

To foster this industry would be to tax the rich. To tax the rich, who are able to furnish boodle in a "fat-frying" campaign, is contrary to Republican policy and principle. I will read the pathetic appeal, which has gone unheeded, of the New York diamond-cutters' committee:

NEW YORK, *May* 10, 1890.

DEAR SIR: We beg to call your earnest attention to that portion of the McKinley tariff bill which affects the diamond-cutting industry of this country.

When the measure was first presented to the committee the tariff was fixed at 40 per cent.; at the urgent solicitation of the diamond importers it was reduced to the present duty of 10 per cent.

Under the existing tariff of 10 per cent. only large diamonds can be cut in this country to cost a trifle cheaper than they can be imported; while smaller diamonds, and those of an inferior grade (comprising nine-tenths of the diamonds sold in this country) can not be cut here, as the difference in cost of production between here and Europe of this grade is greater than the duty on these goods.

Through the diamond trust formed in Africa the prices of fine, large, rough diamonds have so advanced that there are no purchasers for the same, and as the American cutters, under the present protection of 10 per cent. duty, can not successfully compete with the European cutters in goods of other grades they have been obliged in most instances to close their factories and discharge their workmen.

We therefore beg of you to use your influence to preserve this industry, which has been introduced here at the sacrifice of considerable energy and capital, from dying out in our country, which certainly will be the case under existing circumstances.

We therefore suggest that a specific duty of not less than $7 per carat be placed on cut diamonds imported into this country, which would enable the American cutter to produce almost any grade of goods, while the inducement for smuggling would scarcely be greater than at the present tariff of 10 per cent.

Under the proposed protection the industry of diamond-cutting, which has already surpassed European workmanship, would branch out to such magnitude as to make this country one of the largest diamond-cutting marts in the world, giving employment to thousands.

Believing that you have every intention of fostering and protecting our home industries we beg of you to use your endeavors to assist us in having the proposed duty of not less than $7 per carat placed on cut diamonds.

Trusting that you will give this matter your most earnest and favorable consideration,

Respectfully, yours,

E. L. ANRICH,
H. LEVY,
I. ZEEGEN,
Committee of Diamond Cutters.

Hon. JOSEPH E. WASHINGTON,
Washington, D. C.

Ah, sir, works of art, paintings and statues must come in free. Jewelry, precious stones, and cut diamonds, along with champagne, if not free, must come in at the lowest rate of duty which it is thought an indignant public will tolerate, even though the worthy laborers employed in diamond-cutting be driven out of employment by the competition of the underpaid pauper labor of Europe.

Sir, this bill can not be considered in full in the time allotted under the rules. On that account I have been compelled to group my facts and at this time enter the protests which I had intended to make when each section was reached to which they properly belonged. I had intended to offer an amendment in each case and call for a vote upon it; that privilege of course will be denied me. I am compelled to see this bill, a bad, wicked bill, the most iniquitous of its kind which ever passed any legislative body, go through this House by the votes of those whom the party gag has silenced and whom the party lash has whipped into line. We are powerless to prevent or even to delay this action.

Having put on record our earnest protests we will appeal to the country. Those whose business is threatened with destruction, those whose taxes are to be trebled, will speak out next Novem er. They will pass their judgment on this bill free from caucus dictation, free from the hope of reward or the fear of punishment, free from the blandishments of power-promising patronage or the force of a threat to withhold it; and I for one have no fear of the result. When the people speak the McKinley bill will be consigned to eternal oblivion.

The Tariff—New England, its People, and its Interests Ignored.

SPEECH
OF
HON. JOSEPH H. O'NEIL,
OF MASSACHUSETTS,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 20, 1890.

The House being in Committee of the Whole and having under consideration the bill (H.R. 9416) to reduce the revenue and equalize duties on imports—

Mr. O'NEIL, of Massachusetts, said:

Mr. CHAIRMAN: I want to say in reply to the remarks of the gentleman from New Hampshire [Mr. MOORE] that I, as a Northern man and a Northern Democrat, protest against the passage of this bill.

I have no doubt that the Committee on Ways and Means in making up the bill intended to prepare a measure for the whole country, but it happens, unfortunately for the section which I represent in part, that the committee overlooked New England. Every time our interests have been overlooked by this committee, and as one man from that section I protest against the action of the committee in shutting out all consideration of New England industries.

The other day my colleague [Mr. ANDREW] presented to this House a petition, signed by all the large manufacturers in New England, asking for free coal and free iron; and when it was found that among the names appended to the petition were those of two men who did not mean to sign it a great sigh of relief came up from the other side, to find that there were two manufacturers in New England who did not want free coal or free iron. [Laughter and applause on the Democratic side.]

Now, this, of course, is a political bill, and it is evident that the five men who framed it looked out for their political friends. But even on that ground I protest that they have not looked out for their friends in New England. The manufacturers of New England contributed their share of the "fat" in the last national campaign and they are entitled to some little consideration. [Laughter.]

I see by the RECORD that the gentleman from Iowa [Mr. SWENEY] has again offered the amendment twice rejected by the Committee on Ways and Means, putting a duty of 15 per cent. ad valorem on hides. This seems to be in line with the general policy of the bill: everything against New England, nothing for it. And, again, I want to call the attention of the committee to the condition of affairs as they exist in that section of the country to-day. The manufacturers of New England are almost to a man Republican, and they are almost unquestionably to a man protectionists, but thorough believers in a reduction of the tariff. They are still loyal to their convictions on both those matters to-day, and if, as is sought by the passage of this bill, their every interest is to be disregarded, then they must turn for the true protection of their very life in trade to that party which will insure them some protection.

I do not care to go into the discussion of the question of free trade or protection, for, while the last Presidential campaign showed that there were extremists who represented no one but themselves, who would entirely abolish our custom-houses had they the opportunity, no one off the stump ever declared his belief that such was the policy of the Democratic party or that the great preponderating mass of the party or its leaders even leaned that way. But it required the presentation of this bill to show that men could go just as far the other way. No one would have believed had he been told previous to the assembling of Congress, that a bill would be formulated and pushed through one branch of Congress which raised in any marked degree the tariff on any of the necessary articles of manufacture.

Yet here we have it, and it would seem that in devotion to their principles they had gone mad on the issue; for the fact that the Republican party was successful in the last election never proved that the people wanted the tariff increased, if it even proved that they were satisfied to have the duties as high as they were, and this belief is shared by many members on the other side who have on this floor entered their protest against any increase of duties; for many of the best informed political minds lay the result to causes other than the question of tariff, and the haste of this House to push through a pension bill shows that even they think that the tariff did not do it all; and the present radical increase in many of the duties smacks more of a desire to reward contributors of "fat" than a desire to frame a broad, statesmanlike, and patriotic bill.

But even in taking care of Republican interests I desire again to call the attention of the House to the fact that New England has not been taken care of. It may be statesmanship for the members from New England to say that this is a bill for the whole country, and not for New England, and that is right, for New England is not in it, nor near it; but I doubt if this immolation of their interests will entirely satisfy their constituents, and there is very little in this bill to show that any attention was given to New England interests.

You have looked out for the lime industry in one little place in New England [applause and laughter on the Democratic side], a small industry, notwithstanding the fact that every home that is built requires the use of lime; notwithstanding the fact that every man who wants to build his own little humble home, the workingman and laborer, must have lime.

Mr. RICHARDSON. Let me ask the gentleman in whose district this lime business is located.

Mr. O'NEIL, of Massachusetts. I believe a member of the Committee on Ways and Means. [Laughter and applause on the Democratic side.] I say, notwithstanding the fact that you stand here professing to be the only friends of labor, by increasing the cost of lime you have added to the cost of the home of every workingman in New England. [Applause.]

The tariff on lime was raised from 10 per cent. ad valorem to an equivalent of 35.60 per cent., or from about 3 cents to 15 cents per barrel, under this bill, notwithstanding the fact that the following petition, signed by nearly all the prominent builders in New England, was presented to the Ways and Means Committee, protesting against such advance:

To the Senators and Representatives of Massachusetts in Congress:

The undersigned, builders, contractors, manufacturers, and other persons interested in the use of lime, being citizens of Massachusetts and members of all political parties, respectfully represent:

That considerable quantities of lime are now being imported into this State from Canadian provinces.

That the rest and by far the greater part of the lime sold in this market comes chiefly from the vicinity of Rockland, Me., and that the price of Rockland lime is controlled by a combination which includes substantially all the Rockland manufacturers.

That the only relief from the arbitrary action of this combination, which attempts to control prices and limit production without regard to the interest of the consumer, is the competition of the Canadian manufacturers.

That it is currently reported that the Rockland manufacturers are making an organized effort to induce Congress to increase the present duty on lime of 10 per cent. ad valorem, with the avowed purpose of driving Canadian lime out of the markets of this country and of raising the present price of lime to dealers and consumers.

That a duty of 10 per cent., together with the difference in freight charges (equivalent to an additional protection of about 17 per cent.), furnishes a reasonable and sufficient protection to the domestic manufacturer, unless it be good policy to deprive the people of Massachusetts of the benefits of competition in this business and to allow the price of an indispensable commodity to be controlled by a few domestic manufacturers acting in concert.

We therefore protest against the passage of any act of Congress which shall increase the duty on imported lime, and we respectfully urge upon you to consider the importance for the industries of Massachusetts of not surrendering the lime business in this State into the arbitrary control of a would-be monopoly.

These men, who do the great bulk of the building in New England, know what they are talking about when they say that the interest of the consumer is sacrificed to the interest of the producer by such an increase of the tariff. Why, I know many of the master-builders of Boston and vicinity, and, as a rule, they are what we have been in the habit of terming hide-bound Republicans, but loyalty to a party which sacrifices them to the interests of new friends and new localities, not for the interests of the people in general, but to foster some powerful monopoly, has loosened the bonds, and the passage of this bill will sever entirely their connection with a party which has ceased to be what its founders were so pleased to term it, the party of the great common people, but has degenerated into a party of protected wealth and fostered monopolies, and the great common people of the country completely ignored. Perhaps it ought not be claimed that it was New England's interests for which the Ways and Means Committee were looking out when they ran up the duty on lime, for if they remain in power, and are to pass this bill, it makes mighty little difference to the people of New England how high you put up the price of lime, because the tide of emigration from those States would set in so rapidly in a few years that there would be no necessity for doing much more new building, were it not written that this closes their account and another party, more in touch with the people, will be doing business at the old stand after this Congress has lapsed into an eventful past.

It is admitted by all men that no man can get just what he wants in a bill of this kind, that all legislation is a compromise, and that concession after concession must be made in framing such a tariff bill. But I protest that some little concession should be made all around, and that all the concessions should not be made against New England interests, and that the tariff should not be so shuffled that whichever way things turn the rest of the country gets the turkey and New England gets the buzzard. Yet, turn this bill any way you like, examine it whichever way you will, and you will find that the requests of New England have been ignored.

Now, of course, this is a political bill, a measure revising the tariff by its beneficiaries, and not by the people. If, however, a deaf ear be turned to the prayers of the New England manufacturers by the Republican party, then must they go to a more merciful judge to get the relief they need and without which they can not thrive. They do not believe that the last election decided that the duties should be raised and that the issue was protection to that part of the United States which went Republican, except New England. Most of the manufacturers of New England are, or at least were, loyal to the party of Lincoln, and Sumner, and Andrew, and of Grant, but with this bill flaunted in their faces they are leaving the G. O. P. like the moving forward of a great host.

We have asked for free coal—why? Because without it our fires must be banked. We need free coal and free iron ore in New England.

We may struggle along for a few years without it, but money will go where the product will be cheaper, and every day the relief is put off weakens the hold of New England on her manufacturing industries; for to-day coal is a great necessity in all our mills, even those which have great water-power advantages, for all the large mills and factories are obliged to use steam for some purposes; so that, even with great water-power advantages, the mills still need coal, still must have steam, and it is of vital importance to them that this relief should be afforded them, and unless we get this relief we can not compete with mills and factories more favorably located for the purposes of getting fuel.

We have asked for free iron, because unless we get it our foundries must be closed.

Why, sir, I remember standing on the sidewalk in Boston during the campaign, either of 1876 or 1880, I forget which, and watching the Republican torchlight parade, and in that procession were 6,000 workingmen from the iron mills in my district.

Where are they now?

One of the rolling-mills has been closed; another employs just enough to keep the machinery from rusting; the third closed down a few months ago and to my knowledge has not been opened.

Now, what good does a tariff on coal and iron do to the coal and iron producers? Many of the iron mills have shut up their shops and more will follow for the history of the South Boston iron mills will be the history of the balance of the iron industries of New England, as it has already been of many of them, unless they are granted what they pray for. Free coal and iron would not interfere with the coal and iron mines of Pennsylvania, for they have ample markets in which no other country could compete with them outside of New England.

Nor can free iron or free coal be opposed on the score of friendship for labor, for I doubt if any man will declare on this floor that poorer wages are paid anywhere than in the coal and iron mines of Pennsylvania, and if any people are poorer paid, then God help them, for those people hardly get enough to keep body and soul together; and, poor as they are, unless some increase can be secured for their relief it would be far better to close the mines or let others than Americans be called upon to do such laborious work at such low wages. Surely the men who work in the coal and iron mines have not seen much advantage to them in the protective system as now administered, and if this bill should become a law they will see less, for the mask is now thrown off and the doctrine declared that the men who put their money into these enterprises must be protected even at the expense of the consumer and laborer.

What is to become of us? You tell us that we must go where we will be close to the fuel, where we will be close to the coal and the iron mines. Is that the way you look out for the laboring people of New England? [Applause on the Democratic side.] Is that the interest you take in their prosperity—tell them that they must migrate from the places where they were born and brought up; that they must move from the homes that are dear to them by ties of association and kindred, and make new homes among new people in new places? [Applause on the Democratic side.]

Sir, I protest, as a member from New England, that you are not treating New England right. The men who have asked you for free coal and free iron are neither Democrats nor free-traders, but they are the manufacturers of this country, and they are almost all Republicans and protectionists, but not prohibitive tariff men, and the manufacturers of New England are no exception to this rule; and when they come as Republicans, as protectionists, crying out against the abolition and destruction of their industries and asking you to save them from utter ruin, how have you done it?

When the other day a leading Republican paper in the city of Boston published an article covering one page of that paper in reference to this bill, it was headed "Widespread discontent; views of Boston merchants on the effect of the McKinley tariff bill; uncertainty as to the prices or sale of goods." Then it gives a whole page of interviews with prominent men in all branches of business, the great majority of whom were opposed to the passage of this bill and seeing nothing but a gloomy future for them should it become a law; and no newspaper reflecting the sentiments of the people of New England is giving this bill any support.

It may be that the action of the Ways and Means Committee in first putting hides upon the dutiable list, taking them off, then putting them on again, and then once more taking them off was a sop to prevent the people of New England from objecting too much to the other obnoxious provisions of the bill. But it seems that the gentleman from Iowa [Mr. SWENEY] is bound to force the fighting, and the fault will not be his if the Republican party is false to its pledge to put a duty on hides, as was promised to the cattle-kings previous to the election.

Even that great New England article of diet—the toothsome and succulent bean—could not escape the rapacious appetite of the people who were bound to smash New England. Think of good old New England without beans, Ireland without potatoes, France without wine, Germany without beer, China without tea, Boston without baked beans! So much of a New England article of food has the bean become known to be that the people of New England are called "bean-eaters;" and to punish them the tariff has been raised from 10 per cent. to an equivalent

of 34.84 per cent. Potatoes have been raised from 15 to 25 cents per bushel; and so it goes along the whole line. New England, with her poor soil, unfit for the raising of farm products in quantities sufficient for home consumption, must look elsewhere for the necessaries of life; so that upon everything, or nearly everything, that New England needs the tariff has been raised and no section or people really benefited, but all injured.

I can conceive of no reason for this discrimination against New England people and their interests. This visitation upon the heads of the unfortunate men and women who are denied a little relief which will harm no other section of the country, which will give renewed prosperity to present industries, which will reopen dormant and revive abandoned ones, which will keep employed the thousands of men and women for whose relief this bill not only gives no help by a reduction of the burdens on materials for employment, but actually increases the burdens and the prices on many of the prime necessaries of life; and this relief is asked, not in the interests of either Democracy or Republicanism and not in violation of the principles of protection, but in the interest of the men who are now threatened with engulfment by the mad craze which has seized the party in power and which is inclined to forget its old friends, the people of New England.

If that be your policy, gentlemen of the Republican party, pass this bill, ignore the cry of distress from the men of your own party all over the New England States. The Democratic party stands ready to receive with open arms the new recruits, who will not be frightened off by your bugbear cry of "free trade," for your actions on this bill have shown that there are infinitely more men on your side of the House who are willing to sink party, State, and country to protect some special interest which may monopolize the traffic in specific articles and in favor of trusts, than there are men in the Democratic party who are in favor of free trade.

But if you are determined to ignore the great New England States, I warn you now that the people of New England will not forget the insult, but just as sure as you treat her prayers with contempt, just as surely the working men and women will put their stamp of disapproval on the men who by their votes for this bill put party before country, and who by so doing will abandon the interests of the people of New England into the hands of men who are legislating for special interests and special localities and who are ignoring the interests of the thrifty and intelligent people of the New England States. While all the country must suffer, New England is made a special victim.

By this bill, if the Republican party is to stay in power, must New England rise or fall, and the verdict must be given by the Republican Representatives on this floor, and by their votes must they stand or fall; for I am not speaking for this relief and against the passage of this bill, as a member of any political party, but as a Representative of New England, as one who thinks he knows something of her wants, and as a man who believes in proper tariff revision.

I have carefully listened to the consideration of this bill, or rather the want of consideration, for there is no man on either side but will admit that no proper amount of discussion or consideration has been given to a bill of such vast importance and of such vast interest to the people of the whole country, and every day of its consideration has made me believe more and more that the committee which introduced the bill did not expect its passage beyond the doors of this House, but, having passed this stage, are content to rest on their oars and say to the people of whom they asked votes in the last campaign: "We have done everything for you in our power, we have complied with your full demands, every concession you asked has been made to you, we have stood by your interests as against the interests of the people, shut off all amendments, and stifled discussion, and if the bill fail of passage it will not rest with us, but with that other branch which is responsible, not directly to the people, but to the Legislatures of the different States and over whom we have no control."

It seems to me that it requires little foresight to see that one week of fair consideration of this bill would hopelessly divide the Republican side of this House or to predict that this bill will be so cut up and emasculated when it comes back from the Senate that in the words of the gentleman from Missouri [Mr. HATCH] its baptismal name will be forgotten and a new one adopted which will change it from the McKinley bill to the Allison bill.

But whatever happens to it the people of the country will take this bill as passed by the House of Representatives as the clearly defined will and intent of the Republican party, and the people—the great common people of the country—whose interests have been sacrificed to the interest of favored industries, and the great body of consumers, who have been forgotten while this bill increases the privileges and the powers of wealthy producers, will see to it that the party which has passed such a bill, increasing the taxes and burdens of the people when they were expected to decrease them, will be relegated to the rear.

Now I say this is not right. It is not good policy to pass such a bill, and further than that I say to you, gentlemen, that the men here who represent New England should stand by New England as other sections of the country stand by their districts, and look out for New England industries and New England constituencies before spreading themselves over the rest of the country. [Prolonged applause on the Democratic side.]

The Tariff.

SPEECH

OF

HON. W. F. WILLCOX,

OF CONNECTICUT,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 20, 1890.

The House being in Committee of the Whole and having under consideration the bill (H. R. 9416) to reduce the revenue and equalize duties on imports—

Mr. WILLCOX said:

Mr. CHAIRMAN——

Mr. MCKINLEY. If the gentleman would speak to the next amendment and let us have a vote on this one——

Mr. WILLCOX. I desire to be heard on the amendment now pending.

Mr. MCKINLEY. Very well.

Mr. CANNON. I desire to submit a paper here——

The CHAIRMAN. The gentleman from Connecticut has been recognized.

Mr. WILLCOX. Mr. Chairman, I desire to state briefly some of my objections to this bill.

Probably from no part of the country comes more vigorous protest against the enactment into law of the provisions of this bill than from the New England States. Petitions are coming here almost daily signed by hundreds of persons, representing both political parties, who are engaged in a great variety of industrial and manufacturing pursuits.

The tariff is a game that is played by politicians to secure party advantage and ascendency, and is too often won by the class whose shrewdness, persistency, money, and influence are most potential in promoting the political fortunes of individuals and the party with which they are identified.

What excuse or justification can any party or individual furnish to the toiling millions of laborers for the continuation of a system enacted as a war measure, at a time when a great and expensive war darkened the entire country? This was given as the only reason for so extraordinary a measure, and all loyal men bowed in obedience to the emergency that demanded it. It was then contemplated to be only a temporary measure which should be removed when peace should again be restored to the country. Senator MORRILL, of Vermont, the author and mover of that law, said June 2, 1864, in reporting the tariff bill:

> This is intended as a war measure, a temporary measure, and we must as such give it our support.

Mr. MORRILL declared it to be only a war and temporary measure, and it was adopted with that understanding. It has continued ever since, sanctioned and fostered by the Republican party, substantially the same as when first enacted, in spite of the protests and efforts of the Democratic party to change and modify its provisions so as to conform to the reasonable demands of business and the necessities of the people required by the altered condition of the country since that time.

Our tariff system is extremely unjust and unequal in its operation.

No government is just that does not enact and administer its laws so as to distribute as far as it is possible the burdens of taxation equally upon its people.

It is estimated that the sum necessary to meet the Government expenses during the current year will be, approximately, $360,000,000.

This enormous sum is raised, not by direct taxation on the property or means of which a man is possessed, but by an impost duty on all imported goods, the internal revenue furnishing a small portion of the amount.

Never in the history of any nation or in the previous history of this country did riches so suddenly and enormously accumulate in the hands of a few as during and since the war, under the fostering care of high protection.

It has created monopolies, concentrated wealth and power, until the country is largely under its dominating influence, which seeks to perpetuate itself by crushing every obstacle that may or is likely to stand in the way of its continued success.

These barons of commerce and trade have directed and controlled in a large measure the tariff legislation of the country for many years past, and their baneful hand is to be seen in the pending bill.

They are the boon companions of the leaders of the party now in control of the Administration and its strongest allies and supporters in political campaigns, furnishing it with the sinews of war, by which they have been able to place in power the party and men who stand by them early and late, and to hold and advance tariff legislation on whatever lines they demand.

The corrupt use of money at our elections, almost unheard of prior to the war, came in with high protective duties, and has kept pace and advanced with them as they have advanced ever since.

It is greatly to the prejudice of the industrial people of the country that the tariff has been brought into politics and made the chief political issue between the parties.

The party which champions high tariff will naturally gather about it as its chief supporters the monopolist, trust, and all sorts of combinations of capital, for the purpose of controlling and advancing prices, the consumer being compelled to buy at their market the articles necessary to supply his wants and at prices fixed by them.

This is the market, this is the feast, to which are invited the consumer, the farmer and the laboring man.

I do not believe in free trade, nor is it the doctrine of the Democratic party, and none know this fact better than our opponents. The cry of free trade is raised all along the line by the politicians, echoed and re-echoed by their friends and supporters, the beneficiaries of the protective system, the capitalist and monopolist, in order to deceive and frighten the people who suffer most by this unjust discrimination between capital and labor.

The Democratic party believe in such a tariff system as will reasonably protect every legitimate industry, industries useful and beneficial to the American people, but not such as by an artificial stimulus enrich a few at the expense of the great body of our people.

No such legislation as this was ever just or ever will be, though it may have endured for twenty-five years or more. It is a task-master that lays its heavy hand on the laborer and on the farmer and compels them to divide and contribute a portion of their hard earnings to enrich a few, that the capital invested may pay them enlarged dividends. As stated by the gentleman from Ohio [Mr. BUTTERWORTH], he could count on his fingers a number of protected establishments that had made greater profits in a single year than all the farmers in any one of the States of this Union.

The existing and proposed tariff lays the heaviest taxes upon the commodities of the laboring men and farmers and the lightest burdens upon the luxuries of the rich.

Mr. Chairman, let us consider other reasons which called into being our present tariff. It is substantially, as stated, the tariff of 1862 and 1864, enacted to meet the vast expenditures of that period which put to the severest tests the taxing power of our Government; and everything tangible and intangible was taxed from which a revenue could be derived. As remarked by a celebrated economist, "the Government followed the example of the Irishman at Donnybrook fair, 'whenever you see a head, hit it,' whenever you see a commodity, tax it."

Specific taxes were imposed on the production of iron and steel, coal-oil, paper, leather, and other articles. A general ad valorem tax was placed on other manufactures. In addition licenses were required in many callings. A general income tax was imposed. Railroad companies, steam-boats, express companies, were made to pay taxes on their gross receipts, and in line of these taxed industries followed this tariff act.

The object of this act, as stated by Messrs. MORRILL and Thaddeus Stevens, was primarily to increase duties only to such an extent as might be necessary in order to offset the internal taxes laid upon manufactured products. Both Messrs. MORRILL and Stevens were ardent protectionists.

Mr. MORRILL said in his speech introducing the bill:

> It will be indispensable for us to revise the tariff on foreign imports so far as it may be seriously disturbed by internal duties and to make proper reparation. If we bleed manufacturers we must see to it that the proper tonic is administered at the same time.

Mr. Stevens in the same debate said:

> We intended to impose an additional duty on imports equal to the tax which had been put on the domestic articles. It was by way of compensation to domestic manufacturers against foreign importers.

These gentlemen watched with great care the interest of the domestic producers, and saw to it that they did not suffer loss by the internal taxes imposed on their business, and by the increase of duties on articles made in this country they were more than compensated. The bill was in many ways crude and ill-considered; it contained flagrant abuses in the shape of duties whose chief effect was to bring money into the pockets of private individuals.

Mr. Chairman, as stated by one of our leading economists:

> The protectionist, under that tariff bill, had an opportunity for accumulating fortunes with a rapidity never known before.
>
> It is certain that their method of treating the revenue problem resulted in a most unexpected and extravagant application of protection, and made possible a subservience of the public needs to the private gains of individuals.
>
> Every domestic producer who came before Congress received what he wanted by way of duties. Protection ran riot, and this moreover not merely for the time being. The whole turn of the public mind toward the whole question of import duties became distorted not only during but since the war. The habit of putting on as high rate as one asked for became so strong that it can hardly be shaken off.

Mr. Chairman, what I have quoted from this careful observer of our tariff system as to the reckless and partial class legislation, continued for the benefit of the capitalist, was never in the history of our country so manifest as it is in the present Congress.

Notwithstanding the internal taxes imposed upon manufactured products during the war have all been swept away long ago, and which Mr. MORRILL gave as an additional reason for increasing import duties in 1864 in order that the producer should be fully compensated for any loss thereby, yet tariff duties have remained at the same excessive rate, and the bill under consideration will increase them on an average about 11 per cent.

Our friends upon the other side of this floor tell us that the last national campaign was fought upon the tariff issue and that high tariff won.

Mr. Chairman, the protected capitalists unquestionably claim it to be their victory. They insist that they have a claim upon their party which takes precedence over any of the demands and necessities of the people. They have received a *quid pro quo*, and let us say, Mr. Chairman, they have not forgotten to make their demands and wants known to this Congress, as manifested in this bill. They were not to be shaken off by empty promises. They have swarmed about the Capitol and in your committee-rooms. They were promised high tariff and they are to-day riding their high-tariff horses through these corridors and to their homes. Their hearts are gladdened as they look forward with longing eyes and outstretched hands to the time when this bill shall take effect and shall bring from the pockets of the people increased revenues to their industries.

To-day there is no possible excuse a political party can furnish to the people of this country for continuing the present high rate of duties, and much less for the increase of them as is proposed in the bill under consideration. Its effect is to make the rich richer and the poor poorer.

The bill from one end to the other discriminates in favor of the producer and against the consumer, the laboring men and farmers.

The specific duties placed during the war on the incomes of the wealthy, which raised a revenue of about seventy-two millions annually, were speedily wiped off the statute after the war closed; also the $3 tax on every ton of railroad iron and the 5 per cent. tax on the products of all manufacturers, but no substantial change has been made in that other legacy of the war, import duties, except to increase them. It requires no doubtful conjectures as to the influence which was instrumental in obtaining the repeal of the specific duties on wealth and continuing the tariff duties on articles necessary to the consumers.

Let me call the attention of the House to some of the features of this bill which our friends upon the other side say is formulated with the view of protecting our domestic industries.

The bill increases the duty upon linen from 35 to 50 per cent. ad valorem, which, it is estimated by competent judges, will add from eight to ten million dollars annually over and above the sum heretofore derived from this one article. It is used in the American manufacture of shirts, collars, cuffs, clothing for men, women, and children, and is a necessary commodity in every family.

This tax has not even the excuse of being imposed for the protection of any industry existing in this country. It seems to be a burden maliciously laid upon the consumer without a reason to justify it, even on the score of protection. The chairman of the committee [Mr. MCKINLEY] told us in his speech the other day that the tariff duties were intended to be so excessive under this bill that importations will be restricted and the revenues thereby diminished.

This frank declaration unmistakably indicates that people in moderate circumstances must not aspire to the use of foreign products; this high privilege is reserved for the capitalist who has control of the home market and who proposes to supply their demands by his own products with the tariff duty added.

These linens are not manufactured here and they can not be successfully, as the requisite climatic conditions are lacking. Flax for linens is not produced here; still there is a duty of over 17 per cent. ad valorem placed upon undressed flax, an increase over the present duty of nearly 100 per cent. This is intended by the committee to make the farmer flax-raiser feel happy, and it probably would were it of the slightest benefit to him; but since the soil and climate will not produce the quality of flax suitable for linens he receives no comfort from this well contrived scheme to placate and deceive him, but it is a step in the direction of an additional tax on articles of common necessity.

Another striking example of an undertaking of this kind is to be found in the bill under consideration relating to the protective duty on tin-plates. This is an article used by nearly every family in the land. It is manufactured into an endless variety of useful and necessary articles, giving employment to many thousand laborers. There is not one pound of tin produced from any mine in the United States.

A few individuals or corporations who claim to be the owners of undeveloped tin mines appeared before the Committee on Ways and Means and asked for a protective duty on tin-plate. Their request was granted by an obliging committee and all the people of the country are to be taxed for the benefit of corporations and individuals in aiding them in the experiment of developing their mines, to determine if it can be produced in paying quantities. They must be guarantied a sufficient protective duty in advance before they will commence their venture.

It is not to-day one of the industries of this country, but one that is prospective, and may or may not be developed into something if the Government will give it the support asked.

It is estimated by those most competent to judge that the people will be taxed $50,000,000 before these mines can be made to supply the market in the United States.

If this bill becomes a law, it is quite certain, on this one article, it will take from the pockets of the consumers nearly $16,000,000 annually to be charged entirely to the account of protection.

This is only one of the many instances in which the ordinary neces-

saries of life are loaded with taxes for the benefit of the few and without justification or reason. It is as strikingly unjust as any one measure in the proposed bill, although it does not take from the consumers as large amounts as many other of its provisions.

Let me give you a statement of the increase in the cost of tin-plate from the present law as compared with the bill under consideration:

	Present duty.	McKinley bill.
IC 14	$1.08	$2.43
IX	1.36	3.06
IXX	1.57	3.54
IXXX	1.78	4.01
IXXXX	2.00	4.50
IC, 20 by 28	2.16	4.86
IX, 20 by 28	2.72	6.12
IXX, 20 by 28	3.14	7.08
IXXX, 20 by 28	3.56	8.07
IXXXX, 20 by 28	4.00	9.00
Roofing plates:		
IC, 14 by 20 ..... per box	1.08	2.43
IC, 20 by 28 ..... do	2.16	4.86

An increase of over 125 per cent. in amount of duty to be paid to these favored beneficiaries. This enormous increase is made by a willing committee to satiate the demand of a half dozen clamoring capitalists that they may speculate and experiment with a few tin mines of which they are the owners. If a farmer or laboring man undertakes a new venture he must do so at his own risk, but in these wild schemes of the capitalist the Government is made a partner and guaranties so far as it can against loss.

It would be far cheaper and to the advantage of the people for the Government to buy these mines, paying a sum sufficient to make every one of the owners millionaires, and leave them untouched.

Mr. Chairman, let us consider for a moment the effect of duties upon the cost of some of the other articles of common necessity, and as an illustration I will direct your attention to the tariff on woolen blankets. The duty by the proposed bill (McKinley) is to be 110 per cent. We will take a blanket that will cost at our custom-house before the duty is paid $1, and add to this the import duty of 110 per cent., which makes the cost to the consumer of this blanket $2.10, being $1 for the blanket and $1.10 for the tax that goes from the custom-house into the United States Treasury and paid by the consumer when sold to him by the merchant, who never forgets to add this tax to the cost and his own profits.

The effect is exactly the same to the consumer as if he paid it to the tax collector directly.

Supposing this blanket, instead of being imported is made by the domestic producer. He has appeared before Congress and obtained this duty to be imposed on woolen blankets, claiming it to be only a reasonable protection for his industry and is only sufficient to enable him to compete with the foreign producer; therefore he must and does sell his article at or near the price of the imported blanket with the duty added in order that his business may pay him the profits he desires. The difference is, and it is a very important one to both the producer and consumer, that when the consumer buys the imported article the tax which has been paid at the custom-house goes into the United States Treasury to pay Government expenses, while on the other hand the home product increased in price to the amount of the duty goes into the pockets of the producer instead of the public Treasury.

Does the consumer stop to consider that he is paying over $2 for this necessary article, which, were it not for the duty, he could buy for $1? Does he stop to ask why this is so? Very seldom, I think, because many and probably the majority of our people do not understand the extent of import duties and the heavy burden they place upon the common necessities required in every household.

But when they do realize the injustice of excessive protection and ask for an explanation from the manufacturer, he will tell you that these duties are necessary to make his industry remunerative, and for the chief reason that he is unable to compete with the cheap labor of Europe; that it is for the interest of the community that his business should continue, as it gives employment to labor, it builds up thrifty villages of the laboring class, etc.

Mr. Chairman, the consumers, the sixty millions of people of this country, may with reason reply that, though they have no share in your profits or business, We are willing to be taxed a reasonable sum to aid your industry, but when you compel us to pay from 20 to over 100 per cent. additional upon the necessary articles and four times as much as the labor in the article cost you are placing upon us oppressive burdens which we are unable to bear. We are paying the taxes and you are taking the profits. Mr. Chairman, all parties admit that the revenue to meet Government expenditures must be raised by tariff duties.

Mr. Chairman, the gentleman from Ohio [Mr. McKINLEY] tells us that the "agricultural condition of the country has received the careful attention of the committee," and every remedy which was believed to be within the power of tariff legislation to give has been granted by this bill.

What tariff legislation can you give the farmer which will be of any practical benefit to him? Very little, except to reduce the import duties on those commodities he is obliged to buy, the cost of which is largely enhanced by the duties you have imposed upon them. In this direction you can relieve the farmer substantially, instead of compelling him to pay from his scanty savings enormous tariff duties.

The gentleman would undertake to alarm the American farmer by telling him that his products are near the "danger line" of foreign competition in the home market, for the reason that France last year produced 316,000,000 bushels of wheat; Italy, 103,000,000 bushels; Russia, 189,000,000 bushels, and the total product of Asia, including Asia Minor, Persia, and Syria, amounted to over 315,000,000 bushels.

Is this a new industry in those countries that has so suddenly sprung into existence as to bring the American farmer near the "danger line" of competition in his home market, and that therefore the increase of duty on wheat to 30 cents per bushel will provide the necessary bulwark against its importation from Russia, India, France, Persia, and Syria? It is possible that the gentleman may by his eloquent speech convince some farmer that Russia and Asia Minor and the nations named are watching their opportunity when we shall drop off, if that time shall come, the tariff on wheat, to invade our country and drive our farmers from their home market.

But I do not believe there can be serious danger from this competition until the Western farmers shall have ceased to use their grain for fuel. And besides it would seem as if the question of freight, especially from Persia to our shores, would be a rather serious obstacle in the way of successful competition with the wheat-growers of this country. But all things are possible, and there is no danger to the home market, though it be no more than a speck in far-off Persia, but what our protection friends, through their microscope, will discover it. But another obstacle stands in the way; if these countries shall send us their wheat, where will they obtain their supply to feed the many hundreds of millions of their own people, for which their production is often inadequate? These people will probably come to us at the same time with their wheat and then surely the American farmer will have reached the danger line. The one is as likely to happen as the other, and my friend upon the other side knows it.

Mr. Chairman, I do not think the question of protecting our farm products can in any aspect be more strongly put or tersely stated than in this one instance by the gentleman from Ohio [Mr. McKINLEY], and is a fair illustration as any that can be given of the necessity of import duties on farm products.

It demonstrates the consciousness of these apostles of protection of the injustice of their scheme to the farmer and the sophistries to which they resort to persuade and frighten him into submission while they rivet more tightly to his neck the slavish yoke of protective duties that bow him down under their heavy weight of taxation.

They do not claim that the "danger line" has yet been reached, for the reason that the facts and statistics would overwhelmingly disprove it, but they say that they are near it, and when it is once crossed the "pauper" farm products of Europe, Asia, and Africa will be dumped mountains high upon our shores to the destruction of home industries.

They seemingly manifest much sympathy and pity for the overworked farmer, but it is like the generosity of the highwayman to his victim, who says, "You owe me your life because I have spared it."

If the statement of the protectionist is true, the farmer is in a pitiable plight. He stands between high-tariff taxes on the one hand and threatening importations and competition from the Orient on the other, between the upper and nether millstones, which are sure to grind him to powder.

It would be doing injustice to the intelligence of the farmers to believe that they will be deceived and misled by such arguments, by these tales of woe, predicted by their professed friends, the real enemies to their thrift and prosperity.

Mr. Chairman, the questions involved in the bill under discussion are of vital consequence to the farmers and laboring men. They should be carefully and intelligently studied and considered by them, that they may not be deceived or misled by the sophistries of the political fortune hunter or a subservient press.

This bill has made a plausible attempt to aid the farmers by increasing the import duties on agricultural products. They hear their complaints from all over the land and realize that something must be done or else the farmers' votes will slip from their grasp.

Our friends upon the other side would have you believe that protective duties are the true panacea for every industry in this land without regard to its relation to industries in other countries.

If there is a depression in any branch, no matter what may be the product, they apply their universal remedy of more protection; more blood-letting is needed to relieve the system and restore health and prosperity.

They apply the old allopathic remedy, which was discarded many years ago by the great advance of science in the medical profession as debilitating and pernicious to the victim of that sort of practice.

But the dominant party on this floor are continuing their old methods with greater vigor and increasing the draughts of life-blood from the body of the industrial pursuits of this country until the farmer is

famishing and his crops are stored away in granaries awaiting a time when he may sell them for at least their cost. He as yet sees nothing in the future to encourage him.

If there should be a depression in the business of the coal barons of New Castle, and should they seek the advice of our Republican friends, they would by force of habit and to make themselves consistent urge as a remedy a high protective duty on coal, and it would be as consistent and as effective in stimulating that industry and closing their ports to other competitors as when they turn their smiling faces to the farmers and say, "We have guarded and provided for your interest in this bill by placing a protective duty on your farm products, which are near the 'danger line' of competition with the wheat of Asia Minor, Persia, and Italy, etc., in our own markets."

When Pennsylvania shall export its coal to New Castle, European and Oriental countries will be likely to export their wheat, rye, and corn into this country, and not before.

Protection to the farmer on his chief products means directly the opposite to what it does to the producers of raw material and manufacturers.

It is conceded that no country on the face of the earth can approach this in the extent of its great agricultural resources and the cheapness and facility with which farm products can be raised.

There is no civilized country in which the land is so cheap and fertile or that can be tilled at less expense. The best lands in the West can be had almost by asking for them. Hundreds of millions of acres of virgin soil, as productive as any on the globe, are waiting for the farmer to put them under cultivation.

All this is in marked contrast with the lands of other nations, most of which are densely populated and worn down by hundreds of years of cultivation, and their farming machinery and tools are far inferior to those used in this country. When they tell you that your home market is seriously threatened by the products of other nations or will be for the next one hundred years, they attempt to deceive you and to allay your protest against the excessive duties on their own products.

Examine the statistics furnished by the Government and see for yourselves the fallacy of this claim.

During the year 1889 there were imported into the United States 16 bushels of rye and exported 287,000 bushels; 1,946 bushels of wheat, and this was imported by the farmer for seed and cost him $2.05 per bushel; we exported 90,000,000 bushels of wheat at an average cost of 57 cents per bushel; we imported 2,400 bushels of corn and exported 69,000,000 bushels, and raised over 2,000,000,000 bushels.

These are our chief agricultural products in the Northern States, and the figures show the peril the farmers are in from foreign competition, and how near they are to the "danger line," and the gratitude they owe their protection friends for the relief they have so generously furnished them by increasing the duty on corn from 10 cents to 15 cents per bushel, on wheat from 20 to 30 cents per bushel, but rye they have neglected, leaving it where it stood before, at 10 cents per bushel. The above are the most profitable crops produced on our Northern farms and are the principal products.

Mr. Chairman, after the farmer has disposed of his surplus crops and received his money, he finds it necessary to take a large share, if not the whole of it, to buy those necessary articles needed in his family, in supplying his worn-out agricultural implements, and repairing his buildings, etc.

He has already discovered that a protective duty on farm products reads and sounds well, but brings him no comfort or relief; but, as he comes to read on the other side of the page, he finds the duty placed upon the articles which are produced by the woolen and other manufacturers and which he is obliged to buy, means something. He discovers that protective duties cut quite a figure with his small surplus.

When he goes to his merchant and buys a ready-made suit of clothing for himself, the price of which is $20, he counts out the $20 which he received on 35 bushels of wheat, the average price about 57 cents, and returns to his home. He has heard about the duty on woolen clothing and has a curiosity to know to what extent it has enhanced the price of his suit of clothes, and finds that the tariff tax on ready-made woolen clothing is 84.72 per cent., and learns to his surprise that he has paid $11.52 for his suit of clothes and $8.47 tax or tariff duty which goes to benefit the manufacturer.

Our protective friends tell him that tariff taxation is a grand scheme for the development of the farming industry; that the manufacturers give employment to a large number of laborers, and they in turn buy your produce, and without the factories in your neighborhood you would be without a market in which to sell them. This is the way the subject is presented to the New England farmers. If the farmers of the East will take the trouble, as many have, to examine into this question a little further they will discover that the farmers of the great West are their competitors in nearly every village and town in New England, and their products regulate the prices there; and if they go a step further they will discover that the prices for their products are regulated by the market in London and Liverpool, of which the large dealers in this country are daily advised by cable as a guide in fixing prices to the consumers at home; so it will be seen that the manufacturers in your villages have no appreciable influence in enhancing values or furnishing a market for your chief products. You pay the tariff duty of 84.72 per cent., which is directly or indirectly for the benefit of the manufacturer and the wool-producer of the West and South and the few who raise sheep in New England, although it is an industry rapidly declining in that section and is of slight benefit to them.

The wife and daughters are not overlooked in this bill. They fare no better. They are taxed for the wearing apparel they buy, as follows: On cloaks, dolmans, jackets, talmas, ulsters, or other outside garments for ladies' and children's apparel, composed wholly or in part of wool, etc., is a duty of 82.10 per cent. On women's and children's dress goods, coat linings, Italian cloths, from 92.75 per cent. to 110 per cent., more than doubling the cost of these articles, and increasing the present duty from 20 to 25 per cent. On blankets, hats, or wool and flannels composed wholly or in part of wool, the duty is from 72.21 to 110.84 per cent., an increase of about 25 per cent., more than doubling the cost of these goods to the consumer. Woolen or worsted cloths and all fabrics made on knitting-machines, and all manufactures of every description, made wholly or in part of wool, not specially provided for in this act, a duty of 130.45 to 146.99 per cent., an increase over the present tariff of about 70 per cent.

Umbrellas, 35 to 50 per cent., an increase from 30 per cent. On cotton cloths, the duties are fixed at from 40 to 56.45. The raw material of which these goods are made is produced here, and the fact being that no manufacturer in England can produce them as cheaply, so far as the element of labor enters into that cost, as can our home producer, which has been fully demonstrated, while he has an advantage over the foreign manufacturer in the cost of transportation and in every other respect, yet this article of common necessity is burdened with a tax of from 40 to 56.45 per cent., which finds its way into the treasuries of these large manufacturers and enables them from the accumulation of profits extorted from the people to build immense factories and private palaces which vie in splendor with those of the nobility of Europe, while the laborer dwells in his humble and plainly furnished cottage and is obliged to be content so long as he is able to obtain sufficient food and clothing for himself and family from his scanty earnings. Still our friends upon the other side tell us that the Government imposes these duties for the benefit of the laboring man, that he may escape contact with the pauper labor of Europe. Why is it then he does not receive these fruits of tariff legislation instead of the employer who grows rich, while the pretended beneficiary on the contrary remains poor? Somehow the tariff duty goes into the wrong pocket, and yet it is the one for which it is intended by our high-protection friends.

Let us consider for a moment the carpet schedules, and this is an article which should adorn and make comfortable every home. Brussels and tapestry carpets are subjected to a tax of 82.25 per cent., an increase over the present duty of 26 per cent. Treble ingrain and three-ply carpets are subject to a duty of 67.74 per cent., oil-cloths 66.31 per cent., an increase of 26.30 per cent.; mats and rugs share about the same fate.

These articles without an exception are a necessity in every family, and yet our friends manifest their love and sympathy for the people by increasing these already heavily taxed articles from 20 to 50 per cent. If you will take a look at the schedules in this bill in which the capitalist's interests are in the opposite direction, you will find that they are not overburdened with tariff duties. On silk partially manufactured and waste silk, the duty is 28.21 per cent.; silk goods in the piece, including ribbon, 30 per cent.; velvets, 50 per cent.; pearls and precious stones of all kinds, 10 per cent. No 100 per cent. of increase of duty on these articles so essential to the comfort and happiness of the rich.

These import duties are far below those placed on woolens, cottons, and other necessary products. It requires no stronger evidence to convince the people that this bill was formulated to meet the demands of the highly protected class, regardless of the rights and interests of all others. It will be interesting to the farmer to examine the tariff duties upon some of the other articles that directly concern him. On tiles and brick the tax is 25 per cent., an increase of 5 per cent.; lime, 35 per cent., an increase of 25 per cent.—an article used extensively as a fertilizer; chains, 43.15 per cent.; lumber, from 16 per cent. to 25 per cent.; coal, 75 cents a ton; coke, 20 per cent.; pig-iron, the basis of all our metals, 50.19 per cent.; salt, 85.26 per cent.; dressed leather, from 10 per cent. to 40 per cent., which is added to the cost of every pair of boots and shoes the farmer buys, and still the committee refuse to allow a tax on hides of even 15 per cent.; here is an article largely imported, on which a duty would be of substantial benefit to him, but this duty is struck out of the bill by direction of the manufacturer after it had been placed there by the committee.

Here is another schedule which is interesting to farmers and laboring men as a curiosity. The tax on champagne and still wines is not increased; they stand low down in the scale of import duties, the former being 55.82 the latter 16.95. These friends of protection have no sympathy for ginger ale, as it is a temperate beverage, and it has fared hard at their hands. An increase from 20 to 71.15 per cent. has been added to this article. Mineral waters, imported extensively for medicinal purposes, are subject to a tax of 54.93, an increase of 34.34 per cent. The bill makes a new and radical departure in placing a bounty of 2 cents a pound on sugar which is to be paid from the United States

Treasury to every sugar producer in this country. It extends the time for which this bounty shall be paid to July 1, 1905, a period of fifteen years. It is estimated that this bounty will take from the Treasury over $7,000,000 the first year, and that it will so stimulate the cultivation of this product in the United States that there will be a large increase yearly, and a consequent increase in the bounty to be paid to the producers, which will reach $50,000,000 annually during the last years of this period.

The authors of this bill tell us that they have so draughted it, and designedly, that no future, meaning Democratic, Congress can repeal it until it shall reach the limitation of the fifteen years, however mischievous it may prove to be. By what authority does Congress put its hands into the United States Treasury and take from it the people's money and give it to a certain and limited number of sugar-producing farmers? The same partial and kind bounty is to be extended to the silk-producers. It is establishing a dangerous and mischievous precedent. They tell us they want to make sugar-raising profitable in this country to the small number, including the great sugar trust, engaged in that industry. Upon the same principle and for the same reason could the farmers who raise wheat, rye, corn, and other products ask Congress to give them a bounty on each bushel they shall raise. They desire, also, to make their industry as profitable as the sugar and silk producer. I am opposed to the entire scheme, and if one thing is more obnoxious than another in this bill, it is this provision.

Mr. Chairman, one word more as to a protective duty on farm products, and which, in my judgment, concerns the farmers of this country more than any other and threatens greater danger to their interest than anything else that has yet been proposed. Their principal products far exceed the demands of the home market and will continue to for an indefinite time, and their surplus must necessarily find a foreign market or it will be a total loss to them. They stand in a very different relation to the foreign market from our manufacturers, as they are confined substantially, by reason of protective duties, for the sale of their commodities, to the home market, and for the same reason are unable to compete with England and other countries in the foreign market; but the contrary is true of our farm products.

It is of the utmost consequence to them that they shall continue to hold their place in the foreign market in the future as they have in the past, and there is no reason why they should not, unless prevented by unwise legislation. Nations, so far as respects imports and exports, are like immense business corporations, each of which produces a great diversity of commodities, but differing either essentially in kind or extent. The one desires from the other those commodities that it can not produce or not in sufficient quantities to supply its demand. The one has a surplus and desires to exchange that surplus article for the product it is deficient in, and thereby a trade or exchange is carried on through reciprocal relations, which are beneficial and profitable to both.

But let one nation place an embargo on the other's products by way of a prohibitory tariff, and the other is very certain to pass retaliatory measures, and commerce will be interdicted between them, to the great injury of both. A prohibitory tariff on foreign farm products will not, as I have already said, essentially benefit the farmers of this country, as they are imported to such a limited extent as not to be appreciable in the home market in respect to those products that are successfully and profitably raised in this country. But foreign nations might, and very likely would, be induced, by reason of our own restrictions upon their products, to place a prohibitory import duty upon ours. It may be said that England and other nations must necessarily buy of us to supply their wants. But our friends on the other side say to you that this is not the case; that, on the contrary, your home market is in danger from the farm products of those countries.

The effect of the present bill, if it shall become a law, will be to invite retaliatory legislation, which would tend in a marked degree to influence England to bend every energy to stimulate and increase her farming products in India, which already produces 250,000,000 bushels of wheat annually. These products could be easily doubled in Canada, and the time, by reason of inimical legislation, might and very probably would come when they could say to the farmers of the United States, "We have no further need or use for your commodities." If the effect of this bill, as has been declared by the distinguished gentleman from Ohio [Mr. MCKINLEY], in presenting it to the consideration of this House, shall be as stated, essentially prohibitory its operation would be most prejudicial and dangerous to the interest of the farmers.

If our imports are limited, our exports will be correspondingly decreased. As said by one of the ablest statesmen of our country, "It is plain that no nation, any more that a family, can long continue to buy with cash only. Industry must be used; labor must be employed; something must be raised, made, or produced in exchange, or the money gives out, and then resort must at last be had to industry, for in the course of a limited time the imports and exports must be equal."

This is no new doctrine; it has been discussed many years by political economists. No one can fail to see the force and accuracy of this proposition. During the year 1889 our imports were in round numbers $745,000,000. Our exports were $742,000,000. On this enormous sum the difference between our imports and exports, as will be seen, was less than $3,000,000. It will be interesting to notice the exported products that make up this vast amount:

Agricultural products	$532,141,490
Products of the forests	26,997,127
Products of manufactures	138,675,507
Products of mining	19,947,518
Products of fisheries	7,106,388
Other products	5,414,579

More than two-thirds of the total amount exported are farm products, and less than one-fifth are products of the manufacturers. The export trade is of vital consequence to the farmers, their interest in maintaining and encouraging exports being far greater than all others combined. No legislation should be permitted which shall injure or prejudice the exchange of their surplus crops. Consider for a moment what will be the effect of interdicting the import of foreign merchandise. There can be but one answer to this question; it will greatly diminish if not destroy our foreign market. The foreign producers thus far have exchanged their goods with us and the balances on either side have not been very large compared with the extent of the transactions. The last year it was $2,700,000 on a trade amounting to nearly $1,500,000,000.

To prohibit imports and compel, if we could, the foreign merchants and dealers to buy of us to the same extent that we have exported our goods in the past would require them to bring into this country annually between seven and eight hundred million dollars of money. In a short time it would drain them of all their money. They could not continue to deal with us on this plan for one year without creating a stringency and a contraction of their money market that would embarrass and depress their own industries. To place a prohibitory duty upon foreign products, or one that will materially diminish our present trade, as proposed by this bill, is the most serious and crippling blow that any party can inflict upon the farming industries of this country, and only in a degree less injurious to the manufacturer and all other industries conducted on fair and legitimate business methods.

The farmers are the largest consumers of our manufactured products of any class of our people. If you clog or stop the avenues which bring to them hundreds of millions of dollars yearly you are depriving them of the means to buy your products.

High tariff diminishes imports, diminishes trade, and diminishes commerce.

I believe the farming industries, by reason of their importance, deserving merit, and depressed condition, should receive the first consideration at the hands of Congress. They should have all reasonable legislation that will tend to alleviate and improve their condition. If they can be benefited by tariff duties, since all other industries are highly protected they should receive their full share; but, as I have already said, this will only add, in my judgment, to their miseries.

Penal laws should be enacted to suppress all combinations of capital and trust formed to depress the price of their products and to prohibit the manufacture of vicious, adulterated food. Duties should be largely reduced upon all articles of general use among them.

They should not be discriminated against or taxed to pay bounties to the producers of sugar and raw silk. If this bounty system is to be established it should be extended to all our chief farm products, which are more deserving than either of these industries.

Our manufacturers should receive every reasonable and fair consideration in the adjustment of tariff duties. No worthy industry should suffer injustice. It is to the advantage as well as the desire of every class and the people of all parties that thrift and prosperity should be assured to all.

The injustice and harmful effect of our tariff system is nowhere more manifest than upon the iron, steel, and wool manufacturers of New England.

These great industries are struggling for life. Some have been obliged to close their mills, others have reduced the wages of their help far below prices paid in Pennsylvania and other favored localities for similar services. The iron and steel manufacturers are compelled by reason of the duty on the raw material, which is the largest element of cost in their products, to buy and transport it from the mines of Pennsylvania and other interior States by railroad at a cost from $3 to $4 per ton, which is saved in a large measure by similar manufacturers located near those mines, and which places our mill-owners at a great disadvantage with these competitors.

New England has its natural advantages. She has an extended seacoast which furnishes cheap transportation for her commerce were her people permitted to use it; but excessive import duties deny them commerce with other nations and drive them from the sea. They are compelled to take their heavy freights from the interior by railroads. Remove the tax on raw material, New England would obtain her coal and coke from Canada and her iron from England at greatly reduced prices on both cost and freights.

These industries, upon which the prosperity of many cities and villages depends and to which tens of thousands of laborers look for employment, are blighted and throttled by protective duties at both ends: On the raw material and the manufactured product, the excessive

duty on the latter furnishing an excuse for the duty on the former. If you will give them free raw material they would be successful competitors in all the markets of the world. Speaking of the duty on copper the gentleman from Ohio [Mr. BUTTERWORTH], a leading Republican on this floor, said that—

The great producing mines of the country are the Calumet and Hecla, they produce copper cheaper than any other mines in the world, yet as a mere gratuity, as a mere bonus, we have paid these owners millions upon millions of dollars within the last ten years and not one dollar of it went into the United States Treasury, but yet they have been able to impose upon Congress as to their real needs and thus prevent a reduction of the tariff.

All this is true of the coal and mine owners of Pennsylvania and other States. They have been paid tens of millions of dollars where the copper miners have been paid one million during the same time, as a "mere gratuity," a "mere bounty," and not one dollar of it has gone into the Government Treasury, but into their own pockets, and still our Republican friends tell us that not only must these bounties be continued, but they must also be increased. Their strong and able leaders in Congress, backed by the mine-owners outside, have been able to control this pernicious legislation in their interest. They have imposed upon Congress, assigning as their chief reason for these taxes that their labor was more costly than that of the miners of Canada and England, while at the same time they were importing that same cheap labor to displace American labor.

It has been truly said, "O Liberty! Liberty! how many crimes are committed in thy name!" and it may as truly be said, "What frauds and robberies are committed in the name of American labor!" Mechanics and laborers from every land are coming to us daily by the hundreds—every steamer is freighted with them—to compete with American labor, and the protected employer avails himself of that labor when he can obtain it at a less price.

These highly protected owners of mines, or their allies, were never known, when appearing before Congressional committees, where the laboring men are never to be seen or heard to ask or suggest that there should be some law enacted to protect the American mechanic or laborer from the cheap imported foreign labor, and if such move should be made they would be the first to resist it. Their labor has always been in competition in the "home market," at the doors of every factory and other industry, with the cheapest labor of the world.

The mechanic or laborer receive no benefit from high-tariff duties, but on the contrary they are taxed from 20 to 100 per cent. on nearly every article they buy, as I have already said.

Excessive duties lessen the demand for manufactured products and consequently for labor, as they create higher prices, which necessarily diminish their consumption and contract the market.

The Democratic party will stand steadfastly by the people against all encroachments upon their rights, against class legislation, unequal taxes, bounties to a favored few in whatever form or guise they may come, whether at the instance of monopolist, combinations of capital, or from whatever source. It will, in and out of Congress, at all time, and in all places continue, as it has in the past, to combat these evils, the fruits of excessive tariff taxes, until the day of their triumphs which we believe is not far off.

Chickamauga Park.

SPEECH
OF
HON. JAMES BUCHANAN,
OF NEW JERSEY,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 28, 1890,

On the bill (H. R. 5461) to establish a national military park at the battle-field of Chickamauga.

Mr. BUCHANAN, of New Jersey, said:

Mr. SPEAKER: This bill seeks to set apart for preservation as a national military park forever, under the care and supervision of the Secretary of War, the grounds comprising the battle-field of Chickamauga. It provides as a condition precedent to this that the States of Georgia and Tennessee shall respectively cede the jurisdiction of those States over the grounds to the Government of the United States. Another condition precedent to this is the acquirement by the United States of the legal title to the land.

It seems to be a proper bill. Chickamauga witnessed one of the most fearful struggles of the late civil war. The proportion of killed and wounded to the number of men engaged was higher, I am told, than in any other engagement of recent times. While not decisive in its immediate results, it can not be denied that it was one of a series of results which made possible Sherman's historic march to the sea and the cutting in two of the confederacy. No one can tread the historic heights of Gettysburgh and observe the monuments there erected, which mark the ebb and flow of the battle's tide, without a feeling of gratefulness for the care taken to mark accurately each historic spot.

But, sir, while these efforts have their merit, we must not forget the earlier struggles of this nation for life. There are other battle-fields, much older than these, where no monument has been placed to keep alive the memory of the heroism there shown, and there are fields where defeat to us would have been the extinguishment of the cause of liberty. Sir, these fields saw no fratricidal strife. They mark the place where the sons of America together met a foreign foe.

One of these is the battle-field of Trenton, in the State of New Jersey. In the course of some remarks I had the honor to make upon the occasion of the centennial celebration of the battle of Trenton, December 26, 1876, I took occasion to say:

Called upon at a late hour to supply the place of the gentleman originally selected to share in this part of the ceremonies of the day, I deem it but simple justice to myself to say that the time I have been able to snatch from the performance of other and imperative duties has been so limited that it has been simply impossible for me to make that careful preparation for this duty which you have a right to expect, and which, alone, would be at all satisfactory to myself.

* * * * * * *

And it is to do honor to those heroic spirits and to celebrate the noblest of those deeds that we are met here to-day. One hundred years ago to-day the battle of Trenton was fought and won. Here, upon ground within the sound of my voice—ay, in part, upon this very spot—was enacted a scene which has passed into history as the turning point in the fate of the infant nation. Lend me your patient attention for a few minutes while I somewhat fully, yet as rapidly as possible, place the scene before you with its antecedents and surroundings.

The spirit of resistance which had been aroused in the breasts of the Colonists by the perverse and arbitrary measures of a wrong-minded British ministry and an obstinate King, had been rapidly strengthened by succeeding events. The insolent and brutal behavior of many of the soldiery stationed in the Colonies had still further exasperated the Colonists, and preparation was made for forcible resistance. Then came the Lexington massacre, and war, with all its attendant horrors, burst upon the land. Then followed the battle of Bunker Hill, the elevation of Washington to the commander-in-chiefship of the American forces, the rapid organization of that force into a well disciplined army, and the struggle passed from being a series of desultory skirmishes at isolated points, without plan or unity of purpose, into a regular system of carefully devised campaigns, with their strategy, and battles, and varying fortunes.

Thus passed the time from April 18, 1775, to July 4, 1776, when, upon the leaden air of that heated summer day burst the tones of the old liberty bell in the state-house at Philadelphia, proclaiming "Liberty throughout the land unto all the inhabitants thereof," and the Declaration of Independence announced to all the world that another nation was born and claimed its place among the principalities of the earth. The exultant joy with which the Declaration had been hailed soon gave way to feelings of gloom and despair. The disastrous defeat upon Long Island, the occupation of New York by the enemy, the loss of Fort Washington with its garrison, the evacuation of Fort Lee, the retreat of Washington and his army across "the Jerseys," pursued by an exultant foe, left the patriot cause in a critical condition. The army was reduced to a mere handful of men and was daily dwindling. In a few days, by reason of expiration of terms of enlistment, but about 1,500 effective men would remain. They were ill fed, unpaid, and poorly clad. The militia, little used to the stern discipline of camps, disbanded by companies and returned to their homes. The enemy were numerous, well fed and clothed, and re-enforced by hirelings from a distant land.

The British commander had announced a free pardon to all who within a certain time should sue for clemency, and many who had loudly applauded the Declaration when the skies seemed bright now that the storm beat fiercely forgot their manhood and knelt for the royal pardon, and "Tories and pardoned turncoats flaunted their red badges like autumn's melancholy leaves." The Congress had fled from Philadelphia to Baltimore. It was without funds or credit. And thus the year and the campaign were together drawing to a disastrous close, when the Commander-in-Chief determined to strike a bold blow for the cause of his country.

Christmas day, 1776, found Washington and his army upon the west bank of the Delaware, encamped near Taylorsville, then known as McConkey's Ferry. Troops were scattered along that side of the river, some of the detachments reaching nearly up to Coryell's Ferry, now New Hope, opposite Lambertville, and some under General Dickinson extending down the river to the Trenton Falls. The Pennsylvania troops, which had been raised through the persistent efforts of General Mifflin, were posted at Bristol, then known as Donk's Ferry, under General Cadwallader, and another body of Pennsylvania troops, with some others, were stationed at Morrisville, opposite Trenton Ferry, under General Ewing. The effective force under Washington's command did not exceed 2,500 men, and the term of enlistment of many of these, as already stated, would expire in a few days.

The British forces, which, under Cornwallis, had closely followed Washington in his retreat across the Jerseys, and which occupied Trenton as the Americans left it, had been spread along the eastern shores of the Delaware. Detachments were stationed at Mount Holly, Burlington, Bordentown, and Trenton. They were mainly Hessians, under the command of Count Donop. The force at Trenton, under the immediate command of Colonel Rahl, comprised three regiments of Hessians, numbering about fifteen hundred men, together with a troop of British light-horse, numbering about sixty.

Trenton at that time was a village of about seventy houses, ranged principally along King and Queen, now respectively Warren and Greene streets. The river road came into what is now Quarry street; thence curving toward the river, a little north west of the present location of Willow street, it sent off a branch down Laurel, now West State street, and, continuing, reached the building now used by the Widows' Home in West Front street, and then used as a barracks by the Hessians; from that building it continued as Water street and West Front street to Queen, now Greene street. At the foot of Queen street a bridge 16 feet in length led over the Assanpink Creek to the Bordentown road, now Broad street. King, now Warren street, extended no farther south than Water street. East of Queen street were a few buildings, among them the Friends' Meeting House (part of the walls of which are yet standing, incorporated in the present building), standing on the northwest corner of Hanover and Montgomery streets; south and east of this extended an orchard, reaching, it is supposed, on the south nearly to the creek; north was open ground. I have sought in vain for sufficient authentic data to fix beyond dispute the exact location and limits of this orchard and the eastern limit of this open ground. There is a radical disagreement in the maps, and oral traditions vary greatly.

The regiment of Lossberg occupied this meeting-house and probably some buildings in its vicinity. The regiment of Rahl occupied the Episcopal Church building which then stood upon the present site of St. Michael's, on Warren street. The regiment of Knyphausen occupied the old Hessian barracks, now

known as the Widows' Home, in Front street. Colonel Rahl had his headquarters in the house of Stacey Potts, then standing on the westerly side of Warren street, opposite Perry. It is probable, also, that other officers and perhaps some of the privates occupied other private houses. The regiment of Knyphausen had its pickets out as far as the Dickinson mansion, now Mr. Atterbury's. This residence, which, remodeled and enlarged, still stands, was then owned by General Dickinson, who was in command of the American forces upon the opposite side of the river. When he, with Washington's army, had abandoned Trenton a short time before, he had in his cellar some wine that he was loath to lose, and, before he left, buried it in his garden.

While posted upon the opposite side of the river he discovered the Hessian pickets busily engaged in digging up the bottles, breaking off the necks, and draining the contents with evident relish. Enraged at the loss of his wine and the loose regard evinced for the rights of private property, he hastily wheeled a field-piece into position and was about to send them his compliments when some one remarked, "General, if you fire upon them they will fire your house." Struck by the probable truth of the prophecy and concluding that he had better lose his wine than his house, he swallowed his wrath and left the Hessians to swallow his wine.

Rahl, recently promoted to the command of the post, had been directed to throw up intrenchments, but with foolish boasting put aside the suggestion. He did not even place his cannon in position, but used them to increase the pomp and show of his daily parades.

The blow which Washington resolved to strike was to secretly cross his forces over the river, capture the posts mentioned, and then prosecute his successes farther east in New Jersey. He made his preparations carefully. He, with the main body, under Sullivan and Greene, was to cross at McKonkey's Ferry and move south upon Trenton. Ewing was to cross at the lower ferry, below Trenton (somewhere near the present railroad bridge), and prevent the escape of the enemy to the south. Cadwallader was to cross at Donk's Ferry, near Bristol, and surprise the enemy at Burlington and Mount Holly. All were to cross after dark of the 25th and to attack the enemy before daylight of the 26th. The night of the 25th set in bitter cold, with a blinding storm of sleet and snow, and the river was filled with floating ice. Cadwallader succeeded in getting a portion of his infantry over, but finding it impossible to transport his artillery and horse, he was compelled reluctantly to return. Greene did not succeed in crossing at all. Washington, the iron-minded leader, alone succeeded. But the delay from the storm and the floating ice was so great that it was 4 o'clock in the morning before the troops were again in line and ready to move. They passed from the river up to the Bear Tavern, and thence down to Birmingham. Here the two divisions into which the troops had been formed separated, one, under Sullivan, marching down the River road, and the other, under Washington himself, crossed over by the Scotch road to the Pennington road, and thence down.

The storm and bad roads impeded their march, and it was sunrise before they reached the town. Washington's division encountered an outpost upon the Pennington road, but immediately drove it in, and marching down the Pennington road planted a six-gun battery upon the high ground at the present junction of Greene and Warren. The Hessians, completely surprised, ran out of their quarters and endeavored to form in the street, but the battery swept the streets, and the attempt to make a stand failed. In this attempt the Hessians endeavored to wheel two guns into position in Warren street, near the present "feeder" crossing, but Capt. William Washington and Lieut. James Monroe (afterward President of the United States), at the head of some troops, dashed forward, and, capturing the guns, turned them at the flying foe. The Hessians who were in Warren street ran through Church alley into Greene and the open ground beyond. Rahl here attempted again to form his men in this open ground.

Meanwhile Sullivan had reached the outer picket on the River road, driven it in, dislodged the Hessians from their barracks, and, amid a sharp fire of musketry, drove them rapidly down Water or Laurel street (in all probability Water) to Greene, where some of them, including the dragoons, crowded over the narrow Assanpink bridge and made their escape by the Bordentown road. Rushing rapidly into and up Greene street, Sullivan thus cut off any further retreat by that route. The Hessians then fell back into the orchard, and endeavored to escape by the Princeton road. Washington saw the movement, and at once threw out Hand's rifle corps and Barker's Virginia troops, so as to cut off escape in that direction. The enemy, finding themselves with every avenue of escape closed, and their commander having been meantime mortally wounded, and the battery spoken of on the high ground at the "head of town" in full play upon them, threw down their arms and surrendered.

It is difficult to determine with entire accuracy just where the final surrender took place. It is probable, in fact we almost know, that the surrounding troops were at quite a distance from each other. Sullivan's forces, in all probability, reached no point farther north or east than about where the First Presbyterian Church now stands in State street. Some maps locate Barker's Virginia troops near the Assanpink, and above its head and somewhere between Wall street and Model avenue. Others place them east of where the canal now is and not far above State street, about where Carroll street now runs. Hand's rifle corps is invariably placed upon the maps northwest of the Virginia troops, and between these troops and the battery. All agree in placing the battery at the present junction of Greene and Warren streets, with its fire sweeping down those streets, and commanding the open ground to the east. Nearly all agree in extending Washington's line of battle somewhat to the east of this, and toward Hand's rifle corps.

The Hessians, disordered and confused, probably occupied more or less of the space from Greene street east to Stockton, and from Academy street south to or near to the creek. The fugitives from Sullivan's advance, those turned back by the rifle corps and the Virginians and those flying from the upper part of town, in all probability did not come together into one compact mass, but scattered over much of this ground, surrendered where they stood, and afterwards formed into line to ground their arms. It may therefore be that the remark that "half the houses in Trenton are built upon the very spot where the Hessians surrendered" is nearer being strictly true than has been suspected.

Much that is written as history never happened. Lack of detail, unauthentic material, fervid imagination by the narrator, partial accounts accepted as complete, all these combine to prevent strict accuracy. I have striven for accuracy. I have studied carefully many separate accounts of the battle, some of them written by eye-witnesses and actors in the scene. I have inspected many maps and plans of the town and positions of the troops. I find much of contradiction and great inattention to those details, which, if given, would have been of material aid in determining disputed points. The account I have given is not vouched for as accurate beyond dispute. It is a narrative of facts as, in my judgment, they seem to be established by the weight of evidence.

Let me call attention to two points as to which it is quite apparent that public conception has been to a great extent erroneous. It seems to be not true that the Hessian commander neglected that night all precautionary measures. He had neglected to fortify. He dismissed with contempt a friendly caution to beware of an attack. He spent the latter part of the night at cards in the building on the northeast corner of State and Warren streets, and continued his game, while he placed unread a note of warning in his pocket. His troops undoubtedly enjoyed their drunken festivities the day before, with all the appliances within their reach. But in the early part of the night his outposts had been attacked by a small body of wandering militia, and hastily gathering his forces he had easily beaten the attacking party off. He then strengthened his outposts and threw out additional pickets, and made all as secure against surprise as seemed necessary. That he was completely surprised was due not so much to lack of precaution as to the suddenness and fierceness of the American onset. It swept the outposts before it, and before the alarm could be given the Americans swarmed into the town.

Another point. Historians have agreed in regretting that Ewing did not succeed in crossing his force that night. Washington himself regretfully alludes to this failure. It is quite plain that Ewing's failure prevented the miscarriage of the whole plan. Washington intended to reach the town before dawn. He was delayed and did not arrive until after sunrise. Had Ewing crossed at the lower ferry and awaited there the attack above, his troops with the coming of the dawn would have been in plain sight from the Hessian barracks, an alarm would have ensued, and Washington would have found a foe prepared and alert.

The success of this bold stroke reanimated the wavering, encouraged the faithful, and made possible the following successes.

Upon this spot where the battery was planted it is proposed to erect a monument of suitable design and character. An association has been formed, many liberal private subscriptions have been given, and the property has been purchased. It is believed that the nation should feel it a privilege to join in this patriotic work. Upon the 16th day of December, 1889, I introduced the following bill:

A bill (H. R. 8) in regard to a monumental column to commemorate the battle of Trenton.

Whereas an association by the name of "The Trenton Battle Monument Association" has been formed under and by virtue of the provisions of an act of the Legislature of the State of New Jersey, entitled "An act to provide for the incorporation of associations for the promotion of art and for the erection of museums and monuments," for the purpose of erecting a monument on the battle-field of Trenton, in the State of New Jersey: Therefore,

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the sum of $30,000 be, and the same is hereby, appropriated, out of any money in the Treasury not otherwise appropriated, to be expended by said association in erecting and completing on the battle-field of Trenton, in the State of New Jersey, a suitable monument, the money to be paid to the association aforesaid under the order of the Secretary of War: *Provided, however*, That the said "The Trenton Battle Monument Association" shall have raised, prior to the issue of said order, to be expended in the erection of said monument and in the purchase and improvement of the site, at least the sum of $30,000 additional thereto: *And provided further*, That the design for the said monument shall be approved by the Secretary of War; and the sum herein appropriated shall not be available until a contract is made to complete the work.

Similar bills were introduced in the Forty-ninth and Fiftieth Congresses. In each Congress these bills have passed the Senate and been favorably reported in the House, but in each instance they have failed in the House because not reached upon the Calendar. The report of the Committee on the Library of the House in this Congress is as follows:

The Committee on the Library, to whom was referred the bill (H. R. 8) in regard to a monumental column to commemorate the battle of Trenton, submit the following report:

The battle of Trenton has passed into history as the turning-point in the American Revolution. Its history needs no repetition here. Upon the identical spot where Washington planted the cannon which swept the two diverging streets (then known as King and Queen, now Warren and Greene), into which had poured the surprised troops of Colonel Rahl, and turned a surprise into a panic, it is proposed to erect a monument to commemorate this momentous event. The Trenton Battle Monument Association has raised by private subscription $30,000, has purchased the site, and is prepared to fully carry out the proviso in the bill. Your committee believe that in this work the Government should feel it a privilege to join. Precedent justifies it and patriotism demands it.

Your committee recommend that the bill do pass.

The Tariff.

SPEECH
OF
HON. JUSTIN R. WHITING,
OF MICHIGAN,
IN THE HOUSE OF REPRESENTATIVES,
Wednesday, May 21, 1890,

On the bill (H. R. 9416) to reduce the revenue and equalize duties on imports.

Mr. WHITING said:

Mr. CHAIRMAN: The claim that the tariff is not a tax, that the duty paid at the custom-house is not an actual item of cost which must be paid by the consumer just as certainly as a freight charge or any other charge, seems to me so absurd as hardly to admit of controversy. Yet, as this claim is repeatedly made by gentlemen upon the other side of the House, I may be pardoned in making a detailed statement covering the application of import duties upon some article of common use; and to do this let me take for illustration goods imported under clause 394 of "Schedule K, wool and manufactures of wool," in the McKinley bill, which is as follows:

On women's and children's dress goods, coat linings, Italian cloth, bunting, and goods of similar description or character, composed wholly or in part of wool, worsted, the hair of the camel, goat, alpaca, or other animals, and not specially provided for in this act, the duty shall be 12 cents per square yard, and in addition thereto 50 per cent. ad valorem: *Provided*, That on all such goods weighing over 4 ounces per square yard the duty per pound shall be four times the duty imposed by this act on a pound of unwashed wool of the first class, and in addition thereto 50 per cent. ad valorem.

It is the custom among the larger importers and jobbers of dry goods to send buyers directly to England, France, and Germany to make purchases. One of these buyers selects, for instance, goods coming under the clause above referred to; he desires the lowest price. Does he say,

"I am buying these goods to go to the United States, and I want you to throw off enough to cover the custom-house charges?" As a matter of fact, no; for he is aware that no other nation in the world but his own collects a duty on raw material and then allows a drawback on exports. He also knows that the manufacturer will not sell at less than cost wherever the goods may go; so he closes the trade and orders the goods shipped to his firm in the United States. When they reach New York or the nearest port of entry, they are placed in the custody of a Government official, to whom the duties must be paid before they can be withdrawn for sale.

Now, will any one claim that the charges paid the customs official are not of necessity a real item of cost? It would seem not. Then let us see how they affect the cost under the clause referred to:

	Cents per square yard.
On dress goods of the lowest quality, one yard wide, costing	20
The specific duty is	12
Fifty per cent. ad valorem duty	10
Making total duty	22
Being 110 per cent. duty.	
On goods costing an English shilling, or in our money	24
The specific duty is	12
The ad valorem duty, 50 per cent., is	12
Making total duty	24
Being 100 per cent. duty.	
On goods costing	30
The specific duty is	12
Ad valorem duty, 50 per cent	15
Making total duty	27
Being 90 per cent. duty.	
On goods costing	60
The specific duty is	12
Ad valorem duty, 50 per cent	30
Making total duty	42
Being 70 per cent. duty.	

It will be observed that the goods costing 20 cents per yard pay a duty of 110 per cent. while the goods costing 60 cents per yard pay only 70 per cent., but this unjust discrimination against the buyer of the lower priced goods is not an intentional plot against the poor, but is a necessity of the system, for our manufacturers must learn to make the ordinary or cheap goods first, and only need such protection on the finer goods as will keep them out of the reach of those who can not pay above a certain price.

But our Republican friends say that the greater portion of the foreign goods sold in this country are placed here in charge of agents of foreign manufacturers, and that the duty is paid by them for the privilege of entering our market. In reply to this, I say that of course the duty is paid by them, but it must still be added to the cost, or the goods must be sold at a loss; and the reasoning in favor of this claim is not entitled to as much consideration as that of the old lady who claimed that while she sold eggs at less than cost she was able to do well because of the great quantity she sold.

But I am asked, "How do you harmonize this with the fact that some of our articles of manufacture are sold in Canada, for instance, at lower prices than in our own country, although subject to an import duty when entering Canada?" It occurs solely from the fact that our more liberal patent laws and our higher duties on imports enable our manufacturers to exact such excessive prices from the very ones granting the privilege that they find it more profitable to sell the goods which accumulate at lower prices abroad than to throw them upon the home market, which, to their way of thinking, demoralizes the market, but which in fact would only have a tendency to secure to the people at home the benefits which in the advocacy of the law were promised, but which in fact never come; for only those refrain from selling abroad who limit production to the high prices obtainable at home, which latter policy works greater injury, for it deprives labor of employment.

So, Mr. Chairman, this question of who pays the duty is of utmost importance, for if it can be absolutely determined that the foreigner pays it, then it must be evident that we ought not to engage too extensively in manufacturing here, for every dollar's worth of goods we make displaces an equal amount of foreign goods, and diminishes to the amount of the duties the contributions the foreigners are willing to make towards the support of our Government. We know that our manufacturers do not pay anything into the Treasury of the United States. What compensation, then, do they offer for stopping this flow of foreign gold into our Treasury?

To be sure, they pay large amounts into the Republican campaign fund, but that is a matter they do not feel like boasting of publicly (with a few noticeable exceptions), and in fact, by reason of the frequency of the elections and the increasing assessments on account of the growing opposition to protection, some are fearful that it will work their ruin.

Last summer a Boston gentleman said in my presence that during the campaign of 1888 he was induced to contribute $2,400 toward the publication of a series of articles to prove the advantages of the "American system," and that if it had to be repeated every two or four years he doubted whether he could add it all to the cost of his goods, for, while his business was very profitable now, the conditions might suddenly change.

Upon being asked what business he was in, he replied the manufacture of "wool shoddy," and that his business was growing rapidly, being hardly able to supply the demand for his goods; that many manufacturers of cloth were using coarse stock for the body and were working this shoddy into the face of the cloth, making a very sightly and salable article which could be warranted all wool and which bore a very handsome profit. When asked as to its durability, he replied, "Oh, it does not wear very well, but so much the better, for the greater sale is assured." Such was the brag ten-dollar suit Mr. MCKINLEY exhibited in the last Congress.

This condition of things I claim is only a natural result of the system which permits manufacturers to demand high prices and does not provide corresponding purchasing power on the part of the people. It necessarily imposes the substitution of inferior and far less economical goods, which amounts to "laying up wrath against the day of wrath."

Such cases, Mr. Chairman, as the one I have just cited, and which are being practiced in many lines of manufacture, together with the persistency with which the gentlemen upon the other side of the House most solemnly declare that the sole purpose of rising the duties is to give to American labor higher wages and to benefit the American farmer by furnishing a "home market," subject their whole course to the suspicion not only of selfishness and insincerity, but of absolute fraud upon the people, and in my opinion the belief is rapidly gaining ground throughout the country that the men who favor this system do not do so from motives of philanthropy, but because they at least believe that, socially, politically, or financially, there is "pork in the pot" for them.

It does not seem difficult to me to be able to discover the reason why manufacturers want a high duty. It certainly prevents the people from buying the cheaper goods made abroad and so certainly forces them to buy the higher-priced goods made at home. In other words, it produces a scarcity of such goods, and such goods only, as the tariff prevents the importation of. What must then be the conclusion? Scarcity produced by law benefits the owner of the article. It can not benefit labor, for in effecting the scarcity labor is only partially employed, and in prohibiting the importation of the products of foreign labor it forces the immigration of labor itself. Therefore a law which provides for the scarcity of the product of labor and at the same time provides for an abundance of labor itself is manifestly so unjust and one-sided that if one will stop to reason he will readily discover how impossible it is for even organized labor to secure its natural and therefore its just share of the products of labor.

Lastly, Mr. Chairman, how does this law affect agriculture, which by reason of our vast extent of territory, peculiarly adapted to producing the best and most important staples of life, is the greatest and most important of all our industries?

The most superficial mind must discern that the chief products of agriculture must be in excess of home consumption and must, in finding a foreign market, be subjected to loss, unless permitted free exchange for the products of whatever country they enter.

Any law which restricts this must tend to glut the market at home and of necessity produce low prices.

Herein the tariff law accomplishes and completes its full purpose. It secures the scarcity and high price of the manufactured goods and abundance and low price of both labor and farm products; in view of which it is not surprising that vast railroad systems, great combinations and trusts controlling all the products of Mother Earth, great manufacturing and banking corporations, have with marvelous rapidity sprung into existence and have become the property of comparatively few men; for this law is the lever by which the entire increment, above bare subsistence, of the most energetic, skilled, and patient people the world has ever known has been literally swallowed up by sharp, unscrupulous men. It has developed an era of greed and money-worship unequaled in the history of the world, and a corresponding disregard of the rights of honest toil.

Mr. Chairman, this system is not, as its promoters claim, an "American system," except as it exceeds in boldness, hypocrisy, and amount of burdens levied any previous enforcement of the same system. The methods and workings of the present system are well illustrated in the following story of The Three Aldermen, written forty-five years ago by a Parisian merchant named Bastiat, and which I print as part of my remarks:

THE THREE ALDERMEN.

(A demonstration in four tableaux.)

First tableau.

[The scene is in the hotel of Alderman Pierre. The window looks out on a fine park; three persons are seated near a good fire.]

PIERRE. Upon my word, a fire is very comfortable when the stomach is satisfied. It must be agreed that it is a pleasant thing. But, alas! how many worthy people, like the king of Yvetot, "Blow on their fingers for want of wood!" Un-

happy creatures; heaven inspires me with a charitable thought! You see these fine trees? I will cut them down and distribute the wood among the poor.

PAUL and JEAN. What! gratis?

PIERRE. Not exactly. There would soon be an end of my good works if I scattered my property thus. I think that my park is worth twenty thousand livres; by cutting it down I shall get much more for it.

PAUL. A mistake. Your wood as it stands is worth more than that in the neighboring forests, for it renders services which that can not give. When cut down it will, like that, be good for burning only, and will not be worth a sou more per cord.

PIERRE. Oh! Mr. Theorist, you forget that I am a practical man. I supposed that my reputation as a speculator was well enough established to put me above any charge of stupidity. Do you think that I shall amuse myself by selling my wood at the price of other wood?

PAUL. You must.

PIERRE. Simpleton! Suppose I prevent the bringing of any wood to Paris.

PAUL. That will alter the case. But how will you manage it?

PIERRE. This is the whole secret. You know that wood pays an entrance duty of 10 sous per cord. To-morrow I will induce the aldermen to raise this duty to 100, 200, or 300 livres, so high as to keep out every fagot. Well, do you see? If the good people do not want to die of cold, they must come to my wood-yard. They will fight for my wood. I shall sell it for its weight in gold, and this well regulated deed of charity will enable me to do others of the same sort.

PAUL. This is a fine idea, and it suggests an equally good one to me.

JEAN. Well, what is it?

PAUL. How do you find this Normandy butter?

JEAN. Excellent.

PAUL. Well, it seemed passable a moment ago. But do you not think it is a little strong? I want to make a better article at Paris. I will have four or five hundred cows, and I will distribute milk, butter, and cheese to the poor people.

PIERRE and JEAN. What! as a charity?

PAUL. Bah! let us always put charity in the foreground. It is such a fine thing that its counterfeit even is an excellent card. I will give my butter to the people, and they will give me their money. Is that called selling?

JEAN. No, according to the merchant; but call it what you please, you ruin yourself. Can Paris compete with Normandy in raising cows?

PAUL. I shall save the cost of transportation.

JEAN. Very well; but then Normans are able to beat the Parisians, even if they do have to pay for transportation.

PAUL. Do you call it beating any one to furnish him things at a low price?

JEAN. It is the time-honored word. You will always be beaten.

PAUL. Yes; like Don Quixote. The blows will fall on Sancho. Jean, my friend, you forgot the tax on imports.

JEAN. The tax on imports! what has that to do with your butter?

PAUL. To-morrow I will demand protection, and I will induce the council to prohibit the butter of Normandy and Brittany. The people must do without butter or buy mine, and that at my price, too.

JEAN. Gentlemen, your philanthropy carries me along with it. "In time one learns to howl with the wolves." It shall not be said that I am an unworthy alderman. Pierre, this sparkling fire has illumined your soul; Paul, this butter has given an impulse to your understanding: and I perceive that this piece of salt pork stimulates my intelligence. To-morrow I will vote myself, and make others vote, for the exclusion of hogs, dead or alive; this done, I will build superb stock-yards in the middle of Paris "for the unclean animal forbidden to the Hebrews" I will become swine-herd and pork-seller, and we shall see how the good people of Lutetia can help getting their food at my shop.

PIERRE. Gently, my friends; if you thus run up the price of butter and salt-meat you diminish the profit which I expected from my wood.

PAUL. Nor is my speculation so wonderful, if you ruin me with your fuel and your hams.

JEAN. What shall I gain by making you pay an extra price for my sausages if you overcharge me for pastry and fagots?

PIERRE. Do you not see that we are getting into a quarrel? Let us rather unite. Let us make reciprocal concessions. Besides, it is not well to listen only to miserable self-interest. Humanity is concerned, and must not the warming of the people be secured.

PAUL. That it is true, and people must have butter to spread on their bread.

JEAN. Certainly. And they must have a bit of pork for their soup.

ALL TOGETHER. Forward, charity! Long live philanthropy! To-morrow, to-morrow, we will take the council by assault.

PIERRE. Oh, I forgot. One word more which is important. My friends, in this selfish age people are suspicious, and the purest intentions are often misconstrued.

PAUL. You plead for wood; Jean, defend butter, and I will devote myself to domestic swine. It is best to head off invidious suspicions.

PAUL and JEAN (leaving). Upon my word what a clever fellow!

Second tableau.

(The common council.)

PAUL. My dear colleagues, every day great quantities of wood come into Paris and draw out of it large sums of money. If this goes on, we shall all be ruined in three years, and what will become of the poor people? ["Bravo!"] Let us prohibit foreign wood. I am not speaking for myself, for you could not make a tooth-pick out of all the wood I own. I am, therefore, perfectly disinterested. ["Good!" "Good!"] But here is Pierre, who has a park, and he will keep our fellow-citizens from freezing. They will no longer be in a state of dependence on the charcoal dealers of the Yonne. Have you ever thought of the risk we run of dying of cold, if the proprietors of those foreign forests should take it into their heads not to bring any more wood to Paris? Let us, therefore, prohibit wood. By this means we shall stop the drain of specie, we shall start the wood-chopping business, and open to our workmen a new source of labor and wages. [Applause.]

JEAN. I second the motion of the honorable member, a proposition so philanthropic and so disinterested, as he remarked. It is time that we should stop this intolerable freedom of entry, which has brought a ruinous competition upon our market, so that there is not a province tolerably well situated for producing some one article which does not inundate us with it, sell it to us at a low price, and depress Parisian labor. It is the business of the state to equalize the conditions of production by wisely graduated duties; to allow the entrance from without of whatever is dearer there than at Paris, and thus relieve us from an unequal contest. How, for instance, can they expect us to make milk and butter in Paris as against Brittany and Normandy? Think, gentlemen, the Bretons have land cheaper, feed more convenient, and labor more abundant. Does not common sense say that the conditions must be equalized by a protecting duty? I ask that the duty on milk and butter be raised to a thousand per cent., or more, if necessary. The breakfasts of the people will cost a little more, but wages will rise. We shall see the building of stables and dairies, a good trade in churns, and the foundation of new industries laid. I myself have not the least interest in this plan. I am not a cowherd, nor do I desire to become one. I am moved by the single desire to be useful to the laboring classes. [Expressions of approbation.]

PIERRE. I am happy to see in this assembly statesmen so pure, enlightened, and devoted to the interests of the people. [Cheers.] I admire their self-denial, and can not do better than follow such noble examples. I support their motion, and I also make one to exclude Poitou hogs. It is not that I want to become a swineherd or pork-dealer, in which case my conscience would forbid my making this motion, but is it not shameful, gentlemen, that we should be paying tribute to these poor Poitevin peasants who have the audacity to come into our own market, take possession of a business that we could have carried on ourselves, and, after having inundated us with sausages and hams, take from us, perhaps, nothing in return? Anyhow, who says that the balance of trade is not in their favor and that we are not compelled to pay them a tribute in money? Is it not plain that if this Poitevin industry were planted in Paris it would open new fields to Parisian labor? Moreover, gentlemen, is it not very likely, as Mr. Lestebandois said, that we buy these Poitevin salted meats, not with our income, but our capital? Where will this land us? Let us not allow greedy, avaricious, and perfidious rivals to come here and sell things cheaply, thus making it impossible for us to produce them ourselves. Aldermen, Paris has given us its confidence, and we must show ourselves worthy of it. The people are without labor, and we must create it, and if salted meats cost them a little more, we shall at least have the consciousness that we have sacrificed our interests to those of the masses, as every good alderman ought to do. [Thunders of applause.]

A VOICE. I hear much said of the poor people: but, under pretext of giving them labor, you begin by taking away from them that which is worth more than labor itself—wood, butter, and soup.

PIERRE, PAUL, and JEAN. Vote! Vote! Away with your theorists and generalizers! Let us vote. [The three motions are carried.]

Third tableau.

(Twenty years after.)

SON. Father, decide; we must leave Paris. Work is slack and everything is dear.

FATHER. My son, you do not know how hard it is to leave the place where we were born.

SON. The worst of all things is to die there of misery.

FATHER. Go, my son; and seek a more hospitable country. For myself, I will not leave the grave where your mother, sisters, and brothers lie. I am eager to find, at last, near them, the rest which is denied me in this city of desolation.

SON. Courage, dear father; we will find work elsewhere—in Poitou, Normandy, or Brittany. They say that the industry of Paris is gradually transferring itself to those distant countries.

FATHER. It is very natural. Unable to sell us wood and food, they stopped producing more than they needed for themselves, and they devoted their spare time and capital to making those things which we formerly furnished them.

SON. Just as at Paris they quit making handsome furniture and fine clothes in order to plant trees and raise hogs and cows. Though quite young, I have seen vast store-houses, sumptuous buildings, and quays thronged with life on those banks of the Seine which are now given up to meadows and forests.

FATHER. While the provinces are filling up with cities, Paris becomes country. What a frightful revolution! Three mistaken aldermen, aided by public ignorance, have brought down on us this terrible calamity.

SON. Tell me this story, my father.

FATHER. It is very simple. Under the pretext of establishing three new trades at Paris, and of thus supplying labor to the workmen, these men secured the prohibition of wood, butter, and meats. They assumed the right of supplying their fellow-citizens with them. These articles rose immediately to an exorbitant price. Nobody made enough to buy them, and the few who could procure them by using up all they made were unable to buy anything else; consequently all branches of industry stopped at once—all the more so because the provinces no longer offered a market. Misery, death, and emigration began to depopulate Paris.

SON. When will this stop?

FATHER. When Paris has become a meadow and a forest.

SON. The three aldermen must have made a great fortune.

FATHER. At first they made immense profits, but at length they were involved in the common misery.

SON. How was that possible?

FATHER. You see this ruin; it was a magnificent house, surrounded by a fine park. If Paris had kept on advancing, Master Pierre would have got more rent from it annually than the whole thing is now worth to him.

SON. How can that be, since he got rid of competition?

FATHER. Competition in selling has disappeared; but competition in buying also disappears every day, and will keep on disappearing until Paris is an open field, and Master Pierre's woodland will be worth no more than an equal number of acres in the forest of Bondy. Thus a monopoly, like every species of injustice, brings its own punishment upon itself.

SON. This does not seem very plain to me, but the decay of Paris is undeniable. Is there, then, no means of repealing this unjust measure that Pierre and his colleagues adopted twenty years ago?

FATHER. I will confide my secret to you. I will remain at Paris for this purpose; I will call the people to my aid. It depends on them whether they will replace the tax on its old basis and dismiss from it this fatal principle which is grafted on it and has grown there like a parasite fungus.

SON. You ought to succeed on the very first day.

FATHER. No; on the contrary, the work is a difficult and laborious one. Pierre, Paul, and Jean understand one another perfectly. They are ready to do anything rather than allow the entrance of wood, butter, and meat into Paris. They even have on their side the people, who clearly see the labor which these three protected branches of business give, who know how many wood-choppers and cow-drivers it gives employment to, but who can not obtain so clear an idea of the labor that would spring up in the free air of liberty.

SON. If this is all that is needed, you will enlighten them.

FATHER. My child, at your age one doubts at nothing. If I wrote the people would not read, for all their time is occupied in supporting a wretched existence. If I speak the aldermen will shut my mouth. The people will therefore remain long in their fatal error; political parties which build their hopes on their passions attempt to play upon their prejudices rather than to dispel them. I shall then have to deal with the powers that be, the people and the parties. I see that a storm will burst on the head of the audacious person who dares to rise against an iniquity which is so firmly rooted in the country.

SON. You will have justice and truth on your side.

FATHER. And they will have force and calumny. If I were only young! But age and suffering have exhausted my strength.

SON. Well, father, devote all that you have left to the service of the country. Begin this work of emancipation, and leave to me for an inheritance the task of finishing it.

Fourth tableau.

(The agitation.)

JACQUES BONHOMME. Parisians, let us demand reform of the tax; let it be put back to what it was. Let every citizen be free to buy wood, butter, and meat where it seems good to him.

THE PEOPLE. Hurrah for Liberty!

PIERRE. Parisians, do not allow yourselves to be seduced by these words. Of what avail is the freedom of purchasing if you have not the means? and how can you have the means if labor is wanting? Can Paris produce wood as cheaply as the forest of Bondy? or meat at as low price as Poitou? or butter as easily as Normandy? If you open the doors to these rival products what will

become of the wood-cutters, pork-dealers, and cattle-drivers? They can not do without protection.

THE PEOPLE. Hurrah for Protection!

JACQUES. Protection! But do they protect you, workmen? Do not you compete with one another? Let the wood-dealers then suffer competition in their turn. They have no right to raise the price of their wood by law unless they also, by law, raise wages. Do you not still love equality?

The PEOPLE. Hurrah for Equality!

PIERRE. Do not listen to this factious fellow. We have raised the price of wood, meat, and butter, it is true; but it is in order that we may give good wages to the workmen. We are moved by charity.

The PEOPLE. Hurrah for Charity!

JACQUES. Use the tax, if you can, to raise wages, or do not use it to raise the price of commodities. The Parisians do not ask for charity, but justice.

The PEOPLE. Hurrah for Justice!

PIERRE. It is precisely the dearness of products which will, by reflex action, raise wages.

The PEOPLE. Hurrah for Dearness!

JACQUES. If butter is dear it is not because you pay workmen well; it is not even that you may make great profits; it is only because Paris is ill situated for this business, and because you desired that they should do in the city what ought to be done in the country and in the country what was done in the city. The people have no more labor, only they labor at something else. They get no more wages, but they do not buy things as cheaply.

The PEOPLE. Hurrah for Cheapness!

PIERRE. This person seduces you with his fine words. Let us state the question plainly. Is it not true that if we admit butter, wood, and meat we shall be inundated with them and die of a plethora? There is, then, no other way in which we can preserve ourselves from this new inundation, than to shut the door, and we can keep up the price of things only by causing scarcity artificially.

A VERY FEW VOICES. Hurrah for Scarcity!

JACQUES. Let us state the question as it is. Among all the Parisians we can divide only what is in Paris; the less wood, butter, and meat there is, the smaller each one's share will be. There will be less if we exclude than if we admit. Parisians, individual abundance can exist only where there is general abundance.

THE PEOPLE. Hurrah for Abundance!

PIERRE. No matter what this man says, he can not prove to you that it is to your interest to submit to unbridled competition.

The PEOPLE. Down with competition!

JACQUES. Despite all this man's declamation, he can not make you enjoy the sweets of restriction.

The PEOPLE. Down with restriction!

PIERRE. I declare to you that if the poor dealers in cattle and hogs are deprived of their livelihood, if they are sacrificed to theories, I will not be answerable for public order. Workmen, distrust this man. He is an agent of perfidious Normandy; he is under the pay of foreigners; he is a traitor, and must be hanged. [The people keep silent.]

JACQUES. Parisians, all that I say now I said to you twenty years ago, when it occurred to Pierre to use the tax for his gain and your loss. I am not an agent of Normandy. Hang me if you will, but this will not prevent oppression from being oppression. Friends, you must kill neither Jacques nor Pierre, but liberty if it frightens you or restriction if it hurts you.

The PEOPLE. Let us hang nobody, but let us emancipate everybody.

The Tariff.

SPEECH

OF

HON. RICHARD P. BLAND,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 20, 1890.

The House being in Committee of the Whole and having under consideration the bill (H. R. 9416) to reduce the revenue and equalize duties on imports—

Mr. BLAND said:

Mr. CHAIRMAN: I wish to say only a few words. I believe we have already a tax on almost everything entering into building operations, and now we propose to tax granite, marble, stone, etc., raising the tariff all along the line to a prohibitory duty.

Gentlemen on the other side, in the last few votes which have been taken, have confessed before the country that the whole tariff system is but a bounty operating for the benefit of privileged classes. In order to protect individuals and classes and put money into their pockets, instead of putting it into the Treasury, you repeal a purely revenue tax, the tax on sugar, and in lieu of it you provide for a direct bounty, a confession, I say, that the whole protective system is but a bounty.

Gentlemen here have no regard for revenue. They have not been consulting the question of revenue or the interests of the people of the country, but only the interests of classes. There has been a scramble and a fight on the other side of the House as to who should have the most in this division of bounties and special privileges given by the bill.

The lead men came along and the earthenware men, and they have all got something, but they have crowded out my friend from Louisiana [Mr. COLEMAN], who came here, he says, as a protectionist, and the Republicans came down in his district, my friend from Michigan, whom I now see walking down the aisle [Mr. BURROWS], amongst them, and made him promises——

Mr. COLEMAN. I beg the gentleman's pardon. It was not in my district; it was the Third. I had no help.

Mr. BLAND. Well, I suppose they thought you were all right. Any way these promises were made all through the country, and yet when you come here you find that they were always false promises; at least they have proven to be false. I do not mean, of course, to say that the gentlemen who made them to you designedly misrepresented, but that the result has not justified your expectations. You come here and find these very gentlemen voting against their own promises, and so the only purely revenue duty in the whole bill is stricken from it. The tariff on sugar ought to have been reduced probably 50 per cent., but to repeal it for the sole purpose of an excuse to raise the duties on woolen and cotton goods, tin-plate, hardware, crockery, farm implements, etc., is not justified. The sugar duty is in fact a purely revenue duty; very little of it goes to private pockets.

Wanamaker, I believe, has ribbons, bands, and things of that sort all on the free-list; magnificent paintings that cost large sums of money are brought in free——

Mr. FLOWER. Why, has the gentleman from Illinois [Mr. PAYSON] returned?

Mr. BLAND. All of these things come in free and the poor man is taxed on the little he is able to buy. The whole bill is intended for favoritism, for monopoly, to accommodate the Republican party in order that they may arrange not only to pay the debts of the last election, but the promises for the next. [Applause.] [Cries of "Vote!" "Vote!"]

Mr. Chairman, we are now in the closing hours of the consideration of this bill. No amendments have been made to the bill. No fair opportunity for debate and amendments has been permitted. We have been gagged by an order adopted by the majority which in a few hours from now cuts off all opportunity for amendments and all debate. That enforces the previous question and direct vote on the bill. We have not reached one-half of the paragraphs of the bill.

The people whom I have the honor to represent here are for the most part farmers. Farming is in the main the basis of their wealth. The merchant, mechanic, and laborer, the lawyer and the doctor, or of whatever profession or calling, are dependent upon the prosperity of the agriculturists. Their interests are interests in common. There is no necessary antagonisms among them. They must all suffer together or prosper together.

From self-interest they will act together on these questions. Hence I know that anything that could be done here to relieve the languishing industries of the farmer would be heartily approved and sustained by all classes.

To this end I offered amendments to this bill to secure wider markets for the agricultural communities of this country. They are to be found, and the vote on them, in the CONGRESSIONAL RECORD of May 13 and 15. The amendment was voted down by a strict party vote.

I here subjoin the amendment and my remarks upon them at the time:

Mr. BLAND. Mr. Chairman, I offer the amendment which I send to the desk.

The amendment was read, as follows:

Amend by adding, after the word "namely," in line 7, the following words: "That in all cases where it can be shown by proof satisfactory to the Secretary of the Treasury that any goods, wares, or merchandise imported into this country have been purchased abroad by exchange of farm products for such goods, or where such goods have been purchased with the proceeds or avails of farm products in foreign countries, such goods, wares, or merchandise shall be imported free of duty."

Mr. BLAND. That is substantially the amendment which I offered to the administrative bill about the middle of January last. It provides that where it is shown to the satisfaction of the Secretary of the Treasury that farmers, through their own agencies or otherwise, shall export the products of their farms to foreign countries and there exchange them for other products of such countries, the products of such foreign countries thus purchased or obtained by exchange may be imported free of duty. If that amendment is adopted it will go very far toward abolishing all trusts, at least all trusts on farm products.

We hear complaints throughout the country, especially from the farmers' organizations, that their food products are purchased and held by trusts for larger prices and that the sale of their cattle and hogs and other products is in the hands of Chicago trusts. In other words, by our high tariff duties upon foreign products we have virtually compelled the farmer of this country to look only to the home market for the disposition of his goods, because when he takes them abroad and exchanges them for foreign products, as soon as the articles for which he has exchanged them reach our ports they are taxed from 50 to 100 per cent., and thus the whole profit of the exchange is confiscated at the custom-house.

Now, if the farmer had the right, as this amendment would give him, to take his products to foreign countries and there exchange them for his clothing, for example, or his refined sugar, for instance, his farm implements, the things that he uses upon his farm, that difficulty would be removed, and he would have a free and open market the world over, a market a little too large for any trust to control, and he could import the goods which he obtained in exchange for his products without having his profits confiscated at the custom-house. The effect would be to make the world itself the warehouse of the farmer.

We hear that the Alliances in the West, the Northwest, and the South are demanding that we shall establish in the several counties throughout the country warehouses in which the farmers may store their prod-

ucts and have issued upon them by the Government 80 per cent. of their value in money, so that they may be enabled to hold their products free from the control of trusts and monopolies. Instead of that, why not give them the natural freedom which they ought to have in the sale of their products? Why not let them have the markets of the world for their warehouse, so that at all times and under all circumstances they should have a steady and a certain market for everything which they produce?

This amendment was introduced May 12, and is to be found in the RECORD of next day.

The RECORD of May 15 shows the following:

Mr. BLAND. I offer the following amendment, to come in at the end of the paragraph under consideration.

The Clerk read as follows:

Add after line 14, page 14, the following:

"That it shall be lawful for the farmers of each State and Territory of the United States to organize or establish for themselves such agencies as they may deem expedient for the purpose of exporting, selling, and exchanging the product of the farms of the United States in foreign markets, and to import free of duty into this country all articles of commerce procured in such foreign markets by the sale or exchange of the farm products of this country: *Provided*, That all subjects of trade or commerce so imported free of duty shall be for the use and benefit of the farmers so importing the same and for their own consumption, and shall not be sold in the markets of this country in competition with like articles on which a duty shall have been paid. That it shall be the duty of the Secretary of the Treasury to make all needful rules and regulations to properly carry into effect the foregoing provisions relating to the sale and exchange of the products of American farms in foreign markets."

Mr. BLAND. Mr. Chairman, that is a modified form of the amendment which I offered the other day when a bill was under consideration. I will have printed as a part of my remarks the amendment that I offered in this connection heretofore. The amendment that I offered on a former occasion provides for the exchange of products of American farms in foreign countries and the importation of articles for which the products of the farms were exchanged free of duty without any limitation. But that amendment, on a strict party vote in this House, our friends on the other side all voting against it, was voted down.

Now, I offer a modified proposition, and certainly as it is now modified no gentleman who pretends to represent a farming constituency that is languishing to-day for the want of a market for its products can vote against it. The farmers are now organized and have their stores all through the country, which are organizations for the purpose of trade, and this simply enables them to extend their trading powers to other countries. It enables them to ship their surplus products and get in exchange for them such articles of commerce as they consume among themselves. These articles are to be brought in free of duty, and not to be put upon the market in competition with articles that pay a duty.

What fairer proposition can be made than that? Where is the objection that can be raised to a proposition that permits the agriculturists of this country who export about 80 per cent. of all our exports, by which our foreign trade is practically carried on, to exchange their surplus products for articles abroad and for such commodities as they use and consume on their farms?

Gentlemen on the other side say that these high protective duties make their commodity cheaper to the farmer.

Mr. WALKER, of Massachusetts. Yes.

Mr. BLAND. If that is so, the amendment itself will have no effect. I dare you to put it to the test. I deny that it makes articles cheaper here or that the tariff rates reduce the price of commodities beyond what they can be purchased at in other countries. Why not give them this poor privilege? for they are bearing all the brunt of tariff burdens in the first instance, at least, because it is on their articles of commerce that we sustain the tariff system. We bring from abroad all the imports on which the tariff is levied and the duties collected. In the first instance they pay it by advancing their commodities, so to speak.

Now, why not allow them the privilege of a drawback, the same as you permit a drawback on all articles of manufacture sent out of this country? You give drawbacks on articles which are exported. Why not give it to them?

The amendment which I offered a few days ago is as follows:

That in all cases where the products of the farms of the United States shall be sent abroad to foreign markets and there exchanged for goods, wares, or merchandise, or where such goods, wares, or merchandise shall have been purchased with the avails or proceeds arising from the sales of farm products, then, and in all such cases, such goods, wares, and merchandise so purchased or exchanged for in foreign countries shall be admitted free of duty.

SEC. 2. That proof of such exports and imports herein provided for shall be made under such rules and regulations as may be necessary to carry out in good faith the provisions of this act; and it shall be the duty of the Secretary of the Treasury from time to time to adopt and promulgate such rules.

[Here the hammer fell.]

[Cries of "Vote!" "Vote!"]

Mr. KERR, of Iowa. Mr. Chairman, the first objection there is to the gentleman's proposition is that if his proposition were adopted it would abolish our tariff system altogether, and it would take away from us all the revenues that were received from that system.

Mr. BLAND. Then the gentleman admits that the farmers support the whole tariff system? [Applause on the Democratic side.] I expected to bring that out in this discussion.

Mr. Chairman, I desire to have read as part of my remarks an editorial from the St. Louis Republic, to show how the farmers of this country are prospering as compared with the manufacturing industries.

The Clerk read as follows:

WHERE THE MONEY IS.

It is pretty well known that when one of those revulsions in business, called panics, comes over the country money disappears in the West and goes to the East, finding its hiding places in the bank vaults, safe deposits, and money drawers of the manufacturing States. Farm values and crop prices fall, farms become unsalable, and farmers find it impossible to pay their debts or to borrow money, and are forced to stagger along in half despair for several years till times grow better. The explanation of this disagreeable phenomenon is that the manufacturing States control the money of the country; they are the creditor States, while the Western and Southern States are debtors; they are money-lenders, while the other States are money-borrowers; they hold mortgages on a third of the property of the West and South, and there is a perpetual drain of money from all other States and Territories into them to pay the interest on these enormous claims.

The last report of the Comptroller of the Currency furnishes some interesting information on the distribution of money in the country, in a table showing the amount of capital, surplus, undivided profits, and individual deposits in banks of all kinds, for every State and Territory of the Union. A compendium of the table is given in the following statement:

CAPITAL, DEPOSITS, ETC., IN THE NINE MANUFACTURING STATES.

Maine	$71,516,000
New Hampshire	79,281,000
Vermont	36,000,000
Massachusetts	691,000,000
Rhode Island	113,448,000
Connecticut	188,316,000
New York	1,585,800,000
New Jersey	104,367,000
Pennsylvania	508,567,000
Total	3,378,295,000
All other States and Territories	1,823,376,000
Population of the nine manufacturing States	17,000,000
Population of all other States and Territories	47,000,000
Per capita in the manufacturing States	$198
Per capita in other States and Territories	$40

It will be seen that protected manufacturing has given the nine States of the Northeast control of the banks, banking power, and money of the country. They have only about one-fourth the population of the country, but they own over three-fifths of the banking capital and deposits. The per capita is $198 for them and only $40 for the other States and Territories. Massachusetts alone ($691,154,000) has more than the eight States of Indiana, Michigan, Wisconsin, Iowa, Minnesota, Kansas, Nebraska, Missouri, and Colorado put together. New Hampshire, with a population of only 381,000, has as much ($79,281,762) as the two States of Indiana ($63,852,000) and North Carolina ($12,160,000), with an aggregate population of 4,000,000; and Rhode Island, with a population of only 343,000, has ($113,448,036) more than Georgia ($27,299,000), South Carolina ($12,000,000), Alabama ($15,600 000), Mississippi ($10,000,000), Louisiana ($29,000,000), and West Virginia ($8,831,000), with an aggregate population of 8,000,000.

It will be said in explanation of this unequal distribution of the money wealth of the country that, while the manufacturing States have a large share of their wealth in money, the farming States have theirs chiefly in farms, cities, towns, and railroads. This statement is true, but the force of it is broken by another very important fact, namely: That nearly all the railroads of the farming States, and one-fourth their farms, cities, and towns are mortgaged—and the mortgages are held chiefly in the manufacturing States. Indeed, the manufacturing States own not only three-fifths of the money of the country, but a full fourth, and probably one-third, of the wealth in the other States and Territories besides.

[Here the hammer fell.]

Many MEMBERS. Vote! Vote!

The question being taken on the amendment of Mr. BLAND, there were—ayes 62, noes 76.

Mr. BLAND. Great stress is laid upon the fact that there is a tariff on wool. Upon this point I shall quote from the few remarks I made when that schedule was under discussion:

Mr. Chairman, my colleague who has just taken his seat [Mr. NIEDRINGHAUS] alludes to Missouri and the tariff in connection with the State. I do not know any gentleman on this side of the House, nor do I know any gentleman on the other side of the House from Missouri whose interest is direct, immediate, and unconditional in a high protective tariff except my good friend himself who has just addressed the committee. I do not know, indeed, under the rules of the House, if they were properly enforced, that he could vote for this bill or vote against it, on account of his personal interest in the protection it carries.

But another objection I have to the attitude of my colleague is this: While he is willing to receive for himself the benefits of the robbery that this bill will give him, he wants to reduce the tariff on borax, an article that he himself consumes, and yet he is not willing that my farmer constituents shall have the benefit of any reduction on what he is compelled to buy. [Applause on the Democratic side.] There ought to be what might be called a good understanding among gentlemen who are making up these "combines," mutuality in robbery. [Laughter.]

Now, for this woolen schedule. My people are interested in cheap woolen goods. Missouri has about 1,200,000 sheep all told, and we have nearly 3,000,000 people in the State.

We have not got one-half a sheep apiece. I would like to know how the people of that great State, during the frozen snows of December, might go out and attend their flocks and to their factories with half of a sheep-skin on their backs, one-half of a sheep to each of the population. We do not produce the wool that clothes us, or scarcely any part

of it. I have about fifty head of sheep on the farm on which I live; and, sir, you might take all the wool on the sheep and take the mutton on my whole flock, and it will not pay the tribute I pay to the wool manufacturer under the provisions you put in this bill—nothing like it; and yet they talk about the duty on wool for the benefit of the farmer.

The States of Iowa, Nebraska, and the great Northwestern States are similar to Missouri in that respect. They are producing grain, hogs, cattle, mules, and horses, and sheep are a mere by-product. You will never produce sufficient sheep to clothe this people, or nearly clothe one-tenth of them. My friend from Michigan alluded the other day to four counties in my district—Laclede, Wright, Osage, and Cole—and on them, according to his own showing, there were 7,600 mortgages, or nearly 8,000 altogether. Now, the population of those four counties is about 45,000 or 50,000 people. Every mortgage represents the head of a family——

The CHAIRMAN. The time of the gentleman has expired.

Mr. NIEDRINGHAUS. My friend and colleague——

Mr. BLAND. I would like to have three minutes in which to complete my statement. [Cries of "Regular order!"]

Mr. McKINLEY. I hope the gentleman from Missouri will be heard without objection.

The CHAIRMAN. The gentleman from Missouri asks unanimous consent to proceed for three minutes. Is there objection? The Chair hears none.

Mr. BLAND. Mr. Chairman, I was going on to say that these nearly eight thousand mortgages represent about eight thousand heads of families, and taking the average number in a family to be five, that would be some forty thousand, so that nearly every man, woman, and child in those four counties has a mortgage over his head. Now, I do not know why the gentleman from Michigan was claiming his farmers are prosperous. Whether they are or not it is for him and for his farmers to know; but for the farmers in my district, I know them, for I have mingled with them, and I am one of them myself. I get complaint from them daily, and I know that they are not prosperous. The very statistics he has given that nearly every farmer in these counties, or at least one-half of them, have mortgages upon their farms, give conclusive proof that they are not prosperous.

Now, Mr. Chairman, what has reduced them to this? This high protective tariff system is one of the main causes for their being reduced to this condition, and it is a question of whether the Michigan donkey or the Missouri mule or the Kansas grasshopper can longest endure the burden of this infamous system, for that seems to be the contention here. We are comparing notes as to who have the most mortgages and who are the least prosperous. We find when we can get the statistics that all of them are suffering alike. These are the real facts in the case, and yet the majority propose nothing for their relief; no report is made in their interest, but simply a bill that increases their burdens.

Speaking for the farmers whose farms are mortgaged, I protest against it, and I say when gentlemen undertake to make the farmers of this country believe that they are prosperous they will have upon their shoulders a great burden. In the coming canvass you will not be able to convince them that they are prosperous, so that it behooves Congress to do something in the interest of this country. One way of affording them relief is to reduce taxes and to give them more money in circulation. That will be a benefit.

The tariff tax I get upon the wool I sell will not compensate me for the tariff tax I pay to the woolen manufacturer. Ten persons constitute my family, and when we pay, as proposed in that bill, a tax from 80 to 100 per cent. on woolen goods our little tariff of 30 per cent. on wool is confiscated at once. And not only that, but a tribute of from 50 to 80 per cent. in addition is exacted for the benefit of the manufacturer.

Great stress is laid upon the fact that it is proposed to tax wheat by a tariff of 25 cents a bushel. This is a glaring fraud, intended only to deceive. We exported last year 88,600,742 bushels of wheat in form of wheat and flour. We imported only 1,946 bushels, and this was for seed. It is proposed to aid the wheat-grower by taxing his seed-wheat. The bill proposes a tax of 15 cents a bushel on corn. Of course when the law takes effect there will be no more burning of corn in Kansas. There is a tariff duty now of 10 cents per bushel—this is supposed to be too low—so that to prevent the burning of cheap corn for fuel it is proposed to increase the tariff to 15 cents per bushel. Well, we exported last year 69,592,929 bushels of corn and imported only 2,388 bushels. This 2,388 bushels of corn was imported for seed, at least for the most part; so to benefit the Kansas corn-burner we put a tax of 15 cents per bushel on his seed-corn.

Any one who does not see that this tariff on seed-wheat and seed-corn will in a few years pay off all the farm mortgages of the West must be willfully blind. I give a list of surplus farm products showing exports and imports, all going to prove the fallacy of a tariff tax benefiting the farmer:

Tallow: Exports, 77,844,555 pounds; imports, only 34,931 pounds. Lard: Exports, 318,242,990 pounds; imports, only 1,703 pounds. Beef, mutton, and pork: Exports, 286,991,121 pounds; imports, but 215,575 pounds. Bacon and hams: Exports, 400,224,646 pounds; imports, but 272,130 pounds. Apples, dried: Exports, 22,101,579 pounds; imports, none reported. Apples, green or ripe: Exports, 942,406 barrels; imports, none reported. Oats: Exports, 624,226 bushels; imports, 22,324 bushels.

These tables go to show that our exports of farm products should be protected as I proposed; that is, by permitting their exchange for commodities in other countries, and the admitting free of tariff duties the articles thus exchanged for. This would be in the nature of protection to the farmer from the tax he has to pay at the custom-house for the imports of foreign goods exchanged for his farm products. This is the only protection that can benefit him. In other words, it would protect him against a high protective tariff. If our agriculturists can once be thus protected they will find no need of further protection or further favors at the hands of Congress. If they can be protected against a tariff law that practically enslaves them they will find a way to prosperity.

The present tariff is about 47 per cent. The Republicans promised a reduction, but instead they have by the McKinley bill raised it on the average to over 50 per cent. on all dutiable goods.

Mr. Chairman, I have no patience to argue this subject; argument here is useless. If the people of this country submit to it, they must suffer on and on.

The Democratic party can do no more than protest. But we trust the day is near at hand when we shall be intrusted with power, not only to protest, but to act, to legislate, to reduce, reduce, and still reduce this system of high protection to the millionaires, until we get to a basis of revenue for the people.

The State of Missouri is the greatest State in the Union. Her resources of agriculture, mining, and manufacturing are unsurpassed; her Democratic State government is the most economical, perhaps, of all the States; her school system the best provided for. That Missouri is more prosperous than her neighboring States of Kansas, Iowa, or Illinois is due to these causes. Yet I would be false to the true interests of her people if I did not tell the truth, and say that owing to this high protective tariff system her agricultural interests are in great straits.

The Missouri farmer, like his brethren throughout the entire Union, is not prosperous. His markets have broken down at home. A protective tariff prevents him from exchanging his products abroad; consequently his surplus must be sold at a great sacrifice. This surplus in turn regulates the price of all he has to sell at home, and thus his prices for what he has to sell are not remunerative. There is no longer any profit in farming.

During the war and since, every revision of the tariff has been done by the Republican party or the party of high protection. As a consequence we have seen farming steadily declining in profits. The tariff duties were increased in 1883 under the pretext of tariff revision; since that time tariff barons and monopolists have fattened off the farmer. The McKinley bill again increases rates from an average of 47 per cent. to over 50 per cent. The farmer can therefore patiently wait, quietly submit, till he is turned out of house and home. The McKinley bill means the foreclosure of the mortgages on Western farms; it means the transfer of lands and property of the West to the tariff millionaires of the East.

The Western farmer who voted for Harrison and protection signed a bill of sale to his future prosperity. He unconsciously mortgaged his home, his labor, his all to the trusts, monopolies, and combines that now mercilessly demand the pound of flesh. The Wanamakers, Carnegies, and other millionaire contributors to the campaign fund, must be reimbursed. They are being repaid by tariff bills that filch the money from the labor of the country. Thus campaign contributions are made up with interest. And so other campaign funds are readily provided for.

Mr. Chairman, I have faith to believe that this system will speedily sink in its own rottenness and corruption. Faith in a republican form of government compels me to say this. The signs indicate a groundswell of the masses in a war of extermination to all privileged, aristocratic, or class legislation.

God speed the day when justice shall resume her place in our councils.

But, Mr. Chairman, it is proposed, now that monopoly has control of this Government in all its branches, to raise duties and otherwise strengthen the monopoly power, and in turn to place the election of Congress and the President under the control of monopoly by taking the machinery of those elections out of the hands of the people of the States, and instead to place radical election officers and returning boards in all the districts, so as to count out Democrats and tariff reformers, thus, by Federal election laws, to hold by force and fraud the laboring people in this country in the grip of monopoly power to be robbed and fleeced, not of their wealth alone, but of their political rights as well.

This may be a cheaper and easier mode for the protected barons to elect a Congress and President to do their bidding than to put their millions in the campaign fund, as they did at the last election. But will the people submit? That is the question. We shall see what we shall see. "Whom the gods wish to destroy they first make mad!"

The Tariff.

SPEECH
OF
HON. JOHN A. BUCHANAN,
OF VIRGINIA,
IN THE HOUSE OF REPRESENTATIVES,

Monday, May 12, 1890.

The House being in Committee of the Whole and having under consideration the bill (H. R. 9416) to reduce the revenue and equalize duties on imports—

Mr. BUCHANAN, of Virginia, said:

Mr. CHAIRMAN: If it was not for the special interest the people of Virginia, whom I have the honor in part to represent upon this floor, have in the taxation of commercial fertilizers and the chemicals which are used in their manufacture I would not take part in this debate at this late hour and in the short time allowed for the discussion of the provisions of this bill, covering one hundred and fifty-six pages and involving questions of taxation of the greatest importance to the people of this country.

Paragraph 6 of this bill, the one now under consideration, provides for a tax of $5 per ton upon all sulphuric acid or oil of vitriol imported. In many portions of Virginia we are unable to grow wheat or tobacco and other farm products successfully without the use of commercial fertilizers, and in their manufacture sulphuric acid is one of the most important materials used. Under existing laws this acid is on the free-list and has been ever since the use of commercial fertilizers has become so general.

It has been the policy of the Government, as I understand it, in all of its tariff laws to place and keep upon the free-list all farm fertilizers, and as far as practicable the chemicals also which enter into their composition. They were so treated by the tariff laws of the year 1857. Under those of 1870 the legislation was somewhat less favorable to the farmer, but in the year 1883 they were again restored to the free-list.

In the bill now under consideration, as stated above, it is proposed to place sulphuric acid upon the dutiable list and to fix that duty or tax at $5 per ton.

I wish to call attention to the effect that this and legislation like this will have upon the farmers and the agricultural interests of the country. It is estimated, as I understand, that we use annually about 450,000 tons of sulphuric acid in the commercial fertilizers manufactured in this country. Five dollars per ton duty or tax upon it will amount to the sum of $2,250,000. The quantity manufactured in this country, as stated in the evidence taken before the Ways and Means Committee, is from 375,000 to 400,000 tons annually. The duty of $5 per ton proposed by this bill will therefore have to be paid by the consumers of the article. This additional burden will still further depress the agricultural interests of the country.

I had not supposed, until to-day's discussion developed the fact, that there was any difference of opinion upon the subject of the farmers' condition. I do not know what their condition is in other States, but I do know what it is in many portions of Virginia. There they are engaged, for the most part, in the production of corn, wheat, tobacco, cattle, horses, and hogs, and their condition has not been much worse, if so bad, since the war ended, when they went to their homes stripped of everything but their lands.

The burdens of taxation are increasing whilst the prices of their products are growing less. They were told that this Congress would furnish a remedy for existing evils. They had a right to expect such relief as can be had from friendly legislation. But so far as I can see there is no relief in this bill for them. It is said that the tariff on farm products has increased and thus they are put upon an equal footing with the other industries of the country.

The products of the farm are in excess of the demand for them in this country, and therefore a tariff, no matter how high, can not increase the price of their products or furnish them relief. A tariff only benefits producers when the home production is less than the home demand. Then it increases prices. Their products will not be increased in value under this bill. What they need is a foreign as well as a home market. This bill practically destroys their foreign market, and by so doing injures the home market. It is a tariff for prohibition, not for protection, not for revenue. Its object is, or at least its effect will be, to reduce to the smallest quantity the articles purchased abroad by our people, to destroy our foreign trade; for, if we will not buy from others, how can they buy from us?

All laws that lessen competition increase the prices of all articles where the supply is less than the demand and decrease the prices of all articles where the supply is greater than the demand. This tariff bill, if it becomes a law, will doubly injure the agriculturist and all who are engaged in unprotected industries. It will cause them to pay more for what they have to buy and to get less for what they have to sell.

I submit, therefore, Mr. Chairman, since our agricultural classes are to receive no benefit from this bill, that they have the right to demand that Congress shall at least keep its hands off of the fertilizers that they are compelled to use in improving their lands and in raising larger crops. If you will legislate so as to lessen the prices of their products do not increase further the cost of their production.

Mr. KERR, of Iowa. Let me ask the gentleman a question. How many pounds of this substance enter into a ton of fertilizer?

Mr. BUCHANAN, of Virginia. I do not know the exact quantity.

Mr. KERR, of Iowa. I understand it is only ten pounds.

Mr. BUCHANAN, of Virginia. Well, that is all the more reason in favor of the point I am making. My information is that the quantity is much greater. But whether the amount entering into it be little or much, there are about $2,250,000 proposed by this bill to be taken out of the pockets of the farmers on this one item alone more than they are now compelled to pay for the same article, and that, too, without any consideration.

But, Mr. Chairman, this is but one of the many unjust features of this bill. Instead of reducing the duties and removing the inequalities of the existing law in many instances the duties have been increased and the inequalities made greater. Some of these increases have been on the necessaries of life, upon articles which the very poorest of our people must have, such as woolen goods, tin, and window glass. The existing duty on woolen goods averages 67.15 per cent.; that is, a tax of over 67 cents must be paid on an average for every $1 worth of woolen goods imported. This bill increases that duty from $67.15 on the $100 worth of woolen goods to $91.72, an increase of $24.57 on every $100 worth imported.

Not only is this increase made, but the tariff is levied highest upon the cheaper goods so that taxation falls heaviest upon those least able to bear it. The lowest grades of woolen yarns are taxed $1.12 on every $1 worth of goods imported, whilst the most costly yarns are taxed only 72 cents. The coarsest and cheapest wool hats imported are subjected to a tax of $1.11 on every $1 worth, whilst the finest hats are only subjected to a tax of 73 cents. The lowest grades of woolen cloth are taxed $1.25, whilst the highest grades are only taxed 86 cents on the $1 worth imported. Woolen shawls and worsted goods of the lowest grades and worn by the poorest people are taxed $1.30 to $1.35, whilst the highest grade is only taxed 90 cents on the $1 imported.

The existing tariff on tin-plate, out of which our tinware is made and which is used in every home, is 1 cent upon the pound; under this bill it is increased to about 2½ cents per pound, and that, too, when there is not a single tin-plate factory in this country to be protected and when there is no certainty that tin ore can be found in this country in any quantity. This tax on tin is not levied for the benefit of the American laboring man, as is pretended by the friends of this bill. There are no laborers engaged in it. If we manufactured all the tin we use in this country it would, according to the report of the committee who prepared this bill, only give employment to twenty-four thousand men. Yet to do this all the remainder of the more than sixty millions of people of this country will be compelled to pay a largely increased price for their tinware. Is such legislation wise? Is such legislation just?

Not only have the duties been increased upon many articles used by the great body of the people, but a new departure is made in this bill. Heretofore the consumer of the article upon which the duty was levied paid the tax and received the benefit of the article, but this bill proposes to compel consumers to pay a much heavier tax upon the articles they consume in order that money can be raised, not merely to pay the expenses of the Government, but to pay bounties or make gifts to people who produce articles which many of the consumers who pay the tariff or tax do not use. The tariff on raw sugar is taken off by this bill, and a bounty of 2 cents a pound is to be paid to sugar-growers for the sugar produced in this country for a period of fifteen years. All duty is to be taken off of raw silk and the sum of $1 a pound is to be paid for all the silk grown in this country for a period of ten years.

What is the object of these bounties? To induce people to engage in industries that do not pay, with an undertaking on the part of the Government to pay them a sum sufficient to cover all losses and furnish a profit. Where does the Government get the money with which to do this? It taxes the people who are engaged in other industries to raise money for the bounties, just as it does to raise money to pay the ordinary expenses of the Government. The farmer, the mechanic, the day-laborer, all purchasers, whether engaged in protected or unprotected industries, are forced to pay a part of their earnings to the Government that it may make a present of it to the sugar and the silk grower.

All of the citizens of this country who purchase any of the thousand articles upon which there is a tariff must pay a greater price for them in order that the Government may bestow these bounties. I said that the bounty system proposed was a new departure. It is in name, but really not so in fact. It is only doing directly what the Government has been doing indirectly for many years. All tariff duties which increase prices are to the extent of that increase bounties to the protected industry, and they are paid by the people engaged in other industries. This bill boldly proposes to do directly what has heretofore been done indirectly.

The people can now understand better what they pay to the specially favored industries of the country. I have made an approximate calculation of what the sugar and silk bounties will cost the

people of this country during the period they are to continue under the provisions of this bill. Estimating the population of this country now at 62,000,000 and that it will reach 80,000,000 by the time the bounty to sugar-growers is to cease and that each person on an average will consume the same amount of sugar as he now consumes, the following table shows what the sugar bounty alone will cost the people during its existence under this bill.

Year.	Sugar produced, in pounds.	Bounty paid.
1891	380,000,000	$7,600,000.00
1892	449,090,909	8,981,981.80
1893	530,753,470	10,615,069.41
1894	627,254,101	12,545,182.03
1895	741,301,210	14,826,024.20
1896	876,183,248	17,523,664.96
1897	1,030,943,838	20,618,876.76
1898	1,218,388,172	24,367,763.44
1899	1,439,913,294	28,798,265.88
1900	1,701,715,711	34,034,314.22
1901	2,011,118,567	40,222,371.34
1902	2,376,776,488	47,535,529.76
1903	2,808,917,667	56,178,353.34
1904	3,319,629,970	66,392,599.40
1905	3,923,199,055	78,463,981.10
Total		468,681,977.64

From this table it appears that the sugar bounty during the fifteen years it is to be paid aggregates the enormous sum of $468,000,000 and that for the last of the fifteen years the bounty will cost nearly $80,000,000.

The silk bounty will cost, by a like calculation, not less than $50,000,000 during the ten years it is to exist. I have made these calculations upon the assumption that these bounties will accomplish the objects which the majority of the committee reporting this bill think they will, namely, to establish the sugar and silk industries in this country so that our own people will produce both articles in quantities sufficient to supply the requirements of our own country.

If this legislation does not accomplish this it will be a fraud upon the people, for they will have paid out millions of dollars for no purpose. If it does accomplish the objects in view, what will be our condition? Can you stop paying them bounties then? Or will they not have to be continued or a tariff imposed in their stead? Will the people engaged in these industries who have received from the Government more than $500,000,000 in bounties be willing then to say: "We have received enough aid from the Government. Our infant industries have been established and we can hereafter rely upon ourselves?" Or will they not do as all the other protected industries have done and are now doing, demand continued and in many instances increased assistance?

Many industries in this country have been receiving aid from the Government by means of tariff laws for nearly a century. Have they ceased to ask aid? This bill is the best answer. The tariff of the year 1816 was the first levied directly as a protective tariff. Its average rate was about 25 per cent. The average rate of this bill is 51.82 per cent. Under the tariff of 1816 blankets, one of the commonest articles in use among all our people were taxed 15 per cent. Under this bill they are taxed 72.21, nearly five times as much. In the bill the average rate of every schedule has been increased. Its average rate is 51.82 per cent., whilst the average rate on the same articles under existing law is only 41.03, an increase over the present rate of 25 per cent. and more than 100 per cent. increase over the rate of the year 1816.

Manufacturing industries are the chief beneficiaries of the provisions of this bill. Other industries and interests are practically ignored. It disregards those great fundamental doctrines that all taxation should be for public purposes and for public purposes alone; that the Government has no right to tax one class of men for the benefit of another; that in imposing tariff laws justice should be done to all classes and conditions. In the early days of the Republic, before class legislation had become the avowed object of any political party, Mr. Webster said:

> With me it is a fundamental axiom, it is interwoven with all my opinions, that the great interests of the country are united and inseparable; that agriculture, commerce, and manufactures will prosper together or languish together, and that all legislation is dangerous which proposes to benefit one of these without looking at consequences which may fall on the others. All domestic industry is not confined to manufactures. The employments of agriculture, commerce, and navigation are all branches of the same industry; they all furnish employment for American capital and American labor. And when the question is whether new duties shall be laid for the purpose of giving further encouragement to particular manufactures, every reasonable man must ask himself whether it can be done without injustice to other branches of industry.

In framing the tariff laws of this country for the last thirty years that question has not been asked, neither has the axiom laid down by him been acted upon. What is the result? Our commerce has been swept from the seas and our agricultural interests are crushed to the earth by burdens which they no longer can or will bear. There must be a change. The Government must not continue to encourage the growth of trusts and monopolies by its laws. It must treat all the industries with justice and fairness. It must legislate not for a few favored classes, but for the whole people.

The price of manufactured articles must not be raised by destroying competition by prohibitory tariffs whilst at the same time the foreign laborer is imported here free of duty and brought in competition with the American workingman so as to reduce his wages. Higher prices for manufactured articles and lower wages for the workingmen have continued long enough. Enact laws that are equitable and just, and agriculture, manufacture, and commerce, and all the various industries of this country will flourish and prosper together, and all the men engaged in them, whether they furnish the capital or the labor, will receive their fair share of the results of their united efforts. This much the Government owes to its people. And if they be true to themselves they will yet obtain it.

[Here the hammer fell.]

The Tariff.

SPEECH
OF
HON. WILLIAM D. BYNUM,
OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 13, 1890,

On the bill (H. R. 9416) to reduce the revenue and equalize duties on imports—

Mr. BYNUM said:

Mr. CHAIRMAN: In 1843 the tariff was an engrossing question, and the minds of the people were then as now absorbed in its consideration. Hon. James Whitcomb, of Indiana, during the campaign of that year, wrote a pamphlet upon the subject entitled "Facts for the people."

Governor Whitcomb was pre-eminently a man of the people, having won his way to honor and distinction by his own energies and exertions from the humble life of a farmer's boy to a seat in the United States Senate. He was appointed Commissioner of the General Land Office by President Van Buren, was elected Governor of Indiana in 1843, and re-elected in 1846. In 1849 he was chosen United States Senator, but, owing to feeble health, his great abilities were never disclosed in that body, but after serving about half his term he passed away.

Those who were personally acquainted with Governor Whitcomb and competent to judge united in the opinion that he was the ablest man the State ever developed; and not a few accord to him the distinguished position of being the ablest political logician the country ever produced.

The pamphlet written by Governor Whitcomb nearly fifty years ago as an argument has never been surpassed. This remarkable production was for many years supposed to be lost to future generations, but was fortunately rescued by Hon. Lycurgus Dalton, late an official of this House, and reprinted by direction of ex-Senator McDonald, of Indiana, in 1882.

I esteem it an honor of no small proportions to present to this committee a copy of this work of Governor Whitcomb and to have the same perpetuated in the records of this Congress.

LETTER FROM HON. JOSEPH E. M'DONALD DESIRING ITS REPUBLICATION—REPLY OF HON. JOHN C. SHOEMAKER.

The following correspondence explains itself:

INDIANAPOLIS, *July* 31, 1882.

SIR: In 1843 a pamphlet, entitled "Facts for the people, by an Indianian," was published and extensively circulated in this State. Its author was Gov. James Whitcomb, one of the most distinguished men of his times. It related to a "protective tariff" and its influence upon our industrial interests. The tariff question was at that time engaging the attention of the people and was being discussed by the ablest men of the country, the question being then, as now, between a tariff for revenue and a tariff for protection. Governor Whitcomb took strong grounds against a tariff for protection, and demonstrated in his "Facts for the people" that such a tariff was not authorized by the Constitution and that its burdens rested mainly on those least able to bear them, unjustly discriminating in favor of the rich and against the poor; that a tariff for revenue was a tax, and when most equitably imposed for the support of the Government was to be classed as one of the necessary evils incident to governments, but that a tariff for protection was an unqualified evil to all except the favored classes, for whose benefit it was imposed.

The pamphlet is written in a style easily understood by the whole people, illustrated by familiar examples of easy application, and supported, by the most convincing logic. Its influence at the time was felt throughout the State, and it did more to establish in the minds of the people of Indiana sound principles on this most important subject than any other publication of that day. The particular tariff act discussed in it was the tariff of 1842, a tariff which even in that day was regarded as highly protective, and yet it was more than 20 per cent. below the present tariff on manufactured articles. Since that time improvements in machinery and many other causes have changed the relative prices of manufactured articles as compared with the prices of that day, but the principles applicable to revenue and protective tariffs remain unchanged, so that that great production of one of Indiana's ablest men in its discussion of the principles of taxation and class legislation is as applicable to the present time as it was 1843. It has long since gone out of print and remains only in the memory of the old men of the State and those who have passed the middle time of life. Lately, through the efforts of Mr. Dalton, late State librarian, now superintendent of the Senate folding-room, a copy of this important docu-

ment has come into my hands, which I request you to publish in precisely the same form and manner of the original without any change whatever.

J. E. McDONALD.

Hon. JOHN C. SHOEMAKER,
Publisher of the Sentinel.

To the foregoing Mr. Shoemaker replied as follows:

INDIANAPOLIS, *July* 31, 1882.

DEAR SIR: Referring to your favor of the 31st, I reply that I fully appreciate the value of Governor Whitcomb's pamphlet and the interest it necessarily possesses at this time to all classes in view of the discussion that must soon come upon the tariff question. It will, therefore, afford me great pleasure in reproducing it at the earliest possible day as it originally appeared.

Very respectfully,

JOHN C. SHOEMAKER.

Hon. JOSEPH E. McDONALD.

FACTS FOR THE PEOPLE IN RELATION TO A PROTECTIVE TARIFF; EMBRACING A BRIEF REVIEW OF THE OPERATIONS OF OUR TARIFF LAWS SINCE THE ORGANIZATION OF THE GOVERNMENT, INCLUDING THAT OF 1842. BY JAMES WHITCOMB.

FACTS, ETC.

WHAT IS A TARIFF?

This question is often asked, but not often satisfactorily answered. It is of the greatest importance to every tax-payer that it should be correctly understood. What little information we have on the subject among the farmers, mechanics, and laborers is either derived from interested sources, and is therefore one-sided, or it is so covered up with hard words as not to be understood by the mass of the people. When plainly expressed, the humblest individual of sound mind in the community can understand it. To all such we say, "You are precisely the class of men who, above all all others, should understand it." We believe that the mass of the people are virtuous and intelligent and that they are capable of self-government. We believe that God in His kind providence has given them minds equal to the management of their own affairs. It is only necessary that they should know about the facts to enable them to form a correct judgment on every question, public or private, in which they are interested.

The doctrine that a freeman must surrender the right of thinking for him to some knowing neighbor is essentially slavish and unworthy a rational being. Let not the poorest lay away the noble faculty of his reason, like a talent in a napkin. It was bestowed on him by the author of his being for active use. It is of little consequence that the hands are used in procuring a livelihood or in acquiring property if the mind is neglected. In that case too frequently it is others only who are benefited. All wealth comes through the hands of the laborer. "The cloud-capped towers and gorgeous palaces," the splendid cities, and the smiling fields of cultivation are of his creation.

And why, then, do they generally retain so little of that which passes through their hands? It is because the ingenuity of a few, who work their minds and neglect their hands, to make a living from those who work their hands and neglect their minds, has been exercised in all ages. When a fair return is made for all this no objection is made. It is necessary, or at least desirable, that some should engage in business or callings that require the particular exercise of the mind. It is a division of labor and is for the advantage of the whole community.

But we do object to those who, by unjust or partial laws or by their mere wits, suck up their living from the roots that strike into the earth, without contributing anything themselves to the common wants of society. They are a dead weight on the community, for the more idlers there are the harder must the rest work. Let it not be said that we make war on the rich. We only defend the poor. Industry, enterprise, and skill are in the highest degree meritorious, and wealth acquired by their means is a merited reward and should be protected. We only desire that all should start fair in the race for wealth and happiness. Poverty at the best is a heavy weight to carry, and it should not be made heavier by unjust laws. Our country is our common mother, and if she is excusable in showing more of her sympathy and kindness toward some of her children, it should be for the weak and unfortunate. Let it not be said that we are playing the demagogue. We abhor the character. The demagogue flatters the people for his own sinister advantage in the shape of power or wealth, and it is precisely that character that we are about to combat. But are not the sentiments and opinions we have put forth true? Can any man of correct feeling, can any friend of justice, can any lover of mankind, who looks into his heart, object to them? We think not.

Again we ask,

WHAT IS A TARIFF?

It is a law of Congress which requires goods landed in our ports or brought into our country to pay a tax, and this tax is called a duty. The great object of such a law is to raise money for the national Treasury, to pay the expenses of the Government. The goods, when landed, pass through custom-houses at the ports, where they are examined, weighed, measured, or counted by the Government officers, who receive the amount of the tax.

But this tax, although at first paid by the importer of the goods at the custom-house, is at last paid by the people, because the higher the tariff or tax is on a particular kind of goods, the higher must the wholesale importer sell it afterwards to make a profit in his business. For instance, if the importer brings in cloth for which he gave $1 a yard, and he wants to make 10 per cent. profit on it, he must sell it for $1.10. If the tariff duty, or tax, on it is 100 per cent., that is another dollar on the yard, and as he wants to make 10 per cent. on all his outlay, he must sell it for $2.20. This he sells to the Indiana merchant, and the latter also wants to make his profit of 50 per cent., being one-third more. He will therefore have to sell it to one of our farmers or mechanics for $3.30 a yard. Here we see that the importer in the first place paid only $1 a yard tax into the Treasury, but the dollar at last comes out of the farmer or mechanic who buys the cloth for use, with the profit on it, making 60 cents more. Thus we see that the importing merchant when he sells his goods not only charges the first cost and a profit on it, but he adds the amount of the tax at the custom-house and a profit on that also. And an additional profit is charged on both cost and tax by every merchant through whose hands they afterwards pass, until they are at last bought for actual use of the retail merchant, who charges his profit at, say, from 33 to 100 per cent. on the whole.

In this manner it is clear that the tax caused by the tariff is always paid by the consumer; and that, too, with the addition of the profits on the amount of the tax at every step.* The further the consumer lives from the seaboard, the greater are the profits which he is compelled to pay on the tax, besides refunding it. The tax, therefore, is swelled much larger to the people of the new States than to those of the old.

Hence it is clear that a tariff makes the goods just so much dearer to the people as the tax amounts to with all the profits added to it.

That this is the nature and result of a tariff, all parties admit; and they are only mentioned here that what we may say hereafter may be fully understood by every person. It is our intention to guard the people against the deceptions too frequently practiced on this subject and to enable them to be their own judges in a matter which so nearly concerns them.

To apply this to our own State revenue. If the law of Indiana were to require that all the taxes should be paid by the merchants of the State for the privilege of selling their goods, it is plain that in selling their goods, they would charge a profit not only on their first cost and carriage, but on the taxes also. And if they charged but 50 per cent. profit, the purchaser or consumer would thus have to refund to the merchant not only the taxes by him paid, but 50 per cent. or one-third more than the buyer would have had to pay if called on by the collector. And this is precisely the operation of a tariff tax, excepting that in the latter case the goods generally pass through more hands before they are finally bought for use by the real tax-payer, and there is a fresh profit charged at every step.

Every tax is an evil. But so far as a tax is necessary to defray the expenses of Government it is a necessary evil. When such expenses become extravagant, the additional tax thereby created is an unnecessary and unmitigated evil. It is the duty of Government, therefore, to cut down and retrench its expenditures as much as possible, so as to lessen the burden of the taxes.

There has always been a tariff law in the United States, of some kind or other, since the first Congress under the Constitution. No serious proposition has ever been made in Congress or by the Government to abolish it. The only contest has been between those who are for a high or (as it is sometimes called) a protective tariff and those who are for a low or revenue tariff.

On this point the testimony of Daniel Webster himself, who is in favor of a high tariff should be sufficient.

In his speech on the tariff, in Congress, April, 1824, he says: "Consider that our whole revenue, with a trifling exception, is collected at the custom-house, and always has been, and then say what propriety there is in calling on the Government for protection [to manufacturers], as if no protection had heretofore been afforded."*

Then, as both political parties have always been in favor of a tariff of some kind and have always had one, the question is, in what do they differ on this point? It is simply in this: Those who style themselves the Democratic party are in favor of a revenue tariff and those who style themselves the Whig party are in favor of high or, as they call it, a protective tariff.

A revenue tariff is such a tax on imported goods as is sufficient to pay the expenses of the Government, and no more.

A high or protective tariff is a higher tax on such goods, and, of course, beyond what is necessary for the support of Government.

The friends of a high tariff insist that such a measure is necessary to protect our own manufactures; that many foreign articles are made so cheap abroad that they would, unless they were heavily taxed, undersell similar articles made by the manufacturers in the United States.

They contend that the people ought to be made to pay a higher price for their cotton shirting and sheeting, their flannels and baizes, their cassinettes and other coarse woolen cloths, their articles made of iron and steel, their salt, and many other articles of necessary and daily use in every log cabin in the country, so as to enable the large cotton and woolen cloth and other manufacturers in some of the old States, and the salt companies, to sell their articles at a higher price. And this they insist is necessary to enable these manufacturers and companies to carry on their business.

They know, however, that the people, and especially the poorer part of them, would like to sell the fruits of their labor for a full or at least a fair value, and to buy their necessaries as cheap as possible; and therefore, to reconcile them to this tax, they say that it is to last only until the manufacturers and companies are able to stand alone and make these articles as cheap as the foreign ones, and therefore that the people, in the long run, will be benefited by it.

But the smallest amount of a tariff tax is some protection to similar articles made in our country.

This is too plain to be denied, and we have always had some kind of a tariff. The question then is, had any of the domestic manufacturers which were protected by the tariff bill passed at the last session of Congress been sufficiently protected before?

DID ALL SUCH MANUFACTURES NEED MORE PROTECTION?

The Democrats do not say but what some of them needed protection; but did all of them? We mean all of them which were protected by the late tariff bill.

The Whigs say ay, the Democrats say no. Let facts speak. There is a great deal of frothy declamation on this subject on the stump and in party papers. Sober argument is much better. But facts are better than either. We shall confine ourselves to facts and on such authority as will not be disputed.

Henry Clay, who is claimed as being the father of the high tariff or protective system, in his speech in Congress, on the 25th of March, 1816, on the tariff bill, said the object of protecting manufacturers was that we might eventually get articles of necessity made as cheap at home as they could be imported, and thereby produce an independence of foreign countries. In three years, he said, we could judge of the ability of our establisments to furnish those articles as cheap as they were obtained from abroad, and could begin to legislate with the lights of experience. He believed that three years would be sufficient to place our manufactories on this desirable footing.†

Well, that tariff bill passed, and what did the three years produce? Let the the fifth annual message of President Monroe to Congress, of December 3, 1821, five years afterwards, answer. He there says: "It may fairly be presumed that under the protection given to domestic manufactures by the existing laws we shall become, at no distant period, a manufacturing country on an extensive scale."

President Monroe has been sometimes claimed as being in favor of a protective tariff, but so far was he from recommending an increase of the tariff tax that he declared the laws as they then stood were sufficient for the purpose of protection.

We shall show shortly that protection means that one part of the people are to pay to another part a higher price for their articles than they could be got for elsewhere, to enable them to carry on their business. But when this is done there is no justice in compelling them to pay more. This, all must admit.

Only three years afterwards, however, the manufacturers had another bill brought before Congress, largely increasing the tariff. They were not satisfied with the great prosperity they enjoyed at the time of Mr. Monroe's message and which was still increasing. The bill laid higher taxes on imported articles, although similar articles were then made by them so cheap that they could be afforded as low, at least, as the imported ones.

That this was so, we have the word of Daniel Webster himself, in his speech in Congress on that very bill. He then represented a manufacturing State, and his testimony on that point, therefore, must have been true. He said: "I consider the cotton manufacturers not only to have reached, but to have passed the point of competition. I regard their success as certain, and their growth as rapid as the most impatient could well expect. If, however, a provision of the nature of that recommended here were thought necessary to commence new operations in the same line of manufacture, I should cheerfully agree to it if it were not at the cost of sacrificing other great interests of the country.

---

*All the money paid by the consumer which is caused by the tariff does not go into the Treasury. A part of it is the merchant's profits.

* Webster's Speeches, volume 1, page 291.
† See National Intelligencer of March 25, 1816.

"I need hardly say that whatever promotes the cotton and woolen manufactures promotes the most important interests of my constituents. They have a great stake in the success of those establishments and, as far as those manufacturers are concerned, would be as much benefited by the provisions of this bill as any part of the community."*

Mr. Webster, it must be presumed, understood, at that time, the interests of his own constituents. Some of them were manufacturers and some were farmers. He was willing to "protect" the former, only he saw it would injure the latter. He knew that imported articles would be just as much dearer to the buyer as the tax on them amounted to. He knew, too, that similar articles, made in his State, would not be sold below the same increased price. He saw that this extra price on the domestic article would have to be paid by the farmer who wanted it, and that it would go into the pocket of the manufacturer. Hence it was that he was not disposed to help, by a tariff, the manufacturers of his State, because it would be at the cost of sacrificing other great interests of the country, the interests of the farmer, small mechanic, and those engaged in trade and navigation. The wealthy manufacturers, however, had sufficient influence to get the bill passed. And the consequence was that it discouraged trade, injured the farmer, and greatly injured the shipping interest. But it increased the wealth and power of the manufacturers, so true is it in such operations that "what is the loss of one is the gain of another." Wealth and power give influence and command votes; and we find Mr. Webster, in after years, supporting the high-tariff principle. The manufacturing had become the controlling interest of his State.

Let us pause for a moment and ask ourselves what would have been Mr. Webster's course on the tariff bill passed at the session of Congress, in 1842, if he had been there as a member from Indiana. He would scarcely have found a single article raised or made in our State which is protected by that bill. If, in 1824, when he was a Representative from Massachusetts, he had voted against a tariff bill for the benefit of manufacturers, when a large and powerful class of them were in his own State, would he not, if he had been a Representative from Indiana in Congress, at its last session, have voted against a bill laying a still higher tax on imports, when scarcely a manufacturer to be benefited by it can be found in the whole State? Would he not have said, "I voted against the tariff bill of 1824, although it benefited a part of my own constituents, because it injured others, and I can not now support this bill, because, as to the people of Indiana, it injures all and benefits none. It taxes every man in Indiana, not to benefit others in that States, but to fill the pockets of the wealthy in other States."

Let us not be misunderstood. We do not say that no tariff bill should have been passed at the last session. We only say that the bill which did pass was, in many respects, highly objectionable. The taxes imposed were entirely too high on many articles. Some kind of a tariff was desired to supply a revenue. And, indeed, a few of the Democratic members felt themselves compelled to vote for the bill; but they protested against it at the same time as unequal, wicked, and oppressive and avowed their intention to amend it when they had the power. The Whigs had a large majority; the vote was taken just at the close of the session, and the few Democrats who voted for it did so because the tyrannical majority would suffer no Democratic amendments to be made to the bill, and if it had not passed in the shape it did the Whig majority would have adjourned and left the country without a revenue! Their motto seems to have been an unrighteous tax or stop the wheels of Government! The first was thought the least of two evils. It may be asked if the Whigs had the majority, why not let them pass it? Why the necessity of any Democratic member to vote for it? But the fact was the Whigs would unite to prevent any Democratic amendment to the bill, some of them all the time intending not to vote for it on its final passage for fear of their constituents. They were willing to help their friends in everything about the bill except the final vote.

We cannot but view this course as the effect of party feeling and party prejudice. They looked with distrust upon every proposition coming from a Democratic member. No good could "come out of Nazareth." They were but too apt to lose sight of the interests of our common country to indulge in mere party warfare. They were flushed with victory, revengeful and vindictive. We wish not to be uncharitable. We are far from charging all the Whig party as being governed by such motives. We believe there are many among them, especially those who desire to make an honest living by their farms, or by labor, who, on being satisfied of these facts, will withhold their support from such leaders. They desire not to be led to their ruin merely to gratify the ambition of a few men.

Our limits will only permit us to point out a few of

THE EVILS IN THE TARIFF BILL OF 1842.

We have seen that, as long ago as 1824, nearly twenty years, Mr. Webster said that the cotton manufactures in Massachusetts, etc., had even then "passed the point of competition;" that is, they needed no "protection." In fact, the articles of that class which are used by the mass of the people, especially in the Western States, such as shirtings, sheetings, and the average prints and calicoes, are made cheaper in this country than in Europe. The friends of a high tariff insist that the English manufacturer has an advantage over ours in the cheap labor there. But labor is but one item of the expense in carrying on a manufactory of that kind, and it is but a very small item. The principal items of expense are land, buildings, water-power, cotton and other materials to work, and provisions. And all these are far cheaper here than in England.

They are so much cheaper here that the owner can afford to give his workmen much higher wages and yet make much larger profits. In proof of this we are hearing daily of manufactories stopping in England because they are found unprofitable, although the wages paid to the hands employed are so extremely low that many are on the point of starvation, many are striking for higher wages, and quitting work. Frequent instances of this we saw take place during the last year before our tariff bill passed. Our tariff, therefore, did not cause this distress. At the same time—that is, about three months before our tariff passed—we find the following statement in a New York paper:

"*Factories.*—We learn from the Troy Whig that Mr. Benjamin Marshall, of New York, is about erecting four factories on the Poestenkill in addition to the two already in progress there. The amount of money to be expended is about $500,000." Several new factories were to be built in Pennsylvania, and the large factories in Lowell had been enlarged. This, let it be remembered, was when the tariff was low, as compared with the bill that has since passed. Have we not proved, then, that our factories can give better wages and yet make larger profits than the English factories? And now, where was the necessity of "protecting" our prosperous and wealthy factories against the half starved and broken English ones?

This is not all. Before our late tariff was passed, it was published in a paper (the Portland Argus) as follows: "Messrs. A. & A. Lawrence & Co., of Boston, who sell the Lowell cotton goods, have on hand 28,000 bales, or about 25,000,000 yards. James W. Page & Co. and James H. Mills & Co., from various other establishments in New England, have about an equal amount, making 50,000,000 yards of goods piled up in the stores of merchants waiting for market."

Here we see that only three houses in Boston had on hand more than 3 yards of cotton goods of American make for every man, woman, and child, white and black, in the United States. This was only in a single city. But there are other large and numerous factories in New York, New Jersey, Pennsylvania, and other States, and they had also, no doubt, large quantities of such goods on hand. Now the object of a protective tariff, its friends say, is to enable our manufacturers to make goods. But these 50,000,000 yards were already made. They needed no protection. They were ready for sale. And yet we shall shortly see that just such cotton goods are protected by the last tariff bill enormously. We ask every reasonable, thinking man, can this be right?

But we are not yet done with our proofs. It is said that the object of a protective tariff is to have goods made in our own country as cheap as they are made abroad. This we have already seen was stated by Mr. Clay to be the object in 1816. That foreign goods were then made so cheap abroad that unless they were taxed when they were brought into the country they would undersell and drive our goods out of the market, and stop our factories.

But our factories have, for a long time, turned out our cotton goods so cheap that they not only furnished all our home wear of that description, but large quantities of them are actually exported! Yes! They are sent by the American manufacturer to South America, for instance, and landed there at the foreign custom-house alongside of the English vessel, loaded with English goods of the same description, both paying the same tax, and the American article not only fully competes with the English article, but actually outsells it! Did such articles need more protection?

We ask the honest, laboring farmer and mechanic of all parties, was it necessary to tax them still higher to benefit such manufacturers?

If we can export such goods and still compete with the "pauper labor" of England, as it has been called, in foreign ports, it must follow that such English goods can not be brought into our country for sale when compelled to pay a high tax at our custom-houses.

And this is the fact. If you go into one of our "stores" in Indiana you never see a bale of cotton shirting or sheeting with the mark of an English factory on it. You will find none of English make. They all have the mark of an American mill. And this was the case when the duties were low, several years ago. Again we ask, did such goods need more protection? Why, the manufacturers themselves, before the election of 1840, proclaimed in Congress, through their members, that they should ask for no more protection!

But this was for the purpose of getting the Southern and Western Whigs to go with them in that election. For, after getting fully into power, they ask and receive "protection" in the shape of an enormously high tax on the consumers. Is this a fair proceeding?

It is evident that their object was not "protection," but taxation. For there were 50,000,000 yards in a single city waiting for market! That is they were waiting for the passage of a tariff to enable the few wealthy owners to sell them higher than the old prices. If, under the old duties, they had raised the price much above the real value, they were afraid the English article might have been brought into the country and kept them in check. They thought it best for their interests, therefore, to keep out all foreign articles of that description by inclosing the country with the wall of a high tax, and have the whole market to themselves. As these immense factories are almost entirely in the hands of a few wealthy companies, they can easily agree among themselves what prices to impose upon the people. It requires companies of men of great wealth to carry them on.

Let us make all this plain by

A FAMILIAR EXAMPLE.

Suppose one of our incorporated towns in Indiana should pass a law or ordinance that all articles brought within the town limits to market from the country should pay a tax. Among others, suppose the tax of 50 cents on every bushel of potatoes. Suppose a bushel of potatoes could be raised for 50 cents. The farmer, taking them to market, to "make himself whole," would be obliged, then, to charge $1 a bushel; that is, 50 cents for the trouble of "raising and hauling" them to town and 50 cents for the tax which he would be obliged to pay for the privilege of selling them.

Now, one raising potatoes in town, in his garden or on his out-lot, with the same trouble or expense of 50 cents a bushel, could get his $1 a bushel in market also, although he would have to pay no tax; because he would ask and could get the highest price in market. For the tax on the farmer's potatoes would keep them up to a dollar, and the town people must pay that or do without. And it is manifest that the tax, although paid by the farmers in the first instance, would, after all, be paid by the people in town, who were the buyers, the farmers being obliged to charge just so much more. So high a tax, to be sure, would cause fewer potatoes to be eaten in town, and of course fewer would be sold by the farmer. The farmer also could not buy as many articles in town as he would have done had he sold more potatoes. He could not be as good a customer to the mechanics in town, nor get as much sugar, tea, coffee, salt, iron, etc., as he would have done if he had sold or exchanged more of his potatoes. He can not, for instance, get leather from the tan-yard in town because the people in town can not afford to give the money for his produce. He is not well prepared for tanning leather on his farm, and besides has too many other matters to attend to; but leather he must have, and the time that he takes to tan an inferior article would have enabled him to raise potatoes enough to buy twice as much from the tanner if the tax was not in the way.

So far, such tax would diminish trade and be injurious to both parties.

Now, the operation of such a law between town and country is precisely that of a tariff between this and a foreign country.

The most difficult national question can be understood by any man who is able to attend to his own business without the aid of a guardian, if exhibited to him by a familiar example and if he will think for himself. There are too many who are interested in veiling such questions beneath the mist of deceptive words and pompous declamation.

But to return. Another and more important effect would be produced by this town tariff. The advanced price on potatoes occasioned by the tax would not all be paid into the town treasury. That part paid on the potatoes sold by the farmer would go into the treasury, but the extra 50 cents a bushel paid for those raised in town would go into the gardener's pocket. The gardener would be benefited by that part of the operation, and not the town government, for carrying on which the tax was imposed.

Again. If the tax on potatoes should be so high that the farmers would take theirs to other towns where the taxes were not so high, then none would be brought from the country to the first town and no tax would be derived from that source. That would be a prohibitory tariff; and the first town would be compelled to resort to direct taxation to pay the town expenses. The farmers, too, being compelled to trade with other towns, the mechanics, merchants, etc., in the first town would lose the benefit of their custom.

But the potatoes that might yet be raised in our own town would still bring a dollar a bushel, although it would cost the gardener but 50 cents a bushel to raise them. The remaining 50 cents would then be a tax on the rest of the community for the exclusive benefit of the gardener, not a cent of it going into the treasury for the common benefit of the citizens.

All this would be bad enough; but the argument of the town council would be that they wanted to protect the gardeners until they could raise and sell potatoes as cheap as the farmers, and make the town independent of the country. Well, suppose the ten or a dozen gardeners should have bought up nearly all the out-lots for that purpose and, having no other cultivation to attend to, should, by the aid of machinery, wealth, etc., actually raise potatoes so cheap that after the people of the town had bought all the potatoes they wanted of them, at a high price, there would still be an overplus, which the gardeners could afford to be at the expense of sending to the other towns and undersell the farmers. Would the gardeners need a tax on their neighbors for their own protection any longer?

* Webster's Speeches, volume 1, page 295.

But perhaps it might still be urged that, if the profits of the gardeners were so high, it would encourage others to turn gardeners also, and so cheapen the article. But (to make the comparison just as to our large manufactories) suppose it required great wealth to procure machinery, etc., to engage in the business, that it could generally be done only by rich companies. They could then undersell any new beginner, and break him up, and then indemnify themselves by again raising their prices. Besides, it is seen that they already raised more potatoes than were used in town. And would the gardeners ask for an increased tax if they believed it would cheapen the article and diminish their profits?

Another argument is that by encouraging others in town to turn gardeners there would be fewer mechanics, etc., left to attend to their old business and more gardeners to buy their work. But there are but few gardeners needed, as their work is carried on by machinery, etc., and it is not machinery, but human beings that need shoes, leather, salt, sugar, coffee, etc. The gardeners can use only a small part of these articles which are for sale in town, and by their high tax they have driven off the farmers, who would have used them in exchange for their productions. Is it strange that under such circumstances the gardeners should become rich and the rest of the town complain of "hard times?"

Not satisfied with all this, however, suppose the gardeners made wealthy by this very tax should beg the town council to lay a still higher tax on potatoes. Would there be any reason or justice in it? It might be natural enough for the gardeners to ask, but would you suppose that a town council fairly elected by all the citizens would pass such a law? Would you suppose that, to gratify one-tenth part of the people in the town, they would be willing to increase the already heavy burdens of taxation on the other nine-tenths?

Now, let us suppose that each one of the twenty-six divisions or wards of the town was entitled to elect a member of the town council and that these gardeners lived in the four or five outer divisions, and where, by their wealth, which they had got by this very tax, they should be able to control the elections and elect members friendly to their wishes and interests. It would not be very strange if these members should vote for any amount of tax; but would it not be passing strange if the members elected in the other wards or divisions should vote for it? If, however, they should be so ignorant, or so far seduced by plausible speeches and flattery, as to desert the interests of their confiding neighbors and vote to tax them still more, ought they ever to be elected again?

Now, this is a plain and familiar example of the operation of the last tariff upon the whole United States as to most articles of necessity. The reader will be able to make the application.

After the tariff upon imported cotton cloth of the kind generally used by the mass of the people had been kept up until it could be made in the country so cheap that no more was imported, the Whigs have not only continued, but actually increased the tax. And, from what has been said, it is clear that the effect of it is to enrich the wealthy manufacturer without putting a dollar of it into the Treasury of the nation.

We have now the tariff bill before us as it passed at the last session, but our limits will only permit us to examine a few of the necessaries of life, for the farmer, mechanic, and laborer, as to

THE AMOUNT OF THE TARIFF TAX.

The last tariff law provides that all imported manufactures of cotton cloths shall pay a tax of 30 per cent. on the value. So that if a farmer or laborer buys at the "store" $1 worth for shirts he pays 30 cents more to benefit the manufacturer. This is not a small tax for persons in their condition of life. But when looked into it is far worse. For mark the deception. It is provided in another part of the same bill that all cotton cloth which is not worth more than 20 cents a square yard shall be valued up to 20 cents. Now, there is a great deal of that article that costs only from 6 to 8 cents to make it at the factory. And this is what is generally used, especially by the laboring part of the people. And yet, by this unjust law, this is valued as high as the superior article; that is, at 20 cents a yard! That is, all cotton cloth, however coarse, inferior, or low-priced, is to be valued at 20 cents a yard, in fixing the amount of the tax. Now let us take a yard of this cloth, which costs but 6 cents to make it. That is valued at 20 cents. Then a tax of 30 per cent. is put on that value. And 30 per cent. on 20 cents, is just 6 cents for the tax.

So the tax (6 cents) is equal to the cost of making (6 cents), which is really a tax of 100 per cent. on the real value, instead of 30 per cent.! So, too, calicoes or prints are taxed at the same rate; but, however inferior or low priced, they are all valued at 30 cents the square yard. It costs only about 9 cents, on an average, to make calicoes such as are generally worn by the people in the West. Take a yard of calico that costs 9 cents a yard to make it. It is valued at 30 cents. Then 30 per cent. tax on that is 9 cents, making the tax just equal to the original cost.

Some articles of this sort are, in this deceptive way, taxed as high as 140 per cent. There are many other articles of necessity for the farmers, mechanics, and laborers that are taxed in the same partial and unfair manner, which we are sorry we have not time to notice. It applies to almost all such articles. But the finer and better article, that really costs 30 cents a yard to make it and which is used by the rich and fashionable, pays only the same duty. The poor man pays then just a double price for his article on account of the tax, while the rich man pays only the real value, and not quite a third more, for the tax!

For instance: The poor man buys at the "store" $6 worth of the common article, $3 of which is for the tax, while the rich man, who buys $6 worth of the superior article, pays less than a dollar and a half of it as a tax!

Does not such a tariff make the rich richer and the poor poorer?

Let us make this plain by a reference to our State revenue law. Suppose it required a man to pay as a tax 1 per cent., which is $1 on every hundred dollars' worth of property. Suppose that, like our boasted tariff law, it provided that all horses not worth more than $100 should be valued by the assessor up to $100, the poor old man who, to raise bread for his children, would plow with an old blind horse worth only $15 would have to pay as much tax for it as the rich young spark would pay for his horse worth $100.

We ask our farmers and laboring men, without distinction of party, seriously if they can approve of such a law. We ask them if they have not been deceived, if their confidence has not been abused.

We have heard this, ay, this very law, imprudently praised on the stump and in the press as the poor man's best friend. And if a modest complaint is only hinted we are told that we are making war against the rich. If the friends of the poor who are ground under the iron heel of taxation mildly protest against such treatment they are told not to make war against the rich. The rich are to be protected; but if war is made against the poor they are not to be allowed the privilege of defending themselves.

This unjust distinction against the poor is made still greater in other articles. The coarser kind of woolen goods, so much used by the farmer and laborer, and especially flannels and baizes, so necessary for infancy, for old age, and sickness, is taxed still higher by this bill. Flannels that are made for 8 cents a yard pay the enormous tax of 14 cents a yard, being 175 per cent. And the profits charged afterwards on the tax, as well as the cost, make it a heavy burden on the laboring man. But the highest priced broadcloths and the finest flannels pay a far less tax on the value. And yet such articles are in most danger of foreign competition.

It would be some consolation to the farmer if the tax he had to pay should go into the Treasury for the common benefit. But where, as we have shown, the taxes are so high that the foreign article is excluded, the domestic article only can be bought, and the tax or tariff on it of course goes into the pocket of the manufacturer.

So as to salt—salt, that prime necessary of life, which the wealthy inhabitant of the city only uses on his table, but which the Western farmer uses so extensively to save his pork, and beef, and bacon, and to salt his stock, etc. This article, even in tax-oppressed England, is admitted tax free. It is there regarded, like the air we breathe, as an absolute necessary. But in this land of liberty, where we have so many stump professions for the poor, the poor man's salt is sorely taxed. Ay, taxed by this boasted tariff, this "poor man's best friend."

Our Western farmers will be surprised to learn that salt is made in some of the West India Islands at 7 and 8 cents a bushel; that it is made on the seacoast of Spain for 4½ cents, and in Sicily even as low as 2½ cents a bushel of 80 pounds weight. It is made in immense quantities in those and other southern countries by evaporating or drying away sea-water in the sun. It is stronger, dryer, and far superior for curing meat compared with that made at our salt works. Pork and beef cured with it does not need repacking.

Under our present system our produce dealers are compelled to pay an extravagant price for a damp, inferior article of only 50 or 56 pounds to the bushel, and to have their beef and pork repacked at New Orleans at an expense of a dollar a barrel. This is a heavy drawback on their profits, and of course a heavy burden on the prime staples of our State. The produce dealer must buy with an eye to his profits, and is consequently not able to give the farmer as much for his hogs and cattle. Like most laws to raise revenue, the burden is at last borne by the industry of the country.

The census taken in 1840 shows that the salt companies, etc., of the United States manufactured a little over 6,000,000 bushels in the year. The public documents show that we imported in the same year a little above 8,000,000 bushels. The tariff tax on this imported salt was largely above 100 per cent. This enabled the salt companies to sell as high as the tariff would suffer them to go.

The consequence is that we pay an amount of tax on the imported and home-manufactured article both that would buy a far greater quantity of the best salt from abroad than is made in the whole United States.

Ought this tax to be continued for the benefit of salt monopolies, and the people of the West be forced to buy a wet, indifferent article, at a higher price and less weight, and frequently at a still further loss in weight, if bought by the barrel, occasioned by drainage?

If we were to notice all the articles of necessity that are enormously taxed by this bill, it would far exceed our limits. We shall dismiss this part of the subject, therefore, by calling attention to a very few more, of which every man is a competent judge. As very few persons are acquainted with the low price of some articles abroad, we annex a list and their prices, even as long ago as 1832.

The cost of making—	Cents.
One set of 6-inch bed screws is	6
A carpenter's square, weighing 1½ pounds	6½
One chest lock	2½
Carpenter's hammer, weighing 1½ pounds	5½
One six-barred curry-comb, weight ½ pound	1½
Pair trace chains, weight 8 pounds	36
Shovel and tongs, 4½ pounds a pair	21

These prices may seem incredible, but the wonder will cease when we consider that the manufacture of these articles is brought to great perfection by machinery, etc. We refer for our authority to Document No. 106, of the House of Representatives, second session, Twenty-second Congress.

Making every allowance for merchants' profits, the reader can, from this list, form a faint idea how heavily the people are taxed on such articles, to make them command the prices they do in our Western "stores."

The fault is not in the Western merchant, as we have shown. It is in the tax originally imposed by the high tariff, which goes with the goods and is at last paid by the retail buyer.

It may be said that the laborer may pay as little tax as he pleases by buying less from the merchants. To this we answer that his necessities compel him to buy something: and even if he were to buy nothing he would still pay his portion of the tariff tax. This is well understood and easily proved. If the laborer should stint and deprive himself of the comforts and necessaries of life, sold at the "store," yet those who did buy, would, by paying the increased price, be so much the less able to pay the laborer his fair wages, so true is it, in most instances, that all such impositions, in the long run, weigh on the hands of the laborer. Such a policy is not only unjust, but it is impolitic and unwise. For there is nothing at last that gives solid and permanent wealth to a country but labor. All wealth comes from that humble and too frequently despised source. It is the business of trade, commerce, and navigation, merely to traffic in or exchange the products of labor. If labor should cease these proud interests would be annihilated, they would pass out of existence. A free and prosperous laboring and farming interest in a country is its glory and its pride. It constitutes the very sinews and life-blood of its prosperity. Without its life-giving breath every other interest would sink in death. Every wise Government, therefore, should foster and encourage, cherish and protect the laborer.

Why, then, manacle, cripple and palsy its hands?

The poor man pays, under this tariff, in proportion to his purchase, more for his coat, his shirt, his blanket, his salt, and other necessaries than the rich man does for his wines, his furniture, his silks and apparel.

Will it be said that this is spoken for effect? Let us look into the bill itself. "Facts," it is said, "are stubborn things," and "figures won't lie." The custom-house tax on salt was only 20 per cent. in 1842, and is now raised to above 100 per cent., taking the difference of weight into consideration. Common shirtings, sheetings, and calicoes, from 25 to, in most instances, 100 and even 140 per cent. The silk shoe worn in the ball-room pays no higher duty than the cow-hide shoe worn by the laborer and plowman.

On the other side, wines and foreign fruits pay but 50 per cent. and silks generally but 30 or 40 per cent. Ornamental feathers, artificial flowers, hair bracelets, chains, ringlets, and curls pay only 25 per cent.; gold or silver jewelry, only 20 per cent.; diamonds, only 7½ per cent.; other gems, pearls, and precious stones, only 7 per cent. Is this a poor man's law?

WILL THIS TARIFF CREATE A HOME MARKET FOR OUR PRODUCTS?

Those who contend that it will say that there are too many engaged in tilling the earth, and that we must hire some of them to manufacture by promising to give them more for their articles than we should have to give others. We now complain that we can not sell what we produce, or that we sell it too low, which is a loss, and we are, it seems, to balance it by buying at a higher price what we do not produce, which is also a loss! Suppose we could sell to a starved foreigner a barrel of flour for 200 yards of "domestic," what do we gain by refusing to take his "domestic" and be compelled to sell our barrel of flour to one of our own factories for 100 yards? Will not man's self-interest prompt him to engage in the most profitable business? Is he not generally the best judge of what is the most profitable for himself? If you hire him to betake himself to a different business, do you not pay dear for it? Do you not pay "one price to make him willing" and "another price for his article?" If you have to pay the manufacturer to purchase your produce, what do you gain by it? If, by the tariff, you have to give him a double price for his article, are you not just where you were at first, supposing that he gives even a double price for yours? But we shall prove, shortly, that he will not give the double price for yours. If he does give you the double price, wherein is he benefited? How is he "protected?" If he had to do that he would not be striving in Congress for protection. If he has to pay out as much as he receives he is just where he started. No. When any class of men are "protected" in their business it must

be that they obtain an advantage, a substantial benefit. And if so it comes from others. "Protection" to one class is therefore a tax on the rest of the community. In buying and selling "what is one man's gain must be another's loss."

Rest assured that however successful members of Congress from manufacturing districts may be in "humbugging" our members on this subject, they are too wise to be "humbugged" themselves. We have already shown from the speech of Mr. Webster himself, in 1824, that he regarded the protection of his constituents who were manufacturers as a sacrifice of the other great interests in his community.

We have seen, too, that Mr. Clay, in 1816, viewed a tariff as a tax on the rest of the people for the benefit of the manufacturer, for he did not venture to propose that it should last always. It was to continue only until the "protected" article could be made as cheap here as abroad. And how far that has been and is the case we have shown already.

Let us see if the manufacturers can give us the double price for our produce. Let us see if they can consume it. In the good old times of virtue and simplicity the mother and daughter in a thrifty farmer's family did their own spinning and weaving and were able to clothe their fathers and brothers. By modern improvements most of our clothing is made in the large manufactories. Now suppose that ten men engaged in manufacturing were to clothe as many who might be engaged in raising provisions, and that they should mutually supply each other. But the thrifty farmer and his sons could easily raise a great deal more provisions than the whole family, men and women, could eat. Ten able-bodied men, on our Western farms, therefore, can furnish far more than ten puny manufacturers could consume. But this comparison would be conceding entirely too much. Calculate the number of yards of clothing, the number of hats and pairs of shoes, that the ten farmers would use in the course of a year, and then how long it would take the ten manufacturers to make those articles. Now, the real condition of our manufactories makes the difference still greater. That great difference consists in the wonderful improvements made in machinery. It is ascertained that one man, with a spinning machine, can produce as much yarn as two hundred and sixty-seven men can, with each a one-thread wheel. Now, even if it took one manufacturer all his time to make clothing for one farmer, the same manufacturer, with the assistance of a machine, could make enough, from the above calculation, to clothe two hundred and sixty-seven farmers. But this labor-saving machine has but one mouth to feed (the man who "tends it"), and one farmer, by planting a few more rows of corn, could stuff that mouth into an apoplexy. What will the other two hundred and sixty-six farmers do with their surplus produce?

So much for arguments. Now let us see how far they are borne out by facts. Boston is the great market nearest the principal manufactories. We have examined the prices current of that city for different years, when the tariff was high and when it was low. If the protection of manufactures by a high tariff increases the consumption of our provisions and raises their price, these price currents will show it.

In 1810, before the last war, the tariff was low. The prices in Boston in that year were, for a barrel of flour, $8.25; in 1816, when the tariff was raised, flour was $7.37; in 1824, when it was raised still higher, flour was $6.62; and in 1828, when the highest tariff was imposed, flour was only $5.52. So, in 1816, pork was $22 a barrel; in 1828 it was only $12. In 1816 corn was $1 a bushel; in 1828 only 55 cents. Tobacco, in 1816, was $20; and in 1828 only $6.50. Cotton, in 1816, was 30 cents a pound; in 1824 it was 16 cents; and in 1828 only 11 cents.

But it is needless to multiply examples. Do we not know that it would take but a small part of our State to supply every manufactory in the United States with provisions? The great Mississippi Valley would almost bread the world!

But, say some, can we not induce our farmers to abandon their lands and turn their attention to something else? But to what shall they turn their attention? To manufacturing? We have shown that the cotton factories not only supply the whole United States at a high price, but send a surplus to foreign countries. The large manufactories at the East glut our markets with boots and shoes and hats and saddles and tinware and wooden-ware, etc., until our village and country mechanics are nearly broken up.

Well, but what is the remedy, then? To ascertain this, we must first know what is the evil. The fact is that the few manufacturers necessary to glut this country with their goods can not consume the twentieth part of our surplus produce.

They exclude, by a high tariff, an immense amount of cheap necessaries that we could get from abroad in exchange for our provisions. But the foreigner can not buy our produce, unless we buy his articles. This is easily proven. It is charged, indeed, as an argument for a high tariff, that we can not buy goods from abroad unless our staples are taken in return. This is certainly true. And is it not just as true that those from abroad can not buy our produce unless we buy their goods in return? If one proposition is true, the other is also.

The fact is that exports and imports must, in a given length of time, be about equal. This is admitted by every man of experience who has any regard for his reputation as a statesman. Mr. Webster, in sustaining this position as true, in a clear and forcible argument,* observes: "We inhabit a various earth. We have reciprocal means for gratifying one another's wants. This is the true origin of commerce, which is nothing more than an exchange of equivalents, its only object being, in every stage, to produce that exchange of commodities between individuals and between nations, which shall conduce to the advantage and happiness of both."

Mr. Clay himself has said: "For we are instructed by all experience that the consumption of any article is in proportion to the reduction of its price, and that, in general, it may be taken as a rule that the duty [tax] forms a portion of its price." John Quincy Adams, in his fourth annual message, also says: "In our country a uniform experience of forty years has shown that whatever the tariff of duties upon articles imported from abroad has been the amount of importations has always borne an average value nearly approaching to that of the exports, though occasionally differing in the balance, sometimes being more and sometimes less."

Imports and exports, then, being equal, they who are opposed to our getting goods from abroad are necessarily opposed to our sending off our surplus produce; the one depends on the other.

The census of 1840 shows that there were then engaged in trade and manufactures in the United States, including every description of mechanics, white and black, slave and free, only 791,749, while the number of the tillers of the soil was 3,719,951.

A comparison of these numbers proves, first, that if the number of the manufacturers was much increased we could not consume all their products and, second, that as largely increased as they could be in reason—that is, to the extent of our being able to use all they might make—they could not consume the twentieth part of our surplus provisions.

This is evident from the fact that even our manufacturing States are largely agricultural and yield great quantities of our staple products, and in the next place there is no country of the same extent on the face of the globe that, from the cheapness and quantity of land and the activity and industry of the population, is so well adapted for furnishing immense quantities of cheap provisions as the United States. On the other hand, in Europe, the dearness and scarcity of land and the dense population frequently occasion a distress for bread, often amounting to actual starvation. They would be compelled to sell their articles cheap and give a high price for our provisions in return. They offer to our articles, therefore, a more varied and extensive market. Where we have our thousands to feed, they have their hundreds of thousands.

As "imports and exports must, on an average, be equal," it is evident that these famishing millions can not buy our provisions unless we buy the cheap products of their labor in return.

It is but fair, if we are compelled to buy all our goods from our own manufacturers, that they should buy all our produce in return. But this they can not do, and if they did they would remain where they were, "unprotected." If we go into a partnership of this kind, let not the benefits be all on one side. Why should they be suffered to act the part of the "dog in the manger," neither eat our provisions themselves, nor suffer others to eat them?

So it is in relation to cotton, the great Southern staple. This is our most important export in paying off our balances for foreign goods. In 1840 our agricultural exports amounted to about ninety-two and one-half millions of dollars, of which nearly sixty-nine millions were in cotton. There are about 2,000,000 of bales produced annually in the United States, and of these our manufacturers consume but about 300,000. The other 1,700,000 bales must find a foreign market, and if imports are not received in exchange how are they to be disposed of? If Southern planters find a ready market abroad for their cotton it will be their interest to appropriate every spare acre to its cultivation, as the most profitable article. And in that event, as in former years, they will supply themselves with much of their pork, flour, and other provisions from the West. More hands are employed in raising the same value of cotton than in making, with the aid of machinery, the same amount in value of manufactures. In the former employment many mouths are to be fed and backs clothed; in the latter but few. If our imports are diminished or excluded by too high a tariff our exports of cotton must fall off in the same proportion. And, in that event, the cotton planter will be driven to the necessity of devoting a portion of his plantation to raising his own provisions. The result is, then, that too high a tariff will not only, to a great extent, cut off a foreign market, but also the Southern, which is an important domestic market for Western produce.

WILL A HIGH TARIFF MAKE MANUFACTURES CHEAPER?

If its friends did not sometimes urge this as an argument in its favor, we should scarcely deem it worthy of a reply.

Does the manufacturer himself believe it? He complains that they are now too cheap, and therefore he asks for a high tariff to enable him to sell at better prices. If the manufacturer is embarrassed because he can not sell his goods high enough, would he ask for a high tariff, if it would cause his goods to fall still lower in price? By no means. That would not be "protection." Yet the manufacturers were foremost in urging the high tariff upon Congress at its last session; and Mr. Simmons, of Rhode Island, himself a wealthy manufacturer, was the chairman of the Committee on Manufactures in the Senate, which reported in its favor.

But it is said that prices of manufactures have declined; that cotton goods, for instance, are much cheaper now than they were twenty or thirty years ago.

This is very true. But this has been owing, not to a high tariff, but to the vast improvements in machinery. If one man, with the aid of a machine, can now spin as much cotton or wool as two hundred and sixty-seven men could formerly, the only wonder is that goods are not much cheaper than they are. The truth is low prices are the excuse for and cause high tariffs. But high tariffs are the enemies of and prevent low prices. If it were not for high tariffs, machinery would supply our wants at far less expense. High tariffs are the deadly enemies of all the advantages flowing from improvements in the social arts, and confine those advantages to a privileged few.

It is also insisted that we must resort to a high tariff as a measure of

RETALIATION.

The argument assumes that the British dominions will not receive our produce except under higher duties, and concludes, therefore, that we must retaliate by imposing high duties on goods we receive from that country. Those who urge this argument admit that it would be better for every country to tax imports from other countries low and encourage a free exchange of articles, but that this plan should not be adopted by one country unless all adopt it.

In the first place there is a mistake as to the fact. The public documents, based on returns, show that, during the seven years ending with and including the year 1840, the United States exported of our products to foreign countries to the amount of nine hundred and fifty-eight and one-half millions of dollars, and that of this large amount the British dominions alone received more than one-half.

In the four years ending with 1840 our exports to Great Britain and Ireland alone amounted to above two hundred and thirteen millions of dollars, besides the profits being considerably above what we received thence in return.

It is said, too, that Great Britain takes none of our provisions. But the returns show that in the year 1840 alone our farmers supplied Great Britain and her colonies in the single article of flour and wheat to the amount of above twelve and one-half millions of dollars. Great Britain, at that time, had a heavy duty on foreign provisions, which no doubt diminished her imports in that line, though it could have had but little effect on the profits on what was sold, because, as we have shown, the consumer, not the importer, pays the tariff tax. The principal effect, then, which it had was to make provisions there so dear as to deprive her own laboring classes of a comfortable sustenance. She wished to "protect" the rich landed aristocracy by imposing a heavy tax on imported provisions and compel the other classes to buy their domestic supply. In this way numbers have actually died of starvation. They benefited their aristocracy by trampling millions of the poor into pauperism. And now because they have acted so inhumanly and unjustly towards their poor we must impose a high tax to benefit our wealthy manufacturers by grinding the farming interests into the dust. If our high duties could reach the landed aristocracy of England it would be retaliation. But instead of that they diminish our imports from that country, and that, as we have shown, diminishes our exports of provisions to it, and the fewer provisions we send there the greater monopoly is enjoyed by their landed aristocracy in supplying their market.

In short, because the wealthy land-holders of England oppress their poor, our wealthy manufacturers must retaliate by oppressing ours!

Besides, just before our late tariff was passed Great Britain had greatly reduced her duties on our provisions. A comparison of her tariff and ours shows that her duties on grain are lower than one-half of the articles in our tariff. She actually takes, directly and indirectly, three-fourths of all the grain we export. Can we talk with propriety of retaliation when our tax on her cottons, woolens, and crockeryware is nearly double as high as hers on our grain?

When our opponents admit that the system of low duties is the best policy, if acted on by all nations, why do we select the very time for increasing ours when England had just set the example of diminishing hers?* Is there not danger that it may induce her to raise hers again? She will certainly do so if she is governed by the same miserable policy that produced our late tariff. And such an event, it is evident, must injure the sale of our surplus produce of the West.

Again, if we exclude, or materially diminish, the importation of goods from abroad by taxing ourselves with high prices at home, it will increase the amount of freight on our exports. A vessel can take the farmer's produce from

* Webster's Speeches, volume 1, page 282.

*Saxony, Prussia, Holland, Belgium, and England have all made advances towards a system of low duties.

New Orleans to a foreign country cheaper if it can bring another cargo back. If the foreign cargo is excluded from our ports by a high tariff the vessel must charge as much for taking our produce abroad as it would for the outgoing and return cargo, both. If it had a return cargo that cargo would pay half of the expense of the voyage. High freights diminish the profits on the cargo; and the merchant can not, in that case, give the farmer as much for his produce, for the purpose of shipping it abroad. So that in this, as in the other cases we have mentioned, the burden at last falls on the farmer and laborer, to benefit the manufacturer by excluding necessaries from abroad.

A HIGH TARIFF IS INJURIOUS TO COMMERCE, NAVIGATION, AND THE DEFENSE OF THE COUNTRY.

The United States are happily separated from the most powerful nations of the globe by the wide ocean. A war with either of them, therefore, must, to a great extent, be fought on that element. Ships and sailors are necessary in such a contest. Who has not heard—who among us does not feel proud of the valor of a John Paul Jones, of the Revolution; of the Porters, the Decaturs, the Bainbridges, the Lawrences, and our other naval heroes of the last war, in successfully grappling with proud England, the queen of the sea, the first naval power of the world, on her own boasted element, and tearing from her reluctant grasp the wreath of victory? Who does not see the necessity of keeping up the numbers and spirits of our hardy sailors, with whose assistance we can hold foreign arrogance and foreign aggression "at arm's length?"

Now, it is well known that nearly all our brave tars are reared in the merchant service. They commence their life of peril and daring on the stormy deep in trading vessels. This is their apprenticeship. Thence they go into our ships of war and make our glorious flag respected in every port and on every sea or they enter on board of privateers, despoiling the enemy's commerce and crippling his energies.

But if our merchant vessels are thrown out of employ, what becomes of this apprenticeship of the American tar, this nursery of seamen? Whence can our men-of-war get their supply of skillful hands and stout hearts?

Now, it is manifest that a high tariff, by diminishing imports, diminishes trade, and of course diminishes the number of vessels employed in trade. It diminishes the shipping interest engaged in exchanging our products over the whole world. Its direct tendency, therefore, is to cripple our naval force, which has been well termed the "right arm of the national defense."

Now let us see how far this is borne out by the facts. During the ten years from 1800 to 1810, although our merchant vessels were annoyed by both England and France, they increased in tonnage nearly 50 per cent. In the five following years, even when we were engaged in a war with the immense naval power of Great Britain, our tonnage was but slightly diminished. But in the following fifteen years, ending with the year 1830, under the high tariff of 1816, 1824, and 1828, our shipping was reduced to the amount of 277,819 tons, being over 50 per cent., although our population was increased over 50 per cent. Thus the high tariffs had nearly destroyed our shipping and had accomplished what England, with her thousand ships of war, was unable to effect.

Now contemplate the other side of the picture. In 1833 the compromise tariff was passed, by which the tariff tax on imports was gradually diminished, from time to time, for ten years, and within the nine years since we have more than recovered all that we had lost, our foreign tonnage amounting in 1841 to 946,073 tons. And let it be said that this shipping interest has been exclusively engaged in importing goods from abroad. It was also employed in taking out at least an equal amount of exports, as we have already established.

WILL A HIGH TARIFF PREVENT A FLOW OF SPECIE FROM THE COUNTRY?

This is sometimes asserted, and by some may have been believed. But it is plain that no nation, any more than a family, can long continue to buy with cash only. Industry must be used; labor must be employed; something must be raised, made, or produced in exchange, or the money "gives out." And then resort must at last be had to industry; for, in the course of a limited time, "the imports and exports must be equal," as we have said already.

A resort to our own history—to facts—shows, indeed, that high tariffs rather have had a tendency to drive specie out of the country. From 1821 to 1832, both inclusive, there was imported into the United States about eighty-two and one-third millions of dollars ($82,331,067), and there was sent out during the same time about eighty-five and one-half millions of dollars ($85,604,131). This was during the continuance of all our high tariffs; that is, those of 1816, 1824, and 1828. During these twelve years, therefore, there was sent out of the country rising three and one-quarter millions of dollars ($3,273,064) more than was brought in.

In March, 1833, the compromise act was passed, which, as we have shown, gradually diminished the amount of the tariff to the revenue standard. But in the seven following years, ending with 1840, under a decreasing tariff, there was imported into the country about fifty-five millions of dollars more than was sent out ($55,004,288). Our authority for these facts is the report of the Whig chairman of the Committee on Manufactures of the House of Representatives, made at the last session of Congress. If this proves anything, therefore, it proves that high tariffs drive specie out of the country and that low tariffs bring it back. Let us hear no more of low duties robbing the country of specie. What sophistry will selfish interests not resort to!

IS A HIGH TARIFF AT THIS TIME NECESSARY TO MAKE US INDEPENDENT?

Our ability to supply ourselves with the necessaries, comforts, and many of the luxuries of life is now on a footing entirely different from what it was during the last war, and even then we were able to live within ourselves. We did not import from abroad, and retain for use in 1840, when the duties had been diminished to the revenue standard, of blankets more than about 3 cents' worth to each of our people, young and old, black and white. Our whole imports of woolen goods of every kind, including broadcloths, fine worsteds, etc., in the same year, was only about 30 cents each.

The last census shows that we have 20,000,000 of sheep, and our yearly crop of cotton amounts to 2,000,000 of bales, and of this we use less than the sixth part. Who can say that we should suffer for want of clothing in time of war?

Our whole import of iron in that year after deducting what was used by railroads and admitted free of duty was only 22,718 tons, being less than one-twentieth part of our own production. Yes; nineteen-twentieths of the iron we ordinarily use is made within ourselves.

Then, as to articles and munitions of war. We have long been in the habit of making our own cannon. Of arms, we have the most abundant supply. We have two public armories, and contracts with seven private armories, which furnish above 40,000 arms every year. And we have on hand above 600,000 muskets and more than 20,000 rifles belonging to the public. Of gun-powder, we imported in 1840 only about four thousand five hundred dollars' worth ($4,521), and we exported the same year nearly one hundred and twenty thousand dollars' worth ($117,347).

We have, therefore, an abundant and increasing supply of the materials of war; but, if we had not, what sort of an argument is that for taxing cottons, woolens, salt, and crockeryware? It is the best, however, that the manufacturers have, and if it is a poor one they try to make it up by urging it the oftener. Selfishness never sleeps.

IS THE PRESENT HIGH TARIFF IMPARTIAL IN ITS OPERATIONS?

Many of the remarks already made might be referred to this head. But we desire to submit a few more to the candid reader. We say the candid reader, for in the recent state of political excitement, there were, and doubtless there yet are, some who will not be convinced; some whose prejudices are too strong for argument; some who are so anxious for office that the permanent interests of the people are of less importance in their eyes than the attainment of short-lived distinction. Strange as it may seem, there are some who would be sorry to find their opponents right. With such, it would be lost time to argue. We only ask the attention of those of all parties who desire to know the truth for its own sake.

We have already proved that the operation of a high tariff is to compel one part of the community to pay another class of persons a higher price for their products. We will now examine the whole amount of these higher prices caused by the late tariff and compare the numbers and occupation of those who pay and those who get paid.

The census taken in 1840 shows that there were then in the United States 3,700,000 persons engaged in "farming" or agriculture, and that the products of their labor and their farms amounted in the year to $794,000,000. This makes $213 to each tiller of the soil.

The census also shows that there were 791,000 persons engaged in trade and manufactures, and that their products were $394,000,000 in the year, which gives $500 to each of them.*

Now, in the present times, which man most needed protection, the manufacturer, who makes $500 a year, or the farmer, who makes only $213 a year, not one-half?

The above does not yet show the full extent of the evil.

For from this number of 791,000 persons engaged in trade and manufactures should be taken our village and country mechanics, whose profits generally are not larger than those of the farmer and who are greatly injured by the overshadowing competition of the large factories of the old States.

And we should also take from that number the mere hands or workmen employed in these factories; for, as they receive only their humble wages, the profits caused by the high tariff go to the rich companies or individuals who own those establishments.

Is not the farmer and laborer equally entitled to protection? At any rate, if either part of the community is to be favored, ought it not to be the many and not the few? Yet we find the smallest class, who are already doing more than twice as profitable a business as the others, are to be still further benefited at their expense.

Is it just, is it sound policy that these few wealthy manufacturers on whose behalf it was promised in 1816 that a "protection" of three years would be sufficient, and who have since received higher and higher "protection," should again be quartered on the country?

Is it just, is it fair that they should have many of their goods "protected," when there are none of the same kind brought into the country to compete with them?

Is it just, is it necessary, that on articles costing 6 cents a yard they shall make the farmer pay 9 cents a yard more; on one costing 3 or 4 cents, 6 cents more; on one costing 8 cents, 14 cents more?

And now, how are the farmers and laborers benefited in return? The manufacturer, as we have shown, can not consume the twentieth part of the farmer's provisions. Further than that, although a heavy duty on coarse and cheap woolens from abroad is imposed, for the purpose of compelling the laborer to pay a high price to the manufacturer for his article, yet the farmer's wool is inadequately protected in return. One of the reasons urged for a high tariff on woolen goods was that, if the manufacturer could get a high price for them, he would be able to give the farmer a high price for the wool to make them of. Now, the wool of which such are made can be and is imported from South America at 7 cents a pound. But our farmers can not afford to sell such wool for less than 30 or 35 cents a pound. And now mark the difference. While the manufacturer insists that cheap woolen goods, such as he makes, shall not be brought into the country except a tax, ranging from 40 to 175 per cent., which allows him, to a great extent, a monopoly of the market, the South American wool is taxed only 5 per cent. A pound of such wool, costing 7 cents, is taxed, therefore, but one-third of a cent! It is useless for the farmer to try to sell his wool for a saving price under such circumstances and against such competition.

Now, the main object of a tariff, say its friends, is to make us independent. But what is the use of being independent as to the cloth if we are not independent as to the wool of which it is made?

We here see that the manufacturer can sell his woolen goods at a high price, to the farmer, but instead of taking the farmer's wool in return, at 30 or 27 cents, he buys an equal article from South America for not more than 7½ cents! Private gain is his object; and to blind the eyes of the people he talks about independence.

And what is the amount of tax caused by the tariff that we pay? Not only that which is paid into the Treasury by the importer, and which is at last paid by the consumer, as we have shown, but also the profits charged on it which goes into the pocket of the merchant. But all that is much the smallest part.

The articles imported from abroad, and which are taxed, amount to not quite one-seventh part of similar articles made in our own country. The object of imposing that tax, as we have said, is to enable the manufacturers of similar articles at home to sell them higher. It follows, therefore, that as the price is increased on all those articles, home-made as well as foreign, for every dollar we pay into the Treasury on foreign articles we pay $7 to the manufacturer on the domestic article besides the profits charged on it by every trader through whose hands it passes until it is bought for use. The whole amount collected for the national revenue is very large (estimated under the present Whig administration at $32,000,000); but when it is considered that seven times that amount is also paid to manufacturers, and swelled to from one-half as much to an equal amount more for profits, is it wonderful that the mass of the people are kept poor? Is it strange that the sterile and barren manufacturing States should be prosperous and wealthy and that the people of the other States should complain of distress?

If A B should determine to avoid his share of this tax by buying no articles from the merchant which are taxed by the high tariff, and should be able to carry out this resolution by depriving himself of salt, iron, tea, sugar, coffee, knives, forks, plates, cups, saucers, blankets, clothing, and many other necessaries of life, still he would fail in his object. The rest of the community would continue to buy as before; the same amount of money or property would go off in exchange for these articles as before; the country would be left just so much the poorer, and just so much the less able to pay A B a fair price for his labor or for his property. He would still, in this indirect manner, feel his share of this odious tax. His property melts away under its influence as the snow before the sun. He is surrounded with it as by an invisible pestilence from which he can not escape.

If this could be seen in the shape of a direct tax, exempting rich manufacturers living in Indiana from its operation and making it so much heavier on the rest of society, who would submit to it? But what would be said if the law in addition to that should require that we should pay seven times as much more as a direct tax to the manufacturers themselves? Bad as this would be, yet, if the manufacturers were living among us, the money would still be in the country and we might hope to get a part of it back for our labor. But under the

*Strictly speaking, all laborers and mechanics, inseparable from agriculture, should be counted with them, because they are not favored by the tariff. This would make the number above four millions. And from the manufacturers should be taken those engaged in commerce and navigation, which would leave a little above a quarter of a million.

operation of a high tariff the money goes to swell pampered wealth in other States, and as not one-twentieth part of the farmer's produce could be taken in exchange for it nineteen-twentieths of the tax would go, never to return.

NOW WHAT, IN RETURN FOR ALL THIS, HAS THE FARMER AND LABORER RECEIVED?

In vain do we look into this bill for "protection" to the farmer of Indiana. We beg pardon. To preserve the appearance of impartiality it is most graciously provided in this bill that any beef, pork, wheat, flour, oats, and corn imported from abroad shall pay a duty! As if we were afraid that the half-starved of foreign countries could spare these articles, send them here and undersell us! Undersell us in our own country, when our complaint is that we raise more than we can sell and can only sell at the lowest prices!

Pretend to exclude foreigners from sending provisions into our country when they themselves are dying in their cellars and in their streets for want of such provisions! The manufacturers prevent the importation of articles from abroad, which, of course, must prevent the foreigner from exchanging them for our produce, which is rotting in our stacks, barns, and cribs. And then, as a set off, say the foreigner shall not bring agricultural produce to Indiana! This is nothing but the mockery of protection to the farmer. They know that such produce can not be brought here. They might as well protect the buckeye trees and beech logs of our endless forests. In fact, in return for the taxes we pay the manufacturer, we have the consolation of finding by this bill that no hewn timber can be brought from a foreign country into Indiana without paying a duty!

It appears from the official documents that the revenue would be increased by all the butter brought into the country only about $400 in the year, by all the wheat flour only $83, and by all the lard not quite 93 cents! How ridiculous to talk of the amount of such accidental importations as a competition!

Let us not be misunderstood. We are the friends of the manufacturers. We rejoice in the mechanical and chemical improvements of the age, by which nations are clothed with far less labor and at far less expense than formerly. We are gratified to see industry encouraged and rewarded everywhere, but we do object to the elevation of the interests of a few above those of the many, to give assistance where it is not needed at the expense of honest labor which is crying for relief.

Let it not be said that we are opposed to American labor or to home industry. We claim to be, and can prove that we are, more friendly to these great interests on which, under a kind Providence, our national wealth and happiness depend, than our opponents themselves. We are not for the home league, on the part of a pampered few, to fleece and rob the needy and suffering multitude. Is there no American laborer but what is found in the wealthy factories? Is there none at the plow, the scythe, and the sickle? Have we no home crops, home herds of cattle, and home flocks of sheep?

Home industry! At that inspiring name the tide of patriotism rushes to our heart, we raise our heads and cast our eyes over our whole beloved country. We can not fetter and contract our affections to the noisome precincts of the factory alone. But see! Look abroad over our thousand hills and boundless plains. "See the emigrant cutting down the trees, building his log cabin, and turning up the prairie, where golden harvests have slept ever since the flood." There is "home industry." Look at the farmer improving his fences, feeding his cattle, and taking his crops to market. There is "home industry." Look at his wife and daughters cooking his food, making his clothes, doing everything to save what he has earned and giving comfort to his habitation. This is "home industry."

This class exceeds all others in society, both in numbers and importance. Without them our widespread and fertile lands would be as valueless as the deserts of Arabia. Not a house would be built did he not feed the builders. Not a village or city would spring into existence or continue to exist did they not draw substance and wealth from the farmers around them. Not a ship floats whose freight is not, in the first instance, the product of his toil or the labor of those whom he feeds. The lawyer, the doctor, the divine, the mechanic, the seaman, the soldier, the public officer, the merchant, the banker, the broker, the idler, and the knave are all fed from his hands, clothed by his toil. The wealth of the Girards and the Astors is the accumulation of his industry; it is he who fills the treasury of states and nations, builds navies, and supports armies. Without him society can not exist and the world would be surrendered to a few wandering savages, living by the chase.

This is the "home industry" which, above all others, merits "protection." But what "protection" does he obtain or ask? Or what is it possible for the Government to give? Does the emigrant expect or ask the Government to cut down the trees for him or build his cabin and plow up the prairie? Does the farmer ask or expect the Government to build his fences or plow his fields? Does he go to his Government and say: "My land is poor; I can scarcely get a living; I beg for protection; I beg you to impose a tax on the produce of my neighbor's more productive lands, that my crop will sell higher and I may get rich?" If he were to approach Congress or the State Legislature with such a petition he would be laughed to scorn. He would be told that he had himself chosen his occupation and chosen his home; that he must encounter the hazards of the one and the inconveniences of the other; that it would be as unjust to tax his neighbor's crops to enable him to sell his goods at a higher price as it would be to take his neighbor's property without consideration and give it to him.

There are but few men in society who advocate an equal distribution of property by law, and these are stigmatized as agrarians and levelers. But is not a protective tariff, so called, founded on the same principle? When the law compels me to pay more for a hat than I should otherwise be obliged to pay, does it not take a part of my property and give it to the hatter? If the law compels the farmer to give 5 bushels of wheat for goods which he could otherwise purchase for 4, does it not take from him a part of his property and give it to the manufacturer?

And this is called "protecting home industry." The industry of thousands is taxed to swell the income of one; but the thousands are forgotten and the one only remembered! And because he gets rich there is as much gratulation as though the rest of the community had not thereby become poor.

It is frequently insisted that the great wealth of England is occasioned by her high tariff system, and that the United States should copy her example. We were not a little surprised to see the same ground boldly taken by one of the speakers in the late Whig convention, held in Indianapolis, January 17, 1843. In dwelling somewhat on this topic he said that "England's palaces were produced by her high tariffs." He ought to have added that they had also produced the toil, the starvation, and death of millions. There is no doubt that the tendency of a high tariff is to create the wealth of a few, but it is by robbing the many. Suppose two adjacent counties in Indiana to have the same number of inhabitants and that the same amount of labor is done in each county. If the inhabitants of one county should build a palace or one or more splendid mansions, it is clear that the labor necessary for that object must be taken from other pursuits, the pursuits of ordinary industry. The county, therefore, would not be able to send off as much produce or furnish as much from the mechanic's shop as the inhabitants of the other county would be able to do who had confined themselves to their farms and shops. In that case there would be more to eat and wear and it would be cheaper. The laborer would retain more of the fruits of his labor. A man can do but a certain amount of work in a given time, and so of a county or State or a nation.

The products of this labor constitute the wealth of the individual or community. If these products are engrossed by a few so much the less would be left to the others.

If half the people are engaged in erecting splendid buildings, which of themselves put nothing in the mouth nor on the back, it must make provisions dearer and the people poorer. Great wealth is always found in company with great poverty. As much as the higher classes of England surpass the wealthy of our country in splendor and luxury, in the same degree is the poverty and wretchedness of the rest of the community there seen greater and more widely extended. We object, therefore, to any policy which tends to make the distinction between the poor and the rich still greater in the United States. We believe there is more real virtue and happiness in a farming community than there is in large towns, and for the reason, not only that all persons, male and female, labor in the country, more or less, but also that there the inequality is not so great between the rich and the poor.

In no other country is there so unequal a distribution of wealth as in England, and in none has the condition of the laborer so steadily become worse. The misery of the great body of the people seems to have increased in precisely the same proportion that the nation has become more wealthy. We have seen the English laborer under this system losing the comforts, the necessaries, and sometimes even life itself. We have seen him give up the use, first, of meat, then of bread, and, in some cases, even of potatoes, until he was actually reduced to eat the "sowings," made of the starch in which the cloth had been sized at the factories.

And this is the country whose tariff system we are called upon to adopt, that we may have our palaces and poor-houses also!

Whatever may be the secret wishes of their leaders, especially in other States, we are confident that the mass of the Whig party—especially their virtuous and industrious farmers and mechanics—do not wish that England should be held up as an example for imitation in this respect.

HIGH TARIFFS ARE CALCULATED TO DEFEAT THEIR PROFESSED OBJECT.

The main object of a tariff, as we have said, is, or should be, to raise a revenue. But if the taxes imposed on articles from abroad are too high, they either diminish the amount imported or shut them out altogether. If less goods are imported, less taxes are paid at the custom-house. If the tax is so high that the foreign article can not afford to pay the tax and afterwards sell for a saving price, it will not be brought into the country at all. In that case no goods would pass through the custom-house to pay taxes, and, no taxes being collected in that manner, there would be no way left to supply the Treasury but by excises or direct taxation, which the friends of a high tariff profess to abhor. The quantity of articles from abroad that can be used in a country is in proportion to the number of its people. Every tax on such articles, as we have proved, raises their price, and the price is raised in proportion to the amount of the tax. If such articles are raised but a little by a small tax, the poorest of the people only will be prevented from buying them.

If such taxes are raised still higher, those who are a little better off than the poorest will next be unable to buy, and so on, until they are so high that, from inability or on account of domestic competition, none will buy, and then the revenue from that source will cease altogether. If the taxes are very high, although the amount paid on a particular article is then greater, yet there will be fewer of such articles sold on account of the high price, and consequently fewer brought into the country, and therefore less revenue collected. So that, if the taxes are either too high or too low, the revenue will be diminished at the custom-house. If the object is to raise a great amount of revenue, therefore, a medium should be observed.

A high tariff also diminishes the revenue by encouraging smuggling. It raises the price of the article so much that the smuggler is tempted to bring it into the country secretly to avoid paying the tax at the custom-house. More or less of this smuggling is practiced in every country; but the temptation to it is stronger where the tariff is high and of course more extensively practiced.

It is computed that when the tariff duty in England is 20 per cent. the smuggler can afford to run the risk of punishment by violating the law.

But Great Britain is densely populated and has but a limited coast or frontier to guard against the smuggler. The revenue officers and naval and military force for the prevention of smuggling in that country are also far greater than they are in the United States. Now, if, in the face of all these obstacles, a tariff of 20 per cent. causes smuggling in England, what will be the effect in our country, with a coast and frontier of 8,000 miles and a tariff of 36 per cent. and upwards? The United States is divided from Canada only by lakes, a river, or a mere fence. Nothing has been more common than for persons near the line to cross into Canada to buy their "store goods," which they could get much cheaper there, on account of our tariff; and since it has been raised so much higher smuggling must be continued on a much larger scale. We all know the smuggling done on that line during the embargo and the last war. All this may be advantageous to some in New York and the New England States, which border on Canada, but it is a fraud on the honest importer and a fraud on the revenue, and consequently makes the burdens heavier on the people of the other States.

That a high tariff diminishes the revenue has been proved by experience. In England, when the duty on coffee was reduced from 1s. 6d. (35 cents) to 6d. (11 cents) a pound, that is to only one-third, the revenue collected from it was, notwithstanding, three times that of the former amount. And so in our own country. A public document of last session shows that we collected vastly more revenue from sugar when the tax on it was low than when it was high.

Even in tax-ridden England the truth is admitted. One of her statesmen, Lord John Russell himself, lately observed: "Upon a careful view of our commercial imports, we came to the conclusion that by removing prohibitions and lessening restrictions it was possible to replenish the treasury, and at the same time to secure to the working classes a greater command of the necessaries of life at steady and moderate prices." Ought we to be less anxious in this free country to devise a system that will put the taxes more into the Treasury and less into the pockets of the manufacturer, and that will cheapen the necessaries of life to the poor man? Or is an American statesman to be less humane than an English lord?

The trade of the Island of Cuba, exports and imports, is nearly four times the amount of ours, per head of her population, and three times that of England, and yet the duties there are often less than 20 and seldom exceed 25 per cent.

But in Spain, whose tariff is higher than that of any other country in Christendom, a constant warfare by the military is carried on against the smuggler or contrabandist, to prevent a violation of the laws.

We have then impartially endeavored to show some of the evils of a high-tariff system, and especially of that passed at the last session of Congress, and its injurious effects upon the morals of the country and the prosperity and happiness of laboring millions. We have sought to warn our virtuous countrymen, before it is too late, not to follow the fatal example of despotic countries by adopting their laws or their policy, for the unequal distribution of wealth—a system of laws and policy which inevitably tends to make the rich richer and the poor poorer.

It may be asked, that as a tariff has always existed in this country and neither party proposes to abandon it, what kind of a one does the Democratic party offer?

We answer promptly a tariff for revenue, and lest that should be regarded as too vague a reply we will set forth the plan in detail. We believe, nay, we are confident, that if only the expenses of the Government which are absolutely necessary were raised by means of a tariff it would give every desirable protec-

tion to our manufactures of every kind, and at the same time repress monopolies and yield an ample revenue for the wants of the country.

To ascertain what would be a sufficient revenue it will be necessary to compare different periods of our history.

At the last session of Congress, Mr. Fillmore, the Whig chairman of the Committee of Ways and Means, estimated our national expenses at $27,000,000. To raise this amount it would be necessary to impose a tariff of thirty-two millions, the overplus being required to pay the expenses of collection.

Next, judging from the average quantity of goods then and previously imported into the country, when the duties were low, and on which a duty or tax was to be laid, it was estimated that the amount of such imports would be about $89,000,000 in a year.

Now, if $32,000,000 were to be raised on eighty-nine millions of goods, it would make an average duty on each article of about 36 per cent.

Then, as cash payments of duties and other restrictions are required by the last tariff law, it has been computed that it would amount, as compared with former tariffs, to about 39 or 40 per cent., for an average tax, or, as it is called, a horizontal tariff.

This amount, the Democratic party contend, is entirely too large, and that, in many cases, it would amount to a prohibitory tariff; that is, the tax imposed would be so high as to prevent many articles being brought in, which would, to that extent, dry up the revenue from that source.

But this was the smallest part of the evil. Not satisfied with having this high average duty, the Whigs insisted on having, in an excessive degree, what are called discriminating duties; that is, to raise the duties on some articles far above the average duty (of from 36 to 40 per cent.) up to 100 and even 175 per cent.

The different interests—the lead mines, the iron works, the woolen manufactures, the cotton manufactures, the salt companies—were each struggling in Congress, which should get the greatest discriminating duty in their own favor. And we have shown that in many cases, especially in those of cottons and woolens, of the class of necessaries, the tax imposed was enormous, even after such manufacturers had attained such strength and wealth as, by the former admissions of their own friends, not to need further "protection."

Now, supposing the principle of "protection" to be just, the question arises, how far it ought to be carried, as to the amount of the tax imposed. To ascertain this it will be proper to see how high the tariff has been at different times in the United States.

The average duties from 1789, and covering the administration of General Washington, were only 12½ per cent., and often much less, except in the case of one article, and even that was but 15 per cent.

From 1800 to 1808, covering Mr. Jefferson's administration, the average duties were but 20 per cent. And yet the names of Washington and Jefferson are sometimes claimed as favorable to a high "protective tariff." Even the tariff of 1816 averaged not quite 30 per cent. And it was under that tariff that Mr. Webster admitted that the cotton manufacturers had "passed the point of competition." Notwithstanding this, the tariff of 1824 (which, it is confessed, was a protective tariff) raised the duties to an average of 35 per cent. The tariff of 1828, which has been called the "bill of abominations," went still beyond that, and such was its unequal and oppressive operation that it had well-nigh occasioned a civil war and a disruption of the Union.

Finally, to restore peace and quiet, what was called the "compromise bill" was introduced by Mr. Clay in 1833, which provided that every two years a part of this enormous tax should be taken off until at the end of nine or ten years it should be reduced to a duty of only 20 per cent. nearly or quite "horizontal," for a revenue tariff. In his speech on that bill, Mr. Clay said: "Now give us time, cease all fluctuation and agitations for nine years, and the manufacturers in every branch will sustain themselves against foreign competition. I am anxious to find out some principle of mutual accommodation, to satisfy, as far as practicable, both parties; to increase the stability of legislation, and at some distant day, but not too distant, when we take into view the magnitude of the interests which are involved, to bring down the rate of duties to the revenue standard, for which our opponents have so long contended."

He further observed that "viewing it in this light it appeared there were eight years and a half and nine years and a half, taking the ultimate time, which would be an efficient protection; the remaining duties would be withdrawn by a biennial reduction. * * * He had no doubt the rate of duties guarantied would be continued after the expiration of the time if the country continued at peace." And he asked: "What man who is entitled to deserve the character of an American statesman would stand up in his place, in either House of Congress, and disturb this treaty of peace and amity?" In his speech, on the 25th of February, on the same bill, Mr. Clay further remarked:

"The bill before us strongly recommends itself by its equity and impartiality. It favors no one interest and no one State by an unjust sacrifice of others. It deals equally by all." What was this but saying that the tariff of 1828 (which was changed by the compromise) was not equitable and impartial; that it did not favor some interest and some States by an unjust sacrifice of others; and that it did not deal equally by all? And had not the people a right to confide in the promise thus solemnly made, that no man entitled to the character of an American statesman would afterwards endeavor to disturb "this treaty of peace and amity."

The compromise bill was passed by Congress, both parties generally voting for it (though the Democratic members preferred a shorter time than eight or ten years to bring the duties to the revenue standard), and President Jackson approved the bill. Mr. Clay received much praise for this measure, and was regarded by his political friends as the "pacificator" of the country.

Many of the Democratic party, however, expressed their fears that there would be another attempt made to impose a high protective tariff on the country, but they were denounced by their opponents as alarmists and as endeavoring to excite the public mind for mere political effect.

To quiet the people on this subject, Mr. Clay in his speech at Hanover Court-House, Va., renewed the pledge that the compromise act should not be disturbed; and General Harrison, also, in his Zanesville letter, stated that he never would agree "to its being altered or repealed."

After the anti-Democratic party came into power by the election of 1840 and after the death of General Harrison, their leaders still professed to be in favor of the compromise. They still professed to favor a tariff for revenue only. They knew that Mr. Clay had said that by the time the compromise act had brought down the duties to the revenue standard the factories would be in a prosperous condition and need no protection, and no change should be made in the compromise. Notwithstanding all this, the result shows that they wanted to have a high protective tariff, and many of the less prudent among them and political editors came out openly for that measure. But how were they to accomplish it, in the face of all their pledges to the contrary.

General Harrison was gone, to be sure, and he would be no obstacle to their designs.

They took the ground, therefore, that they were still for a tariff for revenue only. But the amount of that revenue was another question, and if they could find a plausible excuse for increasing it, there would be no difficulty in the way; because, according to their reasoning, the greater the amount of revenue the higher must be the tariff, and thus by increasing the revenue and expenditures they could push up the tariff to any amount. Every expedient, therefore, was resorted to for an excuse to expend money.

They charged that the Government had been left greatly in debt by the previous administration. Some boldly asserted that a debt had been created under Mr. Van Buren's administration of $40,000,000 and that it would require a high tariff to raise money to pay it.

Their own Secretary of the Treasury since, however, reports officially that the whole amount of that debt was not quite five and a half millions.

Was any increase of the tariff necessary to pay off that debt; and, if so, how much?

To answer that question we must advert to a few other facts.

It will be recollected that Mr. Clay, before the election in 1840, declared in his speech at the Hanover Court-House that the $13,000,000 was sufficient for the yearly expenses of the Government, that being asserted to be the yearly amount expended under Mr. Adams. The same amount was insisted upon by the Georgia Whig memorial at the extra session.

Our population, public works, Revolutionary pensions, purchases of Indian territory, etc., had very much increased, however, since that time, and men of reflection saw that such pledges could not be redeemed. Still the administration of Mr. Van Buren considered it practicable to reduce the yearly expenses to eighteen (and probably to only seventeen) millions, and were gradually lessening to that amount. The public documents show that the expenses of General Jackson's and Mr. Van Buren's Administrations, taken together, averaged but $21,000,000 a year.

Under those Administrations more money had probably been expended for Indian lands, and certainly more for pensions (which had been greatly increased), than all the other Administrations since the foundation of the Government. The whole of the public debt had been paid off. Three and a half millions in the shape of duties had been relinquished on imported railroad iron. And there was a clear gain besides of $28,000,000 of surplus revenue, divided among the States, over and above all expenses, and which ought to set off the small debt of five and a half millions left by Mr. Van Buren's Administration; that is, on the supposition that Secretary Forward's and Secretary Ewing's reports are correct as to the amount of that debt, and they would not be likely to underrate it. And all these were not the only benefits conferred on the country during those Administrations. We have said that the tariff was reduced by the compromise in 1833. It is ascertained by the public documents that the duties actually paid into the Treasury from 1834 to 1838, inclusive, under that reduction was about eighty-six and one-third millions of dollars ($86,344,299), and that, if the high tariff of 1828 had continued in force and the same amount of imports, one hundred and twenty millions more would have been drawn from the profits of the people in the shape of a tariff tax, besides at least an equal amount as a tax into the pockets of the manufacturers, on domestic articles. If the calculation were continued down from 1838 to the time that the late high tariff was passed the amount would be still greater.

Independent of all this, the Florida war was a source of expense and embarrassment. The paper money system, too, was at its height, money was plenty, and property of all kinds high. Yet Mr. Van Buren's Administration was making strenuous exertions to reduce the expenses. The estimates for the public expenses which his secretaries laid before Congress were low; but that body always made the appropriations far beyond the estimates. And nearly every Whig in Congress voted for the excess uniformly, with a few of the Democrats, and hence the appropriations would pass. The public journals show these facts.*

In spite of all of these obstacles, however, the expenses of Mr. Van Buren's Administration fell, in 1839, to twenty-five, and in 1840, to less than twenty-three millions ($22,339,356,)† and if the same policy had been persevered in by the Whig party, after they came into power, the expenses of 1841 would have been under twenty millions, and those of 1842, not over $18,000,000.

Instead of this, they expended, in 1841, above twenty-six and one-third millions ($26,396,997), being about four millions of dollars (4,057,641) more than was expended under Mr. Van Buren in the previous year.

The amount expended and appropriated by them during the extra session alone was rising five millions of dollars ($5,013,705). If this sum had been saved there would have been no debt, at least not exceeding half a million of dollars.

They also largely increased the civil list, and after all that was said of the extravagance of the Florida war under the Democratic Administration they increased the military expenditures alone in 1841 $2,000,000 more than those of 1840, under Mr. Van Buren, with the Florida campaigns on his hands.

In less than two years the national debt had been increased by them to above $16,000,000!

We omit noticing the many items of extravagance by which this indebtedness was brought about, as that is foreign to our subject. Our only object is to show that the country was needlessly plunged into debt as an excuse for a high tariff. We have seen that solemn pledges were made that the compromise should not be violated, that an "impartial and equitable tariff," which should "favor no one interest or State to the injury of others," should be maintained; in a word, that the tariff should be brought down to the revenue standard. They did not dare to violate this pledge openly or directly. But mark the deceptive movement! If the expenditures or debt of the nation are large the revenue to meet it must be large, and then the tariff to supply the revenue must be large, so true is it that extravagance breeds high taxes and high taxes breed extravagance in return. It was then determined that the Government should be plunged into debt, and we have melancholy experience that it is not so difficult a thing to get into debt, however hard it may be to get out.

But it had been said that it was necessary to impose a high tariff to pay off the debt left by the last Administration. Let us examine this position. We have seen that what is at last admitted by the official report from the Treasury Department, that the amount of that debt did not exceed five and one-half millions. We have seen, too, that it was proclaimed by Mr. Clay that thirteen millions would defray the expenses of the Government. And yet, we have also seen that Fillmore estimated, for the yearly expenses of the Government, twenty-seven and a half millions. That is, he estimated fourteen and a half millions more than he had proposed as sufficient for all expenses, to pay off five and a half millions! We ask the honest and reflecting of all parties if this is reasonable?

But what is still worse, with all this excess in the revenue, they issue Treasury notes, and go into the market to borrow money; and yet, so far are they from paying off that debt that they have in less than two years, since they have been in power, created a debt of their own to the amount of at least $16,000,000 more! And this debt in a state of rapid and fearful increase! The last report from the Treasury Department (December 15, 1842) shows that the expenses of the present year will far exceed the receipts, and the Secretary expressly recommends, to meet these expenses, further taxation, by an extension of the tariff!

But the Whig majority in Congress, it seems, are apprehensive that all this debt will not be sufficient excuse or justification for violating the compromise and keeping up a permanently high tariff. They therefore propose a

DISTRIBUTION OF THE PROCEEDS OF THE PUBLIC LANDS.

These proceeds have always been paid into the National Treasury, and, with the tariff revenue, have defrayed the national expenses for the common benefit of all the people, and, as we have shown, are not now even sufficient for that purpose.

If the public lands money is taken out and applied to any other object it is

*The whole amount of these appropriations above the estimates was more than seventeen millions of dollars ($17,779,074).

†See Secretary Ewing's report to that effect.

evident that the tariff must be increased to supply its place. If this is done, what is gained by the operation?

In laying on or increasing the tariff tax for that purpose, we have seen that the people who buy the taxed articles of the retail merchant pay the tax at last, besides an increase on it, in the shape of merchants' profits. We have seen, too, that they pay a still greater tax by means of the tariff to the manufacturer on similar domestic articles. But a small part of this increased tax, therefore, gets into the Treasury, and even of that part something is lost, by the way, in paying revenue and other officers for the collection of it. The part which reaches the Treasury supplies the place of just so much money derived from sales of the public lands, and which the Whigs propose to distribute to the different States. But even of these proceeds of lands the whole would not reach the National Treasury. A part goes to pay other officers employed by the Government in that branch of the service. But the money proposed to be distributed to the States does not reach the people themselves. It goes into the State treasury, and whether it will afterwards be prudently managed, whether it will share the fate of the surplus revenue funds formerly distributed to the States, whether it will be lent to favorites who will break and leave their securities to pay, or whether it will be uselessly expended would depend altogether on the Legislature. The whole circle of this operation, therefore, is easily seen. The money is first paid by the people for public lands. A part of it gets into the Treasury for the common benefit. It is distributed at some further expense to the treasuries of the different States. And this is called a gift. But it is like the Indian's gift: something is expected in return. The hole made by the operation in the National Treasury must be filled again. To do this the tariff must be increased. If the people had to pay but the same amount back again the operation would only be a foolish one. But, as in the way of manufacturers' profits, merchants' profits, and officers' fees, they pay back a far larger amount, it is oppressive. And, as in the other case we have mentioned, it is at last wrenched from the hand of labor to benefit the manufacturer. Away, then, with this policy of taking money from one pocket and putting less back into the other. Stripped of its disguise, it is thus seen that if distribution is intended as a gainful speculation it is ridiculous, if it is regarded as a gift it is a mockery, and if it is intended as a bribe it is an insult.

To fill this deficiency in the Treasury, occasioned by taking away the proceeds of the public lands, it was proposed by a leading Whig in Congress* to lay a higher tariff on tea and coffee. The tax by the last tariff on the importation of these articles is 20 per cent.; that is, for every 5 pounds of tea or coffee that is now bought 1 pound is paid to the Government as a tax, besides the merchants' profits on the tax, and it was proposed to increase this tax still more. It was stated that $3,000,000 could be raised in this way on these articles, which would about supply the place of the proceeds of the lands to be withdrawn from the Treasury for all the States. Now, if our State's share of these proceeds should reach the State treasury and should be judiciously applied by the Legislature, it may be said that it will save just so much tax from being laid on the people of the State. But we must recollect that our State taxes are on the ad valorem principle; that is, every one pays a tax in proportion to the amount of his property. The rich man, therefore, properly pays more State taxes than the poor man. And thus the rich man would be more benefited by our State treasury receiving the proceeds than the poor man. But in making a return for this "Indian's gift"—that is, in supplying the deficiency in the National Treasury occasioned by withdrawing the proceeds for us—the poor man pays at least as much as the rich man. Because, being paid back by a tariff on necessaries—say tea and coffee—the poor man has to buy at least as much of these articles as the rich man, and if he has "the poor man's luck" he has more mouths to feed. He pays back, therefore, in the shape of an unrighteous tax on necessaries at least as much as the rich man in return for money which benefits the rich man the most. And yet it is pretended that this distribution and high tariff policy is the poor man's best friend.

Many other arguments against distribution might be urged, but our limits forbid, nor are they regarded as necessary. It is only surprising that the scheme was ever proposed, and still more so that it should be seriously persisted in. It was intended to benefit peculiar interests, and it was hoped that the ignorance of the people would fail to detect its fallacy.

We have thus seen the vast and rapid increase of a national debt. We have seen that the declaration that thirteen millions was sufficient for the yearly expenses of the Government was confidently made in 1840. We have seen that on getting into power the Whigs have changed their views, and now expend more than twice that amount, exceeding what was expended under the former Administration. And that, too, although money is much scarcer and will buy at least twice as much as could be done with the inflated currency when Mr. Van Buren had charge of the Government. We have seen this extravagance in high places, while the people are groaning under debt, are pinching themselves in their own expenses. The States also are reducing the salaries of their officers, and are passing their "valuation laws" and "stay laws." Why at this time of universal distress are the expenditures of the nation not diminished also? Why are their taxes increased? Do the Whig leaders suppose that by bawling so lustily for reform they will not be suspected of extravagance themselves? Did they not do it for that purpose? Do they suppose that as they have "got their names up as pure men they can now lie abed till noon?" Where, we ask, are the pledges of retrenchment and reform so profusely made before the election in 1840? Where is the improvement in business so loudly proclaimed and so loudly promised? Where is the "change"—ay, that is the word—where is the change and what sort of a change have we got at last?

The honest and hard-working of their own party have not forgotten these deceptive promises; and, unless we are grossly mistaken, they will also not forget the deceivers themselves at the ballot-box.

Before we proceed further we will notice what may be urged as an argument in favor of the late tariff, namely, that some articles have been sold among us lately, and especially at auction, very cheap. This has been occasioned by the general and deep distress which pervades the country. Many dealers are in failing circumstances or have become bankrupt or insolvent, and have been under the necessity of sacrificing their goods. Besides, there was a large amount of goods brought into the country just before the tariff bill was passed for the purpose of avoiding the increased tax imposed by that bill. Many of these goods had to be re-exported, and what remained must be sold cheap. But to say that goods brought in hereafter, and taxed high, can be sold as low as the same goods would if taxed low is ridiculous. The tax must increase the price.

THE DEMOCRATIC POLICY AS TO A TARIFF,

in the first place, is to reduce the national expenses.

If the statement of the Whigs before the Presidential election that the Government could be carried on for thirteen millions a year is true, they certainly ought to be able to carry it on for seventeen millions a year, which would still be ten millions a year less than what they have expended, and what they propose to expend as a regular, permanent system.

In fact, the President's last message calculates the expenses for 1842 at thirty-four millions, and the Whig majority have never excepted to that or any other act of the President on the score of extravagance. On the contrary, they have voted for high tariffs, Treasury notes, and loans to meet and continue all expenses proposed or practiced.

We have seen, after all that was said about "gold spoons" and other extravagance at the President's house in Mr. Van Buren's time, that the Whigs passed a bill in February, 1841, after the election was determined in their favor, giving $6,000 more for furniture, etc., for the President's house.* This proves either that they did not believe in their previous charges of extravagance or that they were still more extravagant themselves. It is not surprising, therefore, that one of their own party (John Quincy Adams) lately said in a speech which he delivered in Congress on the 10th of August, 1842, that the Democracy had more of a sincere and honest determination to reduce the expenses of the Government than the other party.

After these admissions and after this conduct and after this mode of performing promises, who can be surprised at the recent changes in the elections?

In the next place, the Democratic party take the ground that a tariff which will produce only revenue enough to pay the necessary expenses of the Government will necessarily, and of its own mere operation, give every protection that is needed or ought to be desired. And this is sometimes called "incidental protection." Do our manufacturers really need any more than such protection? Let Mr. Clay himself answer the question. We have shown that in the debate on the compromise bill he declared that after the tariff should, by a gradual reduction, be brought down at the end of the eight or ten years to the revenue standard the manufacturers in every branch would sustain themselves against foreign competition.

And is it not reasonable that it should be so? If, in 1816, three years' protection was thought sufficient for manufacturers, has not twenty-six years been sufficient? Rest assured, my countrymen, the object is to inflict a permanent tax on the industry of the country, a tax not for the support of "home labor," but to tax nineteen-twentieths of our home labor, now bowed down to the earth, to fatten the other twentieth already made rich!

In the next place, the true policy is to have low duties, so as to encourage a free exchange of the farmer's provisions and other products for cheap necessaries in return from abroad. There are mouths enough among the starving millions of the Old World to consume our surplus produce. Our own manufacturers can not do it. But the foreigner can not buy our produce unless we buy the cheap products of his skill in return. Imports and exports must be equal. The leading Whigs pretend that they would open our ports wider if foreigners would do so in return. That they are not sincere in this was proven at the last session of Congress when this very tariff bill was before that body.

On the 2d day of August, 1842, Mr. Tappan, one of the Senators from Ohio, moved to amend the bill by providing that whenever our corn, flour, and salted provisions should be received free of duty into any nation of Europe that the President should make proclamation of that fact to the people of the United States, and that three months afterwards the articles made in that nation should be admitted into the United States at only 20 per cent. tax on the value. Every Whig Senator voted against the amendment, including the Senators from Indiana, Smith and White. Every Democratic Senator voted for it.†

We have already seen that England has lately reduced her duties on our produce. A barrel of flour taken from Indiana, Ohio, or Michigan into Canada pays a tax of only 12½ cents, and from thence to England only 48 cents more, making but 60 cents tax on a barrel of flour, scarcely the twentieth part of its value in England. This was setting a liberal example; but, instead of following it, we immediately passed our high tariff, taxing articles from that country in return, 30, 50 and even to 100 and 200 per cent.! We may next expect to hear that she has raised the tax on our produce up to the "old mark," unless in future we give her better encouragement to continue to do what is right.

CONCLUSION.

We have thus endeavored seriously to place this great question before our countrymen. If we know our own hearts, we have been actuated only by an anxious desire to guard their labor and their property from the spoiler. The manufacturers are rich and powerful. They can afford to employ writers and politicians to battle for their interests. They crowd their papers and their speeches with praises of high tariffs. Members of Congress scatter their speeches in their favor throughout the country.

But if you listen to or read those speeches carefully, you will find that they are loose and "flowery." They do not go into explanations. They do not descend to facts. They are plausible and pretty, but not to the point. They avoid the true question and endeavor to excite prejudices.

But while wealth commands its thousands of advocates, poverty and labor is too often left undefended. In such a case we can not withhold our humble aid. We have confined ourselves to public documents and to the speeches of our opponents themselves—to facts and to figures. We ask a patient hearing.

We know that we are exposing ourselves to the assaults of selfishness. Whoever undertakes to protect the many from being plundered by the few must expect all the abuse, ridicule, and misrepresentution that hireling talent, political prejudices, and aristocratic interests can bring into the field.

Our support and consolation will be found in an approving conscience.

Our opponents claim to be the exclusive friends of a tariff for the purpose of smuggling in an unrighteous tax upon the backs, the mouths, and the labor of the country. They know that if their scheme of taxation stood out in its naked deformity it would receive the hootings and execrations of the honest and unsuspecting of their own party. To avoid urging the question, they pretend to get into a passion, and say "the time for argument has gone by, and that for action is come." They brand those who will not bow to their dictation as locofocos, agrarians, and levelers. They cast the severest reproaches and indulge in the vilest epithets and the grossest personal abuse. They seem to regard that "stump orator" who can talk the loudest and abuse with the most flippancy as possessed of the most talent. Slander is their element and defamation their calling. But we ask our countrymen if, when a man engaged in a discussion gets into a real or pretended passion, and bandies abuse, is it not a "sign" that he has "run out of arguments?"

If one of their own select number is a candidate for office, whatever may be his defects or demerits, he is lauded to the skies. But if a Democrat is so presumptuous as to offer himself for the popular suffrage, however unexceptionable his character and conduct may have been, how much soever they may have praised him formerly themselves for his conduct as a man or as an officer, he at once becomes a mark for the shafts of slander and detraction.

But we warn such interested and kind detractors that the moral sense of this free people will no longer permit such party dictation. A love of justice, a keen sense of right and wrong, and a determination to show "fair play" towards all is felt by the honest and high-minded Indianians of every party, and they will not sanction nor suffer a systematic attempt to build up or put down without regard to truth or justice.

We say again that we are far from including in the above the great majority of our opponents. We allude only to a corrupt press and those leaders who desire to float into office on the waves of public commotion. To the great body—the rank and file of them—we would say, "We know there are many of you who are honest and sincerely attached to our republican institutions. We believe that the majority of your farmers, laborers, and mechanics are, in feeling and tendency, Democratic." Your selfish leaders are compelled to assume the name of Democratic Whigs to induce such men as you are to support them. In usurping that name, they undesignedly pay the highest compliment to the abused men and principles of the Democracy.

"Let us reason together." We are satisfied that, striving as you do, to make an honest living, you do not desire to be robbed of your hard earnings. We are

*Henry Clay.

* See acts of Congress for the year 1840-'41.

† See United States Senate Journal for 1842.

convinced that you are anxious for the best interests of our common country. Many of us are attached to you by mutual acts of neighborly kindness, by the ties of relationship, and often by a common religious faith. Can we not have charity towards each other and, throwing away passion and prejudice, go earnestly in quest of truth for its own sake?

Our opponents (disguise it as they may) are afraid of the people. They doubt their capacity for self-government. They believe the mass of them to be ignorant and vicious. Hence their constant endeavors to excite their passions, their prejudices, and their imagination by mere shows, parades, and spectacles. Hence, too, their endeavors to gratify their appetites, as if the readiest channel to man's reasoning faculties was down his throat. And why do they so?

It is because they do not believe the laboring part of mankind have any reason, or at least not enough to understand their own rights or the nature of our Government. They can only allow them sense enough to attend to the narrow limits of their humble calling. And the only use that they can imagine they have of them is that they should grope and drag out an obscure life of toil and weariness, to pay taxes, to be cajoled, deceived, and "humbugged," to serve as stepping-stones for men to get into office, and finally to sink into the earth, unmourned and forgotten. Let us repel so unworthy an estimate of us, as independent freemen.

Let us rise up to the dignity of our nature. If a foreign or savage foe invades our beloved country, these dictators are ready to call upon us in their behalf, to bare our toil-worn bosoms to the strife of battle; they are compelled to admit that we can then "do our own fighting." Let us show them, also, that we can "do our own thinking and our own voting." They are forced to admit that we are men in the battle-field; let them not treat us as children at the ballot-box. Let us, by protecting the hand of labor, press on in the road of national wealth and social happiness. And let our rallying cry be, "No political advantages from birth or fortune; no monopolies or special privileges; equal rights and equal taxes; and equal and exact justice to all men."

The Tariff—Tin Plate.

SPEECH

OF

HON. HERMAN STUMP,

OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 16, 1890,

On the bill (H. R. 9416) to reduce the revenue and equalize duties on imports.

Mr. STUMP said:

Mr. CHAIRMAN: Representing a district composed of a constituency largely engaged in canning industries, I rise to protest against the increase of tariff on tin-plate.

I believe that the necessary revenues for an economical administration of the Government should be raised by tax upon such manufactured goods imported into this country, but so adjusted that no more revenue should be collected than is actually required, and so imposed that the necessaries of life should bear the least burden in proportion to cost, and that American workmen should have free material, so as to compete for the markets of the world.

No one contends that an additional duty on tin-plate is required "to provide for the common defense or general welfare of the country." The title of the bill under which this increase of duty is sought to be imposed is "A bill to reduce the revenue and equalize duties on imposts." The revenue collected under the present duty of 1 cent per pound and paid directly into the Treasury by the consumer amounts to $7,000,000, and with the additional 1 cent per pound proposed will make $14,000,000 to be paid annually by the people of the United States into a Treasury already overflowing with a surplus illegally and unconstitutionally extracted from them to foster a private enterprise. And what excuse is offered for this outrage? The most ultra-protectionist can not justify it, first, because there is no tin ore being mined in this country and, second, no tin-plate factory to protect. Then why not protect an industry that furnishes food for 15,000,000 of people and supplies the raw material for tin-roofing, kitchen, and dairy purposes?

The canning business is an infant industry and needs special protecting care. There are 1,900 factories in the canning business, scattered over the broad area of thirty-nine States and two Territories. These concerns consume the entire product of 1,000,000 acres of land. The yearly output, according to recent compilations, is 40,000,000 cases, or 80,000,000 dozen. These products, at the average market value the past year, would amount to $60,000,000, of which the farmer and producer receives $10,000,000. Six hundred million cans are manufactured in Baltimore alone for fruit, vegetables, and oyster packing.

The labor cost in canning products is very considerable, as the fruits and vegetables have to be planted, cultivated, harvested, and then carefully prepared before they are ready for the process. At least 2,000,000 people, including skilled and unskilled laborers, are dependent upon the success of the canneries; this includes the label manufacturers, the box manufacturers, can-makers, farmers and their help, and the great swarms of men, women, and children directly employed in gathering the products and packing the goods.

Engaged in it are the farmers, who are no longer able to compete with the corn and wheat growers of the West. They buy largely of the manufacturers of fertilizers to enrich their lands. The laborers are increased fourfold, and when the gathering and packing season commences fifty or one hundred hands are brought from the cities to each farm and given employment. The cans and cases are filled and the goods shipped to market. Five cents per dozen cans is considered a good profit on a farmer's pack, and the chairman of the Ways and Means Committee says that the additional tax of 1 cent will only add 3 cents per dozen to the cost, and that cost to the tin can or outside wrapper of the goods, which is thrown away. The fact is it adds over 4 cents to the cost of one dozen cans, thus leaving only 1 cent profit.

The entire destruction of this industry, which is now languishing, is apparent to every one. It can not stand this additional burden.

But we are told that if this unnecessary and therefore illegal additional tax is imposed some syndicate or company might be induced to manufacture tin-plate in this country, and that in a few years such syndicate or company might be able to reduce the price of tin-plate to the consumer and employ 23,000 men in making it. What right has the chairman of the Ways and Means Committee to speculate with the hard earnings of the American people? What right has any political party to inaugurate a special business for a few favored capitalists and charge an established industry and every man, woman, and child in the land with its support? Who are petitioning them to impose this duty? From the testimony taken before the committee it seems that only two or three persons ask for it, and one of these, Mr. Cronemeyer, is charged with saying "that tin-plate could be made in this country at the present rate of duty and sold at a profit," whilst men representing the whole canning business, North, South, East, and West, were before them protesting against its action.

It is said that there is tin ore in the Black Hills of Dakota. If so, why has it never been mined before? Why has it not been manufactured into tin-plate? The duty of 1.1 cent per pound from 1875 to 1882 and 1 cent per pound on the manufactured article since has in the course of fifteen years taken near $100,000,000 in duties from the poorer classes of the people. Was this not a sufficient protective tariff to stimulate this industry into existence? And no tin-plate manufactured yet. The distinguished gentleman from Ohio, Mr. BUTTERWORTH, adds that it will cost $50,000,000 more before any company pays a dividend.

With the ore at our door, why was not the plate manufactured at home? With this protective tariff, why was not the ore imported from the Straits of Malacca and Australia, whence England (so says the gentleman from Missouri, Mr. NIEDRINGHAUS) imports nine-tenths of all the ore she manufactures. With free ore, the American having a protective tariff of 1 cent per pound and the Englishman handicapped with freight charges, do you mean to say that an Englishman can undersell the American in the home market? No one will believe you. It is an insult to an American workman. There must be other reasons why our own ore or foreign ore is not manufactured here. It is because tin-plate comes in competition with the highest protected iron industries of this country, and that sheet iron for roofing and siding pay a better profit than tin, and hence tin should be excluded from that market.

The iron men control the tin-plate output, and the iron manufacturers are the largest contributors to the Republican campaign funds. The Republican party promised to twist the lion's tail of free-trade England. What happened? The free-traders of England have been able to send capitalists here and buy up the pet protected industries of this county, and with others are grinding the American laborer down to the starvation prices of the old country. This is the case to such an extent that this Congress has deemed it of the utmost importance that a joint committee of the Senate and House should investigate the effect on immigration, and incidentally on American workmen, which is likely to follow the purchase of American industries by foreign capitalists.

The Englishman has control of all the tin ore in this country and abroad, and he owns the ore (if there is any) in the Black Hills of Dakota, except some owned there by a certain Republican politician of the State of New York. If this is so, will not this legislation advance the interests of foreigners? Mr. MCKINLEY, the chairman of the Committee on Ways and Means, seems to think it is desirable to have the English plant locate here. This might be so under certain circumstances, but certainly not to the detriment of millions of people interested in the canning industries.

I have not seen the farmer or laborer going before the committee asking for protection, but the committee claim that all the legislation in the bill will result in their benefit, but no intelligent farmer or laborer can find where the relief is afforded him. The Republican majority is engaged in keeping in power their own political party. They have a bill pending (the Lodge bill) to compel the ignorant negro to vote their ticket for past services rendered them. They endeavor to bribe the soldier with pensions, seeking to have him forget the true love of country which called him to the field in defense of the Union, the Constitution, and equal rights to all men. They give the manufacturing, banking, and business interests of the country into the hands of capitalists for the sinews of war when political contests are at hand.

One industry on a capital of $1,250,000 made a dividend of $60,000,000, so Mr. BUTTERWORTH says. How much should it have contributed? He further says that he could name capitalists whose profits exceeded the profits of all the agriculturists of any one State. They create

what they call a home market, by prohibiting commercial intercourse with other nations, where the supply and price of the commodities to be sold are regulated by trusts, combinations, and syndicates, fostered and protected by such vicious legislation as is contained in this iniquitous measure, where the free American citizen is compelled to make his purchases at such prices as are demanded and where the American laborer is obliged to sell his labor at such remuneration as is offered.

Truly the privileged classes and protected manufacturers, under the present laws, have a monopoly, and are sitting in the temple arrayed in purple and fine linen, changing the money from the pockets of the hard-working, struggling masses of the people into their own.

But the day of reckoning is at hand. The time is coming quietly, steadily, certainly. It will come with the resistlessness of the mighty wind. It will be the voice of an outraged and long-suffering people. The tables will be overturned and the temple will no longer be a "den of thieves."

The Tariff—Missouri's Wealth.

SPEECH

OF

HON. NATHAN FRANK,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 19, 1890.

The House being in Committee of the Whole, and having under consideration the bill (H. R. 9416) to reduce the revenue and equalize duties on imports, the question being on the amendment of the gentleman from Kansas [Mr. FUNSTON] to strike out the provision "that silver ore and all other ores containing lead shall pay a duty of 1½ cents per pound on the lead contained therein"—

Mr. FRANK said:

Mr. CHAIRMAN: I am opposed to the adoption of the amendment offered by the gentleman from Kansas because I believe it is a direct blow at the principles of this bill, a direct blow at the national interests, and a direct blow to the prosperity of the State for which I now raise my voice. I regret, Mr. Chairman, that this amendment should have emanated from this side of the House. The gentleman might as well and with equal propriety propose that gold, iron, and lead should be put upon the free-list. When this amendment was proposed some days ago I had confidently hoped that my colleagues from Missouri on the other side of the aisle would join me in an effort to defeat it in order to encourage the capital which has been invested in the mines of Missouri and which is fast developing her vast and varied resources. But from what I have heard I believe that I have hoped in vain.

Mr. Chairman, during this debate the purity of elections in my district and the grand old State of Missouri has been attacked by my colleagues on the other side in a most unjustifiable and unwarrantable way. Mr. Chairman, none of Missouri's sons honored by her Democratic vote would rise in their places and do her reverence. The gentleman from the Third district [Mr. DOCKERY], in his remarks with reference to the State of Missouri, has been guilty of this language. I quote from page 5035 of the RECORD:

> I desire to make a brief statement as to the indebtedness of Clinton County. In the tariff reform campaign of last year I made the assertion that, notwithstanding the wealth of her agricultural resources, the farming wealth of the county had declined until its decadence was manifest in an appalling aggregate of farm mortgages.

Again:

> I was about to say, Mr. Chairman, that the assessed value of the ten counties I represent amounted in 1888 to over $46,000,000.

Thereafter, proceeding further, he says:

> I have stated the assessed valuation for 1888, but, guided by the general results of the census of 1880, I should estimate that the wealth of the ten counties has not increased.

Now, what are the facts? In Clay County, to which the gentleman refers, the taxable wealth in 1880, according to the census, was $4,987,083. On June 1, 1888, the data of the last assessment, it was $5,581,475, an increase of about $550,000 in that county. Now, the gentleman says that as to the ten counties in his district he would estimate that the wealth of those ten counties has not increased in eighteen years. The fact is that the wealth of the ten counties of his district has increased nearly $6,000,000; and his is a purely agricultural district. In 1880 there was not a town in his whole district that had 1,500 inhabitants.

[Here the hammer fell.]

Mr. FRANK. I ask unanimous consent for five minutes more.

Mr. BLAND. I have no objection to the gentleman occupying five minutes if I can have five minutes to answer him. I am willing he shall have ten minutes to my five.

Mr. FRANK. I will accept the proposition with very great pleasure, because I want to pay my respects to the gentleman.

Mr. BLAND. I hope the gentleman may do so because I have very great regard for him and I want to pay my respects to him.

Mr. FRANK. When I was interrupted, Mr. Chairman, I was demonstrating that the attack made upon the State of Missouri by her honored sons on the other side of the aisle was inexcusable and unjustifiable. I had demonstrated that the Third Congressional district, which has sent Mr. DOCKERY to Congress four times, had increased in material wealth between the last census, 1880, and the reliable State assessment of 1888, nearly $6,000,000. I was interrupted by the gentleman, my colleague [Mr. BLAND], who wished to know what the condition was as to his district. Though he represents the most inaccessible, the most sparsely populated, and perhaps the most barren part of the State of Missouri, his district, Mr. Chairman, in the same eight years has increased in taxable wealth over $2,000,000.

Now, what is the truth about the State of Missouri? Is the picture drawn by my Democratic colleagues, who are holding her up to pity and scorn, reliable? Is her husbandry in this distress? Mr. Chairman, in 1880 the taxable wealth of the State of Missouri was $530,000,000. In 1888, by the same assessment hitherto referred to, it was $750,000,000, an increase of $220,000,000. Now, to what is this marvelous prosperity attributable? I say, Mr. Chairman, it is attributable to the financial legislation of this country. It is attributable to the protection of labor. The thrift of the population of that State is exceptional. It is also attributable to this, that in 1880 she gave 153,000 Republican votes and in 1888 gave 242,000 Republican votes [applause on the Republican side], with a corresponding decrease in the Democratic vote. [Applause on the Republican side.] So that now the governor of the State of Missouri is a minority governor, lacking 6,000 votes of having a majority, while the governor elected in 1880 had 55,000 majority.

Mr. PERKINS. Is that what is the matter with Missouri?

Mr. FRANK. That is what is the matter with the other side. The credit of the State was never so high before. She has reduced her State debt from nearly $20,000,000 in 1880 to less than $10,000,000 now. With her fertile fields, with her mines, with her vast resources, she resents these unwarranted attacks. She does not wish to be held up to the world as poverty stricken. As none of her honored Democratic sons sees fit to come forward, I come in the name of 242,000 Republican voters to say that their statements are unreliable. [Loud applause.]

The bonded debt and the aggregate available resources of the counties of the State of Missouri have been compiled from official sources under the law for the taking of the eleventh decennial census (1890), and I shall have this compilation attached to my remarks. The situation as exhibited by it will refute with undeniable accuracy the extravagant statements made on this floor for political effect.

I am for a revision of the tariff; the bill under consideration is based on the principles which I indorse, but the duties, in my humble judgment, are pitched too high. The campaign of 1888 was conducted on the line of protection to labor, insuring a home market for our products as against a tariff "for revenue only," or as against free trade, if you wish. The time may come, but I apprehend it is far distant, when this country can safely indorse this last policy. When it does arrive, Missouri will be a State which, because of her varied resources, thoroughly developed, will demand no quarter from any source. Her advantageous situation, watered by the largest rivers on this continent, with navigable streams within and at her territorial limits, with her two great commercial and manufacturing cities, fertility of soil, and rich mineral deposits, favorable climate, together with intelligent and industrious people, all combine to make her the sovereign State of the West.

In the language of the poet, I can truthfully say:

> The wandering mariner, whose eye explores
> The wealthiest isles, the most enchanting shores,
> Views no land as beautiful or fair,
> Or breathes the spirit of a purer air.

I want no better or more conclusive proof of the advantages of the American system of protection than the position this country occupies in the civilized world under its beneficent influence, a place which it has secured in the last twenty years.

I shall not impose on the indulgence of the House with traversing the same ground so ably covered by the gentlemen who have preceded me on the merits of the special schedules; but against the amendment now directly under consideration, proposing to strike out the provision for the payment of a duty of 1½ cents per pound on lead ore in silver and other lead-bearing ores, I wish to be understood, as I said in the outset, as emphatically protesting.

APPENDIX.

Indebtedness of Missouri by counties as units.

The Tariff—Argentiferous Lead Ores.

SPEECH
OF
HON. WILLIAM M. KINSEY,
OF MISSOURI,
IN THE HOUSE OF REPRESENTATIVES,
Tuesday, May 20, 1890.

The House being in Committee of the Whole and having under consideration the bill (H. R. 9416) to reduce the revenue and equalize duties on imports—

Mr. KINSEY said:

Mr. CHAIRMAN: This is simply a question of whether the mining and smelting of the lead and silver ores of this country shall be done in the United States or whether the mining shall be done in Mexico and the smelting here.

That is all there is in this proposition.

It is a question between half a dozen smelters on the one hand and fifty thousand miners on the other hand.

It is a question whether the Republican party shall stand by a principle to which we are pledged or whether we shall make an exception to it in this case.

My friend from Nevada [Mr. BARTINE] has said that he would not have been surprised if this amendment to admit argentiferous lead ores from Mexico free had come from the other side of this House. I join with him in that statement.

I am surprised that any man on this side who was elected on the Republican platform of 1888 should ask that an exception be made to the principle of protection enunciated in that platform.

About 140,000 or 150,000 tons of this Mexican silver and lead bearing ore are now brought into this country each year. Mr. Meyer, who is the apostle of this movement, who is the owner of a smelter at Kansas City, who is also the owner of a smelter at El Paso, and who is the owner of lead mines in Mexico—the man who is backing up this amendment—said to the committee when he was before it, "We do not import these ores for the purpose of making lead, but we import them for the purpose of using them as fluxing ores, enabling us thereby to reduce the dry ores mined in the far West." But the fact is that having used these ores for that purpose there is a by-product of 25,000 to 30,000 tons of pig-lead secured, which is dumped upon the market here, thus breaking down the lead industries of Missouri and of the West, by bringing the product of the cheap labor of Mexico in competition with the lead produced by the higher wages of this country.

The argument is made that the Mexican ores are necessary to the economical treatment of the dry or refractory ores of the Rocky Mountain region, and that we do not produce a sufficient quantity of fluxing ores to supply the wants of our smelters.

This proposition is denied by every Representative and Delegate on the floor who represents a State or Territory producing argentiferous lead ores, while every advocate of this amendment, with one exception, represents a district containing a smelter.

The statement has also been made that the ores imported from Mexico now amount to about 200 car-loads per day, from which it may be inferred that certain railroad companies are interested in the adoption of this amendment. I submit, Mr. Chairman, that we are not framing this tariff bill in the interest of the railroad companies, but in the interest of the producer and laborer of this country.

Another fact worthy of note is that three-quarters of the silver mines of the far West could not be successfully operated but for the lead they produce. If you destroy their market for lead by the introduction of the cheaper Mexican lead free, you also render valueless their silver mines.

The situation of the lead-mining industry in Missouri is somewhat different from that in the States and Territories farther West. There our operations are confined to the production of lead alone. Under the encouragement afforded by the protective system about $10,000,000 have been invested in the business, one-half of which is in plants. In my own district there is between three and four millions invested, giving employment to 2,500 men and causing the expenditure of about $2,000,000 annually for wages and supplies among my constituents.

Our ores are found disseminated through rock one to two hundred feet below the surface, and after a very expensive and elaborate treatment yield from 5 to 15 per cent. of pure lead.

It is impossible to reduce these ores profitably at the prevailing prices of lead unless it be done on a very large scale, and then the margin of profit is so small that we are not developing our mines to anything like their full capacity.

Missouri can produce at least one-third of the lead consumed in this country if we are assured that the home market will not be overrun by the product of cheap foreign labor.

The rapidly increasing importation of Mexican ores is a continual menace to the producer of lead in Missouri. If these cheap ores, imported free of duty, have not already fixed the price of lead in this country, no man can tell how soon we will be at the mercy of our neighbors on the south, who with the active assistance of the smelters on this side of the Rio Grande can control the price of our lead and thus cripple if not destroy one of the greatest mining industries of the country.

When it is remembered that Mexican ores are much richer in lead than ours, that the labor cost of mining is about one-third what it is in this country, that transportation facilities are rapidly increasing in Mexico, and that these ores when imported are made to serve a double purpose by our smelters, being used first as a flux, then to produce pig lead, it does not take a great stretch of imagination to see what the result will be in the future, unless Congress shall refuse to agree to this amendment.

David Wilber.

REMARKS
OF
HON. MARK S. BREWER,
OF MICHIGAN,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, May 17, 1890.

The House having under consideration resolutions of respect to Hon. David Wilber, late a Representative from the State of New York—

Mr. BREWER said:

Mr. SPEAKER: Another of our number has ended his earthly labors and has passed from the known to the unknown world, whither we are all rapidly moving. David Wilber is no longer numbered with the living, but that he still has a spiritual existence will not be doubted by the great majority of us who are still engaged in life's contests.

I first became acquainted with Mr. Wilber at the opening of the Forty-sixth Congress. I had been a member of the Forty-fifth Congress, while he had represented his district in the Forty-third and filled many other positions of trust. For some time after we had made the acquaintance of each other we made our home at the same place here in the city, and our personal relations became somewhat intimate.

We both retired from the House at the close of the Forty-sixth Congress and returned here again together at the opening of the Fiftieth Congress, when our former acquaintance was renewed.

Mr. Wilber was a man somewhat advanced in years when I first knew him, but his mental and physical powers were strong and well preserved. He was a plain, unassuming man and faithfully and honestly represented a plain but intelligent constituency. He was not known by his eloquence in speech; he took but little part in public debate; but he was recognized by all as a clear-headed, warm-hearted business man, and his associates upon the committees upon which he served gave much weight to his judgment and suggestions touching pending measures of legislation. The business in which he had been engaged for many years had brought him into close and intimate relations with the people whom he represented here, and no one knew their views touching business matters or political questions so well as Mr. Wilber, and no member of this House ever possessed the confidence of his constituency to a greater extent than did he of whom we speak. They had dealt with him in business affairs and they had great confidence in his integrity as a citizen and in his judgment as a representative, as is clearly manifest by the support which they so often gave to him. Although a majority of the people of his district belonged to another party than that of which Mr. Wilber was a member, yet their confidence in Mr. Wilber won to him their political support.

The life and character of Mr. Wilber must have impressed itself upon the people of his district and State for the individual and public good, and the world was made better because he lived.

How often have we during this Congress been called upon to pay a last tribute to our colleagues who have passed "beyond the river."

Gay, Laird, Nutting, Cox, Kelley, Randall, and others have laid down life's burdens and gone to join the great majority, and now our friend and associate, David Wilber, ripe in judgment and full of years, sleeps with his late associates on the bosom of Mother Earth, and his spirit has returned to Him who gave it. He has fulfilled his mission; his work was well done, and we doubt not it is well now with his gentle spirit.

The Tariff.

SPEECH
OF
HON. J. A. GEISSENHAINER,
OF NEW JERSEY.
IN THE HOUSE OF REPRESENTATIVES,
Tuesday, May 20, 1890.

The House being in Committee of the Whole and having under consideration the bill (H. R. 9416) to reduce the revenue and equalize duties on imports—

Mr. GEISSENHAINER said:

Mr. CHAIRMAN: It is never to be forgotten that a prosperous people make a prosperous country. While it is indisputable that Government is entitled to support, it is equally undeniable that the people are entitled to the according of their support upon a just and equitable basis and without hinderance to their progress and prosperity. Taxation must, by the adoption of a wise policy, be so regulated as to fall with fairness upon all. No body of citizens must be preferred or permitted to prey upon another.

The tax should be so collected that the necessities of our great population be not placed almost beyond reach, while unnecessary luxuries are permitted to escape. Neither must the manufacturer be oppressed. He should be so treated that he may honestly compete with other nations and at the same time deal with his fellow-citizens upon an honest competitive basis. He should not be advanced by any partial legislation in his favor; he should not be surrounded by plausible theories that make an exorbitant market for his wares. It is his due that a fair opportunity be given him and that he be not excluded from disposing of his manufactures to his own countrymen.

The problem before this House is not whether a tariff shall be levied for the maintenance of the Government, but how to arrange the tariff taxes with the least possible injury to the people.

It is a military maxim, Mr. Chairman, that when five hundred men are to be sacrificed in capturing a fortification the loss of every one exceeding that number is to be regarded as murder. This rule may be aptly applied to the collection of the revenue.

When a particular sum of money is needed for Government expenditures, any amount collected beyond that sum is to be considered as an extortion from the helpless citizen. Revenue is collected not only from the produce of the country, but from the labor of the individual and the comforts of life. In order that this burden may fall with the least possible force, it would seem just that those articles which are luxurious in themselves and contribute to ostentation and vanity rather than to the support and sustenance of life should bear the heavier portion of the sum to be collected.

While costly works of art, representing a sum equivalent to a large yield of the earth's produce, and many days, perhaps years, of labor, may be regarded as special objects of luxury, it is to be borne in mind that whatever contributes to a taste for the ornamental and beautiful is an educator of mankind and tends to advance his usefulness both as a public and private citizen.

Where expensive works of art are free to be studied and enjoyed by all, where each one may share with the other his appreciation of what is hewn or depicted, the treasure is possessed in common and may be regarded as the property of the people; but where such treasure is the property of one individual and is reserved for his own gratification and that of a chosen few, it becomes an object of pomp and an exhibition of wealth, for which the possessor should submit to a tax with the same willingness that he pays to insure the preservation of the same.

The exemption from tariff of works of art privately owned necessitates an increased tax upon all other dutiable articles, among which food and clothing are included to no small extent.

The bill now under consideration appears to so operate, in many respects, as to discriminate against the consumer. It is well known that in trade the goods used by the workingman yield a materially larger profit than richer and more elaborate ones, and the duty on these goods, instead of being reduced, has been augmented. On certain articles which this country appears to be incapable of furnishing as yet the tariff has been increased, while upon others that are produced by our people in quantities the tariff is immensely reduced, and bounties and drawbacks are allowed in addition. Bounties and drawbacks are in themselves often detrimental.

It has been well said that they increase taxation, promote monopoly, foster corruption, imperil the capital invested, encourage illegitimate demands on the Treasury, and favor one body of citizens at the expense of another. Bounties and drawbacks discriminate, too, as against the home consumer, by permitting goods to be sold for less money abroad than at home. Agricultural implements, sewing-machines, and other innumerable articles will be found, by comparison of export lists with the domestic lists, offered abroad at from 10 to 20 per cent. less than in this country.

This bill, therefore, appears to consider the foreign consumer better than the American. It is proposed to more than double the tariff on tin-plates. The bill known as the "Mills bill," having taken into consideration the many and varied uses of the plates and their great importance to the consumer, placed them upon the free-list.

A box of tin costs 13*s.* 6*d.*, or $3.31, less 4 per cent. discount for cash and 8 cents for putting it aboard at Swansea, making $3.18. Three pounds of tin are required to coat 108 sheets and cost about 63 cents, which deducted from the $3.18 makes a sum total of $2.47. (There is no duty on the pig-tin and it sells at the same price in this country as abroad.)

The duty on a box of tin-plates at 2.20 cents would be $2.37. In other words, $2.37 for coating a box of sheets with 3 pounds of tin. It will therefore be seen that the duty imposed is equivalent to the entire cost of the box of sheets. It is estimated that the actual labor in producing 108 sheets is $1.32. All articles composed of tin are doubled in price in consequence of the duty, and every one is more or less affected in order to protect an "infant industry" in the handling of an ore which the gentleman from Ohio [Mr. BUTTERWORTH] stated has a very doubtful commercial existence in this country.

The increased tariff will fall heavily in various directions. First, as to the consumer: His roofs and all utensils of tin (including the oft-quoted dinner-pail), together with his packed provisions, will be greatly increased in cost. His can of food will be raised by various gradations between the importer and the grocer, or, if the cost is not increased, the can will contain a lesser quantity. He may pay the same money, but will get less food. Consumption will be greatly restricted, and the packers and canners, as well as the consumers will suffer in consequence.

At a convention of the National Association of Canned-Food Packers, held at Baltimore May 7, 1890, it was stated that—

The canning trade included the farmer, the laborer, and the consumer; that 6,000 firms were engaged in this industry, with an invested capital of $100,000,000, giving direct employment to 1,000,000 persons. That while 3,500,000 boxes are made up into cans yearly for our food products our importations of tin-plates have increased from 546,000 boxes in 1862 to 5,659,734 boxes in 1889. The tariff on tin has been tinkered with since 1842. The duty was then 2½ per cent. ad valorem. In 1846 it was increased to 15 per cent. In 1857 it was reduced to 8 per cent. In 1861 it was raised to 10 per cent., and in 1862 it was raised to 25 per cent. In 1872 it was again reduced to 15 per cent. In 1875 the duty was changed to a specific rate of 1.1 cents per pound. In 1883 it was fixed at 1 cent per pound. Since 1872, which is only seventeen years out of the forty-eight, in which the unborn industry has been protected, $3,300,000 in duties have been paid by the consumers of tin-plates.

The proposed tariff will increase the duty on tin-plates to over $7,000,000 (the amount estimated to be paid as bounty on sugar), and the cost to the consumer will be from eight to nine million of dollars, added to the retail price. As a consolation the increase in this tariff is not to take effect until July 1, 1891, but no assurance is furnished that the year's delay in this duty will not result in raising the price of foreign plates at once. Again, it does not seem possible that even American genius can supply home-made tin-plates in sufficient quantities for the United States in five or ten years, and during that period they must be bought abroad.

Under the tariff proposed the importer and manufacturer will, of course, be obliged to charge an additional price. As the tin-plates pass through the various hands, the tariff, interest, profit, etc., will be added, but it is by no means improbable that the whole tax will not fall on the farmer, in whose interests we are assured this tariff bill has been draughted. He is not passing through a period of unalloyed prosperity. When his products brought good prices all over the country he was tempted to invest in improved tools (at American rates) and in other ways to take upon himself a debt which he has as yet been unable to satisfy. As it does not pay him to cultivate the cereals, he grows fruits, corn, tomatoes, and other vegetables in the hope of bettering himself. He receives but scanty prices now, and may hereafter find no buyer in the packer, unless he concedes to a price that will cover all the expenses of the duty on tin-plates.

Whether the packer buys or not, under the proposed tariff he will find his condition not very materially improved. He is taxed on his fertilizers, his farming implements, his crocks, his linens, his cottons and woolens, his lamp-chimneys, and about everything else, including his coffin and his grave-stone. In short he is given no straw and must deliver the same tale of bricks. We are assured that this bill has been framed to reduce the revenue. It, in fact, increases the revenue many millions of dollars. On the schedules other than sugar the increase is $65,000,000. All are affected; all are called upon to contribute, not only to the tariff, but to drawbacks and bounties as well.

The condition of the workingman is not improved by it. In many instances it creates greater hardships for him, and one of these is to my mind the increased duties on tin-plates.

Our large population, having proportionally large demands, the revenues increase in like proportion.

Shall the rate of duties be so arranged as to produce greater sums than the requirements of the Government?

Shall this excess be allowed to languish idly in the Treasury or shall it be left where it belongs: in the hands of the people?

The report of Special Revenue Commissioner David A. Wells may not inappropriately be applied to the present situation. He says:

With the termination of the war and with accruing receipts from the tariff in excess of the actual requirements of the Treasury the popular tendency, as expressed by legislation, accomplished or projected, has been to reverse the order of importance of these two principles and make the idea of revenue subordinate to protection rather than protection subordinate to revenue. And in carrying out, furthermore, the idea of protection but one rule for guidance would appear to have been adopted for legislation, namely: The assumption that whatever duty could be shown to be for the advantage of any private interest the same would prove equally advantageous to the interests of the whole country. The result has been a tariff upon small issues rather than upon any great principle; a tariff which is unjust and unequal, which needlessly enhances prices; which takes more indirectly from the people than is received into the Treasury; which renders exchange of domestic for foreign commodities nearly impossible, and which, while professing to protect American industry, really, in many cases, discriminates against it.

The Tariff.

SPEECH

OF

HON. EDWARD C. VENABLE,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 19, 1890,

On the bill (H. R. 9416) to reduce the revenue and equalize duties on imports.

Mr. VENABLE said:

Mr. CHAIRMAN: If this whole country were engaged in manufacturing, there would be no protective tariff. There is but one feature of a protective tariff that commends itself to our protected industry, and that is the unprotected consumer. To the successful operation of a protective tariff, the unprotected consumer is an absolute necessity. Nobody in this country would care anything about the so-called protection if it applied universally and equally. Its inherent inequality is its inherent strength. The moment it becomes just and equal it becomes useless to its votaries.

If one industry asked the Government to hold the owners and employés of another and make them buy its goods at its own high price, there would be trouble among "the infants" and they would rebel one against the other.

It is only when "the infants" are united in pursuit of somebody else that there is harmony among them. The gist and essence of their demands are that the Government shall catch the consumer and hold him fast by "protection" while they force him to buy their goods. If the Government hesitates to accede to their demands the cry is that "labor" is being destroyed. They rely on labor for a shield. The game that they pursue is the great taxed multitude of unprotected consumers in all professions and callings. These are the udders that are dear to "the infants."

The philosphic beauty of protection is most admirably shown in the following sentences from the majority report of the Ways and Means Committee on the proposed wool tariff. On page 10 they say:

In revising the woolen-goods schedule so as to afford adequate protection to our woolen manufacturers and wool-growers, we have continued the system of compound duties which have proved to be so essential in any tariff which protects wool, providing first for a specific compensatory pound or square yard duty, equivalent to the duty which would be paid on wool if imported, for the benefit of the wool-growers, and an ad valorem duty of from 30 to 50 per cent., according to the proportion of labor required in the manufacture of the several classes of goods, as a protection to the manufacturers against foreign competition, and 10 per cent. additional upon ready-made clothing for the protection of the clothing manufacturers.

Was there ever such minute perfection? Everybody is protected except the consumer. He stands forth the victim of the "classes." He was naked and they made laws to make him buy clothes at a high price.

If there were no consumers to be "fleeced" but themselves there would be no use for this increase of duties on wool and woolen goods. "The infants" have, as we see by this bill, determined to part company with one of their *confrères*. The sugar tariff is to go. The unprotected consumer, that fount of every blessing to "the infants," was becoming a little restive. Free sugar is given him that he may labor the harder to pay the higher taxes on wool.

A bounty is given "the infant" from whom the tariff is taken. It is equally as good an udder; but the American people, I have no fear, will not stand a bounty.

Once let the Government make a publication that under its licenses to grow sugar and draw bounties Mr. A and Mr. B, sugar planters, were each paid by the Government $50,000 or $100,000 of the people's money yearly because they raised sugar, and the Government that does it will be destroyed by the ballots of the people. I want the Republican party to put this sugar-bounty scheme into execution. This bounty strips all the veil from protection. It sets it forth in full view of the people. I want the bounty to stand by Republican votes as an object lesson, clean cut and conclusive, to the American people of what protection is. The public can well afford to pay the price for the lesson.

That part of my State which I have the honor to represent on this floor is one among the many sections of the country which are simply victims of protection. I do not believe that a more industrious people exist.

I have carefully gone over their avocations, and I can find no provision of the tariff bill which tends to advance the interest of any number of them, except those provisions which partially relieve them from taxation by the sugar tariff. This is only partial relief, because the sugar bounty takes their substance to give it to the sugar-growers.

For the boon of free sugar they are made to stand increased taxes on all the products of wool. Every user of tin-plate is subjected to largely increased taxation. Crockery, hardware, and cotton goods are all subjected to increased duties.

These taxes are made the more unendurable because of the provisions of the bill that enable producers of manufactured articles for export to collect rebates of the Government equal to the duties paid on the imported articles used.

Thus while every little packer of vegetables or fruits is made to pay largely increased prices for his tin cans, the Standard Oil Company is given a bounty on every tin can of oil it exports. This is protection for the people with a vengeance. It is the kind of protection from which our people want deliverance. This is the protection that has produced in this country an aggregate wealth of $62,000,000,000, half of which is the hands of 30,000 citizens in a population of 65,000,000.

The ideal of government is equality of opportunity. This bill denies equality of opportunity to its citizens. It prefers one class of its citizens to another. No aristocracy in Europe is so fortified with privileges as are the protected classes. I realize the fact that a change in the protective system will have to be a matter of gradual growth.

But why longer deny the manufacturers and the consumers the boon of free raw material? Free raw material would be a great step forward; it would mean more work for labor and cheaper goods for consumers. It should be uniform along the whole line. I wish that every hamlet in Virginia could have its factories. I recognize the fact that her future development depends greatly upon the growth of her industries, and nothing could stimulate them more effectually than free raw material. The necessities of this Government, with its immense debt, will compel the imposition of a tariff for many years to come. If it is to be, let it be humane. Let it be just to all sections.

I am thankful that the odious institution of human slavery has passed away forever. Let us not by our laws entail upon one part of our people the slavery of penury in order to endow with useless affluence another and much smaller class. It is legislation such as this that makes the socialists and anarchists flourish. I object not only to the tariff rates in this bill, but also to its continuance of the tax on tobacco. There is a reduction of the tax and a deliverance from some of the restrictions on its sale. This is the money crop of my people. From it comes the means with which they buy their food and their clothing. It is a poor reason to them that you tax their product in order that you may be able to make higher the duties on all the articles they buy.

Virginia has asked for the abolition of the tax on tobacco for years past, and I now ask it of this Congress.

It is a tax that is hateful to my people and hurtful to their interest.

It restricts the sale of their leaf-tobacco to a few customers, and thus, by destroying competition, tends to make the raiser of tobacco receive less for his product.

The majority report of the Ways and Means Committee says that to prevent the increase of prices due to the tariff the country will have to rely upon the unchecked competition among the protected industries.

It thus says that this Government must yield up its right and duty to give the people the protection of equal and just laws. It turns over the American public to the uncovenanted mercies of the protected classes. It denies to the people in their purchases the benefit of free competition in the open markets of the world. When they come to deal with the tax on tobacco they deny to the tobacco-grower the benefit of free competition for an increase in the price of his product. The tax they impose restricts the buyers and accordingly lowers the price.

This is the height of injustice to the tobacco-planter. He is made to bear the double burden of protection. He is not free either in his purchases of the necessaries of life or in the sale of his products. I protest against this unjust discrimination against him and appeal to this House for justice.

If the tobacco-raiser were allowed to buy what he wants in the open markets of the world, he would have less ground of complaint. But he is not. The Government ties his hands both when he buys

and when he sells. There is no other class of farmers thus unjustly hampered.

The Treasury vaults are loaded with the people's money, taken from them beyond the needs of the Government, and it is the duty of the Government to relieve every class of its citizens of every dollar of taxation possible. The tobacco-planters have been taxed on every article upon which the tariff is laid as well as upon their product, and they now ask a relief that takes not one dollar from the Government which it needs.

The Tariff.

SPEECH

OF

HON. AUGUSTUS N. MARTIN,

OF INDIANA.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 14, 1890.

The House being in Committee of the Whole and having under consideration the bill (H. R. 9416) to reduce the revenue and equalize duties on imports—

Mr. MARTIN, of Indiana, said:

Mr. CHAIRMAN: It is with great surprise that I hear Representatives upon this floor declare that the Democratic party is the party of free trade and opposed to American industries. It is with indignation that I hear these same Representatives declare that an alliance exists between Great Britain and the Democratic party. Such assertions spring from a hardihood born of a perversity that stops short of nothing within its power to accomplish its purposes.

FREE TRADE.

The charge that we favor free trade has no foundation in fact, and it is hardly excusable in any Representative to repeat a charge that every fair-minded man knows is gratuitously false. A desperate cause, for want of a better argument, might perhaps be excused for such assertions, when made to persons who might be deceived thereby, but it reaches a limit when they are made to men who know they are untrue.

I here and now denounce these assertions as being as wholly and inexcusably untrue as were the forged quotations from British newspapers circulated as campaign literature by the high protectionists in 1888. The iniquitous twin of this campaign falsehood was the assertion, and the campaign cartoons representing, that the Democratic party was rallying under the British flag. No British flag ever yet floated from a hickory pole. When that gallant Democrat, Andrew Jackson, popularly known as "Old Hickory," led the Democratic hosts to victory on the 8th day of January, 1815, he conquered Britain's most famous army, and he did it under the Stars and Stripes, and the spirit that impelled him then still lives in the old party of Jackson, and no British flag has ever yet peeped from amongst the green leaves of the Democratic hickory.

NEW YORK IN 1888.

The assumption here vaunted, that the battle of 1888 was a victory for the principle asserted in this high-tax bill, is not true. It is well known to us all that the great fight turned upon the result in the States of New York and Indiana. Did New York vote for high protection? Look at the result there. The election, by a sweeping plurality, of Governor Hill, a consistent advocate of tariff reform, and the equally sweeping plurality for General Harrison, at once suggest to those outside of that State the perpetration of treachery having its origin in something else than the tariff, a treachery reasonably to be imputed to the politicians who shamelessly bribed the employés of prohibition newspapers into selling subscription lists of those papers to the conscienceless buyers. Away with the false pretense that the great State of New York has declared in favor of taxing her own citizens yet more heavily in order to create a few more millionaires.

The vote in New York in 1888 was not an expression in favor of this bill, but was simply a result of treachery or corruption or both.

The voice of that great State in 1882, 1883, 1884, 1885, 1886, and 1887, in favor of tariff reform, simply tumbled into falsetto in 1888, but righted itself again in 1889.

INDIANA IN 1888.

And how was it in Indiana in 1888? In 1868 the Republican candidate for governor had carried the State by less than 1,000 plurality, but at every succeeding election except that of 1880 the Democracy elected their State ticket until 1886, when, by reason only of quarrels within the Democratic ranks, the Republicans elected their State ticket by a small plurality.

I think it is well understood by every one that upon a full and fair vote there never has been a day since the war but what, as between these two parties, Indiana has been Democratic.

In 1888, with whatever State pride there may have been in having a candidate for the Presidency, with the powerful aid of great newspapers which have ever professed to advocate the doctrine of tariff reform, the Republican leaders there hedged on the doctrine of high protection in every possible way. The principle which so almost entirely controls this bill was disavowed measurably upon a thousand stumps, and the promise was made that the tariff would be reduced on necessaries of life by the Republican party.

CAMPAIGN STORIES.

In every way possible was the attention of people diverted by the protectionists from the real issue of tariff reform to other and false issues. It was denied on every hand by Republican orators and newspapers that their national platform meant an increase of duties on the necessaries of life. While it is true that tariff reform advocated by the Democracy in 1888 meant but a reasonable reduction of taxation, the falsehood was dinned into the ears of the unwary that tariff reform meant a free-trade alliance with Great Britain, and every corner of that State was black with forged quotations from leading English newspapers, purporting to indorse the candidacy of Cleveland and Thurman. But this was not all, nor half. The private character of President Cleveland was attacked, not in public, where the falsehoods could be refuted, but by men who, even some clothed in the garb of ministers of the Gospel, went from home to home, from family to family, privately repeating falsehoods black as perdition, concerning the private character and conduct of President Cleveland during his sojourn in this city—slandering him in secret, where refutation could come only too late to set him in his true light before many a voter who was misled by these stories.

PENSIONS.

Nor was this all. The gentleman from Ohio [Mr. MCKINLEY] has gravely informed this House and the country that the operations of this bill, if enacted into law, will reduce the revenue collected under existing tariff laws as much as sixty or seventy millions of dollars, and yet in 1888 many Republican orators and newspapers denounced as false the statement that any such surplus existed as was announced by Mr. Cleveland. Not only that. These same orators, with their party workers, not only denied the existence of that surplus, but they visited every pensioner who would listen, and declared that the real meaning of tariff reform was to cut down the revenue so that no more pensions would be granted to the wounded or sick veterans and to the widows and orphans of the dead soldier, and that even the pensions already granted would be in danger of being reduced if not cut off. Nor was this all. Many a Republican worker turned his energies into an appeal to the old soldiers to vote the Republican ticket for President, governor, and Congress, with the assurance that success would not only mean increased pensions to the blind, the deaf, the dumb, the maimed, and the sick, but that every soldier in the land should have a liberal pension, to begin with the date of his disability and not of his application. Not only this, but it was also promised that in every appointment to office the old soldier's claims should be held paramount to all others in the event of Harrison's election.

Many of the old soldiers, and certainly all of them who were Republicans, were led to believe that there would be no reduction of tariff taxes until every soldier who had served sixty days or more in the war for the Union and was entitled to an honorable discharge had received a service pension of $8 per month during life, and that all those who had so served for more than eight hundred days should receive, in addition to the $8 per month, a further sum per month equal to one cent for each day served by him in excess of eight hundred days. All this was promised by the high protectionists if Harrison and Morton and a Republican Congress should be elected. It is a fact that many of the old soldiers who believed that tariff reform was right, and were inclined to vote for it, were induced to vote for Harrison and Morton, and to turn away from tariff reform, solely by this promise that no tariff reduction should take place until every soldier had been thus pensioned by the passage of the bill known as the Grand Army service-pension bill.

The Democrats of Indiana forced the fight on the tariff in 1888, but in every way that the ingenuity of skilled Republican leaders could devise, was attention drawn from the real question of a reduction of taxation to these other matters.

Nor was this all. In addition to these promises to the old soldiers; in addition to this frightening of pensioners into the belief that their pensions would be disturbed; in addition to the most outrageous scandalizing of Mr. Cleveland; in addition to the public charges of his dislike of the old soldiers; night was made revolting and the stars themselves shamed by men who rode the highways and byways of Indiana, screened by darkness, seeking out men at their homes and calling them from their slumbers at midnight, to offer large bribes to them if they would but cast their votes for the Republican candidates. With all this mass of wrongful means, a plurality of only 2,348 was obtained for the Republican electors, and yet Representatives here have the hardihood to assume that that vote was an indorsement of the higher taxation embodied in this bill! I tell you that Indiana stands more than ten thousand majority to day against this measure.

BALLOT REFORM.

I feel that I am justified in saying that I believe that if the simple question could be presented to the people of Indiana to-day, this

fall, "Are you or are you not in favor of a reduction of the tariff taxes on all necessaries of life to the lowest point consistent with the needs of Government economically administered?" the majority in favor of that reduction would be more than 20,000. I am glad that since 1888 the Democratic Legislature of Indiana has not only enacted a law that will protect every voter by enabling him to vote in secret, but will punish corruption in elections in a most exemplary manner. The night riding corruptionist can no longer make bargains for votes, for he can not know that the goods are delivered, and you know "Capital is very timid."

The time has come in this country when public sentiment demands the enactment and enforcement of a law which will not only disfranchise both the vote-seller and vote-buyer, but that will also place the buyer behind the prison bars as an enemy of good government. When this is done, and not till then, will the honest laboring and business men of the land have equal power at the polls with monopolists who never care a straw as to the result of any election unless it is one that affects the profits of their business. This time is coming. It is almost here. And woe will be to the men or party that stand in the way of ballot reform. And hand in hand with ballot reform will come tariff reform, reduction of taxes, reduction of high fees and salaries, abolition of useless offices, requirement of honesty in office and punishment of official dishonesty, the shortening of the hours of labor, the wresting of control of public finances from the national bank millionaires of Wall street, who love dear money because the masses can not retain it.

Yes, with ballot reform will come the election of Congresses that will give the people of this country legislation that will fill the veins of legitimate business with enough money to meet every demand honestly, enough money to enable the poor man to earn sufficient to lift the mortgage that preys upon his home and makes the future look dark to him and to his dear ones.

SILVER MONEY.

Mr. Chairman and gentlemen, you are reckoning without your host when you count upon the majority you think you can continue in the United States Senate to perpetuate the burden you think you are fastening on our land when you pass this bill. Do you remember when by a trick you demonetized silver money in 1873? The men who tricked that infamy through Congress doubtless counted upon a majority in the Senate to perpetuate it. And yet the day came when the public sentiment of this country forced Congress, including the Senate, to in part undo that wrong, even over the veto of a President, the only one, who held his seat by a fraud consummated through the same power that had demonetized silver.

GREENBACKS.

Mr. Chairman and gentlemen, you remember the act, the boasted resumption act, which proposed to retire every dollar of the greenback money from circulation by providing for its redemption with coin to be procured by selling more bonds.

Doubtless the money power which secured that outrageous enactment counted upon a surely continuing majority in the Senate. And yet we all remember that force of sentiment of an indignant people, which compelled that Senate to join in the enactment of the act of April 29, 1878, which stopped the retirement of the greenback currency by a virtual repeal of the most odious feature of your boasted resumption law.

HIGH TAXES.

Mr. Chairman and gentlemen, do you suppose the people will submit to the imposition of higher taxes upon their clothing, medicine, and homes; higher taxes upon the farmer's plow and harrow and wagon; higher taxes on the laborer's spade and ax and pick; higher taxes upon the carpenter's square and chisel and hatchet; higher taxes upon the blacksmith's anvil and hammer and bellows; higher taxes on the sewing woman's thread and needle and sewing-machine; higher taxes upon the teacher's book and ink and ruler; higher taxes upon the physician's lint and medicines and scalpel; higher taxes on the attorney's law-books and furniture and legal cap; higher taxes on the merchant's scales and ledgers and receipt-books; higher taxes upon the clergyman's prayer-book and concordance and commentaries; higher taxes upon the swaddling clothes of the newly born infant, the school-books of the children, the wedding garments and outfit of the bride and groom, the coffin and shroud and gravestone of the dead; all to put money into the pockets of the rich under the miserable pretense of coddling and protecting the business of the rich for the benefit of labor? If you so imagine, get ready to be undeceived when the whip of public opinion, the scourge of intelligent indignation, shall drive you or your successors, and even the United States Senate, into trembling restoration of the rights which this bill would deprive them of.

TAXES ON BANKS AND INCOMES.

Mr. Chairman and gentlemen, you long ago removed almost every tax upon wealth, the taxes on manufacturers and incomes and banks, without lowering the taxes on the great body of the people, and you are now about to add insult to injury by heaping mountain high the taxes on the necessaries of life. But remember this: The wealthy iron barons have been offered a tax bill which would have only reasonably reduced the taxes they are collecting from the poor people of this land. If you refuse this offer—ay, even refuse it in order to retain what you are now exacting from labor—much more if you exact more by passing this oppressive tax law, the time will soon come when this new oppression will be removed by law at the bidding of a free people, and the day will forever have passed when they will give you the measure of protection you now so scornfully spurn. Representatives from great, splendid Iowa, have you not heard and will you not hearken to the voice of your people, which so nearly dragged from his place your Senator, Mr. ALLISON, who is expected as chairman of the Senate Tax Committee to help this bill through that body?

FARMERS' ALLIANCES.

Representatives from Wisconsin, do you not hear the rumbling that presages the storm which will shake almost every high-tax man of you from your seats? Representatives from Kansas, do you not intend to heed the demands of the Farmers' Alliances which are even now overthrowing you in your own conventions? Representatives from Ohio, from Illinois, from Missouri, from Massachusetts, and from Rhode Island, you men who have helped unseat low-tax men and seated high-tax men like yourselves, will you not heed the indications from your own homes and stay your hand from further wronging your own constituents? Do not imagine you can stay the anger of your constituents by telling them that sugar is free, for they know that that freeing is more for the sugar trust than for them. Do not imagine you can pacify their just indignation by telling them of bounties for sugar-raising and subsidies for ships, for they know that you are simply compelling them to hire and pay other people to go into business, and compelling your people to pay great steamship corporations to carry protected manufactures to foreign lands and thence bring back foreign grain to the great seaboard cities, while the crops raised at home are rotting for want of buyers or burning almost within sight of the coal-mines.

REPUBLICAN PLATFORM OF 1888.

I say, with all due respect, that the leading features of this bill were not presented by the Republican leaders to the voters in 1888 and that it has never been passed upon by the people.

In the discussion in this House in 1888 upon the question of tariff reform, the Republicans simply assaulted the bill known as the Mills bill, but they never proposed such a bill as this as a substitute for the Mills bill.

Mr. Chairman, the Republican national platform never hinted at paying a bounty to manufacturers of sugar and silk.

That platform is generally ascribed to the gentleman from Ohio [Mr. MCKINLEY], who is now presenting and defending this bill, and it was not pretended by him in the House of Representatives, in 1888, that such exactions as this bill contains were contemplated by that platform. I think I can safely assert here that he never even hinted at the idea that his party, if successful, would present a bill in this Congress to give seeming relief to the people by taking off the tariff on sugar and in the same bill oppressing the people by offering a bounty of 2 cents a pound for every pound of sugar manufactured in this country, and by paying a bounty of $1 per pound for silk. It is true that he and his party in 1888 fought every proposed reduction of taxes, not only on sugar, but on every other necessary taxed under the existing tariff law.

REPUBLICAN SENATE BILL.

On the 21st day of July, 1888, the Mills bill passed the House of Representatives, which was Democratic, and went to the Senate, which was Republican, and that body refused to consider the House tariff bill any further than to strike out every word in it after the enacting clause, and then inserted what is known as the Senate tariff bill of 1888, and this bill was reported back to the Senate by its Finance Committee on the 3d day of October, 1888, less than thirty days before the election.

With such a short time to consider this bill that its provisions could not be fully considered and understood by the people, it was heralded abroad through the land as the Republican plan of revising the tariff. From Maine to California and from the Lakes to the Gulf, this Senate bill was proclaimed to the people as being a practical construction of the Republican national platform.

It was held up to the old soldiers of the land as the bill that would provide plenty of money with which to pay them all a service pension.

Mr. Chairman, that Senate bill was held out by the Republican party as its promise to the people, and many people mistakenly believed it was a better reduction of taxes than the one passed by the Democratic house. If the men were sincere who made this new promise to the people that that Senate bill was the highest rate of tax that would be imposed on them, why are you now, in this House, violating these promises, and adding much heavier taxes?

MCKINLEY BILL INCREASES TAXES.

Let us look at a few of the items: In the Senate bill of 1888, muriatic acid was left on the free-list, while in this bill, the one we are now considering, a duty of ¼ of a cent is to be levied on each pound; in the Senate bill, sulphuric acid was left on the free-list, while in this bill a tax of ¼ of a cent is to be laid on each pound; in the Senate bill a duty of only 25 cents per pound was levied on tannic acid or tannin, while in this bill the tax is fixed at $1 per pound; in the Senate bill the tax on sulphuric ether was fixed at 30 cents a pound, which this bill raises to 40 cents; in the Senate bill butyric ether

and other fruit others were taxed at $1.25 a pound, which this bill raises to $2.50 per pound; in the Senate bill all other others were taxed at 75 cents a pound, which this bill raises to $1 per pound; in the Senate bill, unrefined glycerine was taxed 1 cent a pound, which this bill raises to 2 cents; in the Senate bill, flaxseed or linseed oil was taxed 25 cents per gallon, which this bill raises to 30 cents; in the Senate bill, sulphate of baryta or barytes, manufactured, used in preparing paints or colors, was taxed at $5 per ton, which this bill raises to $7; in the Senate bill, after fixing taxes on certain paints named, all other paints were taxed at 25 per cent., which this bill fixes at from 25 to 50 per cent.; in the Senate bill, all medicinal preparations containing alcohol, and not otherwise specifically named, were taxed at 40 cents per pound, which this bill fixes at 50 cents; santonine, taxed at $1 per pound in the Senate bill, is taxed $2.50 in this bill; in the Senate bill, common brown earthenware and stoneware, not ornamented, were taxed 20 per cent., which this bill raises to 25 per cent. ad valorem. The rates fixed on certain china and other wares in the Senate bill are raised by this bill in one instance from 50 per cent. ad valorem to 55, and in two other instances from 55 per cent. ad valorem to 60. The taxes fixed by the Senate bill on glass-ware is raised by this bill from 1¼ cents to 1½ cents, from 1¾ cents to 2 cents, from 2⅜ cents to 2½ cents, from 2⅞ to 3 cents per pound, and so on. By this bill anvils are raised from 2 cents per pound to 2½, and tin-plate from 1 cent per pound to 2½ cents, an increase of 120 per cent. over present rates.

By this bill, too, brown and bleached linen cloth is raised from 35 per cent. to 50 in one instance, and in another to 50 per cent. ad valorem and 3 cents a pound, and oil-cloth is raised from 10 cents per yard to 15.

On flannels, blankets, and wool hats, the duties in the Senate bill were 10, 12, and 18 cents per pound; with 35 per cent. ad valorem in addition, while in this bill these duties are raised to 11, 22, 33, and 38½ cents a pound, with an addition of 30 to 40 per cent. ad valorem.

On women's and children's part woolen dress goods, the duties in the Senate bill were 6 and 7 cents per yard, with an addition of 40 per cent. ad valorem, which this bill raises to 7 and 8 cents per yard and an additional duty of 40 and 50 per cent. ad valorem.

These same goods, when all woolen, were taxed in the Senate bill at 11 cents a yard and 40 per cent. ad valorem, which this bill raises to 12 cents a yard and 50 per cent. ad valorem.

Hats for men, women, and children, the little girls' dolls, brushes and brooms, carpets, ready-made clothing, ladies' cloaks, dolmans, jackets, and ulsters, the dress goods of women and children, blankets, flannels, and wool hats, brown and bleached linens, house and cabinet furniture, lamp-chimneys, anvils, one kind of copper, penknives, and pocket knives are all taxed at a much higher rate in this bill than they were in the Senate bill which the Republican party sent out to the people in 1888 as the highest rate of tax which that party would fix if Harrison and Morton and a Republican Congress should be elected.

Mr. Chairman and gentlemen, I ask the Republican majority in this House what it means by daring to now propose a tax bill putting the tariff so far above what it promised in 1888. Is it not because you now have the people where they can not help themselves?

The most oppressive and indefensible raise in this bill over the Senate bill is in woolen goods, the clothing, hats, flannels, and blankets.

Mr. Chairman and gentlemen, again I repeat that the result of the election in 1888 was no authority or justification for the outrages concealed in this bill.

If the majority of the Committee on Ways and Means knew what they were doing, why did they fix these high taxes so much higher than they advocated in 1888? The gentleman from Iowa [Mr. GEAR] has claimed that he was looking after the interests of the farmers and laboring men, as a member of that committee. Will he explain why he helped to fix these rates so much higher than he told his constituents in 1888 they would be fixed? I wonder what he told the people of Iowa last fall, during the campaign, on this point?

THE PROTECTIVE TARIFF A TAX.

Mr. Chairman, if the tariff on imported goods creates competition and brings down the price, let me ask if the object of raising the tariff on imported wool is to bring down the price of the wool raised in this country? If that is true, why do you talk about compensating the manufacturer by raising the tariff on imported woolen goods?

If laying a tariff on imported woolen goods or any other article that may be imported creates competition and brings down the price of the goods manufactured at home, how can the manufacturer afford to pay the tariff on such wools as he must import from foreign countries that he must have in his business and which are not raised in this country?

Mr. Chairman, I believe there is an attempt on the part of organized monopoly to "pull the wool" over the eyes of farmers, laboring men, and business men in this whole bill.

A tariff for revenue is a tax, a tariff for protection is a higher tax, and a tariff such as this bill proposes is protection with a vengeance upon the consumer.

The only authority for levying a tariff is found in the Constitution of the United States, which reads as follows:

SEC. 8. The Congress shall have power: To lay and collect taxes, duties, imposts, and excises, to pay the debts, and provide for the common defense and general welfare of the United States; but all duties, imposts, and excises shall be uniform throughout the United States.

There is not a line, word, or syllable in the Constitution that authorizes Congress to lay a tax on woolen goods, farm implements, medicine, or anything else in order to protect some man or corporation in setting up a factory to manufacture these things at a profit, by giving him the privilege of charging more for his goods than the consumer could buy them for if there was no protective tariff.

Mr Chairman, I desire to illustrate this idea of protection, so as to show that it is not only a tax, but that it creates monopolies and trusts. In the district which I have the honor to represent there lives a gentleman of high character, who has been engaged in the manufacture of glass for some years, and who was previously engaged in the manufacture of the "D" spade-handle, so much used by farmers and laborers in many different ways.

Upon my nomination for Congress in 1888, I sought out this gentleman at his place of business and told him I desired information as to the actual workings of the protective tariff. Upon his asking me why I wished to know, I informed him I was about entering upon a canvass where it was absolutely necessary for me to discuss the workings of the protective tariff and its effect upon the price of manufactured articles and the wages of labor, and that I desired the actual truth, so that the discussion might be intelligent and based on fact rather than theory. "Well," said he, "I have had only a limited experience as yet in the manufacture of glass, but I have had a full experience in manufacturing the "D" spade-handle, upon which was, and yet is, a protective tariff of 35 per cent., being a protection of 17½ cents on a 50-cent spade-handle and 8¾ cents on a 25-cent handle. "This duty," said he, "was a complete protection from all competition from abroad, and gave the domestic manufacturers complete control of the 'home market.' Every year," said he, "the manufacturers ascertained as nearly as they could just how many spade-handles would be needed to supply the 'home market,' which was more profitable than the foreign, and then these manufacturers arrived at an understanding as to just how many spade-handles should be manufactured by each one, with the further understanding that when that limit was reached the factories should cease work and discharge their hands until that product had been disposed of. Upon reaching that limit," said he, "we shut down our factories according to our understanding, discharged our hands, and remained closed until the product was disposed of. More than that," said he, "whenever it was found that the product was in excess of the demands of the 'home market,' we paid the freight on the surplus handles to the seaboard, and the freight and insurance clear across the ocean, and sold them in Europe at a profit, for 10 per cent. less than we had sold the same handles to the farmers and day laborers in the United States."

"But," said I, "tell me how this protective tariff affected the wages of your workingmen." "O," said he, "it did not affect their wages at all, for we simply went into the labor market, which was unprotected, and bought the labor as low as we could." Said he, "If I could hire John to do the same work as Harry for ten cents a day less, I always let Harry go and hired John."

Mr. Chairman, this was indeed a practical object lesson. The gentleman who related these facts to me grew wealthy at the business, and is to-day highly esteemed by all who know him. If fault there be in this, the fault is in the system and not in him who, without helping to create or perpetuate it, enjoys the benefits it confers.

Mr. Chairman, this recital is entirely reasonable. The manufacturer of these goods bought his timber wherever he could buy it cheapest, out of which to manufacture his handles. He also bought the necessary labor wherever he could find it, just as cheaply as he could. When labor had converted his timber into spade-handles, the manufacturer, and not his hired men, sold the handles, collected the money therefor and placed it to his credit in bank, and labor had no legal rights in it.

PROTECTION AND LABOR.

Mr. Chairman, the pretense is made that these high protective duties are laid for the benefit of the laboring man whose labor is used in manufacturing, and yet there is no method provided by this or any law by which he can enforce his right to receive the benefit of this protection. The tariff duty enables the employer to charge for his manufactured goods more than he otherwise could, and when he collects it he not only keeps it, but he claims the right to cut down the wages of his laborers whenever he chooses to do so. The only remedy the laborer has is found in the trades unions and in the weary, costly process known as a strike.

Mr. Chairman, if I were to offer here a proviso, by way of amendment, to give the employés a right to go into court and sue the protected manufacturer to compel him to pay to the laborer the increased price added to the manufactured goods by reason of this high tariff, I do not doubt that the high protectionists here and elsewhere would denounce it as unconstitutional, as being a violation of his right to hire his labor as cheaply as he can and to sell his goods at as high a price as he can get.

Mr. Chairman, one of the absurdities of high protectionists is the argument that, because the prices of certain manufactured articles are less than they were in 1860, that is a result of protection. This I deny. I insist that if it were not for protection the necessaries

of life would all be cheaper than they now are. The prices have come down somewhat, not because of protection, but in spite of it. The improved machinery of to-day enables one man now to perform as much as a half dozen men or more used to perform without this machinery. It can not be truthfully claimed that protection produced this machinery, for gentlemen must remember that they have equally good machinery in countries where they have no protection.

The big printing-presses that are running off the many thousand copies of our great newspapers daily, with the help of comparatively few hands, are working no faster than the big printing-presses that are daily running off the thousands of copies of the great daily newspapers in countries that have no protective tariff laws. And so it is with the machinery in the woolen mills, foundries, cotton factories, and the hundreds of different kinds of business carried on in many lands, whether they have protective tariffs or not.

As an illustration in point, I remember well the labor it cost me, when working on a saw-mill, to dispose of the slabs we run off the sides of the logs we sawed up. It was hard lifting and tugging to get the slabs pulled away from the log carriage and thrown off the side of the mill, there to lie until I could get at them with my ax, to cut up such of them as were needed for wood. That was in 1869. Some time since I went upon a saw-mill near my home, and there saw a simple arrangement by which the slab was dropped from the log onto rollers that transported it a few feet to a table upon which was revolving a small circular saw. It was without great labor that the "tail sawyer" fed that slab to the saw, which not only cut it into firewood but dropped the pieces on a belted contrivance which carried the wood up through the roof of the saw-mill and there dumped it upon the wood pile ready for the market. That man was daily doing ten times as much as I had been able to do in 1869, without working so hard, and yet he was receiving no higher wages than I had received.

No one, surely, will claim that protection perfected this machine which made labor so much more effective, without bringing the workman any better wages. No, Mr. Chairman, this cheapening of prices is the result of invention and not of protection. Our great country has achieved her greatness not because of protection, but in spite of it.

PROTECTION MAKES MILLIONAIRES.

Mr. Chairman, some great things exist in this country to-day which have been produced by the protective tariff. I mean the great fortunes of monopolists like Mr. Andrew Carnegie. On my way to this city, as I passed along Federal street, in Allegheny City, Pa., I saw a massive building, rich in material and beautiful in architecture. Upon looking more closely I saw that, in splendid letters, some artist had engraved thereon the words, "Workingmen's Library," the gift of Andrew Carnegie. There it stood, having cost Mr. Carnegie more than $300,000. As I looked and wondered at its beauty, I felt, as I thought of the millions Mr. Carnegie had coined under the benefits of a protective law enacted professedly for the benefit of workingmen: "Yes, it really is the 'Workingmen's Library'—the results of their labor builded it. Yes, the price of labor withheld by Mr. Carnegie from his own workingmen has enabled him to build himself a monument which is a mocking proof of the wickedness of the system which enabled him to tax the consumer in the name of his workingmen and fill his coffers with millions of money, only a small part of which was necessary to build this great building." I thought too, I think and say now, how many an humble home might have been cleared of the mortgage or filled with books to read at home if Mr. Carnegie had either left the protective tax in the pockets of the consumer of his goods or if he had paid the same to the workingmen in whose name a protective law had enabled him to collect it on the product of his great Bessemer steel works.

Even now this same Carnegie is preparing to build another "Workingmen's Library" in Pittsburgh, Pa., at a cost of one million more of the dollars he unjustly withheld from his workingmen. What hypocrisy!

Mr. Chairman, while many large fortunes have grown up as the result of the protective tariff, yet it is true that they are few as compared with the number of people in this country. There is not one such fortune for every ten thousand people, hardly one for every twenty-five thousand. The great ranges of mountains have their high peaks that rise into the icy coldness of eternal snow, but their bases are pressing upon their brethren below, and pouring down upon them and upon the fertile valleys between their chilling winds and frosty streams. So our great people are the bases of these mighty fortunes which rise into the icy height where plenty breeds forgetfulness of want, until the millionaire easily believes there is no want among his fellows except what they deserve.

Mr. Chairman, labor is the basis upon which all these mighty fortunes have grown and fattened, and yet labor receives no benefit therefrom. Yes, in the name of labor, a system of law has been unjustly enacted, which robs labor in its own name and leaves it helpless except by the repeal of these laws. These protective-tariff laws were not enacted at the request of laboring men. They were not enacted at the request of the farmers of our land. They were enacted at first as a war measure to raise money to carry on the war and are now continued at the demand of the same monopolists who are now demanding the passage of this additional tax on the farmers and workingmen of our land.

Yes, let me say, further, that the enactment of this law will be a curse, a withering, blasting curse to the business men of our western towns and cities, who are not engaged in carrying on business based only on a protective tariff.

THE TARIFF AND THE FARMERS.

From the beginning of the protective system until now the farmers of this country have been taxed at every turn in the name of labor and American industries, until to-day they are staggering under the load and asking for relief. And yet, when a Representative rises in his place in this House to urge that his great farming constituency are demanding relief, he is met almost with jeers and he is derided with the question, "Are your farmers mendicants, beggars?" For myself, I hurl back the insinuation that they are beggars. Our constituents are the sovereign power in this land and we are only their servants. It is our duty to listen and learn the wants and wishes of our constituents. In fact, we ought to pay most attention to the needs of laboring men. By their votes were we elected. We were elected because they put confidence in us that we would honestly try to serve them. They are paying us salaries, and we ought to be glad to render them the fullest service we have within our power. Will we serve them right by voting to pass this bill and increase their taxes, all for the interests of monopoly?

Mr. Chairman, in the great Eleventh Congressional district of Indiana, which I am proud to represent here as best I can, there are more than two hundred thousand people who are the equals of any body of people on earth in patriotism, honesty, intelligence, morality, and business thrift. Any man who has ever lived might well be proud to stand here as the Representative of that district. Knowing the great honor these people have done me by sending me here and feeling my responsibility, I daily ask Almighty God to give me wisdom of mind and strength of body and honesty of purpose, so that I may be of some use here to my constituents.

With great farming, business, and manufacturing interests, and without a single large city within the district I represent, more than one hundred thousand of my constituents are engaged in farming. Of the over 47,000 voters of that district, I make no doubt that more than 25,000 of them are farmers.

Mr. Chairman, in the name of these farmers, I demand that their interests be looked after, their voices listened to, without even the thought, much less the insinuation, that they are mendicants. They have been taxed under these protective-tariff laws upon their clothing, furniture, and household goods; upon their farming implements, binding twine, and homes; upon their books and newspapers and school books; upon their buggies and wagons and medicines—in fact, down to the grave, and upon almost every article they use, until it is no wonder many of them have fallen in debt in spite of all they could do. When they see how the money lords and monopolists have demanded principal and interest of this Government in gold and got it; when they have seen the money lords engaged in demonetizing silver and battling to make and keep money scarce; when they see the tariff monopolists wringing from them a tariff tax of $47 on every $100 they expend for the common necessaries of farm-life; when they see these tariff monopolists here demanding of this Congress a still higher tariff and in a fair way to get it; when they see the great steamship corporations here demanding millions of dollars in subsidies to make their business more profitable; when they see these same protective-tariff barons wheedling this Congress into spending $17,000,000 to build battle-ships that these monopolists will get the contracts to construct; when they see millions of dollars being spent on unnecessary buildings and on rivers and harbors; when they see the values of farm products growing less and less from year to year; when they see their own necessary debts mounting a little higher from Christmas to Christmas; and when they see Congress about to cut off markets for millions of dollars' worth of farm products in order to enable a few capitalists to start up the manufacture of tin-plate, and at the same time increase the cost of every tin cup, bucket, roof, spoon, and dipper the laborer must buy, is it any wonder that the voices of our farmer constituents are heard in wrathful protest as well as earnest entreaty?

This system of protection is leading the farmers and workingmen to blame the men who retail goods which have been increased in cost more by the rapacity and greed of the protected manufacturer than by the profits of the retailer. This system is breeding distrust among our constituents by exciting their wonder as to who is getting the benefit of the high prices on goods covered by the protective tariff. Such a system is a burning shame, an outrage, and ought no longer to be borne. The great mass of our people must stand or fall together. What benefits the farmer and workingman benefits all but the monopolist, and what hurts the farmer hurts all but the monopolist.

TARIFF ON FARM PRODUCTS.

Mr. Chairman, in this bill you are purposely trying to deceive the farmers by placing high duties on wheat, corn, hay, rye, buckwheat, oats, barley, cabbage, and other articles, in order to "protect" the farmer. What do you mean? You tell the farmer in one breath that the effect of protecting the manufacturer is to cheapen the price of his goods and in the next breath you tell him you are putting a high tariff on farm products in order to make the prices high. Now, which is true?

There has been a tariff on wool, canned meats, corn and vegetables, lard, tallow, poultry, bacon and ham, beef, mutton and pork,

meat, grapes, plums and prunes, potatoes, flaxseed, garden and agricultural seeds, vegetables, beans, peas, cabbage, cider, hay, honey, hops, milk, cheese, butter, rye, wheat, flour, oats, cattle, horses, mules, sheep, barley, buckwheat, corn, and corn meal for many years under the present tariff law, and yet look at the prices of farm products. In 1889 there were imported into this country 22,325 bushels of oats, 2,389 bushels of corn, 1,947 bushels of wheat, and 16 bushels of rye, and now the high-tariff men are trying to make the farmers believe that farming has been depressed by competition from foreign countries.

During the year 1889 the farmers of the United States exported and sold to foreign countries 624,226 bushels of oats, 69,592,929 bushels of corn, 46,414,129 bushels of wheat, and 287,252 bushels of rye, and 10,210,413 pounds of oatmeal, 312,186 barrels of corn meal, 3,669 barrels of rye flour, and 9,374,803 barrels of wheat flour.

During the year 1889, the value of these grains and breadstuffs imported into this country from foreign countries was $305,886, while the value our farmers sold and exported to foreign countries of these farm products was $123,876,661. In other words, for every dollar's worth of these articles imported our farmers exported $405 worth. Any farmer can see at a glance that the tariff on the things he raises was of no value to him at all, and that an increase of that duty in the new tariff law is a mere blind, to be used as an excuse for raising or keeping a high tariff on the things he must buy.

Mr. Chairman, I have not the time to go into details as to all the hundreds of items embraced in the tariff, but I must speak of another matter of vital interest to our farmers. In 1889 there was imported into this country an article called tin-plate, which enters into the tin spouting, roofs, buckets, cups, spoons, and many other articles used by the people of the United States. The people in foreign countries who manufacture this tin-plate bought and lived on the corn, wheat, rye, and other agricultural products of the farms of the United States, and thus made a market for our farm products. The amount of tin-plate exchanged for our products last year was $21,222,653, which would buy more than 30,000,000 of bushels of our wheat at 70 cents per bushel, or about 90,000,000 of bushels of our corn at 25 cents a bushel. Under the new tariff law, the tariff is to be placed so high on tin-plate as to enable a few men to manufacture it in this country and sell it to us at much more than it costs now, and at the same time the foreign market will be cut off, and that much more of the farmer's products will be left on his hands. And this is to be done under the pretext of protecting American industries. The real truth of the matter is that it is to be done to make a few more rich monopolists.

The farmers can not fix their own prices, but must take the prices fixed at the great seaboard cities, and those prices are fixed in Europe, where the surplus of farm products is sold.

Mr. Chairman, although these protective taxes have been levied for many years, it is true that very few manufactures of protected articles were ever established in the great district I represent until since the discovery of natural gas. Since that discovery a large number of protected manufactures have been established within that district, but no one can be deceived into the idea that such manufactures were there erected because of the tariff. No, it was largely on account of the cheap fuel. No one is proposing to attack the proprietors of these factories, nor their legitimate profits. They are, indeed, welcome, and are a source of pride to the people of that district. And yet it is true that the farmers in the immediate neighborhood of these factories do not get a penny more for their corn and wheat and flour than they did before these factories were located there. It is true that in parts of the East, some manufactures have languished. One reason for this is that these factories have moved into Ohio and Indiana, where they find cheap fuel and have splendid railroad facilities for transporting both the raw material and the manufactured product. Our manufacturers in the natural-gas belt are distancing their Eastern rivals on account of these advantages, and these Eastern manufacturers feel that unless they can get higher protection our Indiana manufacturers will largely absorb their business. If the tariff were either left as it is or even made lower, the latter would soon control the business the others have so long enjoyed.

Mr. Chairman, the Democratic party has no war to make on any business, no attack to make on manufactures. On the contrary, there never has been a greater increase in the manufactures of this country than from 1850 to 1860, under the tariff law of 1846. The Democratic party is the unyielding foe of monopoly wherever it attempts to lift its cruel hand and lay it on labor and the true business interests of this country.

Within the district I represent we have a soil that can not be excelled and which responds bounteously to the planting of the farmer. Nowhere else does the soil send up finer crops of corn, wheat, oats, and other crops than in that district, and yet the farmer is hard driven to supply the wants of his family.

Nowhere is labor more constantly employed than it is in the Eleventh Congressional district of Indiana, and nowhere else can be found more intelligent, honest, sober workingmen than there, and yet, Mr. Chairman, who can tell of the patient, arduous, painful endeavors of the men and women, boys and girls, who daily toil ten hours or more, when labor can be had, for wages so small as almost to bring the blush to the face of him who names the small sums these good people receive!

How the laborer provides for the wants of his family from his small earnings is known only to his God and himself. It seems to me that he has the right to be able to buy just as many of the necessaries and comforts of life with his small wages as possible, and that any law which interferes with that right by increasing prices of these necessaries to benefit a class is wickedly wrong and ought not to be tolerated. Class legislation is always injurious to the great mass of the people and tends to build up monopoly.

The Democratic party does not propose to injure any interest in the country, nor to oppress any industry within the district I represent. It opposes this bill as a false pretense, an attempt by monopoly to fill the pockets of a few, a favored class, with money extorted from the great body of the people on the false pretense that it is done for the benefit of those whose money is extorted.

The Tariff—Missouri.

SPEECH

OF

HON. ALEXANDER M. DOCKERY,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 19, 1890.

The House being in Committee of the Whole and having under consideration the bill (H. R. 9416) to reduce the revenue and equalize duties on imports—

Mr. DOCKERY said:

Mr. CHAIRMAN: I should not occupy the time of the committee one moment, since I know a number of gentlemen are desirous to be heard on the pending amendments, were it not that my colleague from Missouri [Mr. FRANK] has made some observations which seem to demand a reply. A few days since, in the course of debate upon this bill, I referred to the election in St. Louis in 1888, and stated that it was "notorious and 'known of all men' that the result in that city was largely due to the contribution of money by 'protected industries,' which carried it for the Republican party and elected three members to this House."

My colleague [Mr. FRANK] challenged this declaration with the assertion that "not one single dollar was contributed from any source to carry the Ninth Congressional district of Missouri" and further avowed his belief that the election in all the St. Louis districts was entirely "honest." In making the statement I did it goes without saying, of course, that I had no purpose or desire to connect my colleague with any improper use of money, because I do not believe he sustained any such attitude. If money was corruptly used my friend would not likely have been taken in upon the "ground floor" of the scheme.

I desire, however, to present, as a basis for some observations, a secret circular, issued October 17, 1888, by L. M. Hall, secretary of the Republican club, calling together a number of prominent Republicans for the purpose of raising a "liberal fund" for campaign purposes. I will not occupy the time of the House in reading the circular, as debate is limited, but will incorporate it in my remarks.

Mr. MASON. I make the point of order that the gentleman can not put in his remarks a Republican circular unless he adopts the language as his own. [Laughter.]

Mr. DOCKERY. I want to say, Mr. Chairman, that if the circular is to go into the RECORD with that understanding, it will not be incorporated in my remarks, because I do not care to indorse either its letter or its spirit. I will say, however, that it differs from a certain letter which has been introduced during the course of this discussion——

Mr. MASON. I withdraw the point of order.

Mr. DOCKERY. It differs from that letter in this, that it does not reflect upon the character of any Representative upon the floor.

The language of the circular is as follows:

ST. LOUIS, *October* 17.

DEAR SIR: At an informal meeting of a few business men held to-day the situation of the Republican party of this State was discussed, and it was determined to call a meeting of several hundred prominent business men to lay before them the whole matter. It is believed that with a liberal fund to draw upon it is possible to prosecute such a campaign for the next two weeks as will cause Missouri to cast her electoral vote for Harrison and Morton.

The situation is unparalleled heretofore in the history of the State, and no such enthusiasm on the part of the Republicans has heretofore been known. The enormous sums of money being spent in the doubtful States has led both parties to slight Missouri. The opportunity is a golden one. Speakers and canvassers must be sent out in all directions at once. You are requested and urged to attend a meeting on Saturday, 20th instant, at 8 o'clock p. m., at the Mercantile Club.

The uncertainty of the result elsewhere makes it imperative that the vote of this State be cast for the Republican national ticket. Come.

By request,

L. M. HALL, *Secretary.*

Mr. Chairman, the caucus of Republicans called together by this circular assembled at the League Club in St. Louis October 20, 1888.

Its proceedings, although in executive session, through some inadvertence or otherwise, appeared in the columns of the public press on the morning after the session. All the speakers seemed possessed with the urgent necessity of raising money, and sought to impress that necessity upon the minds of others. The chief of one of the "protected industries" of that city insisted that "$50,000 had to be raised." His suggestion met with favor on every hand, and the chairman of the meeting appointed fifteen committees of two members each to canvass the city, having first apportioned the work among the different business districts.

The record of the proceedings shows that the most active and vigilant among those enlisted in the work of raising the $50,000 were the representatives of "protected industries." It may also be stated in their behalf that they were the most liberal contributors to the fund. It is, indeed, an open secret that one firm contributed as much as $6,000, whilst many in addition to their contributions employed much time in the work of the campaign. The criticism of the Foster "fat-frying" circular, therefore, could have no application to the protected "infants" of St. Louis.

Mr. Chairman, in determining the real purpose of this large campaign fund, it is well to remember that it was raised within two weeks of the election and with the distinct understanding that it was to be used exclusively in Missouri.

Sir, I do not believe that the raising of this immense sum on the threshold of election day meant an "honest election." I am, on the other hand, entirely convinced that $50,000 could not have been employed in the payment of legitimate campaign expenses. The amount of the fund, taken in connection with the circumstances under which it was raised, is wholly inconsistent with the theory of an honest and unpurchased ballot.

I should not, however, have made any further reference to this matter but for the fact that my colleague, Mr FRANK, has seen proper to call the subject again to the attention of the House. The facts in part only are before the House, but I shall not, at least at this time, pursue the subject further.

MISSOURI'S WEALTH.

Now, Mr. Chairman, I desire to submit but a single observation with reference to the State of Missouri; and in so doing will say that in the history of the last twenty-five years we have been confronted with two causes which have operated to retard the growth and prosperity of our State, and that yet, despite these adverse influences, Missouri's wealth in the aggregate has increased, while she has at the same time largely augmented her population.

The first obstructive cause, Mr. Chairman—a cause most detrimental and pernicious—was the long, dark night of the rule of the Republican party in the years immediately following the war. During this harsh and sinister period many of our counties were involved in the thralldom of bonded debt, our State credit became depreciated, our bonds sold at a ruinous discount, and our railroads were bartered at a loss to the tax-payers of about $20,000,000.

Notwithstanding, however, these untoward conditions at the time the Democratic party took control in 1873, by honesty and economy in the administration of State and county affairs, as also by frugality in the conduct of private interests, we have lifted in most cases the bonded burdens from our counties, have decreased the interest-bearing debt of the State from about $20,000,000 to less than $10,000,000, whilst at the same time reducing the State taxes from 50 cents to 30 cents on the $100. We have also lowered the interest rate from 6 per cent. to 3¼ per cent., while the State bonds which were finding reluctant sale in the markets under Republican rule, have to-day a standing in financial circles of equal dignity with the bonds of the Federal Government.

The second hindering cause, Mr. Chairman, is the existing system of "protection," which has restricted enterprise, retarded the growth and development of industries, limited the markets for agricultural products, impoverished labor, and reduced the earnings of our farmers by its inordinate and oppressive exactions. That there is trouble with the agriculturists of Missouri, as elsewhere in the Union, can no longer be successfully controverted. The leader of that side of the House [Mr. MCKINLEY], in his report on the bill under consideration, concedes "that there is widespread depression in this industry," and says that this fact "can not be doubted." I also desire to submit the following editorial testimony of the St. Louis Globe-Democrat of December 11, 1889, to establish the fact of agricultural decadence. That journal is the leading Republican organ of the State and avers that—

Their [the farmers'] business has become unprofitable, in spite of all their industry and economy; and they are firmly of the opinion that this is due to causes which can be and should be removed, causes for which they are not responsible, but which involve devices of injustice and unfairness aimed strictly against them. The prices which they are obliged to accept for their grain are below the actual cost of production. There are millions of bushels of corn west of the Mississippi River which will not bring enough to pay for taking it to market. Live-stock can not be sold for much above the expense of feeding. The farmer can not get a decent remuneration for his labor in any branch of his calling; he is lucky if he realizes as much as a dollar a day, counting nothing for interest on his investment.

It will be seen at a glance that these people have substantial reasons for complaint. There is manifestly something wrong somewhere, and they can not be blamed for seeking to find out what it is and to have it corrected. The familiar argument of overproduction is not a sufficient explanation and answer in their case. They can readily sell all they produce at the prevailing prices, which proves that it is needed for consumption. The supply does not exceed the demand or they could not sell the surplus at any price. They know very well that all the food products which they turn off year by year are consumed; and they have a right to demand a reasonable return for the work by which those products are made available for the uses of all other classes. The question is one of vital importance to them. Adverse influences have placed them where they can not make a decent living by the hardest toil and closest saving; and they have a right to demand a fair share of the proceeds of their labor.

Again, Mr. Chairman, Senator INGALLS, of Kansas, President *pro tempore* of the Senate, in an interview in the New York World of April 13 last, in reviewing the commercial relations of the West and South, supports the view I have expressed as to the depressed condition of agriculture and the relation of the tariff thereto. He says:

These great communities, that were only separated by the system of slavery, have since its destruction been alienated by factions that have estranged them only to prey upon them and to maintain political supremacy by their alienation. Unfriendly legislation has imposed intolerable burdens upon their energies; invidious discrimination has been made against their products; unjust tariffs have repressed their industries.

As an illustration of the effects of the "intolerable burdens," the "invidious discrimination," and "unjust tariffs" referred to by Senator INGALLS, it may be well to read the following special dispatch to the St. Louis Globe-Democrat from Boston, Mass., of date February 4, 1890, wherein it is stated that—

Western farmers will hereafter find it more difficult than ever of late to get Eastern capital by mortgaging their farms. Within two weeks the Showalter Western Farm Mortgage Company, doing business here, has asked for an extension. A farmers' loan company, of Anthony, Kans., recently was obliged to close up business, and there is more than one local company that is able to meet its semi-annual interest only with the most violent struggles. There are seventy-five Western farm-mortgage companies in this State with a total capital of $22,797,514. The first-mortgage loans owned by these companies aggregate $54,975,876 and the second mortgages $4,853,030.

Again, Mr. Chairman, the subjoined special to the Chicago Tribune of the 21st of March last tells the same story of "intolerable burdens," "invidious discrimination," and "unjust tariffs:"

The passage of the bill extending the time of redemption on real-estate mortgages from one year to two years in North Dakota has created a panic in financial circles. This telegram, signed by all the loan agents in Grand Forks, was sent to the governor yesterday:

"If the bill extending the time of redemption becomes a law it will drive capital from the State, increase the rate of interest and force the companies to use trust deeds, which would enable the companies to get title immediately after default."

The mortgage men assert that in case this bill goes upon the statute-book a tornado of foreclosures will break loose upon the entire State and all outside mortgage loaners will pull their capital out as rapidly as possible. Furthermore, they say that all capital inside the State will turn into other channels and the farmers will find themselves absolutely unable to procure accommodations. The bill was passed at the request of the Farmers' Alliance. The loan men say there are $15,000,000 of mortgage loans in North Dakota, and that upon 15 per cent. of it the interest is delinquent and being extended from time to time by the mortgagees.

As conclusive upon this issue, Mr. Chairman, I desire to submit the following excerpts from a letter of the Secretary of Agriculture, given to the country on the 21st of April last through the medium of the Associated Press. Secretary Rusk is certainly the very highest Republican authority on all questions relating to agriculture. He says:

For months past from all parts of the country there have reached me communications, many of them from large bodies of men, all of them from persons deserving consideration, and all of them deeply in earnest respecting the present condition of agricultural depression.

Further on in the communication he declares:

It would be a work of supererogation at this time to undertake to prove the existence of severe agricultural depression. This is universally admitted. Representative farmers and farmers' associations are constantly calling my attention to their condition, urging the necessity for some measure of relief. The situation warrants all the attention which our wisest minds can devote to it.

Upon the question of farm mortgages the Secretary is explicit and direct. Unlike some gentlemen on this floor and elsewhere in the country, he concedes in a frank and manly way their widespread and baneful presence in the following language:

FARM MORTGAGES.

The burden of mortgages upon farms, homes, and lands is unquestionably discouraging in the extreme, and while in some cases no doubt this load may have been too readily assumed, still, in the majority of cases, the mortgage has been the result of necessity. I except, of course, such mortgages as represent balances of purchase-money, which are rather evidences of the farmer's ambition and enterprise than of his poverty.

On the other hand, those mortgages with which land has been encumbered from the necessities of its owner, drawing high rates of interest, often taxed in addition with a heavy commission, have to-day, in the face of continued depression in the prices of staple products, become very irksome and in many cases threaten the farmer with loss of home and land. It is a question of grave difficulty to all those who seek to remedy the ills from which our farmers are suffering. At present prices the farmer finds that it takes more of his products to get a dollar wherewith to pay back the dollar he borrowed than it did when he borrowed it. The interest accumulates, while payment of the principal seems utterly hopeless, and the very depression which we are discussing makes the renewal of the mortgage most difficult.

Mr. Chairman, two days since, as appears by the RECORD of May 17, on page 5035, the gentleman from Michigan [Mr. ALLEN], among other matters relating to the wealth of certain Missouri counties, made the following statement touching two of the counties of my Congressional district. He said:

I will direct your attention to two counties, the counties of Clinton and Clay. There were recorded from 1880 to 1889, inclusive, in these two counties 7,993 mortgages. The difference in the number recorded in the years 1884 and 1889 in the two counties was 329 only, and the great county of Clay, which is to-day one of the most prosperous counties in Missouri, in part adjoining Kansas City, has had more mortgages recorded in 1889 than any other of the eighteen counties to which I have referred.

Replying to this statement, the following occurred in the course of the debate, as appears by the RECORD of the same date:

Mr. DOCKERY. Mr. Chairman, I desire to ask the gentleman from Michigan to state the amount of the mortgage indebtedness in Clay and Clinton Counties.

Mr. ALLEN, of Michigan. In dollars and cents?

Mr. DOCKERY. Yes, sir.

Mr. ALLEN, of Michigan. I have not the amount and I am not able to state it. I am simply stating that—and I repeat what I said—in 1889 there were only about 329 more mortgages put upon record than in 1884. So that the people were not mortgaging themselves very heavily, as we have been lead to believe.

Mr. DOCKERY. The statement of the gentleman, showing simply the number of mortgages, without the aggregate amount of such indebtedness, is meaningless, and indicates nothing either one way or the other. I have not said that my people were not prospering to a limited extent. [Laughter and applause on the Republican side.] Oh, you may laugh, gentlemen, but your laughter will turn to mourning in November. [Applause on the Democratic side.]

And I want to say here and now——

Mr. ALLEN, of Michigan. I have figures from the other Congressional districts which I will give in the morning.

Mr. DOCKERY. Mr. Chairman, have I the time or the gentleman from Michigan? [Laughter.]

Mr. BOUTELLE. The gentleman from Missouri may have a mortgage on the time.

Mr. DOCKERY. But the Republican party seems determined to foreclose it. [Laughter.] I only desire to occupy a few moments if I can do so without interruption.

The CHAIRMAN. The gentleman from Missouri will proceed without interruption.

Mr. DOCKERY. I desire to make a brief statement as to the indebtedness of Clinton County. In the tariff-reform campaign of last year I made the assertion that, notwithstanding the wealth of her agricultural resources, the farming prosperity of the county had declined until its decadence was manifest in an appalling aggregate of farm mortgages, amounting to $600,000.

That statement was contradicted by one of the most prominent Republicans in the county, who made an investigation of the records, and as a result conceded that the county of Clinton, which is one of the fairest counties in Missouri, was burdened with $640,000 of mortgage indebtedness upon her farms.

Mr. CUTCHEON. You refer to farm mortgages?

Mr. DOCKERY. Yes, sir.

Mr. ROWELL. How much money did they have on deposit in bank? Enough to pay for that?

Mr. DOCKERY. I do not know what the deposits were, but I am quite sure that the mortgaged farmers had no surplus to their credit, for if they had they would not have mortgaged their farms. [Laughter and applause on Democratic side.]

Mr. HOPKINS. Let me ask the gentleman a question.

Mr. DOCKERY. No; I must decline to yield, as I have but a moment of time remaining.

Mr. HOPKINS. As regards foreclosures, can the gentleman give any information?

Mr. DOCKERY. I can not yield to the gentleman now.

Mr. HOPKINS. I venture the statement that the foreclosures do not amount to 2 per cent. of the mortgages.

Mr. DOCKERY. Mr. Chairman, if I can get the floor from the gentleman from Illinois, I want to say that the ten counties I represent——

The CHAIRMAN. In debate like this, to interrupt a gentleman who has only five minutes is simply to destroy the force of his speech. Everybody has a chance to reply in their own time, and if they will do so we will get along much better. The Chair thinks the proprieties of the occasion have not been observed.

Mr. DOCKERY. I was about to say, Mr Chairman, that the assessed value of the ten counties that I represent amounted in 1888 to about $46,000,000. There is not a more productive body of agricultural land in any Congressional district in this country, but, notwithstanding the exceeding fertility of our soil, notwithstanding the industry of my people, notwithstanding that in business sagacity they are the peers of the foremost, farm mortgages have piled up not only in the county of Clinton, to which the gentleman from Michigan referred, but also in the other counties of the district. I am not able to correctly estimate their aggregate. Congress passed a bill recently which calls for information of this character, and when we get it the country will know the amount of the indebtedness of its farmers. The census returns will put the question without the pale of controversy and startle the country with its enormous aggregates.

Mr. CUTCHEON. Will the gentleman allow me to ask him a question?

Mr. DOCKERY. Yes, sir.

Mr. CUTCHEON. Can you give us what the increase in wealth has been in those ten years?

Mr. DOCKERY. I have not that information. I have stated the assessed valuation for 1888; but, guided by the general results of the census of 1880, I should estimate that the wealth of the ten counties has not increased. The census shows that in 1860 the farmers owned in round numbers one-half of the wealth of the United States, while in the succeeding decades that wealth decreased until in 1880 it only amounted to about one-fourth of the aggregate wealth of all the people——

Mr. ALLEN, of Michigan. In 1860 the wealth was largely composed of slaves. [Not heard by Mr. DOCKERY.]

Mr. DOCKERY. I am confident, Mr. Chairman, that the census to be taken in June next will show that the farmers, although constituting one-half of the people of the United States, own less than one-fifth of its wealth. I trust that my friend from Michigan when he renews his investigation at the Census Office will segregate the mortgaged farms from those unencumbered and then give us the aggregate of this indebtedness.

Mr. ALLEN, of Michigan. I would, but they had not it.

The estimated wealth referred to by me, Mr. Chairman, was, of course, the relative per capita wealth as between 1860 and 1888. This statement in the debate of the 17th instant was in entire and thorough accord with the eminent Republican authority I have just quoted, to establish the fact of our agricultural decline and the decrease of our per capita farming wealth; and yet, sir, some of the averments made in this debate have suggested the possibility that the leader of the Republican party on this floor and its Secretary of Agriculture, in common with myself, were mistaken in the conviction that we have expressed in respect to the unhappy condition of our farming interests. The doubt suggested inquiry and investigation so as thus to set this question at rest and put it beyond the limits of further contention.

RESULTS OF PROTECTION.

The result, so far as my own Congressional district is concerned, is given in the following statistical summary: The assessed valuation of all the real and personal property of the ten counties I have the honor to represent on June 1, 1880, amounted to $37,172,651, estimating the increase of wealth to have been $961,866 from June 1, 1879, to June 1, 1880. On June 1, 1888, the assessed valuation of the same counties aggregated $44,867,586, or a total increase in eight years of $7,694,935. The population of these counties, according to the census of 1880, was 158,316, whilst the population in 1888, based upon the estimate of 3 per cent. annual increase, was 196,312. I may also state, Mr. Chairman, that I have adopted this per cent. of gain after consultation with the Superintendent of the Census, who is of opinion that it is within the limits of entire accuracy.

That this estimate as to the population of 1888 is fortified by abundant caution, and is within the lines of a strictly conservative calculation, will be confirmed by the vote cast in that year.

The aggregate vote actually cast for the various Presidential candidates was 38,417. Now, assigning 5 per cent. as the number of the "stay-at-home" vote, we ascertain the entire voting strength of the district to have been 40,337. The actual proportion of those who do not vote is, however, usually nearer 10 than 5 per cent. Still, estimating on the basis of 5 per cent. and five members to every household, it appears that our population in 1888 was 201,685, and that the estimate of 196,312 population is therefore entirely safe and conservative.

On this basis I ascertain that the average per capita wealth in my Congressional district, which was $234.80 in 1880, decreased to $228.50 in 1888, an actual average loss to each individual of $6.30. Sir, it is true that there has been an increase of aggregate wealth, but it is, at the same time, apparent that the ratio of the increase of wealth has not kept pace with the ratio of the increase of population. The per cent. of gain in the increase of population has far outstripped the per cent. of gain in the increase of wealth. It is pertinent, also, to remember that within this eight years these ten counties have been traversed by many new lines of railway, and that but for this increase of railroad wealth the per capita decrease would have been more pronounced than it has been. In other words, a considerable part of the aggregate increase of wealth comes from the value of new railroads, and not from an increase of farming wealth.

Further comment, Mr. Chairman, upon the ruthless rapacity of the protective system becomes gratuitous and unnecessary when we recall the marked and superior business attainments of my people and the surpassing affluence of their agricultural resources.

I am confident, Mr. Chairman, that the census of the present year will show that Missouri's increased wealth comes largely from mining, manufacturing, commercial, and railroad investments and development rather than from any very great increase of the wealth of her splendid agricultural domain. I am further convinced that the same census will not only disclose a pronounced decrease in the per capita wealth of the farmers of Missouri, but a still greater decrease among the agriculturists of the other States of the West and the Northwest.

Everywhere there is unrest and discontent among this class of the people, whilst the sign boards along all our commercial highways point with unerring certainty to the ultimate ruin and overthrow of agriculture if the United States shall persist in maintaining its present policy in respect to foreign trade and internal taxation.

Missouri, Mr. Chairman, asks no privilege for her farmers that she does not desire extended to her sister States of the West and Northwest. Under any financial policy the measure of her prosperity will surpass that of her neighbors, since in mineral, commercial, mining, and agricultural endowments she stands to-day unequaled and without a rival.

The Tariff on Sugar.

SPEECH
OF
HON. GEORGE W. ATKINSON.
OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 20, 1890.

The House being in Committee of the Whole and having under consideration the bill (H. R. 9416) to reduce the revenue and equalize duties on imports—

Mr. ATKINSON, of West Virginia, said:

Mr. CHAIRMAN: I am opposed to the sugar feature of this bill. I have always been in favor of the all-round principle of protection. I do not indorse the doctrine of discriminating in favor of one industry as against another. I can not ask my Republican friend from Louisiana [Mr. COLEMAN] to vote to protect the glass and pottery and iron and steel and coal and wool in my district and then turn upon him and vote to place sugar on the free-list, and thus destroy that great and growing industry in his district.

That is not my idea of fairness, and I will not vote that way either, unless I am forced to do so in order to save the many valuable and essential features of the bill now under consideration. I maintain that it is our duty to protect sugar the same as we protect glass and iron and

pottery and indeed all the industries of my own and other districts. Upon this principle I stand squarely. Upon it the Republican party has stood for thirty years and has won some of the greatest political triumphs of history; and whenever we, as a party, allow invidious distinctions, like the one we are now considering, to be made between the sugar industry and other industries, we make a rent in our tent of protection that we can not sew up in a hundred years.

The last Republican platform, upon which we won a signal victory, proclaimed to all the world that before any part of our tariff protection should be sacrificed the entire internal-revenue system should be destroyed. Yet, to-day, in the face of that declaration, we find ourselves hanging on to the obnoxious internal revenue, while the sugar business is to be thrown overboard into the bottomless sea of destruction. Mr. Chairman, we make a serious mistake when we allow this to be done. There is, I know, a popular clamor for sugar to be placed upon the free-list, and a lawmaking body always errs when it allows itself to respond to a clamor.

If the duty is taken off sugar other industries may demand free raw materials and cheaper labor; and when these things are done our great tariff system will be overthrown. Then, instead of being independent, as we now are and have been ever since we instituted our present wonderful tariff system, we may again lapse into our former dependent and helpless condition as a nation.

Placing sugar on the undutiable list will doubtless cheapen the article to the consumer for a time; but, inasmuch as prices are invariably fixed by supply and demand, every reasoning individual must know that when our people cease to manufacture sugar the demand for a foreign article will increase and the price will therefore be accordingly raised.

Consignors, consignees, and refiners will combine and fix the prices to suit their own wishes, and the result will be a total loss to the Government and people of $56,000,000 of import duty plus the $7,500,000 that will have to be paid to the American producer as bounty. The entire sugar interest will, in consequence, most likely be turned over to a monopoly, a trust, and the people, in the end, will be the sufferers.

Mr. Chairman, where is the money to come from to supply this enormous deficit of $63,500,000 in the National Treasury. Whence will the money come to pay the increasing pensions to our soldiers? The service-pension bill, passed by this body a week or two ago, pledges $60,000,000 additional pensions to existing law to the soldiers of the Republic. Where is this vast sum of money to come from? Do you propose, gentlemen, to restrict rather than increase the pensions to the men that saved the flag, in order to throw money into the pockets of the sugar trust? You may not intend to do it, but, in my judgment, that will inevitably be the result of the passage of the sugar feature of the present bill. We can not afford to do it. Rather should we lift up the soldier and pull down the trust.

Mr. Chairman, we can not excuse ourselves by stating to the country that we only produce one-eighth of the sugar we use and import the rest. It seems to my mind an incontrovertible fact that, with proper encouragement, we can produce within the United States every pound of all grades of sugar that we can possibly consume. Cane is a certain crop in Louisiana, Texas, and Florida. The sugar-beet has already been introduced in some of the Western States, notably California, where sugar is being successfully manufactured from it. Why, then, do you say we can not make all the sugar we can use, if it is properly protected?

Germany and France, only a few years ago, by high protective duties, encouraged the growth of the sugar-beet, and to-day both of them are sugar-selling instead of sugar-buying nations. I use again, Mr. Chairman, a table on this subject that I prepared a week or so ago for my speech upon the general question of tariff. It shows the wonderful growth in the production of this kind of sugar in the Old World during the past twelve years. What has been done over there can be duplicated on this side of the Atlantic.

Beet-sugar products of Europe.

1884–'85	1,155,000	308,400	557,500	386,400	88,450	50,000	2,545,750
1885–'86	825,000	299,400	377,000	540,600	48,400	37,500	2,127,950
1886–'87	950,000	500,000	525,000	475,000	80,000	50,000	2,580,000
1887–'88	959,156	392,824	428,616	441,342	140,742	119,260	2,481,940
1888–'89	990,604	466,767	523,242	526,387	145,804	133,040	2,785,841
1889–'90	1,260,000	775,000	750,000	475,000	200,000	140,000	3,600,000

If we have within our country the soil, climate, enterprise, and industry peculiar to the production of the sugar beet, in God's name, Mr. Chairman, why not maintain a duty high enough to encourage its growth and manufacture, so that we may produce upon our own soil and with our own labor the $93,000,000 worth of sugar we imported last year? It seems to me that such a course would not only be wise political economy, but the course of common sense and common fairness to our own countrymen.

SUGAR EXPORTS AND IMPORTS.

The following table shows, for the years indicated, the average annual imports of sugar into the countries named, with the average annual exports therefrom for the same periods, respectively. It also shows the net imports or the net exports, as the case may be, for each country, with the general net imports for the whole of Europe. Montenegro, Servia, and Turkey with its tributary states are the only European countries not included. For these no statistics are available. The figures for Austria, Hungary, Germany, Roumania, and Switzerland include molasses, and to that extent overstate the trade. All the figures are taken directly from the official documents of the respective countries, with the exception of those for Russia and Switzerland, which are from the British Statistical Abstract for the Principal and other Foreign Countries. The foreign denominations are here reduced to their equivalents in pounds:

Sugar exports and imports.

Countries.	Years.	Annual average.

Total		3,977,704,749	2,927,774,087	1,049,930,662	

I do not like the sugar-bounty feature of this bill either. To my mind it is un-American and to say the least is an experiment of questionable propriety. It is open to doubt also as to whether it is constitutional to place a direct tax upon the people for the benefit of any particular industry.

It is objectionable also because it will open a door to endless frauds upon the Government. Millions of pounds of foreign sugar will be reported as American production, and upon which the bounty will be paid. The strictest surveillance by Government officials can not prevent it.

Besides, Mr. Chairman, there is no certainty how long the bounty will be continued. Every year the Democratic party will oppose the appropriation for that purpose. The consequence will be continued uncertainty in the sugar business, and the industry will decrease in-

stead of increasing, as it should do, and ultimate destruction will follow. No distinctively American industry will prosper so long as we pay the present rate of wages for labor unless it has the certainty of loyal legal protection of a proper import duty on every similar foreign production. This is the experience of the past, and we have no means of judging the future except by the past. The old adage is as true as it is trite: "One man's experience is worth ten men's theories."

Moreover, Mr. Chairman, permit me to remark, in conclusion, that it is unjust to pay a bounty on cane, sorghum, and beet sugars, and allow nothing upon domestic glucose and corn-sugar. As a matter of fact, to do this will crush the manufacture of these latter articles in this country. Last year there was over 19,000,000 bushels of corn used in this particular industry in the United States, from which was produced 570,960,000 pounds of glucose, valued at $17,128,800, and for which $2,058,507 were paid to laborers. I can not, therefore, see the fairness of paying a bounty upon cane and beet sugars and nothing upon corn.

These, Mr. Chairman, are a few of the reasons why I hope the proposed schedule relating to sugars may not become law. I shall therefore vote with pleasure to strike it out and allow the present tariff to remain in force.

Tariff on Lead Ore.

SPEECH
OF
HON. THOMAS H. CARTER,
OF MONTANA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 15, 1890,

On the bill (H. R. 9416) to reduce the revenue and equalize duties on imports, and for other purposes.

Mr. CARTER said:

Mr. CHAIRMAN: The remarks made on Saturday morning by the gentleman from Texas [Mr. LANHAM] in opposition to the proviso attached to paragraph 203, which assesses a duty of 1½ cents a pound on the lead contained in imported ore are so misleading that I presume to present to the House in advance of the consideration of that paragraph the facts and figures which explode the assumptions and theories advanced by him.

The Mills bill not only left the law phraseology suitable to the Mexican smuggling, but actually reduced the duty from 1½ cents to three-fourths of a cent per pound. When that clause was under consideration in this House every Republican supported an amendment reinstating the duty of 1½ cents per pound and making a proviso identical in effect with the clause in the bill reported by the committee.

Thereafter the Senate tariff bill passed that body, containing the proviso which had been supported by the Republicans in the House. On this party record the Republican Congressional nominees were elected in every prominent lead and lead-silver producing district in this country.

Recognizing not only the logic and justice of the act, but the existing party obligation, the committee reported the paragraph as it now appears in the bill.

No section of the bill has been the subject of such continued and uncompromising controversy as the section referred to. For five long months the Ways and Means Committee has been besieged by an aggressive and opulent lobby favoring the free importation of Mexican lead-silver ore. Every sophistry which keen intelligence, sharpened by self-interest, could suggest has been employed to induce a departure from party record, principles, and pledges on this issue. Facts in nature and political economy, demonstrated by science and experience, have been misrepresented or distorted to aid a conspiracy formed to confuse and deceive the committee and the House, in the interest of five large dividend-paying smelters, whose stockholders have become opulent through palpable error in the persistent misconstruction of existing law. These five smelting concerns, located in Texas, Missouri, and Kansas, have been and now are waging war on the disorganized labor of four States and three Territories of this Union. That labor has found expression before the committee, as it now finds a voice in this House, through the chosen Representatives of the people, and not through specially retained counsel. The conflict is between the people and those who seek unfair advantage over them. In favor of free Mexican lead appears the Mexican Central Railroad and its connecting lines in this country interested in transportation from the Southwest, together with five smelters located in Texas, Missouri, and Kansas, operated or controlled by a close corporation interested in continuing brown-stone front-producing dividends; while opposed to that unrepublican idea there appear over two millions of American people who are contributing their lives to the enrichment, support, and advancement of the States of Missouri, Colorado, Nevada, Montana, and Washington, and the Territories of Idaho, Wyoming, and Utah.

After most careful investigation the Committee on Ways and Means adopted the clause now assailed. It is but proper for me to say that the committee did not give the protection asked for by the representatives of the American miners. We urged that a tariff of $30 be levied on every ton of imported lead ore and on all other ore in which the lead contents were of greater weight than any other metallic component. This demand the committee insisted we should withdraw, and while feeling that our demand was just, we did, as Republicans, accede, well knowing that Mexican ore was almost wholly classified by the Treasury Department as silver ore bearing lead, and as such would only be subject to duty on the actual lead contents. Thus where we formerly insisted that these Mexican ores should pay a duty of $30 per ton, we acceded to a schedule of 1½ cents per pound on the metallic lead contents, being only equivalent to about $6 per ton duty on the average, instead of $30 per ton, which would be collected from Mexican importers if the existing law were correctly enforced. Even this broad concession seems to be unsatisfactory to the gentlemen who seek to perpetuate abnormal dividends by striking the proviso from the bill. The amendment should prevail before this Republican majority if it is in harmony with the principle of protection to American labor, and it should fail if it is in direct conflict with that principle.

I insist that the proposal to strike out the proviso is in direct conflict with the principle of protection, and that such action would be an abandonment of that cardinal principle of Republican faith at a vital point, and a direct violation of a clearly implied party pledge.

Will you bear with me while I undertake to demonstrate this, and vote with me, if I succeed? I ask no more. I hope there is no reason to expect less. Then let us briefly to the facts. From the earliest days of the Republic we have had a tariff on pig-lead. It has varied with the ebb and flow of protection sentiment in national councils, but no party has ever been so unmindful of home interest as to place our lead miners in open competition with the Spaniards. From the 10th day of August, 1790, down to the present hour, pig-lead and lead in bars has been on the protection schedule. Rates of duty have varied, and in such variation and their sequences may be found the most powerful argument in favor of protection to American labor furnished by any protected product. In 1825 the first definite data was collected showing our home production. In that year we produced only 1,500 tons of lead; but mark the increase from year to year down to the present date.

Years.	Net tons.	Years.	Net tons.	Years.	Net tons.
1825	1,500	1850	22,000	1870	17,830
1830	8,000	1851	18,500	1871	20,000
1831	7,500	1852	15,700	1872	25,880
1832	10,000	1853	16,800	1873	42,540
1833	11,000	1854	16,500	1874	52,080
1834	12,000	1855	15,800	1875	59,640
1835	13,000	1856	16,000	1876	64,070
1836	15,000	1857	15,800	1877	81,900
1837	13,500	1858	15,300	1878	91,000
1838	15,000	1859	16,400	1879	92,780
1839	17,500	1860	15,600	1880	97,825
1840	17,000	1861	14,100	1881	117,085
1841	20,500	1862	14,200	1882	132,890
1842	24,000	1863	14,800	1883	143,957
1843	25,000	1864	15,300	1884	139,897
1844	26,000	1865	14,700	1885	129,412
1845	30,000	1866	16,100	1886	135,629
1846	28,000	1867	15,200	1887	145,700
1847	28,000	1868	16,400	1888	151,919
1848	25,000	1869	17,500	1889	155,000
1849	23,500				

It will be observed that during the revenue tariff years from 1850 to 1860, and as to lead extended to a later date, our American production decreased from 22,000 tons to less than 15,000 tons, and of course our imports increased accordingly. Before 1869 all our lead was produced from the non-argentiferous ores of Missouri, Wisconsin, Kansas, Virginia, and Illinois. Between 1860 and 1870 the development of the smelting interest in this country was so marked that it became evident to Congress that the tariff on pig-lead could be readily avoided by shipment of foreign ores to this country for reduction. To prevent such evasion, the existing tariff of 1½ cents per pound on lead ore and lead dross was enacted on the 30th day of June, 1864. Prior to 1883 no effort was made to evade this duty. This was a period of complete protection to the lead industry of this country and I challenge attention to the remarkable illustration of the happy effects of our protective policy as shown in the results obtained during that period.

The official figures I present tell the truthful and eloquent story; decrease of cost to consumer, increase of home production, and decrease of importations of lead:

Year.	Average price.	United States product.	United States consumption.	Imported.
		Tons.	*Tons.*	*Tons.*
1870	$7.13	17,514	48,500	31,460
1871	6.80	19,640	51,000	31,400
1872	7.14	25,416	54,000	29,000
1873	7.20	41,781	65,000	24,358
1874	6.67	51,150	69,590	19,440

Year.	Average price.	United States product.	United States consumption.	Imported.
		Tons.	*Tons.*	*Tons.*
1875	$6.72	58,575	56,610	8,000
1876	6.74	62,930	67,085	5,153
1877	6.74	61,000	63,330	6,970
1878	3.64	91,000	78,000	319
1879	4.18	92,780	94,000	2,460
1880	5.05	97,825	94,697	3,228
1881	4.80	117,085	117,345	3,492
1882	4.90	135,240	132,718	2,578
1883	4.32	147,345	140,535	1,085

The reduction of price from $7.18 per hundred in 1870 to $4.32 per hundred in 1883 was simultaneous with the decrease of importations from 31,460 tons in 1870 to 1,085 tons in 1883. Can there be found in the history of protected productions a more brilliant result? Can the vague theories of free trade survive this practical demonstration in the face of the further fact that our lead-miners were during those years the best paid, the best fed, and the best clothed lead-miners delving in the crust of this revolving globe? At times the home production exceeded the home consumption. During such years and in consequence the price fell below the cost of production. The result always was temporary check in the increase of supply, with only temporary inconvenience, pending the automatic adjustment through the law of supply and demand, operating justly and without foreign interference. In 1883 our home production exceeded our home consumption of lead by 7,810 tons, the importations for that year being less than the exportations.

At this point we began to experience free trade with Mexico. Under a Treasury ruling, dated March 29, 1883, it was held that where lead ore contained silver of greater market value than the lead it should be admitted duty free as silver ore. Recognizing the strained character of this construction, speculators were shy at first, but emboldened by success in doctoring the ores to bring them in free, they finally became defiant. They secured ore mined by Mexican laborers working at less than 50 cents per day, and entered our market with the lead bullion, to compete with the product of ores taken out of the ground on this side of the line, with miners' wages averaging over $3 per day. This presented a veritable bonanza. The available mines along the line of the Mexican Central Railroad were leased or purchased by the speculators without delay, and to-day that Mexican lead-ore supply is practically controlled by the voice of one man. Smelters were erected on this side of the line at El Paso, Argentine, and other convenient points to the number of five, and the importations began and have continued as follows:

Year.	Tons.	Year.	Tons.
1884	1,815	1887	15,000
1885	8,463	1888	28,646
1886	12,000	1889	33,000

These figures were in part furnished by the Bureau of Statistics and are evidently below the amounts actually imported, as the grab samples on which they were based were always, prior to November, 1889, doctored to show greater silver than lead value in the ore, and where ore was classified as silver ore no account was taken of its lead contents by the bureau. This circumstance is important in view of the claim that all the ore was used for smelting purposes because of the lead it contained, and still nearly 90 per cent. of the importations have been made free of duty as silver ore. It is not unreasonable to assume that in the five years between and including 1884 and 1889 200,000 tons of metallic lead were imported in Mexican ores and thrown on the American market in free competition with the product of our own mines. It will be remembered that in 1882 we produced in this country 132,240 tons of metallic lead to meet the total home consumption of 132,718 tons, the production being only 278 tons below the total home consumption, while in 1883 we actually produced a surplus. Consider the results since then. What are they? Home consumption has steadily increased over production. Ponder over the humiliating figures which result from the closing down of the American lead-producing mines and the opening up of the Mexican country.

The following table shows the production and consumption of lead in the United States from 1883 to and including 1889:

Year.	United States product.	United States consumption.	Consumption exceeded production.
	Tons.	*Tons.*	*Tons.*
1884	143,360	148,760	5,400
1885	135,518	145,900	10,382
1886	127,404	141,878	14,474
1887	144,980	164,416	19,436
1888	151,919	180,555	28,636
1889	155,000	188,000	33,000

During these years of decline in the home production, the Mexican importations increased from less than 2,000 tons metallic lead product in 1884 to over 33,000 net tons in 1889. During these years the Mexican miner was made happy by the steady receipt of an average of about 45 cents per day, while American miners were driven and are to-day being driven into other occupations to compete with and lower some other toilers' daily reward. American mines have been closing down since 1884 until to-day the idle silver-lead mines in the Rocky Mountains can be counted by dozens. In the mean time, the Mexican mining districts have been and are being opened up by cheap labor, and a gang of audacious speculators ask this House to enact a law calculated to insure the continuance of this suicidal policy. The demand is made not on the basis of fact, but upon dogmatic assertion of falsehoods, which investigation to the most meager extent will explode. It is claimed—

First. That lead ore can not be produced in sufficient quantities in this country to smelt the dry silver ores.

As this is the real foundation of the claim for the free importation of Mexican lead ore, it is important that we understand the exact meaning of the terms used. Let me therefore say that smelting is but one of the means by which silver is extracted from ore. Where silver in ore is found entirely free from lead and other base metals, it is extracted by a cheap method, known as the "Free milling process." The ore is crushed into powder by heavy stamps raised by steam power and allowed to drop constantly on the ore in a battery below, until it floats away in a ceaseless passing current of water running over plates charged with chemicals which attract and hold the silver, while the water and waste pass on to increase the dump and the stream beyond.

Various auxiliary methods are employed to facilitate the free milling process, but the general principle is outlined by the statement made.

Where silver ores are too heavy in lead and other base metals to yield their precious contents through the process described, they are smelted, either in a lead smelter or with copper ore, in a copper smelter. Dry refractory ores, that is, refractory ore which does not contain sufficient lead to form a liquid slag in the smelter, may be reduced either in a copper or lead smelter. Copper smelters seek these dry silver ores to run in with their copper ores so as to raise the silver contents of the copper matte. All copper ore smelted in the Rocky Mountains bears silver, but no allowance is made by refineries for the silver, unless the copper matte contains over 30 ounces of silver to the ton of matte. This fact causes the copper smelters to enter into competition with the lead smelters in many instances for the dry silver ore. I think it can be safely asserted that all the dry silver ores on the continent could be smelted in the copper smelters if there was not a pound of lead ore in existence. But the lead smelting industry has developed in this county for the express purpose of utilizing the lead ores, which exist in abundance, as a flux to run through the dry ores, and thus make a profit on the lead and silver combined. The fact that dry silver ores are being, and can be, successfully reduced in copper smelters, without the use of lead, effectually disposes of the assertion that these Mexican lead-silver ores are absolutely necessary to enable us to treat our dry silver ores.

But, sir, we are not compelled to rest on this conclusive fact alone. The whole Rocky Mountain chain, crossing the territory of the United States from north to south, is one endless network of gold, silver, copper, and lead bearing veins of ore. These veins have been barely prospected on the surface. When all the centuries shall have run their course or this race of ours becomes enveloped in the gloom of antiquity, rich lead-bearing veins of ore will still remain undeveloped in those mountains within the limits now under the jurisdiction of the United States.

But to reduce the assertion to its absurd foundation you need only reflect that the claim made requires us to believe that nature was careful to locate all the dry ores within the territorial limits of the United States and all the wet or lead-silver ores were dropped into the same long mountain chain at a point just south of the north boundary line of Mexico, as defined by the treaty of peace. Do you believe that nature performed this freak or do you believe that the statement is a mere makeshift used to mislead and deceive? If there is any doubt as to the deceitful intention of the parties responsible for the statement that this country can not produce sufficient fluxing ores to smelt the dry silver ores, consider the testimony of the following affidavits, which indicates what quantities of such ores can be produced in our intermountain region.

TERRITORY OF UTAH, *County of Salt Lake, ss:*

James F. Woodman, of lawful age, being first duly sworn, deposes and says, I have been engaged in mining in California, Nevada, and Utah since the year 1858; I am familiar with a majority of the mining districts in Utah and Nevada, and know in a general way the amounts of lead ore which such districts could produce with a fair price on lead and good access to market. I am especially familiar with the districts on the western edge of Utah and the eastern part of Nevada. These districts contain large deposits or veins of carbonate lead ores, carrying a large per cent. of oxidised iron, making the best possible ore for fluxing dry silver ores. I make the following estimates of the ore that could be produced in the various districts named, from my acquaintance with them, and I am con-

sident my estimate of their possible production is far below the amount that might be produced:

	Tons.
Dugway district can produce annually	30,000
Columbia district can produce annually	15,000
Lakeside district can produce annually	30,000
South Willow district can produce annually	15,000
Stockton district can produce annually	30,000
Dry Cañon district can produce annually	15,000
Ophir district can produce annually	15,000
Clifton district can produce annually	22,500
Furber district can produce annually	45,000
One mine, Silver Cañon district, can produce annually	12,000
Muncie district can produce annually	7,500
West Tintic district can produce annually	7,500
Del Monte and Iron Mountain mines, annually	15,000
Bingham (West Mountain mining district), annually	100,000
Spruce Mountain can produce annually	30,000
Kinsley district can produce annually	15,000
Delano district can produce annually	15,000
Buel district can produce annually	12,000
Total	431,500

These ores thus producible will average at least 25 per cent. lead and are fine fluxing ores, containing generally, in addition to the lead, a large percentage of oxidized iron. Many of these districts are not now producing, on account of the low price of lead, and some of them, which were producing largely before Mexican importations of lead ore became large enough to be of importance, have either greatly lessened their yield or closed down entirely.

I have heard of a statement, alleged to have been made by Mr. August Meyer, that the United States can not produce enough lead ore to flux the dry silver ores produced within its borders. I know that the State of Nevada and the Territories of Utah and Idaho can produce enough fluxing lead ore to reduce not only the silver ores mined in this country, but such silver ores as may be imported from Mexico and British America.

JAS. F. WOODMAN.

Subscribed and sworn to before me, April 24, 1890.

W. M. BRADLEY,
Notary Public, Salt Lake County, Utah.

UTAH TERRITORY, *Salt Lake County, ss:*

W. G. Galigher, of lawful age, being first duly sworn, deposes and says that he has been engaged in the mining of silver-lead ores in the mining States and Territories for eighteen years; that he is now operating silver-lead mines in the State of Montana, and is part owner of the Spanish Hill mine of Bingham Cañon, Utah. That the said Spanish Hill mine has in the past been one of the largest producers of low-grade silver-lead ores in said Territory, and could continue to produce at the rate of at least 100 tons per day of ore, assaying about 20 per cent. in lead and 10 ounces in silver per ton. That the continued low price of lead has continued and will continue to operate as a bar to the profitable working of the mine on an extensive scale. That he has been obliged by reason of low prices to leave standing the low-grade ore-bodies and confine operations to those parts of the mine which produce the higher grade ores, and that in consequence the mine only yielded for the year 1889 about 2,000 tons of concentrate product and furnished employment for only about twenty men; whereas under favorable conditions it could furnish employment to from seventy-five to one hundred men.

That he is intimately acquainted with the larger part of the mining districts of Montana, Idaho, Utah, and Nevada, having traveled extensively among them; that he knows their resources and their capacity to produce fluxing ores, and he asserts of his own knowledge that the said intermountain mining region is abundantly able to produce enough fluxing lead ores to reduce by smelting process all the dry ores produced in the United States as well as gold and silver ores which can be shipped in from Mexico and British Columbia.

That the question under consideration is, in his judgment, a question of "wages only;" that it is impossible for the owners of the average silver-lead mines located in this region to pay $3 and $3.50 per day, the present rate of wages, and compete with the silver-lead mines in the northern parts of Mexico, with their system of cheap labor.

W. G. GALIGHER.

Subscribed and sworn to before me, April 29, 1890.

W. M. BRADLEY,
Notary Public, Salt Lake County, Utah.

TERRITORY OF UTAH, *County of Salt Lake, ss:*

William F. James, of lawful age, being first duly sworn, deposes and says: I have been engaged in mining and selling mineral ores for twenty-four years last past, and am familiar with the designation and character of such ores. Carbonate lead ores are usually found at or near the surface of the ground, and are the result of the combined action of air and water on sulphide ores of lead. As depth is attained the original sulphide ores, being less exposed to such action of air and water combined, are less and less changed, until at considerable depth they are found wholly unchanged. Whether in the form of carbonates or sulphide ores (galena), it is the lead which is of value in reducing so-called dry ores, or ores containing little or no lead.

The only difference in the treatment of the two classes of lead ores is that the sulphide, or galena, ores are often roasted to drive off the sulphur before they are put into the smelting furnace, while the carbonate ores go into the furnace without the preliminary roasting.

As a matter of fact most sulphide ores in the intermountain region, unless very high grade in lead, contain a considerable percentage of iron, also generally in the form of sulphide of iron, known as iron-pyrites. This ore being roasted, the iron is changed by the heat from a sulphide of iron to an oxide of iron, and the roasted ore becomes the most favorable and favored agent for reducing dry silver ores.

The lead ores, or argentiferous lead ores, of the intermountain region are composed almost entirely of these two classes, namely, carbonates, sulphides, and nearly all lead or argentiferous lead ores of that region are good fluxing ores.

The statement that nothing but carbonate lead ores can be used for reducing dry silver ores is fully met and refuted by the fact that Europe has no carbonate lead ores at all, and uses in smelting furnaces only the sulphide or galena ores, and with these ores reduces all the silver which is reduced in her lead furnaces.

I am familiar with the mines and mining districts of Utah, Idaho, Nevada, and Montana, and I know of my own knowledge that large quantities of carbonate lead ores are still produced here; that by reason of the open and broken character of the mountains here the oxidization has extended to a great depth, and even our deepest mines are still producing carbonate ores.

In addition, a fair protection for our lead ores would stimulate the development of new surface deposits of carbonate ores, and I know of my own knowledge the fact that there are large districts containing immense deposits of carbonate ores, high in lead and low in silver, which, with a fair price for lead and good access to markets through already projected lines of communication, can produce annually hundreds of thousands of tons of the very best fluxing carbonate lead ores.

WM. F. JAMES.

[SEAL.]
W. M. BRADLEY,
Notary Public, Salt Lake County, Utah.

TERRITORY OF UTAH, *County of Salt Lake, ss:*

Richard Mackintosh, of lawful age, being first duly sworn, deposes and says, for many years I have been engaged in mining mineral ores, and running sampling mills for sampling the same. I am familiar with the ores of Utah, Nevada, Idaho, and Montana, and know their character and their desirability for use in smelting furnaces, to aid in reducing so-called dry ores, by which is meant ores containing silver and not enough lead to reduce the silver. The lead ores of the States and Territories above named, whether they are carbonate ores or sulphide (galena) ores, are fine fluxing ores, the chief difference being that the sulphide ores are often roasted to drive off the sulphur before they are put in the smelting furnace, while the carbonate ores are put directly in the furnaces. Very generally the sulphide ores of lead contain an admixture of sulphide of iron (iron pyrites), and the roasting changes that sulphide of iron into oxide of iron, making a most desirable ore for smelting and for reducing so-called dry ores.

There are in the various mining districts of the States and Territories above named many developed and undeveloped mines containing large quantities of both carbonate and sulphide lead ores, high in lead, but of low or medium grade in silver; these ores are excellent fluxing ores for reducing dry silver ores and are as good as the ores imported from Mexico for that purpose. Many of these mines can not be profitably worked when the price of lead is low, while, with the price of lead assured at $4.50 per hundred-weight or over, they could produce hundreds of thousands of tons yearly of the best fluxing lead ores. The chief reason, and so far as I know the only reason, we can not in the intermountain region produce these ores as cheaply as they can be produced in Mexico is because we pay our miners about six times as much wages daily as are paid to Mexican miners. I append hereto a carefully made statement of the days of labor actually paid for by me on one mine during last winter, the amount of lead produced from the ores mined, and the cost of producing each ton of lead reduced therefrom at the wages actually paid, and an estimate of what the cost would have been if the wages had only been 50 cents per day to the man.

I make that statement as a part of this affidavit and the facts therein stated are true of my own knowledge. The mine in question produces the best kind of carbonate lead ores, extremely desirable for reducing dry silver ores. This mine can be made to produce, with lead at a fair price, eighteen to twenty thousand tons of such ore annually. There are many mines in the same district containing the same kind of ore, which are not working and cannot work at the present price of lead and make a profit for the owners. With a fair price for lead the district in which these mines are located can produce at least from forty to fifty thousand tons of such fine carbonate lead ores.

DIAMOND MINE, EUREKA, NEV.

Comparative statement showing cost of extracting 180 *tons of lead for six months, ending March* 31, 1890. (*Labor at* $3 *per day and* 50 *cents per day.*)

Month.	Days.	Rate.	Amount.	Rate.	Amount.
				Cents.	
October	366½	$3.00	$1,099.50	50	$183.25
November	480½	3.00	1,441.50	50	240.25
December	536	3.00	1,608.00	50	268.00
January	531½	3.00	1,594.60	50	265.75
February	485½	3.00	1,456.50	50	242.75
March	677½	3.00	2,032.50	50	338.75
Total	3,077½	.....	9,232.50	.....	1,538.75

180 tons cost to extract at $3 per day, $9,232.50; $51.29 per ton lead.
180 tons cost to extract at 50 cents per day, $1,538.75; $8.55 per ton lead.

R. MACKINTOSH.

Subscribed and sworn to before me April 25, 1890.
[SEAL.]
W. M. BRADLEY,
Notary Public, Salt Lake County, Utah.

To the President and the Senate and House of Representatives of the United States in Congress assembled:

In order to show the disadvantage American lead mines labor under when brought into competition with the Mexican mines, the example of the Lead Mines and Brooklyn mine (adjoining properties, worked under one management) is brought to your notice. These properties are located in the West Mountain mining district, Salt Lake County, Utah, and jointly produced 45,000 tons of crude ore during the year 1889. Three thousand tons of this ore was first class, leaving 42,000 tons of very low grade ore to be "dressed," or concentrated into a merchantable commodity. The product of this "dressing" or concentration was 6,140 tons of second class, containing 3,500 tons of lead. Considering the single item of labor alone, 1 ton of this lead cost $41, the average cost of labor being $3 per day per man.

Contrast this with the pay received by the same classes of Mexican labor, 50 cents per day, and the cost of a ton of lead, mined and treated under the same conditions, figures out less than $7 on the other side of the border, thus demonstrating very clearly and very forcibly the urgent necessity of a protective tariff upon lead sought to be imported into this country.

The mines, tramway (connecting mines with concentrating mill), and concentrating mill employ 125 men, with a monthly pay-roll of, in round figures $12,000.

The writer of this is also engaged in the smelting business near Salt Lake City, and smelted some 10,000 tons of the above output, which after being roasted becomes a very valuable fluxing ore in connection with the treatment of dry ores (*i. e.*, ores containing little or no lead) as it contains an excess of lead. In this connection, I beg to state that all ores carrying an excess of lead, that is, more lead than is necessary for their own fluxing, are considered as fluxing ores, be they carbonate or galena.

Yours respectfully,

A. HANAUER,
Manager Brooklyn Lead Mine Group and Hanauer Smelting Works.

APRIL 18, 1890.

TERRITORY OF UTAH, *County of Salt Lake, ss:*

Abraham Hanauer, of lawful age, being first duly sworn, deposes and says all the statements made above are true of my own knowledge.

ABRAHAM HANAUER.

Subscribed and sworn to before me this 18th day of April, A. D. 1890.
[SEAL.]
W. M. BRADLEY,
Notary Public, Salt Lake County, Utah.

Thousands of sworn statements might be introduced to show that we have an abundance of lead ores in this country, but it seems useless to read further on a point so clearly apparent to any one who but reflects that the Mexicans are simply mining on veins of ore running parallel to veins in this country in the same mountain chain. As Mr. Gallagher well says in his affidavit, it is a question of wages pure and simple.

Second. It is claimed that these Mexican ores are different from our ores and that we can not produce carbonate ores like those produced in Mexico, a trifling subterfuge; but, as the statement has been made, I introduce a few affidavits which on their face bear the impress of their high authority:

TERRITORY OF UTAH, *County of Salt Lake, ss:*

John Tiernan, of lawful age, being first duly sworn, deposes and says, I have for twenty years past been engaged in mining in the Territory of Utah I know the character of the mineral ores produced here. Last summer I had occasion to examine at El Paso the character of the ores from Mexico there imported, and know by assay and analyses the character of the same. We can in this intermountain region produce enough of said ores, quite as good for fluxing purposes as they are, not only to reduce all the dry ores mined in the United States, but such dry ores as may be imported from Mexico and British Columbia. I am myself the owner of various mines containing tens of thousands of tons of such carbonate of lead fluxing ores, containing also a large percentage of oxidized iron. These mines were formerly producing, but are now closed down on account of the low price of lead.

JOHN TIERNAN.

Subscribed and sworn to before me April 26, 1890.

W. M. BRADLEY,
Notary Public, Salt Lake County, Utah.

TERRITORY OF UTAH, *County of Salt Lake, ss:*

William J. B. Walker, of lawful age, being first duly sworn, deposes and says: I have been engaged in smelting ores six years and refining the resulting base bullion for three years, and am familiar with the designation and character of such ores.

In my experience lead ores are entirely used as fluxes. The carbonate lead ores, which occur generally near the surface, are being replaced by galena or sulphide of lead ore as the mines attain greater depth. This ore is divided into two classes by the smelters.

Galena assaying 40 per cent. to 50 per cent. and over in lead is smelted directly without preliminary roasting to drive off the sulphur, as such character of ore will furnish enough excess of lead over that necessary to flux its own charge, to carry or flux an additional burden or weight of dry or silver ore.

Galena ore assaying under 40 per cent. lead or second-class ore usually contains enough iron pyrites, which, when changed to oxide of iron by roasting, will act as an iron flux in the furnaces and thus become also a fluxing ore by the use of which additional tons of dry or silver ores may be smelted.

From my own experience and observation I can state that, on account of the lead mines in Utah, Nevada, Idaho, and Montana being generally low grade in silver, it is necessary for the price of lead to be high enough to obtain a market for the second class, which is invariably mined with the first class to a greater or less degree; otherwise the mines would be compelled to close down. In order to treat second-class galena ore smelting plants in Utah, Montana, and Colorado are yearly increasing the capacity of their roasting plant, the resulting roasted product being used entirely as a flux for and the lead contained therein as a matrix for the silver and gold in dry or silicious ores.

To my certain knowledge galena ores have been purchased in the Salt Lake market by Colorado smelters, the high prices paid for the same proving that they were bought to be used as fluxing ores.

Smelters east of the Missouri River are at present buying galena ores from Missouri, Montana, and Idaho, which they use as a flux to smelt dry silver ores.

W. J. B. WALKER.

Subscribed and sworn to before me April 25, 1890.
[SEAL.]
W. M. BRADLEY,
Notary Public, Salt Lake County, Utah.

Giovanni Lavagnino, of lawful age, being first duly sworn, deposes and says: I have studied civil engineering in Italy, mining engineering and metallurgy in Germany, and I have been engaged in mining during the last fifteen years, both in Europe and in this country. I am acquainted with the principal mining and smelting districts of Germany, England, and Italy, Colorado, Montana, and Utah.

Galena, or sulphide of lead, is by far the most important lead mineral; cerusite, or carbonate of lead, occurs in the upper parts of lead-ore deposits as an alteration of galena. Both galena ores and lead carbonate ores generally carry more or less silver.

In Europe lead smelting is practically independent of the lead carbonate ores, and silver ores are generally reduced by lead smelting. In the common practice the lead ores are roasted before smelting.

I saw lead carbonate ores mined and smelted on a large scale in Leadville in 1880 for the first time, and in Utah afterward. I found that some good galena ores would be charged raw in the smelting furnaces, but low-grade sulphide ores were neglected, there being a deficiency of roasting plants at the smelters and of concentrating plants at the mines. I have observed in these ten years a marked tendency to extend the smelting process for the treatment of silver and gold ores, to reduce the proportion of lead in the smelting charge to a minimum, to subject the sulphide ores to a preliminary roasting, and to use these roasted ores in lieu of the lead carbonate ores. All smelters now have large roasting plants, and most of the sulphide ores are mechanically prepared, as in Europe, to suit the convenience of the smelters.

Inasmuch as most lead ores are not rich enough in silver and gold to be profitably smelted on their own account and are only sparingly used for reduction of silver and gold ores, therefore these lead ores should be considered only as fluxing ores. There can be no essential distinction made between galena and lead carbonate ores, save that the latter do not need the preliminary roasting. Opposite to this advantage of the lead carbonate ores I would place the fact that the sulphide lead ores are more easily prepared mechanically so as to contain more lead, more iron, and much less silica than the carbonate ores. I should say, by way of explanation, that iron pyrites occur very often with the galena ores, and that while the oxide of iron in the roasted ores used for fluxing is favorable, silica is objectionable, because the silver and gold ores carry it, as a rule, in a large excess.

I have been selling low-grade lead ores for the last six years, and my experience is that while the carbonate lead ores have been growing scarcer in this market the price, independent of the lead quotations, has been at the same time falling since 1886, and sulphide ores have been gradually selling better.

G. LAVAGNINO.

Witness:
J. R. NICHOLS.
APRIL 30, 1890.

TERRITORY OF UTAH, *County of Salt Lake, ss:*

John McVicker, of lawful age, being sworn, says: I am and for twenty years past have been carrying on the business of a public assayer at Salt Lake City, Utah. I am accustomed to make assays on ores mined in Idaho, Nevada, and Utah. During the past year over 65 per cent. of the lead ores assayed by me have been carbonates; the rest sulphide of lead.

The latter ores when carrying a high percentage of lead, and they generally do, are as valuable as the carbonate for use in reducing dry silver ores.

JOHN McVICKER.

Subscribed and sworn to before me, April 25, 1890.
[SEAL.]
W. M. BRADLEY,
Notary Public, Salt Lake County, Utah.

To the President and the Senate and House of Representatives in Congress assembled:

I have been engaged in lead smelting in Utah during the last thirteen years, and for the last ten years have been superintendent of the Hanauer Smelting Works. In that time I have seen one large works—the Horn Silver—run for years on ores containing little or no carbonate of lead. The mine of this company was a remarkable deposit of sulphate of lead. Their smelting operation was a commercial and a metallurgical success. The lead ores of Montana and Idaho are almost exclusively galena, yet both have sustained large smelting industries and export very heavily to the Mississippi Valley galena ores for fluxing purposes.

The lead ores of Cornwall, England, the Hartz Mountains, Germany, and those of Spain as well, are all galenas. One pound of galena contains about 10 per cent. more lead than 1 pound of carbonate of lead. Since lead is the agent which collects silver (as quicksilver does in the milling operation) it is easy to see the value of galena as a flux for silver ores.

Respectfully submitted.

RICHARD H. TERHUNE,
Superintendent Hanauer Smelting Works.

TERRITORY OF UTAH, *County of Salt Lake, ss:*

J. C. Conklin, of lawful age, being first duly sworn, deposes and says: I have been engaged in mining, sampling, and buying and selling mineral ores in Idaho and Utah for sixteen years past, and am familiar with the character and classification of such mineral ores. The ores of Idaho and Utah are to my personal knowledge desirable for the purpose of smelting dry silver ores, and are shipped to Newark, N. J., Chicago, Ill., Oakland, Cal., Denver, Colo., and St. Louis and Kansas City, Mo., to the amount of many thousand tons each year. Whenever the lead contained in the ore is in excess of the quantity needed for a flux, that is, about 15 per cent., the ore, whether a carbonate or sulphide of lead, is sought for as a fluxing ore. The low price of lead and the present difficulty of getting to market have kept almost wholly undeveloped many entire districts in Idaho and Utah, which could, if developed, produce hundreds of thousands of tons of fine fluxing ore annually.

J. C. CONKLIN.

Subscribed and sworn to before me, April 26, 1890.
[SEAL.]
W. M. BRADLEY,
Notary Public, Salt Lake County, Utah.

TERRITORY OF UTAH, *County of Salt Lake, ss:*

Francis M. Bishop, of lawful age, being first duly sworn, deposes and says: I have been engaged in assaying ores in Salt Lake City, Utah, for eleven years past, and have been accustomed to make assays on lead ores mined in Idaho, Nevada, and Utah. Of such lead ores 70 per cent. at the present time are carbonate ores. The sulphide of lead ores (galena), when they carry a large percentage of lead, and the natural or concentrated ores of this class generally do, are no less valuable as a flux for dry silver ores than the carbonate ores of lead.

F. M. BISHOP.

Subscribed and sworn to before me April 25, 1890.
[SEAL.]
W. M. BRADLEY,
Notary Public, Salt Lake County, Utah.

From this testimony, which could be multiplied indefinitely, it is manifest that we can and do produce ores identical with those now being imported from Mexico, and that we can produce them in necessary quantity. It is further apparent that the statement that carbonate ores alone are useful for fluxing purposes is erroneous. No man familiar with smelting ores could have the audacity to maintain that galena, high in lead, was not good smelting ore, the contrary being well known both in this country and the Old World.

Third. It is maintained that the introduction into this country of those Mexican ores has tended rather to enhance the price of lead than to decrease it, and a comparison is made to sustain this paradoxical proposition by citing the years 1883, 1884, and 1885 and comparing the average price of those years with the average price for the years 1886, 1887, and 1888.

Examination of the figures which I have heretofore given will show that prior to the introduction of any Mexican lead into this country we had produced a surplus of lead in 1883, amounting to about 7,000 tons. To add to this accumulated surplus, in 1884 more than 1,815 tons of lead were shipped in from Mexico. The next year over 8,000 tons and in the year 1886 about 12,000 tons were imported. These importations of Mexican lead, added to the surplus of the country for 1883, effectually broke down the market and, holding down the market, drove the American production of lead entirely out of proportion to consumption, so that in the year 1885 our home consumption exceeded our home production by over 10,000 tons. These figures show that American lead-producing mines had been driven into idleness by the low prices resulting from the burden of Mexican importations into our market. The result, the closing down of our

mines, was followed by an increase in the market price of lead, the truth being that control of the market has been in the hands of the Mexican free ore importers since 1885.

The market was stimulated by a combination in 1888. In 1889 the artificial support was removed, and from the effects of the heavy importations the price was driven down below the cost of production in this country, and is now hovering close by the edge of the danger line. Remove the tariff, give to the mines of Mexico, British Columbia, Germany, and Spain the privilege of free entry of their ores to the United States and within thirty days after the passage of such a law every silver-lead-producing-mine on this continent will be compelled to close down and the vast army of miners will be compelled to drift into other avocations.

It is important to consider how cheap lead can be produced. As casting some light upon that question I present a tabulated statement showing the yearly average price of pig-lead at London for the past century, submitting as a logical deduction that the lowest price reached during the century in London is the minimum at which lead can be produced by the labor of Spain, Germany, and Mexico.

Yearly average price of pig-lead at London for the past century.

Year.	Price.	Year.	Price.	Year.	Price.	Year.	Price.
	£ s.		£ s.		£ s.		£ s.
1787	21 4	1813	25 14	1839	19 5	1865	20 15
1788	21 10	1814	26 11	1840	19 10	1866	20 15
1789	19 17	1815	20 16	1841	20 10	1867	20 5
1790	16 1	1816	16 5	1842	18 10	1868	19 15

1801	24 8	1827	15 0	1853	23 10	1879	15 7
1802	24 16	1828	14 7	1854	23 15	1880	16 5
1803	27 15	1829	13 10	1855	23 15	1881	15 5
1804	28 0	1830	12 10	1856	24 5	1882	14 15
1805	27 11	1831	12 10	1857	23 10	1883	13 12
1806	35 12	1832	12 5	1858	22 5	1884	11 10
1807	30 3	1833	15 0	1859	22 10	1885	11 0
1808	30 1	1834	17 5	1860	22 15	1886	12 19
1809	31 3	1835	22 10	1861	22 0	1887	14 0
1810	28 16	1836	24 5	1862	21 10	1888	13 12
1811	24 0	1837	21 10	1863	21 5	1889	12 7
1812	23 3	1838	20 10	1864	21 15		

Its testimony is very clear. Only twice during that time has lead gone to or below 12*l.*, namely, 1830 to 1832 and 1884 to 1886. Barring those depressions, the market has not gone below about 15*l.*, which equals $3.25 in bond in New York. Thus it is palpable that at 11*l.* none of the mines in Europe can live. Freights from the coast of Spain and from the north of Germany to England, the great consuming market, are only about $2 per ton, and thousands of tons can be brought from Spain to New York by sail at the same cost; but at the present time, with the price at New York as it has been for a year past very close to $3.75, and with a freight rate from Colorado, Idaho, Montana, Utah, Nevada, and all the Western States on an average of 1 to 1¼ cents per pound, the Western miner is receiving 2¼ to 2¾ cents per pound for his lead. Therefore the deduction follows, and is clear and incontrovertible, that owing to the heavy importations from Mexico the American miner is getting only the equivalent of 11*l.* 15*s.* at London, which is very close to the price which has invariably shut up Spanish mines, and is only three-quarters of a cent less than the average in Europe for the past century, and nearly 1¼ cents lower than the price at London for a very large portion of that period.

We must not lose sight of the fact that wages in Germany and Spain are less than one half what are paid to the American miner. The average at the great Mechemich mine, employing 3,000 hands, is 30 cents per diem. Spain and Germany, together with England, have thus far furnished more than three-fourths of the lead consumed outside of the United States, and outside of them the only large producer has been Australia, where supplies are almost without limit. The Broken Hills district, in that country, can now produce, according to representations of experts, almost half as much as Spain. They have already chartered a steamer to take 3,000 tons of the base bullion per month from Sydney to London. Enormous quantities of this ore could find its way as free silver ore to this country. British Columbia is also prepared to furnish its very liberal quota. It will be an absolute impossibility for this country to prevent some doctoring of ores at foreign points and to prevent an importation of lead as silver ore which shall be equivalent to one-half of the entire production of this country if the proviso is stricken out. It must also be remembered that even 15 or 20 per cent. of surplus will drag down the price of the entire product of the country and so make it unprofitable to the point that the industry will of necessity be abandoned, beginning with the more unfavorable localities and spreading more and more all around as the price declines.

Even allowing that no doctoring is to be done, it is well known to every miner that the sorting of ores is an easy matter, so that the entire portion of the world's product, which fulfills the conditions to make it a so-called silver ore, will be carefully selected everywhere and sent to this country. If the proviso assailed is stricken out of the bill, the aggregate of these various importations, added to the Australian and Mexican products would be more than double enough to carry our price below the average at London for the last century, and, of course, far below the producing point in this country.

It will be observed by consulting production in this country, and prices prior to the importation of Mexican lead free of duty, that whenever the price has gone below 4 cents the supply has been checked; whenever it has gone above 4½ cents the supply has increased so as to equal consumptive demand. It is automatic, and the plea that we can not produce enough lead ore is refuted by this experience.

But $3.60 to $4 per hundred, with the heavy costs of freight, now brings down the price to the American miner lower than the average of a century in Europe, as shown by the table. It is true that the processes of mining and smelting are growing cheaper, but we can not escape from the fact that on the average American lead must be transported nearly 2,000 miles overland to market, while all foreign lead reaches market by the ocean highway, and this difference must inevitably and always remain at from one-half to three-quarters of a cent per pound against the American miner and stand as a factor and fixed charge to be added to his cost or taken from his returns.

To the end that the yearly average prices may be the better understood, in view of fluctuating exchange, I add the parity table on pig-lead, London and New York prices, prepared by Mr. E. A. Caswell, the lead broker, of New York:

Parity table on pig-lead—London and New York prices.

	Exchange at $4.84.	Exchange at $4.86.	Exchange at $4.88.	Exchange at $4.90.
£ s.				
11 0	$2.37	$2.38	$2.39	$2.40
11 5	2.43	2.44	2.45	2.46
11 10	2.48	2.49	2.50	2.51
11 15	2.53	2.54	2.55	2.56
12 0	2.59	2.60	2.61	2.62
12 5	2.64	2.65	2.66	2.67
12 10	2.70	2.71	2.72	2.73
12 15	2.75	2.76	2.77	2.78
13 0	2.81	2.82	2.83	2.84
13 5	2.86	2.87	2.88	2.89
13 10	2.91	2.92	2.93	2.94
13 15	2.97	2.98	2.99	3.00
14 0	3.03	3.03	3.04	3.05
14 5	3.08	3.09	3.10	3.11
14 10	3.13	3.14	3.15	3.16
14 15	3.18	3.19	3.20	3.21
15 0	3.24	3.25	3.26	3.27

Calculating the London discounts, average freights, insurance, duty, etc., about 2.10 must be added to the London price to obtain the figure at which lead could be laid down at New York—duty paid.

E. A. CASWELL.

It will be urged that freight rates from Mexico to the market by way of the American smelter do not place the American miners at any disadvantage in that particular when competing with Mexico. This suggestion drives us back to the labor question again, and I repeat that the whole gist of this question is wrapped up in the labor question. We are endeavoring to maintain the dignity and wages of American workmen by asking that this Government interpose its protective policy between the intelligent, progressive American citizen engaged in lead mining, and the Mexican peon, whose wants are supplied and whose ambitions are satisfied by the meager sum of from 25 to 45 cents.

Those who have not analyzed or observed the workings of the economic conditions controlling the production of the precious and base metals found in combination in ore, are liable to underestimate the disastrous effects of a policy destined to reduce the price of one component below the cost of production.

Such policy would not only result in decreasing the production of the component thus reduced in price, but would likewise diminish the output of all metals found in combination with it. More than one-half of our silver and much of our gold product is taken from mines containing ore which can only be extracted and treated when the lead can be sold at a profit. It follows that decrease of our lead product through ruinous competition with unequal labor conditions, must diminish our production of gold and silver. This means closing down all our low-grade mines, and that in turn means the destruction of labor and commerce in every mining State and Territory in this Union.

But it is insisted, Mr. Chairman, that there must be a sacrifice made of the American miner in order to open the markets of Mexico to the farmers of Kansas. If you will indulge me a few minutes

upon that proposition I will endeavor to satisfy you that it is fully as absurd as any of the theories advanced in support of this free-lead and reciprocity idea.

Since 1884 we have been admitting Mexican lead ore into this country free of duty, the amount of duty collected being too insignificant to bear mention. What has been the result with reference to our Mexican trade? In 1883 we imported from the Republic of Mexico a trifle over $8,000,000 in merchandise; in 1889 we imported over twenty-one millions. Now compare this history with our exports of merchandise during the same period. In 1883 we exported to Mexico a little over fourteen millions' worth of merchandise; in 1889 we exported to Mexico something over ten millions. Our reciprocity is exceedingly wholesome to Mexico, but costly to the United States. This is the class of reciprocity for which the foreigners north and south of us are pining. Can the farmers of Kansas afford to subscribe to a policy which will give them their one-forty-second part of an export trade amounting to an aggregate of only ten millions of dollars, when through such policy they will sacrifice their market in Colorado, in which market they sold during the year 1889 butter, eggs, chickens, flour, and, indeed, produce of every kind from their farms, aggregating over $8,000,000. The aggregate amount shipped into the State of Colorado alone from the States of Nebraska and Kansas in 1889 amounted to 30,465 car-loads of produce, aggregating in value over $12,000,000, which is 40 per cent. of the total annual product of all the mines of the State of Colorado. Of this aggregate sum the closest estimates clearly indicate that eight millions of the amount was purchased from the State of Kansas.

No sane man in the State of Kansas who has given careful consideration to this question from a pure, cold financial point of view, entirely free from all sentiment, can fail to conclude that the best interests of the State of Kansas will be served by preserving the market of Colorado and taking chances for a larger share of the forty-second part of ten millions exported to Mexico.

It is insisted, however, that the citizens of Kansas are interested in maintaining this free Mexican ore proposition because the levy of a tariff on these Mexican ores would be destructive of the smelting interests established in that State. No greater fallacy can possibly be conceived. The levy of duty on Mexican lead ore will merely reduce the large dividends of the Kansas City and Argentine smelters. Every man who is now employed in those works will continue in that employment, but the gentlemen with the bank accounts will be compelled to pay living American prices for lead ore, instead of paying peon prices for the Mexican product. The levy of the duty works injustice to no man. The shallow pretense that this interest has been built up on the faith of the Government allowing Mexican lead ores to come in free is refuted by the very figures which show the cautious manner in which the daring speculators approached this palpable violation of law. Let them buy lead ore for flux from the languishing lead mines of Kansas and Missouri.

As to the smelter at Newark, N. J., whose owners undertake to impose upon this House by saying that they established their works on the faith that the Government would continue to admit Mexican lead ore free, I will merely say that they undertake to perpetrate a fraud on the House and the country. The Newark smelter was in operation for many long years before a pound of Mexican ore was imported into this country. The vast fortunes of its owners were built up in smelting the ores mined from the earth in various portions of this country by the identical miners against whose interests they are now wielding the influence of their mighty fortunes thus acquired. I say to you, Mr. Chairman, that the people of Kansas and New Jersey can not be fairly represented on this floor by any individual who will boldly insist that the honorable, honest citizens of Kansas and New Jersey are entirely selfish, and disregardful of the interests and well-being of their neighbors and patrons in adjoining States.

Reflection, consideration, and mature thought will lead the gentlemen who represent the people of Kansas, no doubt, to realize that the great mountain chain extending through this country from north to south, developed into an active, busy succession of mining camps, will constitute for the States on the mountain slopes west of the Mississippi River a better market than can be found in any other portion of the country. Let this matter be fully and fairly considered; let not the people of Kansas take such action as will sacrifice the magnificent market of Colorado; let not Minnesota and Dakota so act as to sacrifice the magnificent market of Montana. Indeed, let all the States west of that river consider that every agricultural interest demands a continuance of the market which has existed and may be continued in that Rocky Mountain country for the agricultural products of the Mississippi Valley. Representatives from Illinois and all points east of that river should realize that we pay them millions of dollars annually for machinery and protected manufactures. When this matter shall have been fully considered there will be no question as to the dictates of duty.

But, Mr. Chairman, the audacious gentlemen who have worked up this free-trade sentiment in the State of Kansas no more represent the honest sentiment of that State than did the individual, Mr. Clover, whose statement the gentleman from Texas caused to be printed, represent the sentiment of the people of Kansas with reference to the re-election of one of the eminent Senators from that State. I am creditably informed that this individual, misusing the name of the Farmers' Alliance, has been very actively operating through the State of Kansas, using the temporary authority given him by the Alliance to work up a sentiment in favor of this Kansas City smelter combine. This chief of the Alliance is undoubtedly a thrifty man, if he is anything. A Denver newspaper is receiving $125 for each issue to allow this Kansas City smelter combine to state its case on one side of the paper to the miners of Colorado, and this statement in the Denver paper, paid for as advertising matter, is presented to unsuspecting victims as a voice from Colorado in favor of free Mexican lead.

It is made to appear that certain smelters in the State of Colorado are in favor of striking this proviso from the bill. I have no doubt that certain smelters in Colorado are in league with the Mexican free-lead scheme, and the peculiar inducement can be better understood by studying the plan for a smelter trust with a capital of $25,000,000, which is either complete or in process of completion, between the Kansas City smelter combine and certain smelters now making a fight in favor of free Mexican lead. This smelter combine has been prepared, or is being prepared, to absolutely control the lead market of this country, and the requirement of the proposed trust is free lead ore from Mexico, which will insure the advantage of the cheap labor of that country, whose lead-producing mines they now control very largely. In the Denver Times of Saturday, March 1, 1890, will be found an explanation of the purposes of this trust. With twenty-five millions of capital in sight and its future well-being in the balance there can be little difficulty in procuring the services of such men as the individual who has been signing statements for publication in the CONGRESSIONAL RECORD.

This smelter combine, through its minions, has not hesitated to boldly assert that the miners and people of the West were in favor of having their own throats cut by admitting free Mexican lead. Lest any one present may feel that some credit is due this statement, I beg leave to present telegraph messages from the members of the Boards of Trade of three of the prominent cities of my State, Montana, showing the widespread interest manifested in that State with reference to this subject and in favor of the protection of the lead miners from peon competition:

HELENA, MONT., *April* 3, 1890.

Hon. T. H. CARTER, *Washington:*

At a meeting of the Helena Board of Trade held to-day the following resolutions were adopted:

"Whereas the silver and the lead of our State become sensitive in quantity and price in proportion to the violence of a competition of either that comes from abroad; and

"Whereas a bill is now before Congress to admit lead ores duty free, thereby imperiling the industries of silver and lead producing in Montana, whereby many thousands of our citizens would be impoverished by being thus brought into competition with the cheap labor of Mexico and pauper labor of other lead-producing countries; and

"Whereas our many millions invested in the development of Montana mines are threatened by the free lead bill before the Ways and Means Committee of the present Congress; and

"Whereas the thousands of miners and many millions of money engaged in the production of silver, whose export last year exceeded $12,000,000, and whose facile manipulation depends largely upon the presence of lead in treating argentiferous quartz; and

"Whereas the amount of lead value to the ton is a guiding figure in the economy of every smelter in Montana where such ore goes to make up the aggregate value of our precious metal export; and

"Whereas silver, lead, and gold are ribbed together in our mountains and stand sponsors as the triumvirate giants of our mighty industries whose united product is $70,000,000 per year, employing many thousands:

"*Resolved by the Helena Board of Trade, representing in part the largest mining district in the United States*, That we remonstrate in behalf of the many miners in Montana and in behalf of capitalists who have their money invested with us against the passage of any bill by Congress for the introduction into the United States of any free lead ores.

"*Resolved*, That a copy of these resolutions be wired to Hon. T. H. CARTER, our Representative in Congress, with a request that he will lay them before the Committee on Ways and Means."

A. M. HOLTER, *President.*
DONALD BRADFORD, *Secretary.*

BUTTE, MONT., *April* 1, 1890.

At meeting board trade to-night following resolutions adopted, which I am instructed telegraph you:

"Whereas the Ways and Means Committee of the lower House of Congress has pending before it a proposition to levy a duty of 1¼ cents per pound on lead contained in ores; and,

"Whereas certain persons and corporations who are concerned in and who derive a profit from the importation of Mexican lead ores have appeared before said committee and are striving to make it appear that our lead and lead-mining industries will be better subserved by a lowering of the proposed rate of duty or by the free admission of lead in ores.

"Whereas we believe that this effort to abolish or reduce said duty is inspired by a purely selfish motive, for the purpose of enriching a comparatively few individuals in a limited locality, and without any consideration for the rights of the great mass of the people directly concerned: Therefore,

"*Be it resolved by the Board of Trade of Butte City, representing the greatest mining community in the American Union*, That by reason of the great difference existing between this country and Mexico in particular, in all the conditions surrounding labor and living and transportation, any reduction from the proposed rate of 1¼ cents per pound would seriously injure and permanently cripple the lead mining industry of Montana, while the abolition of the duty means ruin and widespread disaster to investments involving millions of dollars.

"*And be it further resolved*, That as citizens of mining sections whose interests are directly concerned, and understanding the extent of the threatened evil, and without any reference to political lines, we most earnestly call upon the Committee on Ways and Means to extend their range of vision and let the principle of protection shed its fostering rays west and north of the Rocky Mountain range.

"*Resolved*, That a copy of these resolutions be telegraphed to Hon. THOMAS H. CARTER, Representative in Congress, with request that he present them to the Committee on Ways and Means."

LEE MANTLE,
President Board of Trade.

Hon. THOMAS CARTER, *Washington, D. C.*

GRANITE, MONT., *April* 15, 1890.

SIR: We, the undersigned executive committee, are directed to transmit to you the following resolutions unanimously adopted by the Granite Miners' Union at their regular meeting Tuesday, April 8, 1890:

"Whereas there is at present a bill pending before Congress to admit foreign lead ores duty free, thereby threatening the destruction of one of our chief industries; and

"Whereas the certain and immediate effect of the passage of such act will be the closing down of many mines and the consequent throwing out of employment a large number of miners, thus inflicting a great hardship on not only the miners and mine-owners, but also on the numerous dependencies sprung up around them; and

"Whereas the network of railways either now projected or in course of construction through the only partially explored regions of Northern and Western Montana will give an impetus to the speedy development of many silver-lead-bearing properties known to exist in the mineral belts traversing through the country adjacent and tributary to the aforesaid lines of railway, so that the assertion of the agents for the smelting companies to the effect that sufficient wet or lead ore for flux does not exist or is not obtainable in the United States, has no foundation in fact; and

"Whereas, through the agency of cheap labor and material other countries than Mexico could and would enter the field of competition in the production of lead, among others our northern neighbor, British Columbia, where in the delta between and near the junction of the Frozen and Thompson Rivers there occurs a limestone formation of considerable extent containing large deposits of lead ore with no appreciable quantity of silver, which if developed indirectly by American capital and Chinese cheap labor, with which British Columbia is ignominiously swarmed, would result in the suspension of every lead-producing industry, not of Montana alone, but with telling effect throughout the United States; and

"Whereas it is a fundamental principle of this Government to protect, as far as possible, the free workmen of America against the odious competition with the pauper or slave labor of despotic countries: therefore, the present duty of 1½ cents per pound on lead ore should be maintained, whether the lead enters as ordinary ore or as an artificial mixture compounded to cheat the customs: Therefore,

"*Be it resolved by the Granite Miners' Union, representing the principal mines of Deer Lodge County, Montana, numbering upwards of six hundred men, employed in the various mines*, That we respectfully protest against the passage of any act that will have a tendency to reduce the present duty of 1½ cents per pound on lead ore, by Congress.

And be it further resolved, That a copy of these resolutions be transmitted to our Representative in Congress, Hon. T. H. CARTER, and that he be respectfully requested to submit the same to the Ways and Means Committee for their consideration."

Very respectfully and obediently,

JAMES GILFILLAN.
MARTIN MYERS.
HUGH M. BLUET.

Hon. THOMAS H. CARTER, *House of Representatives.*

I also present a petition signed by 4,922 miners and citizens of the intermountain country, the body of which petition reads as follows:

To His Excellency the President and to the Congress of the United States:

The undersigned respectfully represent that they are interested in lead-mining in the United States, as miners, smelters, refiners, transporters of ores and the produce from ores, as laborers in the mines, as doing business connected with mining, and in various other ways engaged in and connected with said lead-mining business.

Most of the articles used in mining are protected by a high protective tariff, such as steel, iron, shovels, picks, machinery, powder, fuse, caps, rope, woolen goods, and various other things.

In consequence of the importation of foreign lead ores many of our mines are abandoned and others will be abandoned; capital is seeking investment in Mexico, where miners' wages are 50 cents per day, while American miners receive $3 per day; railroad building, so necessary to the development of our great country, is seriously crippled, and general stagnation pervades our mining regions.

Our mines are capable of furnishing sufficient lead to supply the full demand in the United States. Under a high protective tariff on lead and lead ores we reduced the price to consumers, between 1868 and 1886, from 9 cents to 4½ cents per pound; and since free lead has been admitted from Mexico it has depreciated $18 per ton to the producer, and white lead has advanced $30 per ton to the consumer, thus injuring the mining business and at the same time increasing the cost of products from lead to the consumer.

In the interest, therefore, of both producer and consumer, we earnestly petition that such laws be enacted as will impose on imported lead ores a tariff which will adequately protect the lead-mining interests of this country against foreign importations.

A careful consideration of all these statements, which I believe fully and clearly refute every claim made in favor of a departure from the protective policy of the Republican party, leads me to confidently expect that each and every member of the party will stand in this contest in favor of the large body of American miners as against one railroad combine and five large dividend-paying smelters and the prospective $25,000,000 smelter trust. From the Republican party we have reason to expect a redemption of promises. In my State the Democratic party are in favor of protection to lead and have so declared in their party platform, and I ask any Democrat in this House who has a disposition to aid the Democratic party of Montana in redeeming its pledges to vote with us on this proposition. It is of vital interest to hundreds of struggling communities on this continent.

I realize that the Democratic party on this floor has taken a more pronounced stand in favor of free trade during the present session of Congress than was ever assumed by the party in this House before. Being in favor of free trade pure and simple, I do not feel that any Democrat would be inconsistent in voting to place lead upon the free-list, but with the Republicans here present, who stand under the banner of protection to American industries and American labor, there is but one course to pursue, and that is, be true to party pledges and principles.

Treasury Notes and Silver.

SPEECH

OF

HON. JOHN P. JONES,

OF NEVADA.

IN THE SENATE OF THE UNITED STATES,

May 12 *and* 13, 1890,

On the bill (S. 2350) authorizing the issue of Treasury notes on deposits of silver bullion.

Mr. JONES, of Nevada, said:

Mr. PRESIDENT: The question now about to be discussed by this body is in my judgment the most important that has attracted the attention of Congress or the country since the formation of the Constitution. It affects every interest, great and small, from the slightest concern of the individual to the largest and most comprehensive interest of the nation.

The measure under consideration was reported by me from the Committee on Finance. It is hardly necessary for me to say, however, that it does not fully reflect my individual views regarding the relation which silver should bear to the monetary circulation of the country or of the world. I am, at all times and in all places, a firm and unwavering advocate of the free and unlimited coinage of silver, not merely for the reason that silver is as ancient and honorable a money metal as gold and equally well adapted for the money use, but for the further reason that, looking at the annual yield from the mines, the entire supply that can come to the mints will at no time be more than is needed to maintain at a steady level the prices of commodities among a constantly increasing population.

In view, however, of the great divergency of views prevailing on the subject, the length of time which it was believed might be consumed in the endeavor to secure that full and rightful measure of legislation to which the people are entitled, and the possibility that this session of Congress might terminate without affording the country some measure of substantial relief, I was willing, rather than have the country longer subjected to the baleful and benumbing influences set in motion by the demonetization act of 1873, to join with other members of the Finance Committee in reporting the bill now under consideration.

Under the circumstances I wish at the outset of the discussion to say that I hold myself free to vote for any amendment that may be offered that may tend to make the bill a more perfect measure of relief and that may be more in consonance with my individual views.

CONDITION OF THE COUNTRY.

The condition of this country to-day, Mr. President, is well calculated to awaken the interest and arouse the attention of thinking men. It can be safely asserted that no period of the world's history can exhibit a people at once so numerous and homogeneous, living under one form of government, speaking a common language, enjoying the same degree of personal and political liberty, and sharing, in so equal a degree, the same civilization as the population of the United States. Eminently practical and ingenious, of indomitable will, untiring energy, and unfailing hope, favored by nature with a domain of imperial expanse, with soil and climate of unequaled variety and beneficence, with every natural condition that can conduce to individual prosperity and national glory, it might well be expected that among such a people industry, agriculture, commerce, art, and science would reach an extent and perfection of development surpassing anything ever known in the history of mankind.

In some respects this expectation would appear to have been well founded. For several years past our farmers have produced an annual average of 400,000,000 bushels of wheat. Our oat crop for 1888 was 700,000,000 bushels, our corn crop 2,000,000,000 bushels, our cotton crop 7,000,000 bales. In that year our coal mines yielded 170,000,000 tons of coal, our furnaces produced 6,500,000 tons of pig iron and 3,000,000 tons of steel. Our gold and silver mines add more than $100,000,000 a year to the world's stock of the precious metals. We print 16,000 newspapers and periodicals, have in operation 154,000 miles of railroad and 250,000 miles of telegraph. The value of our manufactured products at the date of the last census was $5,400,000,000. Our farm lands at the same time were estimated at $10,000,000,000, our cattle at $2,000,000,000, our railroads at $6,000,000,000, our houses at $14,000,000,000. It is not too much to say that there has been an increase of fully 50 per cent. in those values since the taking of the census of 1880. Our national wealth to-day is reasonably estimated at over $60,000,000,000.

Figures and facts such as these in the history of a young nation bespeak the presence not merely of great natural opportunities, but of a people marvelously apt and forceful. From such results should be anticipated the highest attainable prosperity and happiness. Our population is alert, aspiring, and buoyant, not given to needless repining or aimless endeavor, but, with fixity of purpose, presses ever eagerly on, utilizing every conception of the brain to supplement and multiply the possibilities of the hand, and at every turn

subordinating the subtle forces of nature to the best and wisest purposes of man. No equal number of persons on the globe better deserve success or are better adapted for its enjoyment.

But instead of finding, as we should find, happiness and contentment broadcast throughout our great domain, there are heard from all directions, even in this Republic, resounding cries of distress and dissatisfaction. Every trade and occupation exhibits symptoms of uneasiness and distrust. The farmer, the artisan, the merchant, all share in the general complaint that times are hard, that business is "dull." The farmer is in debt and is not realizing, on the products of his labor, the wherewithal to meet either his deferred or his current obligations; the artisan, when at work, finds himself compelled to share his earnings with some relative or friend who is out of employment; the merchant who buys his goods on time finds little profit in sales and difficulty in making his payments.

WHAT IS THE DIFFICULTY?

What can it be, Mr. President, that has thus brought to naught all the careful estimates and painstaking computations, not of thousands, nor of hundreds of thousands, but of millions, of keen, shrewd, and far-seeing men? Our people take an intelligent interest in their business; they look ahead; they endeavor, as far as possible, to estimate correctly their assets and liabilities, so that on the day of reckoning they may be found ready. Why this universal failure of all classes to compute correctly in advance their situation on the coming pay-day? What potent and sinister drug has been secretly introduced into the veins of commerce that has caused the blood to flow so sluggishly, that has narcotized the commercial and industrial world?

All have been looking for the cause and many think they have discovered it. With some it is "overproduction," with others either a "high tariff" or a "tariff not sufficiently high." Some think it due to trusts and combinations, others to improved methods of production, or because the crops are overabundant or not abundant enough. Some ascribe the difficulty to speculation; others, to "strikes." All sorts of insufficient and contradictory causes are assigned for the same general and universal complaint. However inadequate in themselves, they serve to emphasize the universal recognition of a difficulty whose cause without close inquiry is likely to elude detection. But the evil is of such magnitude, it is so widespread and pervasive, that, without a knowledge of its cause, all effort at mitigation of its effects can but add to the confusion and intensify the difficulty.

It behooves us, therefore, as we value the prosperity and happiness of our people, to set ourselves diligently to the solution of the inquiry: What is the cause of the unrest and discontent now universally prevailing?

ONE SYMPTOM COMMON TO ALL INDUSTRIES.

In surveying the question broadly, to discover whether there is anything that affects the situation in common from the standpoint of varying occupations, we find one, and only one, uniform and unfailing characteristic: the prices of all commodities and of all property, except in money centers, have fallen and continue to fall. Such a phenomenon as a constant and progressive fall in the general range of prices has always exercised so baleful an influence on the prosperity of mankind that it never fails to arrest attention.

History gives evidence of no more prolific source of human misery than a persistent and long continued fall in the general range of prices. But, although exercising so pernicious an influence, it is not itself a cause, but an effect.

When a fall of prices is found operating, not on one article or class of articles alone, but on the products of all industries; when found to be not confined to any one climate, country, or race of people, but to diffuse itself over the civilized world; when it is found not to be a characteristic of any one year, but to go on progressively for a series of years, it becomes manifest that it does not and can not arise from local, temporary, or subordinate causes, but must have its genesis and development in some principle of universal application.

WHAT PRODUCES A GENERAL FALL OF PRICES?

What, then, is it that produces a general decline of prices in any country? It is produced by a shrinkage in the volume of money relatively to population and business, which has never yet failed to cause an increase in the value of the money unit and a consequent decrease in the price of the commodities for which such unit is exchanged. If the volume of money in circulation be made to bear a direct and steady ratio to population and business, prices will be maintained at a steady level, and, what is of supreme importance, money in which a large volume of business is conducted on a basis of credit will be kept of unchanging value. With an advancing civilization, extending over long periods, it is of the utmost importance that money, which is the measure of all equities, should be kept unchanging in value through time.

EFFECT OF A REDUCTION IN THE MONEY-VOLUME.

A reduction in the volume of money relatively to population and business, or (to state the proposition in another form) a volume which remains stationary while population and business are increasing, has the effect of increasing the value of each unit of money, by increasing its purchasing power.

It is only within a comparatively recent period that an increasing value in the money unit could produce such widespread disturbance of industry as it produces to-day. In the rude periods of society commerce was by barter; and even for thousands of years after the introduction of money credit where known at all, was extremely limited. Under such circumstances changes in the volume and in the value of money, while operating to the disadvantage of society as a whole, could not instantly or seriously affect any one individual. An increase of 25 per cent. in one year in the value of the money unit—a change which now, by reason of existing contracts and debts, would entail universal bankruptcy and ruin—would not be seriously felt by a community in which no such contracts or debts existed, in which payments were immediate or at short intervals, and each individual parted with his money almost as soon as he received it.

Such proportion of the annual increase in the value of the money unit as could attach to any one month, week, or day would be wholly insignificant, and, as most transactions were closed on the spot, no appreciable loss could accrue to any individual. Such loss as did accrue was shared in and averaged among the whole community, making it the veriest trifle upon any individual. But how is it in our day?

THAT EFFECT INTENSIFIED AS CIVILIZATION ADVANCES.

The inventions of the past one hundred years have established a new order of the ages. The revolution of industry and commerce, effected by the adaptation of steam and other forces of nature to the uses of man, has given to civilization an impetus exceeding anything known in the former experience of mankind. Under the operation of the new system, the rapidity and intensity with which, within that period, civilization has developed, is due in great part to an economic feature unknown to ancient civilization and practically unknown even to civilized society until the present century. That feature is the time-contract, by which alone leading minds are enabled to project in advance enterprises of magnitude and moment. It is only through intelligent and far-seeing plans and projections that in a complex and minutely classified system of industry great bodies of men can be kept in uninterrupted employment.

We have 22,000,000 workmen in this country. In order that they may be kept uninterruptedly employed it is absolutely necessary that business contracts and obligations be made long in advance. Accordingly, we read almost daily of the inception of industrial undertakings requiring years to fulfill. It is not too much to say that the suspension for one season of the making of time-contracts would close the factories, furnaces, and machine shops of all civilized countries.

The natural concomitant of such a system of industry is the elaborate system of debt and credit which has grown up with it and is indispensable to it. Any serious enhancement in the value of the unit of money between the time of making a contract or incurring a debt and the date of fulfillment or maturity always works hardship and frequently ruin to the contractor or debtor.

Three-fourths of the business enterprises of this country are conducted on borrowed capital. Three-fourths of the homes and farms that stand in the name of the actual occupants have been bought on time, and a very large proportion of them are mortgaged for the payment of some part of the purchase-money.

Under the operation of a shrinkage in the volume of money this enormous mass of borrowers, at the maturity of their respective debts, though nominally paying no more than the amount borrowed, with interest, are, in reality, in the amount of the principal alone, returning a percentage of value greater than they received, more than in equity they contracted to pay and oftentimes more, in substance, than they profited by the loan. To the man of business this percentage in many cases constitutes the difference between success and failure. Thus a shrinkage in the volume of money is the prolific source of bankruptcy and ruin. It is the canker that, unperceived and unsuspected, is eating out the prosperity of our people. By reason of the almost universal inattention to the nature and functions of money this evil is permitted, unobserved, to work widespread ruin and disaster. So subtle is it in its operations that it eludes the vigilance of the most acute. It baffles all foresight and calculation; it sets at naught all industry, all energy, all enterprise.

CONTRAST OF EFFECTS PRODUCED BY AN INCREASING AND A DECREASING MONEY-VOLUME.

The difference in the effects produced by an increasing and a decreasing money-volume has not escaped the attention of observant writers.

David Hume, in his Essay on Money, says:

It is certain that since the discovery of the mines in America industry has increased in all the nations of Europe. * * * We find that in every kingdom into which money begins to flow in greater abundance than formerly everything takes a new face; labor and industry gain life; the merchant becomes more enterprising, the manufacturer more diligent and skillful, and even the farmer follows his plow with greater alacrity and attention. * * * It is of no manner of consequence with regard to the domestic happiness of a state whether money be in a greater or less quantity. The good policy of the magistrate consists only in keeping it, if possible, still increasing; because by that means he keeps alive a spirit of industry in the nation and increases the stock of labor, in which consist all real power and riches. A nation whose money decreases is actually at that time weaker and more miserable than another nation which possesses no more money, but is on the increasing hand.

William H. Crawford, Secretary of the Treasury, in a report to Congress, dated 12th February, 1820, says:

All intelligent writers on currency agree that when it is decreasing in amount poverty and misery must prevail.

Mr. R. M. T. Hunter, in a report to the United States Senate in 1852, says:

Of all the great effects produced upon human society by the discovery of America, there were probably none so marked as those brought about by the great influx of the precious metals from the New World to the Old. European industry had been declining under the decreasing stock of the precious metals and an appreciating standard of values; human ingenuity grew dull under the paralyzing influences of declining profits, and capital absorbed nearly all that should have been divided between it and labor. But an increase of the precious metals, in such quantity as to check this tendency, operated as a new motive power to the machinery of commerce. Production was stimulated by finding the advantages of a change in the standard on its side. Instead of being repressed by having to pay more than it had stipulated for the use of capital, it was stimulated by paying less. Capital, too, was benefited, for new demands were created for it by the new uses which a general movement in industrial pursuits had developed; so that, if it lost a little by a change in the standard, it gained much more in the greater demand for its use, which added to its capacity for reproduction, and to its real value.

The mischief would be great, indeed, if all the world were to adopt but one of the precious metals as the standard of value. To adopt gold alone would diminish the specie currency more than one-half; and the reduction the other way, should silver be taken as the only standard, would be large enough to prove highly disastrous to the human race.

The Encyclopædia Britannica, 1859 (article Precious Metals, by J. R. McCulloch), says:

A fall in the value of the precious metals, caused by the greater facility of their production or by the discovery of new sources of supply, depends in no degree on the theories of philosophers or the decision of statesmen or legislators, but is the result of circumstances beyond human control; and although, like a fall of rain after a long course of dry weather, it may be prejudicial to certain classes, it is beneficial to an incomparably greater number, including all who are engaged in industrial pursuits, and is, speaking generally, of great public or national advantage.

Ernest Seyd, 1868 (Bullion, page 613), says:

Upon this one point all authorities on the subject are agreed, to wit, that the large increase in the supply of gold has given a universal impetus to trade, commerce, and industry, and to general social development and progress.

The American Review (1876) says:

Diminishing money and falling prices are not only oppressive upon debtors, of whom, in modern times, states are the greatest, but they cause stagnation in business, reduced production, and enforced idleness. Falling markets annihilate profits, and as it is only the expectation of gain which stimulates the investment of capital in operations, inadequate employment is found for labor, and those who are employed can only be so upon the condition of diminished wages. An increasing amount of money and consequently augmenting prices are attended by results precisely the contrary. Production is stimulated by the profits resulting from advancing prices; labor is consequently in demand and better paid, and the general activity and buoyancy insure to capital a wider demand and higher remuneration.

PRICE THE INDEX OF THE VALUE OF MONEY.

There can be no truer index of the value of money than the general range of prices. Price is the mercury by the rise and fall of which the heat and struggle of industrial and business life are daily measured and made plain. Where the tendency of this indicator continues downward, there is no more certain sign that money is increasing in value.

During a period of falling prices the fear of impending calamity hangs like a pall over the business of the country. Notwithstanding unremitting efforts, men feel themselves constantly on the edge of disaster. Gloomy foreboding and timidity take the place of confidence and courage.

A shrinking volume of money is the most insidious foe with which civilization has to contend.

It is my firm conviction that the inexpressible miseries inflicted upon mankind by war, pestilence, and famine have been less cruel, unpitying, and unrelenting than the persistent and remorseless exactions which this inexorable enemy has made upon society. As the volume of money contracts prices decline, and with the decline of prices come stagnation of industry and the relegation to idleness of thousands of willing workmen. Capitalists become unwilling to invest their money in enterprises that employ labor while the products of that labor are constantly decreasing in price. During all periods of falling prices therefore money capital is withdrawn from active industry and seeks investment in bonds and other forms of money-futures yielding fixed incomes; for, although the rate of interest in many such cases may be low, the capitalist is compensated for this by the enhancement in the purchasing power of each dollar of the principal and by the necessarily greater command it secures over the products of labor.

Avoiding the very purpose for which it was devised, money at such times seeks seclusion and declines to circulate. Its owner finds that he can better afford to leave it idle in a vault or bury it in the earth than subject it to the probability of diminution by investing it in business on a constantly falling market. Thus, contrary to all principles of progress and of natural justice, the man who keeps his money idle and deprives society of its use is rewarded by an unearned increment, while he who puts his money into active business, where industry and labor may profit by it, is punished by unmerited loss.

Under such conditions it is impossible for a community to reach that degree of material progress which, under proper circumstances, it would readily attain. At every turn distress and discouragement stare the people in the face. In every town and village, men willing to work stand idle. Even their misfortune does not end with themselves, for not only are they a tax upon their friends, lessening to some extent the meager income of those who give them temporary assistance, but their necessary and eager competition for the little work that offers tends to reduce the compensation of those to whom they are thus indebted. Stores, workshops, and factories, unoccupied and unused, are found in every direction. Crime increases, bankruptcies multiply, and, even though the aggregate of wealth augments, it is unjustly distributed, and is consequently barren of beneficent results.

A GLANCE AT THE HISTORY OF MONEY.

The system of relying upon the precious metals as money has long been known as the automatic system. Accurately, it should be called the *accidental* system. It has been called "automatic" because, so long as money was made to depend solely upon the yield of the mines, the supply regulated itself by what was believed to be a natural method, namely, by the expenditure of labor in its production, and was limited only by the rude obstacles which nature opposes to the production of the metals. The necessity of expending this labor placed the money volume of any country beyond the control of the kings and conquerers who, in the primitive periods of society, exercised despotic sway over their subjects. It was undoubtedly better for the people of those early times to risk the accidents of production than the follies and sinister designs of rulers.

This automatic system grew out of barter. It is a survival from the period when articles were exchanged directly, not for gold and silver as money, but for gold and silver as commodities—on the basis of their cost of production—as in the case of the articles for which they were exchanged.

There have been the same evolutions of progress in money as in all other things. In the rude original of society no kind of money was possible. The first trade was by barter, after which, some one or more commodities attainable in the vicinage and in general use and demand were selected as the common media through which all exchanges were filtered. The use for that purpose of various metals by weight followed next, and, at a succeeding stage, gold, silver, and copper by weight, and after this their use in the form of coins, the value of which coincided with the bullion-value, which must necessarily be the case when free coinage is permitted.

It may be not uninteresting in this connection to have a general view of the materials which, at different epochs of the world's history, have been used as money. I therefore present a tabular statement giving those particulars in chronological order.

Table showing some of the substances which have, at various periods and in various countries, been used as money.

Period.	Country.	Substance used as money.	Authority.
B. C.			
1900	Palestine	Cattle, and gold and silver, by weight.	The Scriptures.
	Arabia	Gold and silver coins	Jacob.
	Phœnicia	Gold, silver, and copper coins.	Anonymous.
	Phœnician colony in Spain.	Same (some still extant)	Carter.
1200	Phrygia	Coins, by Queen of Pelops	Julius Pollux.
1184	Greece	Brass coins	Homer.
862	Argos	Gold and silver coins, by Phidon.	Dictionary of Dates.
700–500	Rome	Brass, by weight	Jacob.
578	Rome	Copper coins	Ibid.
Uncertain.	Carthage	Leather or parchment money, first "paper bills" known.	Socrates, Dial. on Riches, Journal des Économistes, 1874, p. 354.
491	Sicily	Gold coins, by Gelo (some still extant).	Jacob.
480	Persia	Gold coin, by Darius (two still extant).	Ibid.
478	Sicily	Gold coin, by Hiero (some still extant).	Ibid.
407	Athens	Debased gold coins, foreign	MacLeod, 476.
400	Sparta	Iron, overvalued	Boeckh.
360	Macedonia	First gold coins coined in Greece, by Philip.	Jacob.
266	Rome	First silver coins coined in Rome.	Ibid.
54	Britain	Pieces of iron	Ibid.
50	Rome	Tin and brass coin	Dic. of Dates.
Uncertain.	Arabia	Glass coins	N. Y. Tribune, July 2, 1872.

PERIOD FOLLOWING THE FAILURE OF THE ANCIENT MINES.

A. D.			
212	Rome (Caracalla).	Lead coins silvered and copper coins gilded.	Anonymous.
1066	Britain	Living money, or human being made a legal tender for debts at about 2*l.* 16*s.* 3*d.* per capita.	Henry's History of Great Britain, vol iv, p. 243.
1160	Italy	Paper invented; bills of exchange introduced by the Jews.	Anderson.
1240	Milan, Italy	Paper bills a legal tender	Arthur Young.
1275	China	Paper bills a legal tender	Marco Polo.

Table showing some of the substances used as money—Continued.

PERIOD FOLLOWING THE FAILURE OF THE ANCIENT MINES—continued.

Period.	Country.	Substance used as money.	Authority.
A. D. 1275	Africa, part of..	"Machutes" (ideal money; this view doubted).	Montesquieu.
1470	Granada, Spain .	Paper bills a legal tender ...	Irving.
1574	Holland	Pasteboard bills, representative.	Dic. of Dates.
Uncertain.	Iceland	Dried fish.....	Anonymous.
Uncertain.	Newfoundland..	Codfish, dried	Anonymous.
Uncertain.	Norway and Greenland.	Seal skins and blubber.....	Anonymous.
Uncertain.	Hindostan and parts of Africa.	Cowry shells	Jacob, 372.
Uncertain.	North American Indian tribes.	Agate, carnelian, jasper, lead, copper, gold, silver, terra-cotta, mica, pearl, lignite, coal, bone, shells, chalcedony, wampumpeag, etc.	Anonymous.
Uncertain.	Oriental pastoral tribes.	Cattle, grain, etc.....	Anonymous.
Uncertain.	Abyssinia	Salt	Anonymous.
Uncertain.	China and India.	Rice	Anonymous.
Uncertain.	India	Paper bills	Patterson, p. 13.
Uncertain.	China.....	Pieces of silk cloth.....	Ibid.
Uncertain.	Africa	Strips of cotton cloth.....	Ibid.
	Not stated.....	Wooden tallies or checks.....	Ibid.

PERIOD FOLLOWING THE DISCOVERY OF THE AMERICAN MINES.

1631	Massachusetts..	Corn a legal-tender at market prices.	Macgreggor.
1635	Massachusetts.	Musket-balls.....	Anonymous.
1690	Massachusetts..	Paper bills, colonial notes....	Macgreggor.
1694	England	Bank-notes.....	McCulloch.
1700	Sweden	Copper and iron coins.....	Voltaire's Charles XII.
1702	South Carolina..	Colonial notes.....	Macgreggor.
1712	South Carolina..	Bank notes	Ibid.
1716	France.....	Interconvertible paper bills a legal tender.	Murray.
1723	Pennsylvania ...	Paper bills, colonial notes....	Macgreggor.
1732	Maryland	Indian corn a legal-tender at 2*3d.* per bushel.	Anonymous.
1732	Maryland.....	Tobacco a legal-tender at 1*d.* per pound.	Anonymous.
1776	Scotland.....	Tenpenny nails for small change.	Adam Smith.
1785	Frankland, State of (now part of North Carolina).	Linen at 3*s.* 6*d.* per yard, whisky at 2*s.* 6*d.* per gallon, and poltry as legal-tender.	Wheeler's History of North Carolina, 94.
1810-1840	All commercial countries.	Great era of bank-paper bills.	
1826	Russia.....	Platinum coins (discontinued in 1845).	App. Encyc.
1847	Mexico, parts of	Cocoa beans; and at Castle of Perote, soap.	Anonymous.

PERIOD FOLLOWING THE OPENINGS OF CALIFORNIA AND AUSTRALIA.

1849	California	Gold dust by weight, also minute gold coins for small change, coined in private mints.	
1855	Australia	Gold dust by weight.....	
185-	Communist settlement in Ohio, called "Utopia."	Paper bills, each representing "one hour's labor."	Private information.
1862	United States ..	Paper bills a legal tender	Act of Feb. 25.
1863	North Carolina .	Tenpenny nails, at 5 cents each, for small change.	Anonymous.
1863	Camp at Florence, S. C.	Potatoes for small change....	Yorkville Enquirer.
1863	United States...	Postage-stamps for small change, temporary.	
1865	Philadelphia, Pa.	Turnips for small change, temporary and local.	Philadelphia Ledger, April.
1865	United States...	Nickel coins for small change, overvalued.	Act of March 3.

An analysis of this table will show how carefully even the most primitive communities guarded against a too restricted money volume.

The materials chosen to serve the purpose of money in each country during the early history of society were, it will be observed, such as at the time and place would be of sufficient quantity or volume to insure against any sudden deprivation of supply. In countries where the chase was common, the skins of wild animals were used as money; in maritime communities, shells; in pastoral countries, cattle; in the early history of agriculture, grain; in early mining periods, base metal; in primitive manufacturing ages, nails, glass, musket-balls, strips of cotton, etc.

As communities developed and commerce between them began, substances somewhat common to all countries, portable and indestructible, such as the precious metals, came to be more, and other substances less, resorted to. By reason of their great beauty those metals were always in demand, even among barbarous peoples, for purposes of ornament and decoration. Because of their universal use for such purposes they came to be recognized as things for which anything else could with safety be exchanged, and as society advanced, and it came to be recognized that some medium should be adopted in which to make all exchanges, those metals were naturally selected for the purpose, so that, together, they became, as it were, a common denominator of value. Their selection proved a convenient method of storing away wealth in a form that commanded at all times every other form of wealth. They had always passed by weight wherever used, but as society became better organized and its methods more complex it became necessary, in order to insure against fraud, to form them into pieces convenient for handling and to invest them distinctly with the function of money, so that, by law, they became a universal solvent for debts and demands, the stamp of the government placed on the coin testifying to its weight and fineness.

Both metals, as shown by the table, have been concurrently used as money for thousands of years—not only since the dawn of history, but from a period anterior to any historical records. The oldest annals show that they had already been employed as circulating media and that their relative values, or the ratio of their exchange each for the other, had already been established. Gold and silver were used as money in Palestine as early as the year 1900 B. C. We read in the Bible that Abraham weighed to Ephron the Hittite 400 shekels of silver, "current money with the merchant." An inscription on the temple of Karnak, of the date of 1600 B. C., mentions those metals as materials in which tribute was paid.

But long anterior even to these dates, both metals had been used, as, among the relics of the bronze age of the prehistoric era, ornaments of both gold and silver have been found. Gold, being the less abundant of the two metals, has had the higher value; but the ratio between the two has been marvelously steady, taking into account the great sweep of ages during which they have been used as money. This will be seen by reference to the following tables of ratios. I will first take their relative values during ancient times.

Table showing the ratio of gold and silver in various countries of the world up to the christian era.

B. C.	Ratio.	Authorities.
1600	1 to 13.33	Inscriptions at Karnak; tribute lists of Thutmosis. (Brandis.)
708	1 to 13.33	Cuneiform inscriptions on plates found in foundation of Khorsabad.
	1 to 13.33	Ancient Persian coins; gold darics at 8.3 grams = 20 silver siglos, at 5.5 grams.
500	1 to 13.00	Persia. Darius. Egyptian tribute. Herod. III, 95. (Bœckh, page 12.)
490	1 to 12.50	Sicily. Time of Gelon. "At least" 12.50. (Bœckh, page 44.)
470	1 to 10.00	Doubtful. Asia Minor. Xerxes's treasure. (Bœckh, page 11.)
440	1 to 13.00	Herodotus's account of Indian tributes. 360 gold talents = 4,680 silver.
420	1 to 10.00	Asia Minor. Pay of Xenophon's troops in silver darics. (Anab.; Bœckh, page 34.)
407	1 to ——	Spurious and debased gold coins at Athens. (MacLeod, Polit. Econ., page 476; Bœckh page 35.)
400	1 to 13.33	Standard in Asia, according to Xenophon.
400	1 to 12.00	Standard in Greece, according to Hipparchus; attributed to Plato.
400	1 to 12.00	Various authorities adduced by Bœckh.
400	1 to 13.50	
404–396	1 to 12.00, 13.00, 13.33	Values in Greece from the Peloponnesian war to the time of Alexander, according to hints in Greek writers. There were variations under special contracts—unit, the silver drachma.
340	1 to 14.00	Greece. Time of Demosthenes. (Bœckh, page 44.)
338–326	1 to 11.50	Special contracts in Greece.
343–323	1 to 12.50	Egypt under the Ptolemies.
300	1 to 10.00	Greece. Continued depression of gold, caused by great influx under Alexander.
207	1 to 13.70	Rome. (Bœckh, page 44.) Gold scriptulum arbitrarily fixed at 17.143 for 1.
100	1 to 11.91	Rome. General rate of gold pound to silver sesterces to date.
58–49	1 to 8.93	Rome. Continued depression of gold, caused by influx of Cæsar's spoil from Gaul. [N. B.—Cæsar's headquarters were at Aquileia, at the head of the Adriatic, where there was also a gold mine, which at this period became very prolific.]
50	1 to 11.90	Rome. "About the year U. C. 700," the rate was 11⅔. (Bœckh, page 44.)
29	1 to 12.00	Rome. Normal rate in the last days of the republic.

By reference to the foregoing table it will be observed that the increase in the supply of gold in Europe, consisting of the spoils of the Orient, gathered by Alexander the Great and brought by him to Greece, had the effect of decreasing the value of that metal so that instead of being exchangeable at the ratio of 1 to about 13½ of silver, as formerly, gold became depressed, 1 ounce of it exchanging for only 10 ounces of silver. Later, when Julius Cæsar extended his conquering arms into Gaul and sent to Rome the accumulations of treasure amassed by him, the value of gold by reason of the increased supply was again depressed, so that an ounce of it was exchangeable

for only 8.93 ounces of silver. With these exceptions it may be said that the relation of silver to gold for sixteen hundred years before the time of Christ had varied only from the ratio of 1 to 12 to that of 1 to 13.33. Silver at no time during all this period fell below 13.50 to 1 of gold.

Looking, now, at the relative values of gold and silver from the time of Christ to the discovery of America, we find the ratio between the two metals to be as follows:

Table showing the ratio of gold and silver in various countries of the world from the opening of the christian era to the discovery of America.

A. D.	Ratio.	Authorities.
1–37	1 to 10.97	Rome. Rate under Augustus and Tiberius.
37–41	1 to 12.17	Rome. Reign of Caligula.
54–68	1 to 11.80	Rome. Reign of Nero.
69–79	1 to 11.54	Rome. Reign of Vespasian.
81–96	1 to 11.30	Rome. Reign of Domitian.
138–161	1 to 11.98	Rome. Reign of Antoninus.
		The silver coinage much debased; consequently the ratio of the metals pure was about 1 to 11.
312	1 to 14.40	Byzantium. Reign of Constantine. Arbitrary.
438	1 to 14.40	Byzantium and Rome. Theodosian code. Arbitrary.
864	1 to 12.00	Probable ratio, as shown by the Edictum Pistense, under the Carlovingian dynasty
1260	1 to 10.50	Average ratio in the commercial cities of Italy. Local or doubtful.
1344–1660	1 to ——	England. Numerous mint indentures given in McLeod's Political Economy, page 475. The ratio, except when fixed arbitrarily and in violation of market price, varied between about 1.12 and 1.14 during the two hundred and fifty-seven years included in this period.
1351	1 to 12.30	Ratio in North Germany as shown by the very accurate rules of the Lübeck mint, corroborated in the main by the accounts of the Teutonic Order of Knights, averaged in periods of forty years.
1375	1 to 12.40	
1403	1 to 12.80	
1411	1 to 12.00	
1451	1 to 11.70	
1463	1 to 11.60	
1453–1494	1 to 10.50	Ratio according to the accounts of the Teutonic Knights. As the ratio fixed in England by numerous mint indentures from 1465 to 1509 was about 1.12 this German ratio is considered local or doubtful.

It will thus be observed that during the one thousand four hundred and ninety-two years from the coming of Christ to the discovery of America, silver never went below the ratio of 14.40 to one of gold.

The relations which the metals have borne to each other since the discovery of the New World will appear from the following:

Table showing the relative values of gold and silver in the various countries of the world from the discovery of America to 1680.

A. D.	Ratio.	Authorities.
1497	1 to 10.70	Spain. Reign of Isabella. Edict of Medina. Local.
1500	1 to 10.50	Germany. Adam Riese's Arithmetic. Local or doubtful.
1551	1 to 11.17	Germany. Imperial mint regulations. Arbitrary or local.
1559	1 to 11.44	German Imperial mint regulations.
1561	1 to 11.70	France. Mint regulations.
1575	1 to 11.68	
1623	1 to 11.74	Upper Germany. Mint regulations.
1640	1 to 13.51	France. Mint regulations. Transition period.
1665	1 to 15.10	France. Mint regulations.
1667	1 to 14.15	Upper Germany. Mint regulations. Doubtful.
1669	1 to 15.11	Upper Germany. Mint regulations.
1679	1 to 15.00	France. Mint regulations.
1680	1 to 15.40	

Table showing the ratio of silver to 1 of gold from 1687 to the demonetization of silver by Germany and the United States and the closing of the mints to its free coinage.

[From the Report (1890) of the Director of the U. S. Mint on the Production of the Precious Metals in the United States.]

[NOTE.—From 1687 to 1832 the ratios are taken from Dr. A. Soetbeer; from 1833 to 1878 from Pixley and Abell's tables; and from 1879 to 1889 from daily cablegrams from London to the Bureau of the Mint.]

Year.	Ratio.	Year.	Ratio.	Year.	Ratio.	Year.	Ratio.
1687	14.94	1704	15.22	1721	15.05	1738	14.91

1770	14.62	1800	15.68	1830	15.82	1859	15.19
1771	14.66	1801	15.46	1831	15.72	1860	15.29
1772	14.52	1802	15.26	1832	15.73	1861	15.50
1773	14.62	1803	15.41	1833	15.93	1862	15.35
1774	14.62	1804	15.41	1834	15.73	1863	15.37
1775	14.72	1805	15.79	1835	15.80	1864	15.37
1776	14.55	1806	15.52	1836	15.72	1865	15.44
1777	14.54	1807	15.43	1837	15.83	1866	15.43
1778	14.68	1808	16.08	1838	15.85	1867	15.57
1779	14.80	1809	15.96	1839	15.62	1868	15.59
1780	14.72	1810	15.77	1840	15.62	1869	15.60
1781	14.78	1811	15.53	1841	15.70	1870	15.57
1782	14.42	1812	16.11	1842	15.87	1871	15.57
1783	14.48	1813	16.25	1843	15.93	1872	15.63
1784	14.70	1814	15.04				

By the foregoing table it will be seen that in the three hundred and seventy-five years from 1497 to 1872 the maximum separation of the metals was only as 1 to 16.25, notwithstanding the widest divergencies during that long period in the yield of the two metals from the mines. It will be observed that all the later quotations are from the London market, but it is a significant fact that in France, where, by the law of 7 Germinal, An XI (1803), free coinage was permitted to both metals, at the ratio of 15½ of silver to 1 of gold, for a period of seventy years, and until the coinage of silver was limited, there was at no time the slightest variance from that relation.

When silver was deprived of the full money function and all the money-work of society was placed on gold, the metals began to separate. The following table shows the degree of that separation from year to year:

Table showing the ratio of silver to 1 of gold since the demonetization of silver by Germany and the United States and the closing of all mints of the Western world to its free coinage.

1873	15.92	1882	18.19
1874	16.17	1883	18.64
1875	16.59	1884	18.57
1876	17.88	1885	19.41
1877	17.22	1886	20.78
1878	17.94	1887	21.13
1879	18.40	1888	21.99
1880	18.05	1889	22.10
1881	18.16		

The foregoing figures show that it is only since the legislative proscription of silver by Germany and the United States and the closing of all the European mints to its coinage that any material change took place in the ratio between the two metals, which conclusively demonstrates that the present divergence in the relative values of the two metals is directly due to the legal outlawry of silver, and not to natural causes.

Not only has the concurrent use of the two metals as money had the sanction of all time, but the approval of the greatest minds of history, and, when not blinded by self-interest, the approval of practical and experienced financial minds. So well recognized is this fact that I need only cite a few instances of such approval.

Alexander Hamilton said:

To annul the use of either of the metals as money is *to abridge the quantity of circulating medium* and is liable to all the objections which arise from a comparison of the *benefits of a full with the evils of a scanty circulation.* (Report to Congress, 1791.)

Thomas Jefferson, in a letter to Hamilton, indorsed this view, saying:

I return you the report on the mint. I concur with you that the unit *must stand on both metals.* (Letter to Hamilton, February, 1792.)

In his Recherches sur l'or et sur l'argent, 1843, Léon Fauchet said:

If all the nations of Europe adopted the system of Great Britain, the price of gold would be raised beyond measure and we should see produced in Europe a most lamentable result. The Government can not decree that legal tender shall be only gold, in place of silver, for that would be to decree a revolution, and the most dangerous of all, because it would be a revolution leading to unknown results (*qui marcherait vers l'inconnu*).

In a memoir read before the French Institute in 1868, M. Wolowski said:

The suppression of silver would bring on a veritable revolution. Gold would augment in value with a rapid and constant progress, which would break the faith of contracts and aggravate the situation of all debtors, including the nation. It would add at one stroke of the pen at least three milliards to the twelve milliards of the public debt.

In a debate in the French Senate on January 28, 1870, Senator Dumas eloquently pleaded for caution in dealing with a subject of such far-reaching importance as the demonetization of one of the money metals. He said:

Those who approach these questions for the first time decide them at once. Those who study them with care hesitate. Those who are obliged practically to decide doubt and stop, overwhelmed with the weight of the enormous responsibility.

The quantities of the precious metals which are now sufficient may become insufficient, and we should proceed with great prudence before we diminish that which constitutes a part of the riches of the human race. Sometimes gold takes the place of silver. Sometimes silver takes the place of gold. *This keeps up the general equilibrium.* Nobody can guaranty that the present vast production of gold will continue. The *placers* are found on the surface of the earth and may be exhausted by the very facility of working them. Silver presents itself in the form of subterranean veins. Science may contribute to accelerate its extraction. In presence of the unknown, which dominates the future, we should practice a prudent reserve.

Before a French monetary convention in 1869 testimony was given by M. Wolowski, by Baron Rothschild, and by M. Rouland, governor of the Bank of France.

M. Wolowski said:

The sum total of the precious metals is reckoned at fifty milliards, one-half gold and one-half silver. If, by a stroke of the pen, they suppress one of these metals in the monetary service, they double the demand for the other metal, to the ruin of all debtors.

M. Rouland, governor of the Bank of France, said:

We have not to do with ideal theories. The two moneys have actually co-existed since the origin of human society. They co-exist because the two together are necessary, by their quantity, to meet the needs of circulation. This necessity of the two metals, has it ceased to exist? Is it established that the quantity of actual and prospective gold is such that we can now renounce the use of silver without disaster?

Baron Rothschild said:

The simultaneous employment of the two precious metals is satisfactory and gives rise to no complaint. Whether gold or silver dominates for the time being, it is always true that the two metals concur together in forming the monetary circulation of the world, and it is the general mass of the two metals combined which serves as the measure of the value of things. The suppression of silver would amount to a veritable destruction of values without any compensation.

At the session (October 30, 1873) of the Belgian Monetary Commission, Professor Laveleye, one of the most luminous writers on economic subjects, said:

Debtors, and among them the state, have the right to pay in gold or silver, and this right can not be taken away without disturbing the relation of debtors and creditors, to the prejudice of debtors, to the extent of perhaps one-half, certainly of one-third. To increase all debts at a blow (*bruquement*) is a measure so violent, so revolutionary, that I can not believe that the Government will propose it or that the Chambers will vote it.

WHY WAS THE AUTOMATIC SYSTEM INTERFERED WITH?

Some thirteen years ago, as chairman of the Monetary Commission appointed by Congress to investigate the causes of the changes in the relative values of the precious metals, I submitted to this body a report, in which I took occasion to refer to the motives which evidently influenced the creditor classes of the western world in destroying the automatic system of money. From that report I quote as follows:

The world has generally favored, theoretically if not practically, the automatic metallic system, and adjusted its business to it. Some nations adopted one metal as their standard and some the other, and some adopted both. Those that adopted both metals served as a balance-wheel to steady with exactness their relative value. The practical effect of all of this was the same as if all nations had adopted both, because it secured the entire stock of both at a fixed equivalency for the transaction of the business of the world. While some nations have changed their money metal, or, having had paper money, have resumed specie payments in one metal, the policy of a general demonetization of one of the metals was first broached only about twenty years ago. About ten years later a formidable propaganda was organized to fasten that policy upon the commercial world.

This new school of financial theorists advocate the retention of metal as the material of money, but favor its subjection to governmental interference in every respect. Whenever new mines are discovered or old ones yield or promise to yield more abundantly, instead of freely accepting their product in accordance with the automatic theory, they advocate its rejection through the restriction or the absolute prohibition of the coinage of either or both metals, or through the limitation or the abolition of the legal-tender function of one of them. Whenever the interests of the creditor and income classes seem to be in danger of being impaired by an increase in the volume and decrease in the value of money, or, in other words, by a general rise in prices, these modern theorists are clamorous in double-standard countries for the demonetization of one of the money metals and in single-standard countries for the shifting of the money function from the metal which promises the most to the one that promises the least abundant supply. They are extremely anxious for the retention of the *material* of which the money-standard is composed when such material is rising in value and prices are falling, and exceedingly apprehensive of the evil and inconvenience which they predict as sure to result from changing it.

Whenever a fall in prices occurs, through either a natural or artificial contraction in the volume of money, they maintain that it is due to antecedent inflation and extravagance or to overproduction through persistent and reckless industry; if the contraction be natural, that it can not be helped, and, if artificial, that though it may inflict great temporary losses on the masses of the people, it will be sure to result in their ultimate benefit, and they console the sufferers with the comforting assurance that such contraction is necessary in order to reach the lowest depths of that "*hard pan*" whose foundations they have previously undermined by demonetizing one of the metals, and upon which alone they claim that money, capital, and labor can securely and harmoniously rest. But when the material composing the standard is falling in value and prices are rising they immediately discover that the maintenance of the *value* of the standard is the all-important consideration, and that its material is of no importance whatever and should be at once changed to "*redress the situation.*" After having reduced one of the metals to a commodity by depriving it of the money function, these theorists complacently point to the resulting fluctuations in its value as a justification of the act producing them, and as a conclusive proof of the unfitness for money of the demonetized metal. * * *

Metallic money, on this theory, is no longer automatic, but is as completely subjected to governmental control for all injurious purposes as paper money. But, unlike paper money, the control over this kind of metallic money can only be exercised in the baneful direction of decreasing its volume, and thereby making property cheaper and money scarcer and dearer.

This is a one-sided system, which can operate only in the interest of the security creditor, the usurer, and pawnbroker, whom it enables, through the falling prices which itself occasions, to swallow up the shrunken resources of the debtor, but is impotent to protect the interests of the unsecured business creditor, the debtor, or society, when, from any cause, the supply of the money metals becomes deficient.

The world has expended a vast amount of labor in the production of the precious metals, and has made great sacrifices in upholding the automatic metallic system of money, and has a right to insist that it shall be consistently let alone to work out its own conclusions, or that it be abandoned.

The history of the subsequent struggle to remonetize silver only serves to illustrate and emphasize the correctness of that statement of the case.

Between 1810 and 1849, according to Tooke and Newmarch (recognized authorities on the subject), gold increased in value 145 per cent. which is equivalent to a fall in the general range of prices of 59 per cent. No movement was then made or suggestion offered by the debtors, or by any class of the community, to add any new money-metal to the metals already in use, with the view of increasing the volume of money, so that the equity of time contracts might be maintained, and the value of the unit of money kept at a steady and unchanging level.

But as soon as the discoveries of gold were made in the alluvial deposits of California and Australia, or rather as soon as it was suspected that money would thereby become considerably increased in volume, the annuitants and income classes, the creditors everywhere, took steps to avert what they characterized as a great calamity. They openly declared their purpose, by every means in their power, to prevent a decline in the value of money, so that the purchasing power of their incomes might not be reduced. They determined to go to any length in order to prevent the rise of prices which their aggressive instincts led them to fear would follow the additions to the money volume of the world by the natural and much needed yield of the mines.

The fiat therefore went forth that one of the metals must be discarded.

THE PROPOSITION FIRST MADE TO DEMONETIZE GOLD.

If anything were needed to demonstrate that the reason for the demonetization of silver was the cupidity of the creditor classes—the money-lenders, annuitants, and those in receipt of fixed incomes—and that it was not any defect inhering in the metal silver, nor any change in its adaptability to subserve the purposes of money, it is to be found in the significant fact that the metal first selected for demonetization was not silver, but gold—that metal which has since become the idol of the money-changers and which is now declared to be the only "natural" money. The openly avowed determination was to increase the value of money, and in order to accomplish that purpose the metal which promised the largest yield was to be condemned and stripped of its ancient monetary function. So strongly was this determination set forth, so earnestly was it presented, and so urgently pressed on the ground of duty that its achievement came to be regarded as the fulfillment of a high moral purpose.

It was with gold then as it came to be with silver afterward and as it always is with whatever interferes with the interests of privileged classes, intrenched in power and prerogative, the determination to destroy it being arrived at, measures were taken to prove that the public good required its destruction. While the purpose was to discard the metal, whether gold or silver, which threatened most immediately and seriously to reduce the purchasing power of money, the argument was that a decrease in the purchasing power of money was a calamity against the happening of which every energy should be directed.

The privileged classes found then, as they find now, able and ingenious advocates and defenders among the literary and educated guilds of the period. The celebrated De Quincey, in England, attempted to prove, and to his own satisfaction did prove upon figures drawn from his fears and a brilliant imagination, that the least yield of gold to be expected from the mines of California and Australia for an indefinite period in the future was the yearly sum of $350,000,000.

M. Chevalier, in France, vehemently proclaimed the necessity of discarding one of the money metals, and that one not silver, but gold. In his work upon the Fall of Gold M. Chevalier, in 1856, said:

The quantity of gold annually thrown on the general market approaches in round numbers a milliard of francs ($200,000,000). Those two countries (California and Australia) must yet for a long series of years produce gold in such quantities and on such conditions as to render a marked decline in its value inevitable.

It is absolutely certain that so vast a production should be accompanied with a great reduction in value.

In no direction can a new outlet be seen sufficiently large to absorb the extraordinary production of gold which we are now witnessing, so as to prevent a fall in its value.

Unless, then, we possess a very robust faith in the immobility of human affairs, we must regard the fall in the value of gold as an event for which we should prepare without loss of time.

The "preparation" which Chevalier advocated was the discarding of that metal which gave promise of the greatest abundance. He did not attempt to hide his purpose. He boldly stated that his object was to enhance the value of money. This object was also clearly expressed on a later occasion by another distinguished advo-

cate of dear money, Mr. Victor Bonnet, of France, in the Journal des Economistes. He said:

The world is now saturated with the precious metals, and if there is any danger against which it is necessary to guard, it is that this saturation should become greater. * * *

If the annual production of gold is now reduced to 500,000,000 francs, let us thank Heaven for it, and let us wish that it may not be too rapidly increased, whereby we should be embarrassed. It is the too great abundance and not the scarcity of metallic money which is to be apprehended.

GOLD DEMONETIZED.

In 1857 the German states and Austria demonetized gold; and had it not been for the opposition of France, which insisted on retaining the double standard, the movement might have become general on the continent. With England, however, nothing could be done. More than a generation had passed since it had declared for the single standard of gold, and its creditors and income classes—the shrewdest, most adept, and watchful of financiers—did not believe that the large yields of gold would long continue.

The creditor classes of the continent, finding England immovable and realizing that the object sought by the English creditors was identical with their own, namely, the increase in the value of money and the depression of prices, concluded that the common purpose could be as well served by the demonetization of one as by that of the other. This conclusion was emphasized by developments on the Comstock lode, whose bountiful and beneficent yield of silver was the fitting supplement to the great discoveries of gold on the Pacific coast. The danger of a decline in the value of money was more imminent than ever. The annuitants became alarmed. Commissions were sent from Europe to the Pacific coast to investigate the subject. The United States, too, sent a commissioner to examine into the condition and prospects of the Comstock, and, imbued with many of the characteristics of De Quincey and Chevalier, the United States commissioner, in 1868, reported that if all other mines were worked with the machinery used on the Comstock "their yield would flood the world."

Like many of the present opponents of silver he was endowed with the gift of prophecy, and accordingly we find him confidently predicting that other and innumerable rich lodes of silver would be found on the Pacific coast which would be worked with great profit. The attack on gold was immediately changed to a combined attack on silver. From that period till the present no means have been left untried to belittle and degrade that metal and also to disparage those who are in favor of continuing it as one of the money metals of the world.

It was then announced with all the dogmatism of authority that silver was unfit to be used as money. Defects were suddenly discovered in it that the scrutiny of three thousand years had failed to disclose. Its weight and bulk were found to be insuperable obstacles to its use as money. Yet the specific gravity of silver is no greater now than it has been for all the ages during which it has been used as money by all mankind, nor is it any heavier or more bulky than it was in 1851 or 1857, when Belgium, Germany, and Austria demonetized gold and made the "heavy," "bulky," and "inconvenient" metal, silver, their only money metal. Silver can now be transported from place to place with less risk and at no greater expense than gold and at much less cost than at any previous period in the history of the world.

The objection that silver is too heavy for the pocket is an objection common to all metallic money. We see hardly any gold in circulation in this country, infinitely less than of silver. When our people have a choice as to the form in which they will take money they prefer paper representatives as being the most convenient. The extraordinary perfection to which the arts of the engraver and paper-maker have been brought gives paper money a security against counterfeiting and imitation far superior to any immunity which can be claimed for the metals. The marvelous inventions of modern times in the form of safes and vault-locks render it a matter of practically no risk to store the metals, both silver and gold, so that paper representatives of them may be issued. These representatives are preferred by the general mass of the people and have almost entirely occupied the channels of circulation to the exclusion of both metals. A silver certificate for $1,000 weighs no more than a gold certificate for the same amount.

MOTIVE FOR DEMONETIZING SILVER.

The motive for the demonetization of silver was precisely the same that had previously inspired the demonetization of gold. The object was to demonetize one of the metals, that metal which promised the greatest abundance and which would contribute most largely to maintaining at an equitable level the general range of prices. The motive in both cases was to aggrandize the privileged classes—the income and the creditor classes of the world—and by means of a subtle and sinister manipulation of the money volume, whose effects it is not always easy to trace to their true cause, to practically confiscate the reward of the hard toil of the masses. To all intent and purpose the design was to establish a new system of slavery for the western world, of which the debtor classes among the white races should be the victims.

When demonetization was determined on there was no pretense that there was any difficulty in maintaining a parity between the two metals at the established ratio.

In the official résumé of the doings of the French monetary commission of 1869 the arguments upon both sides were summed up.

In behalf of the gold standard it was said:

The rise in price which has taken place within twenty years in a great number of articles of merchandise is evidently due to many causes, such as war, bad harvests, and increase in consumption; but it is very probable that the depreciation of the precious metals has contributed to it, since there has been a striking coincidence between the rise of prices and the production of the new mines of gold and silver. The annual production of the two metals, which was only $80,000,000 in 1847, exceeds now $200,000,000. It has nearly tripled, and it is easy to see that the real value of the metals has diminished. It is difficult to estimate exactly what the diminution is, but whatever it may be it demands the attention of governments, because it affects unfavorably all that portion of the population whose income, remaining nominally the same, undergoes a yearly diminution of purchasing power. As governments control the weight and standard of money, they ought so far as possible to assure its value. And, as it is admitted that the tendency of the metals is to depreciate, this tendency should be arrested by demonetizing one of them.

In behalf of the double standard it was replied as follows:

Many economists argue that the precious metals, having become very abundant, have lost 10 or 15 per cent. of their value, and that the situation must be redressed by making money scarcer by demonetizing silver. To this it may be answered that the great discoveries of gold of the last twenty years have injured nobody. The new mass of gold, spreading over the whole world, has found employment in stimulating all forms of business, and, as a consequence, the value of gold has fallen very little. According to Mr. Newmarch, the mass of gold and silver has augmented 3 per cent. per annum, while the mass of exchanges has augmented more than 3 per cent. per annum, so that the equilibrium has been maintained. And the present is an especially inopportune time to demonetize silver, because the annual production of gold has been falling off for several years. It was $200,000,000 in 1853, and it is now not more than $140,000,000. What will happen to the civilized world if silver is demonetized and if gold shall then fail?

MOTIVE OF ENGLAND.

England did not adopt the gold standard until she was in a position to become the principal creditor nation. When her forges, furnaces, spindles, and looms were ready to supply manufactured goods to all the world, she saw that all countries and peoples would be compelled to pour their treasures into her lap. Her insular position and great navy guarantied her against external assault. Released from the anxieties and labors incident to the Napoleonic wars, with a sturdy population of trained mechanics, and with fields of coal and iron in abundance, she was well adapted to become the "workshop of the world." With colonial possessions in every sea and with Continental Europe in ceaseless unrest, England could rely on customers who could themselves produce nothing but raw material and would be obliged to buy her finished products.

The field of industry had been recently broadened by basic inventions of unparalleled importance: the steam-engine, the power loom, the spinning-jenny, and a multiplicity of other devices that increased a hundred-fold the efficiency of artisan labor. England knew that her trade would in the main be a foreign trade and her financial dealings largely with foreign governments. She knew that from the people of the continent, impoverished by years of struggle for existence against the attacks of Napoleon, she could not expect immediate payments in cash or in commodities. Time bonds and other deferred obligations were the media in which for the most part she received pay; she made interest and principal payable in gold alone, and if before the date of payment the value of money should increase it would not be to the disadvantage of the creditor. Whatever we may think of the *ethics* of this policy, we can have no difficulty in understanding its *motive*.

ACKNOWLEDGMENT OF THE MOTIVE.

As to the object which England had in view in demonetizing silver we are left in no sort of doubt. It has been candidly admitted by many of her financiers and publicists. The reason for her stolid adherence to the gold standard now is the same for which she originally demonetized silver. Her income and creditor classes are daily in receipt of an unearned increment to their wealth by reason of that demonetization. More candid than the advocates in this country of the single gold standard, the writers and press of Great Britain openly avow the object. No better testimony to the fact can be adduced than that supplied by the royal commission appointed in 1886 to inquire into the changes in the relative values of the precious metals.

At page 90, Part II, of the final report of that body, section 128, the commission say:

It must be remembered, too, that this country is largely a creditor country, of debts payable in gold, and any change which entails a rise in the price of commodities generally, that is to say, a diminution of the purchasing power of gold, would be to our disadvantage.

Before the British Royal Commission of 1868 on International Coinage, Mr. Jacob Behren, an eminent British merchant and member of the Associated Chambers of Commerce, after answering special and technical questions, was asked, in conclusion, "if there was anything else he wished to state." His reply was (p. 13):

I would only state that, in my opinion, the general introduction of gold all over the world has been one of the greatest possible blessings to England. I believe that England would be now the very poorest country in the world if the silver standard abroad had been kept up and gold had not been generally introduced. Gold would otherwise have been very much reduced in value and we should have had all the gold poured into England. All the debts owing to us would have been paid in the depreciated currency; and, therefore, I believe that England ought to have taken the lead in the introduction of a gold currency abroad. We ought to be very thankful that it has been introduced and we ought to give every facility to its circulation.

Sir Lyon Playfair, in a speech delivered in the English Parliament

on April 18, 1890, according to the report in the London Times of the day following, said that—

> The true policy of England as the chief creditor nation of the world was to keep perfect independence and to refuse participation in any entangling conference on our monetary system.

And, according to the same report, Sir Lyon Playfair, referring to the holding of the metals together by law, said that—

> It was quite true that, if you yoked a cart-horse to a racer, the strength of both would be increased, but the speed of the racer would be sacrificed.

Gold is the "racer" whose "speed" must not be sacrificed, no matter how much injury may be effected by its tendency to greater and greater gain.

The weight of the enormous burden which is imposed on gold can not be better illustrated than by a statement of this same Sir Lyon Playfair, made in the same speech. According to the London Times of April 19, he said that—

> The liabilities of the banks of Great Britain to the public amounted to 621,000,000*l.*, or about the amount of the national debt of England; but the amount of coin or bullion to meet this liability was only 35,000,000*l.*; or, deducting from each side of the account 8,000,000*l.* locked up in the notes department of the Bank of England, it was 27,000,000*l.*; or only 4½ per cent. of liabilities.

On the same occasion Mr. Goschen, Chancellor of the Exchequer, delivered an able speech, in which he gave his facts, his eloquence, and his logic to the struggling masses of his countrymen by maintaining the wisdom of remonetization of silver, but gave his conclusions and his policy to the creditor classes by recommending no disturbance of present conditions.

> I have contended—

said the Chancellor of the Exchequer—

> and am prepared still to contend that I should prefer the currency of the world to depend upon two metals rather than upon one metal. To those views I gave expression in 1878. * * * I have always looked upon silver and gold not as antagonistic to each other; not as being metals the price of one of which would necessarily fall when the other rose, but I have looked upon them as partners who together were doing the work of the currency of the world.

The English creditor classes have not been without able coadjutors in this country. We have noticed for the last twelve or fourteen years that zealous advocates of the gold standard, the advantages of which are not confined to Great Britain, are to be found among the creditor classes of the United States.

If the toilers of this country, from the proceeds of whose labor these exactions have to be paid, had as little influence on the legislation of the United States as the toilers of England have on the legislation of that country, the creditor classes and financiers of the United States might be as frank as those of Great Britain in admitting the object of maintaining the single gold standard.

How graphically, though unintentionally, does the English poet, Waller, in the following verse, express the advantage which the gold standard gives to creditors everywhere and the self-satisfaction with which they contemplate life:

> The taste of hot Arabia's spice we know,
> Free from the scorching sun that makes it grow.
> Without the worm, in Persia's silk we shine,
> And, without planting, drink of every vine.
> To dig for wealth we weary not our limbs;
> Gold, though the heaviest metal, hither swims.
> Ours is the harvest where the Indians mow,
> We plow the deep, and reap what others sow.

MOTIVE OF GERMANY.

When Germany, intoxicated by her victory over France and in order to further cripple a fallen foe from whom she had exacted $1,000,000,000 in gold, demonetized silver, she inflicted on her people by the fall of prices consequent on the increase in the value of money more misery than all her armies of horse and foot had been able to inflict on France. France, on the contrary, notwithstanding this unprecedented war tribute, by keeping a sufficient volume of money in circulation to maintain, and even advance, her range of prices, emerged in a few years from the consequences of the greatest disaster in her history, conscious of a triumph more complete than Germany had achieved by all the military splendor of the war. The ransom exacted of France was received back by her almost as soon as paid, in exchange for the products of her industry. It is not a sign of prosperity, Mr. President, when hundreds of thousands of people, the best bone and sinew of a nation, are found annually emigrating; and it is a coincidence which I merely mention, in passing, that as soon as the effects of demonetization of silver had had time to make themselves felt in Germany a veritable hegira of its people took place.

From 1873 to 1889 the emigration from Germany numbered 1,546,000 persons.

Students of social science everywhere recognize the statistics of illegitimacy and of suicide as among the most powerful evidences of monetary distress. By reference to those statistics we find that notwithstanding the large emigration during that period the number of illegitimate births in Germany increased from 161,294 in 1883 to 169,645 in 1888. The suicides in Prussia, Bavaria, Saxony, and Baden—the leading states of the German Empire—increased from 179 for each million of population in 1868 to 196 for each million of the population in 1876 and to 218 for each million of the population in 1882. In Prussia alone the number of suicides in 1876 was 151 per million, while in 1882 it was 191 per million.

This is part of the price which the toiling masses of Germany are paying for the gold-standard experiment, which, without their consent, their imperial government foisted upon them.

Bismarck made the mistake that many able men in all countries of the western world have made and continue to make, namely, that of attributing the commanding position of Great Britain in the commercial and industrial world to her adoption of the gold standard. Bismarck mistook for cause and effect what was a mere coincidence, the result of exceptional conditions, as did those of our legislators in 1873 who happened to know anything whatever of the nature of the act demonetizing silver. The belief of some of the most far-sighted statesmen of Great Britain has been that she secured her position, not by reason of the gold standard, but in spite of it.

In a speech delivered at Glasgow, in November, 1873, after the alteration by Germany in her monetary standard, Mr. Disraeli said:

> The monetary disturbance which has occurred, and is now to a certain extent acting very injuriously upon trade, I attribute to the great changes which the Governments of Europe are making in reference to their standard of value. Our gold standard is not the cause of our commercial prosperity, but the consequence of that prosperity. It is quite evident that we must prepare ourselves for great convulsions in the money market, not occasioned by speculation or any of the old causes which have been alleged, but by a new cause, with which we are not sufficiently acquainted.

And again in March, 1879, when the effects of the decreasing volume of money were making themselves more and more felt, Mr. Disraeli, then Lord Beaconsfield, said:

> All this time the produce of the gold mines of Australia and California has been regularly diminishing, and the consequence is that, while these great alterations on the continent in favor of a gold currency have been made, notwithstanding that increase of population which alone requires a considerable increase of currency to carry on its transactions, the amount of the currency itself is yearly diminishing, until a state of affairs has been brought about by gold production exactly the reverse of that which it produced at first. Gold is every day appreciating in value, and as it appreciates the lower become prices. It is not impossible that, as affairs develop, the country may require that some formal investigation should be made of the causes which are affecting the value of the precious metals, and the effect which the change in the value of the precious metals has upon the industries of the country and upon the continual fall of prices.

In reaching their conclusions, Bismarck and others ignored the fundamental principle that a gold supply that might be sufficient for one country with a gold standard, and might even result in a measure of prosperity to that country, would be wholly insufficient if other countries should adopt the same standard and should enter upon a keen competition and rivalry for the acquisition of gold.

The adoption of that standard by Germany and France was therefore not only destructive of their own prosperity, but was a stunning blow at the prosperity of England and all other gold-using countries. In taking England for his model, Bismarck had not the condition of the toiling masses before his mind, but the glamour of prosperity which surrounded the creditor-barons.

The unprejudiced observer can not fail to perceive that the $370,000,000 coined under the limited coinage act of the United States of 1878, supplementing the gold stock of the western world, postponed great industrial and financial crises. But the elements of these crises are gathering, and, unless relief be soon forthcoming, will burst upon the world with crushing severity.

DEMONETIZATION IN THE UNITED STATES.

If we are surprised that the sordid selfishness of the privileged classes of Europe should have induced them to perpetrate so gross an act of injustice, we are reminded that the legislation of monarchical countries has usually been controlled in the interest of the privileged classes. But what shall be said in defense of the demonetization of silver by the United States? No such stupendous act of folly and injustice was ever before perpetrated by the representatives of a free people.

Our position differed materially from that of Great Britain. This was not a creditor nation. Our people did not, and do not, own thousands of millions of dollars of foreign bonds, on which to receive semi-annual interest in a constantly appreciating money, which would have to be paid from the current earnings of foreign labor. Instead, therefore, of our demonetization unjustly enriching our creditor-classes at the expense of foreigners, it enabled the creditors at home here to rob and despoil the debtors among their own countrymen. Instead of despoiling the Canadian, the Australian, the East Indian, the Egyptian, or the Turk, the spoliation arranged for by our adoption of the gold standard was a spoliation of the debtors in our own communities. In so far, however, as our debt was held abroad, it provided for a spoliation of our citizens by the foreign bondholders also. And, as nearly all our public debt was so held, we had presented to us in 1873 the extraordinary spectacle of representatives, sent here to enact laws for the welfare and advancement of our own people, devoting all their energies, whether aware of it or not, to the upbuilding of the fortunes of the moneyed aristocracies of other countries, at the expense of the producers of the United States.

CONDITION OF THE COUNTRY AT THE TIME.

Consider for a moment the condition of this country at the time when this amazing piece of legislation was enacted.

The Republic was but just recovering from an exhausting war, which loaded it with a national debt approaching $3,000,000,000. There were also State, county, city, and town debts aggregating many more thousands of millions, with railroad and other corporate bonds and debts aggregating yet other thousands of millions and

private debts of indefinite and unascertainable amount, represented largely by mortgages on real estate. This constituted an aggregate whose burden might naturally be presumed to be sufficient to tax all the resources of the people. Although some portion of those debts has been liquidated and the national bonds have been refunded at lower rates of interest, yet we all know that in this age all municipal and corporate debts, if not national debts, are practically perpetual. No sooner is one form of bond liquidated than another takes its place; no sooner is one public improvement completed than another is begun.

At the time silver was demonetized it might well have been supposed that a sufficiently large unearned increment had already been realized by the foreign and domestic holders of United States bonds. The greater portion of the debt of the Government was, when incurred, made payable simply in "lawful money," the interest alone being payable in coin. Yet in March, 1869, the bondholders secured the passage of an act of Congress, entitled "An act to strengthen the public credit," containing a pledge to pay in coin or its equivalent not merely the interest, but the principal of all national obligations not specially provided to be paid otherwise.

COURSE OF THE CREDITORS.

And again, when in 1870 Congress was about to provide for a refunding of the public debt, these clamorous creditors, not satisfied with having got the bonds at rates much below their face value and not satisfied with the pledge to pay in coin—a pledge made long after the contract was made and the debt incurred—insisted that not only should the new bonds be payable in coin, but, in order to guard against any possible interpretation which might work to their detriment, they did what has rarely been done in the history of monetary legislation, insisted that even the very *standard* of that coin should be fixed and nominated in the bond. They were willing to take no chances. They were not willing to place confidence in the sense of equity and fair dealing of the people of the United States. They held before Congress the covert threat that if the new issue of bonds did not provide for payment in "coin," instead of "lawful money," and did not prescribe the precise standard of coin in which they were to be payable, it would be difficult if not impossible to place the bonds on the market.

So, by the refunding act of July 14, 1870, Congress provided for the payment in "coin of the present standard value," that is to say, in either gold dollars of 25.8 grains of gold, nine-tenths fine, or in silver dollars of 412½ grains of silver, nine-tenths fine, at the option of the United States. But even this extreme advantage to the creditors over payment in "lawful money" of the United States, in which the bonds were bought and in which they were legally payable, was insufficient. All but the most ingenious would imagine that having thus provided for payment in coin then bearing a considerable premium over the current money of the Republic and having the very standard of that coin fixed in the act, the highest point of vantage had been reached. One device, however, and only one, remained by which the money of the payment could be still further increased in value, and this device did not escape the watchful eye or cunning hand of the public creditors.

They clearly saw that if by legislative enactment they could secure the rejection of one of the money-metals they would succeed in enormously increasing the value of the metal retained. This they accomplished by the demonetization of silver, and thus by striking down one-half the automatic money of the world and devolving the money function exclusively on the other half, added thousands of millions of dollars to the burden of the debt.

PRETENSE TO "STRENGTHEN THE PUBLIC CREDIT."

It will be observed that this anxiety to strengthen the public credit was evinced by the bondholders *after* and not before the bonds were in their possession. No anxiety for the public credit was manifested by them at a time when the Government might be able to reap advantage from it. The Government having parted with the bonds at a heavy discount, their selling price in the market became a matter of no direct pecuniary importance to the people of the United States.

The "strengthening of the public credit" that was to be effected by the act of March 16, 1869, consisted of a rise in the price of the bonds for the benefit of the holder, at a time when they were no longer the property of the Government, but of private individuals. The real effect of the act, therefore, was not in any way to benefit the Government, but greatly to enrich, by an increment unearned and unbargained for, a few men who had already been greatly enriched by their dealings with the United States. The title of the act should have read "An act to strengthen the bank account and credit of the holders of United States bonds."

The excuse and apology for the act was that by its passage the refunding process, then contemplated and afterward provided for by the refunding act of 1870, might be rendered more certain of success: but, if any advantage accrued from that cause, it was lost, and much more with it, by the increase which the act of 1869 effected in the burden of the bonded obligation, by pledging the nation to a payment in a medium much more valuable than the medium provided for in the contract. And, again, in 1873, when all the bonds provided for by the refunding act of 1870 had been sold and had passed out of the hands of the Government, another act was passed, intended by the money-lenders again to strengthen the public credit, and again to the disadvantage of the people and to the exclusive and enormous advantage of the bondholders. It bore the innocent title of "An act revising and amending the laws relative to the mints, assay offices, and coinage of the United States." This act, bearing on its face no suggestion of any change more serious than that of regulating the petty details of mint management, has proved to be an act of momentous consequence to the people of this country. This is the act that demonetized the silver dollar, which it did by merely omitting that coin from the enumeration of the coins of the United States.

DEMONETIZATION WHOLLY UNJUSTIFIABLE.

Among all the explanations that have been made to account for that demonetization by a Congress of the United States, I have never heard any reason advanced which constituted a justification for it. To my mind, in view of all the circumstances—in the face of the herculean difficulties by which the nation was surrounded, in the face of the sacrifices which our citizens had made to preserve the Republic, and in the face of all that had already been done by an over-generous people, proud of their national strength and jealous of their national honor, to satisfy the rapacious demands of the money-lenders—in view, I say, of all these facts, the demonetization of silver by the United States must be regarded as one of those historic blunders that are worse than crimes. It was the child of Ignorance and Avarice and is already the prolific parent of enforced idleness, poverty, and misery.

It is to undo as far as possible the effects of the blunder of 1873 that new legislation is now imperatively demanded by the people. While the past can not be recalled, the present is ours, and the pressing duty of to-day is to provide for the future. The demand comes from all sections of the country that a remedy for the depressed industrial conditions caused by the legislation of 1873 be applied at the earliest moment. And what better remedy could be applied than absolutely to reverse that legislation and to put the monetary position of this country back to exactly where it was when that wrong was committed?

Some twelve years ago an attempt was made to apply a remedy, but the attempt was only partially successful. Instead of resulting in free coinage, it resulted in the passage of the bill which authorized the coinage of not less than two nor more than four million dollars' worth of silver per month. On that occasion a financial debate of great interest and importance was had in this Chamber and in the other House of Congress. The proposition to remonetize silver or to increase the silver coinage was vigorously opposed, but the arguments then presented by the advocates of remonetization never have been, and never can be, refuted.

In fact, but rarely has there been any attempt made to answer those arguments. Puerile attempts at wit and diatribes of abuse are all that the silver men have heard in sixteen years in answer to the contentions they have made in favor of the remonetization of silver.

EDUCATIONAL EFFECT OF DISCUSSION.

With that debate, Mr. President, long pending and eagerly maintained on both sides, there began in this country an educational movement among the masses that is destined to have far-reaching consequence. The public attention was fastened, as it had never been fastened before, on the subject of money and on the forces which govern its value, and up to this time that attention has never flagged. As a result we find the great body of our people to-day—the farmers and artisans of the country—after years of reflection and discussion in their lyceums and trade organizations, adopting to a large extent the views then presented by the advocates of an increased money volume, views which at the time were contemptuously derided by the advocates of contraction and of gold.

The cry for relief appropriately now comes from the farmers, the artisans, and the laboring classes, as well as from the young, the enterprising, the thoughtful, of all classes, who have not inherited wealth, but are hewing out for themselves the rugged path to success. It is they who have had to bear the exactions of the system which has prevailed. It is from the proceeds of their labor that the extortions have been paid. If objection be made that the character of relief proposed is not indorsed in financial circles or by the literary guild or professional political economists that surround them, the sufficient reply is that the world can not wait for the correction of abuses by those who are profiting by them. In the nature of things, all movements for reform must be initiated by those who can not lose by the installation of justice.

But there are others besides the laboring masses who are working in the cause of humanity. There are noble, unselfish, and altruistic men in all the countries of civilization, who see the wrong and are indefatigable in their efforts to set it right.

I will read a cable dispatch recently addressed to me by Mr. Henry H. Gibbs, formerly governor of the Bank of England and now president of the Bimetallic League of Great Britain:

LONDON, *May* 6.—The friends of silver deeply regret the death of Senator Beck, whose services in the cause of monetary reform are most warmly appreciated on this side of the Atlantic. The bimetallist party of the United Kingdom, now including over one hundred members of the House of Commons, attach the greatest value to the debate about to commence in your illustrious chamber. We fully recognize not only that the support afforded to silver by your legislation during the last twelve years has helped to protect the industrial world from an acute mon-

etary crisis, but also that the debates in Congress have served more than all else to educate our people to recognition of the important issues involved. We believe also that the increase and coinage of silver contemplated by Congress will restore, wholly or considerably, your coinage rates, and will thus make international settlement of this complex question comparatively easy. We anticipate further and with much confidence that the advance in the price of silver which must follow your action will stimulate both the export and the other trades of your country, and, while tending to the prosperity of your agricultural classes, will also assist the manufacturing industries of the United Kingdom and the whole body of our wage-earners.

Mr. Moreton Frewen, of London, an able writer on economic subjects, whose recent work on the The Economic Crisis I commend to the careful perusal of Senators, says:

It may, indeed, be affirmed, without fear of contradiction, that legislation arranged in the interest of a certain class, first by Lord Liverpool in this country and again by Sir Robert Peel at the instigation of Mr. Jones Loyd and other wealthy bankers, which was supplemented recently by simultaneous anti-silver legislation in Berlin and Washington at the instance of the great financial houses—this legislation has about doubled the burden of all national debts by an artificial enhancement of the value of money.

The fall of all prices induced by this cause has been on such a scale that while in twenty years the national debt of the United States quoted in dollars has been reduced by nearly two-thirds, yet the value of the remaining one-third, measured in wheat, in bar iron, or bales of cotton, is considerably greater—is a greater demand draft on the labor and industry of the nation than was the whole debt at the time it was contracted. The aggravation of the burdens of taxation induced by this so-called "appreciation of gold," which is no natural appreciation, but has been brought about by class legislation to increase the value of the gold which is in a few hands, requires but to be explained to an enfranchised democracy, which will know how to protect itself against further attempts to contract the currency and to force down prices to the confusion of every existing contract.

Of all classes of middle-men, bankers have been by far the most successful in intercepting and appropriating an undue share of produced wealth. While the modern system of banking and credit may be said to be even yet in its infancy, that portion of the assets of the community which is to-day in the strong boxes of the bankers would, if declared, be an astounding revelation of the recent profits of this particular business; and not only has the business itself become a most profitable monopoly, but its interests in a very few hands are diametrically opposed to the general interests of the majority. By legislation intended to contract the currency and force down all prices, including wages, the price paid for labor, the money-owner has been able to increase the purchase power of his sovereign or dollar by the direct diminution of the price of every kind of property measured in money.

UNFULFILLED PROPHECIES.

During the debate on the limited coinage bill, not content with abuse of the advocates of the measure, with flimsy criticism of it, and specious arguments against it, its opponents in and out of Congress indulged in divers prophecies and predictions. They pictured forth the lamentable results that would follow its passage and the direful consequences that would ensue from an increase of the circulating medium of the country. Among the results confidently predicted were the following: that the silver would not circulate at all, and again that it would circulate to the exclusion of gold, which metal, we were informed, would flow out of this country with a velocity and in a volume theretofore unknown; that we should be unable to redeem our paper money in gold; that we should be precipitated into a silver vortex; that an inflation of the currency would follow, which would ruinously raise prices of all commodities and that this inflation would result in an unprecedented contraction. We were charged with forcing upon the public creditors a dollar worth only ninety cents. We were warned that the passage of the bill would indefinitely postpone the refunding of the public debt, and would lower the price and impair the value of our national securities. It was charged that we were setting on foot a new and irrepressible conflict between two great sections of the country, the East and the West. We were charged with uttering a debased coin, with lowering the standard of American credit, with tarnishing the integrity and honor of our country before foreign nations, and with unprecedented moral turpitude in setting an example of flagrant and shameless national dishonesty.

The men of the far West, and of the Pacific slope especially, were the particular targets of this abuse. They were denounced by some as "lunatics," by others as dangerous and unworthy demagogues, because, as was charged, their constituents, if not themselves, were directly interested in the restoration of the ancient right of silver to full recognition as one of the money metals. For their benefit resort was had to every epithet which the English language afforded. In holding them up to public scorn the rich and varied vocabulary of odium and opprobrium was exhausted.

These prophecies of disaster were united in by the professors of political economy in all the Eastern colleges, by the President of the United States, by the Secretary of the Treasury, by the leading American newspapers, by the principal public men and journals of Great Britain, if not of all Europe, and, of course, by all bankers, money-lenders, and professional financiers the world over.

And now, Mr. President, how many of all those alarming prognostications by all these distinguished prophets have been fulfilled? Not one! On the contrary, it is not too much to say that the public credit of the United States is to-day the highest in the world. It does not stand merely in line with that of other first-rate powers; it stands at the head. Our gold, silver, and paper money stand at a parity with each other. If a full measure of relief was not realized by the passage of that bill it is because the coinage of $4,000,000 a month was left optional with the Secretary of the Treasury, instead of being made mandatory on him.

But it is hardly necessary to assert that the predicted inflation of prices has not been observed as a consequence of the coinage of $2,000,000 a month. While the issuance of that amount has not, with our rapidly increasing population and wealth, been sufficient to arrest the downward tendency of prices, it has undoubtedly prevented them from falling much lower. Without that coinage, we should have had industrial depression, chronic and somber, with consequences of untold disaster.

But the result which gave most apprehension to those who advocated the gold standard, the evil which they regarded as on the whole the most threatening and direful of all the evils that were to result from even so small an increase in the money volume as that bill provided for, was the outflow of gold. They ridiculously underestimated the tremendous money-absorbing power of this great country. And, as if to emphasize to all the world the complete absurdity of their alleged fears, this apprehension has been conspicuously and notoriously set at naught by the constant inflow of gold. On the 30th of June, 1878, the amount of gold coin and bullion in the Treasury and in monetary circulation in this country is officially reported to have been $213,199,977, and this amount is probably much overestimated. On November 1, 1889, we had more than three times as much, the amount of gold in circulation and in the Treasury being reported as $689,000,000.

"Experience," says Dr. Johnson, "is the great test of truth, and is perpetually contradicting the theories of men," and the last experience, Mr. President, is the best.

If the professors of political economy, the Eastern newspaper editors, and the professional financiers were then so seriously mistaken ought they not to be a little modest now in making predictions, especially in renewing predictions that have been already discredited? They can not point to a single instance in which their prophesy has not been falsified by the event. So humiliating a failure on the part of the professors, in a realm of which they boastfully claimed to be masters, so complete an overthrow of these "experts" by men who were ridiculed and derided as rural financiers and crazy theorists, ought to put the advocates of the gold standard on their guard against a like defeat on this occasion. They are pressed for reasons to account for the utter miscarriage of their prophecies. They are left without a shadow of consolation except that the coinage of $2,000,000 worth of silver bullion each month has not succeeded in placing silver at a par with gold. They affect to believe that the advocates of silver in 1878 expected that that metal, under the very limited demand of $2,000,000 a month, would be brought to a level with gold, which, owing to the demonetization of silver, had risen abnormally and ruinously in value.

No such belief was ever entertained or expressed. On the contrary it was repeatedly asserted by the advocates of silver that so long as the entire yield of gold from all the mines of the world (in 1878, $119,000,000) was invested with the full money function and had free access to all mints to be transmuted into coin, it could not be expected that the conferring of the legal-tender function upon a sum so comparatively trifling as one-fourth the yield of silver (the yield in 1878 being $99,000,000) would have the effect of placing it on a level with gold.

It is, however, a significant fact that every silver dollar that has been coined under that act is at a parity with gold and will to-day buy as much of all the objects of human desire as will the gold dollar. Nay, more, silver bullion—disparaged and discredited as it is by being shorn of the money function and denied access to the mints, instead of decreasing in purchasing power, has maintained so steady a relation to commodities that 412½ grains of uncoined silver will exchange for as much to-day as would the coined dollar, whether of silver or gold, in 1873, when the full money function attached equally to both metals. If this be true—and I shall presently demonstrate it beyond refutation—what an utter perversion of terms it is to say that silver has fallen in value!

WILL REMONETIZATION PLACE US ALONGSIDE INDIA?

We are solemnly warned that the full remonetization of silver in the United States would place us alongside India and the other barbarous countries of the world. This brilliant piece of reasoning is advanced with great confidence and is intended to be conclusive of the argument against silver. But, Mr. President, India is no more barbarous now than it was in 1873, before our silver dollar was demonetized. India is no more barbarous now than it was in 1857, when Germany demonetized gold and placed herself "alongside" India. Neither is Germany any more civilized now than then. We did not at that time hear any complaint, either in the United States or Europe, that the use of silver as money placed any one nation more than any other in dangerous affiliation with the civilization of India. We have never heard it charged against France that its civilization was brought any nearer that of India by the immense quantity of silver money in France. Neither did we hear it charged against the United States up to 1873 that we were "alongside" or dangerously close to the barbarous nations by our use of silver as money.

Up to 1834 we had no metallic money other than silver in our circulation, and up to 1850 we had much more silver in circulation than gold. Were we "alongside" India then? Where were the wise and patriotic men of our country at those periods? History fails to record any protest on their part that we were placing ourselves "alongside" India or any other of the barbarous nations of the world

by our use of silver and our recognition of its full money power. All the nations of the earth used silver and accorded it full recognition as money equally with gold up to 1819. Was all Christendom at that time "alongside" India? When, in that year, Great Britain sundered the silver link that from time immemorial had kept her "alongside" India and the other barbarous nations and, for selfish reasons of her own, arising from her position as a creditor of all other nations, decided to recognize gold only as money, was any evidence afforded of a sudden advance in the civilization of Great Britain? Was the emergence of that nation from the benumbing companionship of India and the other barbaric countries into the glittering and refulgent light of the gold dispensation signalized, as would be expected, by a corresponding improvement in the condition of the people?

On the contrary, the history of the time informs us that, as a consequence of the passage of the bill by Parliament in 1819 compelling payments in gold, prices rapidly fell, cotton in particular sinking in the short space of three months to one-half its former value. Within six months all prices had fallen one-half and showed no signs of improvement for the next three years. By reason of the contraction of the currency the industry of the nation was congealed, as is a flowing stream by the severity of an arctic winter. Alarm became universal; confidence and activity ceased. Bankruptcies increased in 1819 more than 50 per cent. over the number of the previous year. Meetings were held throughout England in which the people called on the government to devise some means of redressing the situation. So universal was the distress that the owners of land in England, who in 1819 numbered 160,000 were in seven years, by forced sales and foreclosure of mortgages on the smaller farms, reduced to 30,000, and one in every seven of the population lived on organized charity. All this was but a part of the price which the people of England paid for a policy imposed on them by the creditor classes among their own number. The condition of industry and disorganization of labor led to frequent and serious conflicts between the people and the military. They also led to commercial crises without number, and England, by demonetizing silver and thus ceasing to be "alongside" India, became the seat of panics, as Egypt had long been of the plague and India of the cholera.

As a contrast to this I will merely cite the change in the condition of India within the past seventeen years. When the Western world discarded silver as money and, as a consequence, India received a larger supply of it than ever before, that barbarous nation, as is universally admitted, made progress by leaps and bounds. No country on earth has in the same time made such advances in material prosperity and in all the elements that conduce to the comfort and happiness of a people. Notwithstanding the alleged debasement of silver, no sooner had its increased inflow into India begun than the industries of a vast continent were established and set in motion, and a substantial part of the activity and prosperity that were wont to pervade some of the industries of the United States has, by that demonetization, been transferred to fields of wheat and fields and factories of cotton 10,000 miles distant.

What really placed us alongside such barbarous countries as India was the demonetization of silver. It was by that demonetization that the people of Europe were enabled, with gold, to buy silver at 30 per cent. discount, which, when shipped to India and coined into rupees, would buy as much wheat as could ever have been bought with that coin. There has been no decrease whatever in the purchasing power of the rupee in India. This was equivalent to buying wheat at 30 per cent. below the price theretofore paid for it, and thus the farmers of the United States were by demonetization placed "alongside" the barbarous people of India. Their wheat had to compete in the European markets with the wheat of India, and it is this competition that placed them "alongside" India. The farmer of this country, therefore, by demonetization of silver, was compelled to compete with under-paid and half-starved ryots. And so it was that our cotton-planters, by the demonetization of silver, were placed alongside the barbarous people of India. It is this degrading competition that places a highly civilized people alongside a barbarous one.

The advocates of the single gold standard deem even silver money much better money than greenbacks. Does it then follow that when greenbacks were our only money—good enough money to carry the nation through the greatest war in all history—we were "alongside" or underneath the barbarous nations of the world? It is not the form or the material of a nation's money that fixes its status relatively to other nations. That is accomplished by the vitality, the energy, the intellectuality and effective force of its people. The United States can never be placed "alongside" any barbarous nation, except by compelling our people to compete with barbarous peoples, compelling them to sell the products of American labor at prices regulated by the cost of labor and manner of living in barbarous countries. As well might it be said that we are alongside the barbarous people of India because we continue to produce wheat and cotton.

The distinguishing feature of all barbarous nations is the squalor of their working classes. The reward of their hard toil is barely enough to maintain animal existence. A civilized people are placed alongside a barbarous one when, in their means of livelihood, the foundation of their civilization, they are made to compete with the barbarians. That was the result accomplished for the farmers and planters of the United States when silver was demonetized.

CREDITORS AND DEBTORS—A COMPARISON OF MOTIVES.

All movements for the increase of the monetary circulation are ascribed by the money-lenders and creditor classes to the unworthy desire on the part of the debtors to escape their just obligations. But if motives are to be brought in question the rule should work both ways. No note is taken of the motive of the creditor classes in securing a contraction of the circulation. Whatever the apparent purpose of contraction and however specious the arguments advanced in its justification, the real object has always been to increase the purchasing power of money. In all countries and throughout all time, it is the cupidity of the creditor classes and annuitants and their desire to increase the value of the money unit that have brought about a shrinkage in the money volume. Unlike the great masses of the people, who were ignorant of the effects to be naturally expected from such a shrinkage, the annuitants and moneyed men very well understood that the value of every pound or dollar depended on the number of pounds or dollars that were in circulation; the larger the total number out, the smaller the purchasing power of each; the smaller the total number out, the greater the purchasing power of each.

Loaners of capital are not usually those who entertain further hope of personal achievement. When men realize fortunes it is rarely that they conserve the faculty of initiative; they find no special delight in novelty; they look so carefully to security in the use of money that the spirit of adventure is restrained. The realization of a fortune is usually the labor of a life-time, and few men who reach the goal care to retrace their steps to enter again upon a struggle that demands all the strength, the momentum, and the intrepidity of youth. Men of assured incomes therefore are disposed to take their ease, and society must look, for its material progress and development, to those who have a career to make, with the ambition and the power to make it.

It is a remarkable circumstance, Mr. President, that throughout the entire range of economic discussion in gold-standard circles it seems to be taken for granted that a change in the value of the money unit is a matter of no significance and imports no mischief to society so long as the change is in one direction. Who has ever heard from an Eastern journal any complaint against a contraction of our money volume, any admonition that in a shrinking volume of money lurk evils of the utmost magnitude? On the other hand we have been treated to lengthy homilies on the evils of "inflation," whenever the slightest prospect presented itself of a decrease in the value of money, not with the view of giving the debtor an advantage over the lender of money, but of preventing the unconscionable injustice of a further increasing value in the dollars which the debtor contracted to pay. Loud and resounding protests have been entered against the "dishonesty" of making payments in "depreciated dollars." The debtors are characterized as dishonest for desiring to keep money at a steady and unwavering value. If that object could be secured, it would undoubtedly be to the interest of the debtor and could not possibly work any injustice to the creditor. It would simply assure to both debtor and creditor the exact measure for which they bargained. It would enable the debtor to pay his debt with exactly the amount of sacrifice to which, on the making of the debt, he undertook to submit, in order to pay it.

WHO ARE THE DEBTORS?

In all discussions of the subject the creditors attempt to brush aside the equities involved by sneering at the debtors. But, Mr. President, debt is the distinguishing characteristic of modern society. It is through debt that the marvelous developments of nineteenth century civilization have been effected. Who are the debtors in this country? Who are the borrowers of money? The men of enterprise, of energy, of skill, the men of industry, of foresight, of calculation, of daring. In the ranks of the debtors will be found a large preponderance of the constructive energy of every country. The debtors are the upbuilders of the national wealth and prosperity; they are the men of initiative, the men who conceive plans and set on foot enterprises. They are those who by borrowing money enrich the community. They are the dynamic force among the people. They are the busy, restless, moving throng whom you find in all walks of life in this country, the active, the vigorous, the strong, the undaunted.

These men are sustained in their efforts by the hope and belief that their labors will be crowned with success. Destroy that hope and you take away from society the most powerful of all the incentives to material development; you place in the pathway of progress an obstacle which it is impossible to surmount.

The men of whom I have spoken are undoubtedly the first who are likely to be affected by a shrinkage in the volume of money.

The highest prosperity of a nation is attained only when all its people are employed in avocations suited to their individual aptitudes and when a just money system insures an equitable distribution of the products of their industry. With our present complex civilization, in order that men may have constant employment, it is indispensable that work be planned and undertakings projected years in advance. Without an intelligent forecast of enterprises large numbers of workmen must periodically be relegated to idle-

ness. Enterprises that take years to complete must be contracted for in advance and payments provided for.

A constant but unperceived rise in the value of the dollar with which those payments must be made baffles all plans, thwarts all calculation, and destroys all equities between debtor and creditor. If we can not intelligently regulate our money volume so as to maintain unchanging the value of the money unit, if we can not preserve our people from the blighting effects which an increase in the measuring power of the money unit entails upon all industry, to what purpose is our boasted civilization?

By the increase of that measuring power all hopes are disappointed, all purposes baffled, all efforts thwarted, all calculations defied. This subtle enlargement in the measuring power of the unit of money (the dollar) affects every class of the working community. Like a poisonous drug in the human body, it permeates every vein, every artery, every fiber and filament of the industrial structure. The debtor is fighting for his life against an enemy he does not see, against an influence he does not understand. For, while his calculations were well and intelligently made and the amount of his debts and the terms of his contracts remain the same, the weight of all his obligations has been increased by an insidious increase in the value of the money unit.

EFFECTS OF A SHRINKING VOLUME OF MONEY.

As to the benumbing consequences following a shrinkage in the volume of money, the testimony of history is briefly reviewed in the report of the Monetary Commission to which I have already referred and from which I read the following:

At the christian era the metallic money of the Roman Empire amounted to $1,800,000,000. By the end of the fifteenth century it had shrunk to less than $200,000,000. During this period a most extraordinary and baleful change took place in the condition of the world. Population dwindled and commerce, arts, wealth, and freedom all disappeared. The people were reduced by poverty and misery to the most degraded conditions of serfdom and slavery. The disintegration of society was almost complete. The conditions of life were so hard that individual selfishness was the only thing consistent with the instinct of self-preservation. All public spirit, all generous emotions, all the noble aspirations of man shriveled and disappeared as the volume of money shrunk and as prices fell.

History records no such disastrous transition as that from the Roman Empire to the Dark Ages. Various explanations have been given of this entire breaking down of the frame-work of society, but it was certainly coincident with a shrinkage in the volume of money, which was also without historical parallel. The crumbling of institutions kept even step and pace with the shrinkage in the stock of money and the falling of prices. All other attendant circumstances than these last have occurred in other historical periods unaccompanied and unfollowed by any such mighty disasters. It is a suggestive coincidence that the first glimmer of light only came with the invention of bills of exchange and paper substitutes, through which the scanty stock of the precious metals was increased in efficiency. But not less than the energizing influence of Potosi and all the argosies of treasure from the New World were needed to arouse the Old World from its comatose sleep, to quicken the torpid limbs of industry, and to plume the leaden wings of commerce. It needed the heroic treatment of rising prices to enable society to reunite its shattered links, to shake off the shackles of feudalism, to relight and uplift the almost extinguished torch of civilization. That the disasters of the Dark Ages were caused by decreasing money and falling prices and that the recovery therefrom and the comparative prosperity which followed the discovery of America were due to an increasing supply of the precious metals and rising prices, will not seem surprising or unreasonable when the noble functions of money are considered. Money is the great instrument of association, the very fiber of social organism, the vitalizing force of industry, the protoplasm of civilization, and as essential to its existence as oxygen is to animal life. Without money civilization could not have had a beginning; with a diminishing supply it must languish and, unless relieved, finally perish.

Symptoms of disasters similar to those which befell society during the Dark Ages were observable on every hand during the first half of this century. In 1809 the revolutionary troubles between Spain and her American colonies broke out. These troubles resulted in a great diminution in the production of the precious metals, which was quickly indicated by a fall in general prices. As already stated in this report, it is estimated that the purchasing power of the precious metals increased between 1809 and 1848 fully 145 per cent., or, in other words, that the general range of prices was 60 per cent. lower in 1848 than it was in 1809. During this period there was no general demonetization of either metal and no important fluctuation in the relative value of the metals, and the supply was sufficient to keep their stock good against losses by accident and abrasion. But it was insufficient to keep the stock up to the proper correspondence with the increasing demand of advancing populations.

The world has rarely passed through a more gloomy period than this one. Again do we find falling prices and misery and destitution inseparable companions. The poverty and distress of the industrial masses were intense and universal, and, since the discovery of the mines of America, without a parallel. In England the suffering of the people found expression in demands upon Parliament for relief, in bread-riots, and in immense Chartist demonstrations. The military arm of the nation had to be strengthened to prevent the all-pervading discontent from ripening into open revolt. On the Continent the fires of revolution smoldered everywhere and blazed out at many points, threatening the overthrow of states and the subversion of social institutions.

Whenever and wherever the mutterings of discontent were hushed by the fear of increased standing armies, the foundations of society were honey-combed by powerful secret political associations. The cause at work to produce this state of things was so subtile, and its advance so silent, that the masses were entirely ignorant of its nature. They had come to regard money as an institution fixed and immovable in value, and when the price of property and the wages of labor fell, they charged the fault, not to the money, but to the property and the employer. They were taught that the mischief was the result of overproduction. Never having observed that overproduction was complained of only when the money stock was decreasing, their prejudices were aroused against labor-saving machinery. They were angered at capital, because it either declined altogether to embark in industrial enterprises or would only embark in them upon the condition of employing labor at the most scanty remuneration. They forgot that falling prices compelled capital to avoid such enterprises on any other condition and for the most part to avoid them entirely. They did not comprehend that money in shrinking volume was the prolific parent of enforced idleness and poverty and that falling prices divorced money-capital from labor, but they none the less felt the paralyzing pressure of the shrinking metallic shroud that was closing around industry.

The increased yield of the Russian gold fields in 1846 gave some relief and served as a parachute to the fall in prices, which might otherwise have resulted in a great catastrophe. But the enormous metallic supplies of California and Australia were all needed to give substantial and adequate relief. Great as these supplies were, their influence in raising prices was moderate and soon entirely arrested by the increasing populations and commerce which followed them. In the twenty-five years between 1850 and 1876 the money stock of the world was more than doubled, and yet at no time during this period was the general level of prices raised more than 18 per cent. above the general level in 1848.

A comparison of this effect of an increasing volume of money after 1848 with the effect of a decreasing volume between 1809 and 1848 strikingly illustrates how largely different in degree is the influence upon prices of an increasing or decreasing volume of money. The decrease of the yield of the mines since about 1865, while population and commerce have been advancing, has already produced unmistakable symptoms of the same general distrust, non-employment of labor, and political and social disquiet, which have characterized all former periods of shrinking money.

The time that has elapsed since that report was written has but served to verify and emphasize its statements.

FALL OF PRICES SINCE 1873.

It is a fact not disputed anywhere, but universally admitted, that for many years past the prices of all articles entering into general consumption among the people have been steadily falling. It is obvious that the industrial conditions prevailing since 1873 are but a repetition of those above described as following 1809: with falling prices, constant unrest and universal discontent.

The following table, compiled from figures published by the Bureau of Statistics of the Treasury Department, shows the average range of export prices of the articles named for each year since 1873:

Annual average export prices of commodities of domestic production for each year from 1873 to 1889, inclusive.

Year ending June 30—	Corn per bushel.	Wheat per bushel.	Wheat flour per barrel.	Cotton (upland) per pound.	Leather per pound.	Illuminating oils, refined, per gallon.	Bacon and hams per pound.	Lard per pound.

1889	7.4	5.5	16.5	9.3	13.9	3.8	7.6	8.8

To show from another source the same general fact of the decline of prices, I quote from an article published in the New York Tribune early in 1886.

The New York Tribune is pretty good authority. These figures are undoubtedly from the calculations and from the pen of Mr. Grosvenor, of the editorial staff of that able journal, formerly editor and proprietor of The Public, whose estimates of prices have, in my judgment, been more correctly made than those of any other statistician in the world. The article is as follows:

Quotations of about two hundred articles are compared since 1800, and the amount of money is ascertained which would purchase, at different dates, of these various articles, quantities corresponding as closely as possible to their ascertained consumption in 1880, the date of the last census. Among the articles compared are wheat, corn, oats, rye, barley, beans and peas, mess pork, bacon, ham, live hogs, lard, fresh beef, tallow, live sheep, poultry, butter, cheese, eggs, milk, hay, potatoes, turnips, cabbage, onions, apples, raisins, sugar (brown and crushed), molasses, coffee, tea, tobacco, whisky, malt and hops, mackerel, codfish, salt, rice,

nutmegs, cloves, pepper, cotton, print-cloths and standard sheeting, wool of different qualities, blankets, carpets, flannels, leather, boots, shoes, hides, silk, India rubber, iron (pig and bar), nails, steel rails, coal, oil (crude and refined), tin and tin-plates, copper, lead, hemp, lumber, spruce and pine, oak, ash, walnut, and white wood, lath, brick, lime, turpentine, linseed oil, soap, glass, paper, white lead, and twelve other kinds of paints, fertilizers, and over fifty kinds of drugs and chemicals.

* * * * * * *

Cost of products at different dates.

It is not only clear from this comparison that the prices of 1885 have been the lowest in our history for twenty-five years, but that there has been a general tendency toward lower prices. From 1866 to 1871, and again from 1872 until 1885, prices fell quite steadily. Indeed, had not the short crop of 1881 caused a temporary advance in the spring of 1882, the range of January, 1880, would have been the highest of the later period, and it might have been said that the present era of declining prices had continued with little intermission for six years. None will fail to observe how swift and sharp the advances have been—about 12 per cent. from November, 1871, to May, 1872, and 25½ per cent. from October, 1878, to January, 1880. But these spasmodic advances, by which the general tendency downward is interrupted, only serve to make it more clear that prices have been tending irresistibly toward a lower level than that of 1860, not only during the period of paper depreciation, but since gold has been the measure of value.

In order to show that the United States are not alone in their complaint of falling prices, but that the complaint is universal, and in order that we may have before us a broad view of the field of general prices, I submit a table showing the relation to each other of the range of prices from 1809 to 1849, by decades, based on the prices of fifty leading articles of commerce, prepared by the distinguished Professor Jevons and published in the London Economist for May 8, 1869.

Taking the range of prices of 1849 as a datum line (the range for that year being the lowest of the century) Mr. Jevons works backward to 1809, when the revolt of the South American colonies against the authority of Spain shut off at a blow the supplies of the precious metals and set on foot a money famine from which the world knew no relief till the discovery of the mines of California and Australia.

Professor Jevons's figures are as follows, the prices of 1849 being represented by 100:

Relation of prices, 1809 to 1849, by decades, those for 1849 being rated at 100.

1809	245
1819	175
1829	124
1839	144
1849	100

From these figures it will be observed that the fall from 1809 to 1849, a period of forty years, was as 245 to 100, or 59 per cent.

By the next table which I submit, that of Dr. Soetbeer, it will be seen that the general range of prices rose gradually from 1849 to 1873, in the last of which years the figures bore to those of 1849 the relation of 138 to 100. It has never been denied that this rise was due to the increase in the world's money supply by the yield of the precious metals from the mines of California and Australia, the effects of which, however, as will be seen by the table, were not felt on prices till 1853, five years after John Marshall's discovery of the yellow metal in the tail-race at Sutter's mills. Yet, because it interferes with the pecuniary interests of a large and influential class, it is vehemently denied that the fall of prices since 1873 is due to a decrease in the volume of the money caused by the demonetization of silver in that year throughout the western world.

From and after that year, as will be perceived by an examination of the figures; in other words, from the year when one-half the world's money supply was deprived of the money function, we find an almost uninterrupted decline of prices. The figures of 1873 and 1885 will be seen to bear to one another the relation of 138 to 108, or a fall of 22 per cent. in twelve years. Should the fall continue at that rate without interruption—and there is no reason apparent why it should not—we shall in forty years have witnessed a decline of 72 per cent. in the general range of prices, a decline considerably greater than that from 1809 to 1849. And these are not the figures of bimetallists or silver "theorists," but of pronounced advocates of the single standard of gold. Where, I would inquire, is the fall of prices to stop?

Dr. Soetbeer's table represents the general average price of one hundred leading articles of commerce each year for a period of nearly forty years. He takes as a basis the general range of gold prices prevailing between 1847 and 1850, and calling that range 100 shows the relative standing toward it of the general range of prices for subsequent years, up to 1885.

Relation of prices by years from 1849 to 1885, the general range of prices of 1849 being rated at 100.

1849	100.00	1869	123.38
1851	100.21	1870	122.87
1852	101.69	1871	127.03
1853	113.69	1872	135.62
1854	121.25		
1855	124.23	1873	138.28
1856	123.27		
1857	130.11	1874	136.20
1858	113.52	1875	129.85
1859	116.34	1876	128.33
1860	120.98	1877	127.70
1861	118.10	1878	120.60
1862	122.65	1879	117.10
1863	145.49	1880	121.89
1864	129.28	1881	121.07
1865	122.63	1882	122.14
1866	125.85	1883	122.24
1867	124.44	1884	114.25
1868	121.99	1885	108.27

Mr. Sauerbeck, also an advocate of the gold standard and whose work has the approval of the Statistical Society, takes as a datum line the prices ruling from 1867 to 1870. Rating those at 100 he finds that by 1873 prices had risen to 111, by 1886 they had fallen to 69, and by September, 1887, to 68.7. He declares the average prices for the first nine months of 1887 to have been the lowest reached for a hundred years.

BOTH GOLD AND SILVER VARIABLE IN VALUE.

The fact that the metals have separated considerably since 1873, and that silver bullion now sells at less than par value of $1.29 per ounce, is taken to signify that silver has fallen, not that gold has risen. This proceeds from the assumption that whenever a change takes place in the relation between gold and any other article the change must necessarily be in the other article. This assumption, in turn, is based on the absurd idea that calling gold a "standard" will insure it against change.

Among political economists it is a well recognized principle that neither gold nor silver is exempt from the universal application of the law of supply and demand. That law governs gold and silver, not only as commodities, but as money, and governs as well all other kinds of money that may be used. And, while the advocate of the single gold standard is at all times ready to concede the truth of this assertion as to silver, he is confident that it does not and can not apply to gold; that the economic law which makes supply and demand a regulator of value is suspended as to gold.

That a metallic money, whether of gold or silver, is very far from being stable is admitted by innumerable authorities, of whom I will cite only a few.

Dr. Adam Smith, in his Wealth of Nations, book 1, chapter 5, says:

Gold and silver, like every other commodity, vary in their value. The discovery of the abundant mines of America reduced in the sixteenth century the value of gold and silver in Europe to about a third of what it had been before. This revolution in their value, though perhaps the greatest, is by no means the only one of which history gives some account.

And again:

Increase the scarcity of gold to a certain degree and the smallest bit of it may be more precious than a diamond.

John Locke, Considerations, etc., in Relation to Money (published in 1691), says:

The greater scarcity of money enhances its price and increases the scramble, there being nothing that does supply the want of it; the lessening of its quantity, therefore, always increases its price and makes an equal portion of it exchange for a greater of any other thing.

Prof. Francis A. Walker, Money, etc., page 210, says:

Gold and silver do, over long periods, undergo great changes of value and become in a high degree deceptive as a measure of the obligation of the debtor of the claim of the creditor. Thus Professor Jevons estimates that the value of gold fell between 1789 and 1809 46 per cent., that from 1809 to 1849 it rose 145 per cent., while in twenty years after 1849 it fell again at least 20 per cent.

Jevons, Money and Exchange, chapter 6, says:

In respect to steadiness of value the metals are probably less satisfactory, regarded as a standard of value, than many other commodities, such as corn.

And again, in chapter 24 of the same work, he says:

We are too much accustomed to look upon the value of gold as a fixed datum line in commerce; but in reality it is a very variable thing.

Sir Archibald Alison (England, in 1815 and 1845) says:

The coining of gold and silver, which is universal in all civilized nations, and affixing to them one definite and permanent value by authority of law, has no effect whatever in preventing the fluctuations in the real value of the current coin of the realm.

Professor Laughlin, of Harvard, in his work on Political Economy (page 72), says:

It is quite evident that the name dollar does not always have the same value, although people often think it does. We get into the habit of using names without thinking what they really mean. The 23.22 grains in a gold dollar may be exchanged sometimes for more, sometimes for less, of other commodities. When it is exchanged for less, its value has fallen relatively to all other commodities, and, even if the name dollar remains the same, its value has fallen. One must then offer more dollars than before for the same commodities. That is, when money falls in value, prices rise; when money rises in value, prices fall.

Now, we shall say a few words in regard to another function, a means of paying long contracts or debts which run over a long term of years.

Suppose that I loaned you in 1880 $1,000 for twenty years. In that year the $1,000 bought a certain quantity of corn, wheat, sugar, salt, wood, hats, and shoes. In 1900, when you are to pay me back the $1,000 in money, if prices have changed, you may give me back the same amount of money, but you will not return to me the same purchasing power over other things. If for some reason prices have fallen between 1880 and 1900, it will take less money to buy the same quantity as before of corn, wheat, etc. If so, the $1,000 you return me in 1900 will be of more value than the $1,000 I gave you, and it would be unjust to oblige you to give me more than you borrowed. If, on the other hand, prices have risen, then the $1,000 in money would buy me less than before, so that I should lose. * * * Hence, the value of money (gold or silver) does not remain the same for any length of time; and the precious metals, while they are very satisfactory for exchanges which do not take very long to complete, can not serve as a proper measure of value during a long term of years.

Ricardo, the greatest authority on the gold standard, the financial writer, more highly regarded throughout the world than any other that has ever appeared in Great Britain, whose logical utterances have never failed to attract the attention of mankind, stated the true condition of things in 1810 and advocated the true policy for Great Britain.

In his Proposals for an Economical and Secure Currency, Ricardo makes the following statement, which I commend to the careful attention of the advocates of the single gold standard:

While a standard is used, we are subject to only such a variation in the value of money as the standard itself is subject to; but against such variation there is no possible remedy, and late events have proved that, during periods of war, when gold and silver are used for the payment of large armies distant from home, those variations are much more considerable than has been generally allowed. This admission only proves that gold and silver are not so good a standard as they have been hitherto supposed, that they are themselves subject to greater variations than it is desirable a standard should be subject to. They are, however, the best with which we are acquainted.

If any other commodity less variable could be found, it might very properly be adopted as the future standard of our money, provided it had all the other qualities which fitted it for that purpose; but while these metals are the standard the currency should conform in value to them, and whenever it does not, and the market price of bullion is above the mint price, the currency is depreciated. This proposition is unanswered and is unanswerable. Much inconvenience arises from using two metals as a standard of our money; and it has long been a disputed point whether gold or silver should by law be made the principal or sole standard of money. In favor of gold it may be said that its greater value under a small bulk eminently qualifies it for a standard in an opulent country.

And I may here remark that it requires an opulent country to maintain the single gold standard, and the country does maintain it at very great expense. I do not wonder that he thought an opulent country, a creditor country, the only one that ought to adopt it, for no other country can afford to adopt it. But, like many people who in attempting to improve their condition in society attempt luxuries and extravagances which they can not maintain and which force them back into the ranks from which they came, so nations in attempting to establish the gold standard may find themselves reduced from opulence to poverty.

Ricardo continues:

But this very quality subjects to greater variations of value during periods of war or extensive commercial discredit, when it is often collected and hoarded, and may be urged as an argument against its use. The only objection to the use of silver as the standard is its bulk, which renders it unfit for the large payments required in a wealthy country; but this objection is entirely removed by the substituting of paper money as the general circulation medium of the country. Silver, too, is much more steady in its value in consequence of its demand and supply being more regular; and, as all foreign countries regulate the value of their money by the value of silver, there can be no doubt that on the whole silver is preferable to gold as a standard, and should be permanently adopted for that purpose.

Innumerable additional citations from authors of repute could be adduced to fortify this position.

It will thus be seen that the fluctuations in the value or purchasing power of both gold and silver have always been admitted by scientific writers. They were so well understood three centuries ago that in Queen Elizabeth's reign (1576) the British Parliament directed that the rents reserved in the long leases of certain college lands should be payable, not in money, but in wheat. And at various times during the past seventy years propositions have been formulated to substitute for gold and silver as a standard of value for deferred payments, a tabular statement of the prices of the principal articles of commerce, to be made by official authority and published from time to time, by the average of which the fluctuations of gold could be ascertained and proper allowance made for them in the settlement of time transactions. Professor Jevons, Prof. Francis A. Walker, and other political economists of note have expressed approval of such a tabular standard for long-time contracts, as securing greater equity than would gold as a measure of values.

Those who now assert that silver has fallen and that gold has not risen in value arrive at this conclusion by a very safe process of reasoning. First, to show that silver has fallen they measure it by gold alone, without reference to the general range of prices, and then to prove that gold has not risen they make it the measure of itself. An increase or decrease of the value of either can not be ascertained by reference to the other, and certainly not by constituting either of them a standard by which to judge itself. It would of course be forever impossible to show any change in the value of gold or silver, or of anything else, measuring it by itself. It is only by looking at the relations which both metals bear respectively to a considerable range of commodities generally dealt in, as well as to each other, that it can be ascertained with certainty what has happened.

Not only upon consideration of all the facts I have given, but upon the logic of the situation, it must be obvious that gold has risen and will continue to rise in value as long as its volume decreases and the demand for it increases. Since 1860, when gold constituted 77 per cent. of the combined yield of the two metals, it has diminished not only in relative proportion to the yield of silver, but it has diminished absolutely. For the five years ending with 1860 the yield of gold throughout the world was $137,000,000 a year; for the five years ending 1889 the yield was but $110,000,000 a year. If, as claimed by the advocates of the single gold standard, an increase in the yield of silver decreases the value of silver, by what system of logic can they deny that a decrease in the supply of gold increases the value of gold?

In a late issue of the London Economist, that of April 26, 1890, I find an editorial article relating to the recent discussion on bimetallism in the British House of Commons. That article comments somewhat sharply on Mr. Smith's assertion that "a conspiracy had been formed among the financial class in Europe and America to get rid of silver as full-valued money in order to increase the value of gold, in which their revenues are paid." In the course of his comments the editor, by "confession and avoidance," admits our whole contention as to the rise of gold and the fall, as a natural consequence, of the prices of commodities. He says:

It may not be amiss, however, to point out that the increase in the exchangeable value of gold has been by no means such a gain to the financial class as he in common with many others supposes; for advantage has been very largely taken of it to cut down the return upon the capital which the financial classes have invested. It has favored debt-conversion schemes, and it has been one of the influences that have caused the rate of interest in general to decline so decidedly that, all round, the yield of investments is now very appreciably lower than it was fifteen years ago. The idea that the creditor class have realized unmixed gains and the debtor class have suffered unmitigated losses by the alteration in the purchasing power of gold is thus altogether fallacious. There has in their case, as in all others, been a species of compulsory give and take. Each has gained and each has lost something, and now that the process of readjustment has been carried so far it would be unwise to the last degree to unsettle everything again by such legislation as the bimetallists propose.

The editor of The Economist is to be commended for at least one thing. He does not quibble as to the most important point in the bimetallic controversy. He frankly admits that gold has risen, and does not, as some others do, attribute the fall of prices to improvements in methods of production.

He also admits that coincidently with and caused by the rise in gold there has been a great decline in the rates of interest, and, strangely, claims that the debtor is compensated for the rise in the value of money by the ability to convert the debt into one bearing a lower rate of interest, or, as he calls it, resorting to "debt-conversion schemes."

He does not inform us how any compensation can be made to the the debtor for the time the debt has been running, as to which it can not be converted, nor for the enhanced amount exacted from the current earnings of labor by the rise in the value of money to pay taxes and the expenses of Government, nor for the loss entailed on the debtor whose property is mortgaged on long time, where the holder of the mortgage refuses to convert it into an obligation bearing a lower rate of interest than originally contracted for. He suggests no method by which to make whole those who have lost their property through sheriff's sale by reason of falling prices and the rise in the value of money. Neither does he state how long it will be before the next confiscation is to take place, by reason of the continued operation of the cause that produced the first. But he has been frank enough to concede (what is never disputed except when the money question is under discussion) that there has been a rise in the exchangeable value of gold, and conceded its natural sequence, a fall in the rates of interest.

IMPROVED METHODS OF PRODUCTION.

In order to justify their position it becomes necessary for the advocates of continued demonetization of silver to insist that the fall of prices is not due to the rise in the value of gold, but to improved methods of production.

Whatever the cause to which it is to be ascribed, the undoubted fact is that a fall of prices throughout the western world set in concurrently with the reduction of the world's money volume by the demonetization of silver. It was well understood at the time by those who had given consideration to the subject that demonetization alone would effect that result. This is manifest from an article in the London Daily News, a paper of exceedingly large circulation, quoted in the Journal of the Statistical Society of England for 1873,

page 395. Referring to the adoption of the single gold standard by Germany the Daily News said:

As the annual new supply of gold throughout the world is reckoned at little more than 20,000,000*l.* ($100,000,000) and the usual demand for miscellaneous purposes is very large, it follows that, if the German Government perseveres in its policy, the strain upon existing stocks and currencies of gold will be most severe. For a time, at least, unless the annual production of gold should suddenly increase, the money markets of the world are likely to be perturbed by this bullion scarcity, and the fall in the value of gold—

Which means the rise in prices that for some time had prevailed—

of which so much has been heard, will be checked or reversed.

The yield of gold did not "suddenly increase," and the intelligent prophecy of the Daily News was fully realized, not merely to the extent of a check to the rising prices (or, as it is styled by the Daily News, a check to the "fall in the value of gold"), but to the extent of an immediate rise in the value of that metal and a persistent and deplorable fall in the general range of prices.

This prophecy, that the "fall in the value of gold" would be checked by the demonetization of silver or, better, reversed by it, was welcome reading to the creditor and income classes of England and of the world.

That it was "reversed," and the value of gold appreciated, is as plain as that, one being subtracted from two, there is but one for a remainder.

The immediate fall in prices of commodities was the natural, the anticipated, and the deliberately intended result of that movement.

But we are now assured that this fall is not due to any monetary cause, but to the greater efficiency of machinery in the production of commodities.

No advocate of an increased volume of money denies that in a few departments of manufacture there have since 1873 been improvements tending to economize labor and cheapen products; but they emphatically deny and challenge proof that improvements of mere detail in the manufacture of some articles will account for the extraordinary fall of price since that time in almost every product of industry. We are also told that the development of the system of transportation, both by land and sea, has tended to lower the price of commodities to the consumers. I grant it. But we had those improvements before 1873.

The inventions made between 1873 and 1890, the period of falling prices, were no more important or radical in their effect on industry, tended no more to cheapen commodities, than did those from 1850 to 1873, the period of rising prices. Indeed the inventions which preceded 1873 were as a whole much greater in scope, more far-reaching in result, and more revolutionary in their effects on industry than those of the later period. All the great basic improvements had been invented and had been incorporated with the industrial system of all civilized countries long before 1873, if we except the electric light and the telephone. We have had the steam engine, the cotton gin, and the spinning-jenny since the last century; the railroad and the steam-ship since the '30s; the telegraph, the mechanical reaper, steam-plow, and other agricultural labor-saving devices since the '40s; the sewing machine since 1854, and the Bessemer process and steel rail since 1857.

The forced construction into which their position drives the advocates of the gold standard is well illustrated in a recent number of a magazine of high standing in this country, in which I find the following:

But, if it be demurred, does not a debt incurred, say, ten years ago require today more wheat or iron for its satisfaction than the sum could have bought when first borrowed? Certainly, but the wheat or iron represents no more labor now than it did ten years ago, and its increase in quantity stands for the new efficiency which applied science has bestowed on toil.

Observe how deftly the writer places iron, in the manufacture of which there have admittedly been some improvements, in the same category with wheat, in the production of which the improvements within any recent period have been of the most trifling character. It will be exceedingly difficult to convince the farmers of this country, whose mortgages are eating up the proceeds of their labor, that the enormous decrease in the debt-paying power of their products is made up to them in "the new efficiency which applied science has bestowed on toil."

As well might it be maintained that the rise of prices and the concurrent wave of universal prosperity, experienced after 1849, was not due to the increase of the world's money stock from the mines of California and Australia, but to some sudden, unaccountable, and complete loss of all improvements theretofore attained in the arts and industries of the world.

EFFECT OF CHECKS AND CLEARING-HOUSES.

But it is said that checks, notes, drafts, bills of exchange, and the facilities afforded by clearing-houses effect such economy in the use of money that it goes farther now than formerly, and that therefore so large a volume of money as was formerly needed is not needed at present. It is sought thus to escape the conclusion that the fall of prices is the result of a shrinkage of the volume of money, or at least to imply that if the money volume has been shrinking the agencies mentioned have served to mitigate, if not entirely to counteract, the effects of such shrinkage. This is in substance to claim that, however contracted the money volume of a country may become, the system of checks and clearing-houses—on the principle of the compensating balance—will expand in a proportion directly corresponding to the contraction of the currency; that the greater the reduction of the volume of money in the country the greater the increase in the transactions of the clearing-house.

Nothing more absurd could be conceived. If this view were correct, it would make no difference whether the amount of money in circulation were large or small, a million dollars would be as efficacious as $100,000,000 and even one dollar as effective as a million dollars; and if we suppose the last dollar to have disappeared from circulation, then, according to the sweeping and pretentious claims set up for the clearing-house system, we could dispense altogether with the use of money and rely exclusively on checks, drafts, and bills of exchange.

That checks and clearing-houses are a great convenience to commerce is not denied. They serve to a certain extent to make more effective the money volume of a country. By the clearing-house system of off-setting the demands of the several banks, one against the other, and requiring payment in cash of the balances only, large amounts of loans may remain undisturbed and greater stability of industrial conditions be secured.

Clearing-houses, however, were not established primarily for the convenience of commerce, but for the profit of bankers. Whatever amounts of money are economized by means of those institutions bring compensation, by way of interest, to the banks. We may, therefore, rely upon their being utilized to the utmost under all circumstances.

But, however much checks and clearing-houses may economize the use of money, they are no novel devices. They are not some untried and newly invented instrumentalities. Checks have been in use ever since the invention of banks. The clearing-house system was established in this country in 1853. Contributing, as it does contribute, to the pecuniary profit of the banks by making possible an economy in the use of invested money, which the banks have loaned out and on which they are drawing interest, the system has grown with the growth of the business of the country. It will undoubtedly continue to grow, but with no greater acceleration than population and business will warrant.

As it has been a part of the banking machinery of the country for nearly forty years and during that period has been utilized to the utmost, the conditions of its existence and utilization have long since become static conditions. The demands for currency have borne relation to the needs of business, with clearing-house facilities in full sight and operation; and at all seasons, in the adjustment of prices, those facilities have had full force and effect. Assuming that at any given period the business of the country were conducted with a given volume of money, *plus* a certain volume of clearing-house exchanges, then, at a later period, an increase of business would demand an increase in the volume of money, *plus* a proportionate increase in the volume of clearing-house exchanges; having had this system in full and effective use for forty years, it is as absurd to ascribe the *fall* of prices in the last half of that period to any economy in the use of money effected by the clearing-house system as it would be to ascribe to the same cause the directly opposite effect—the *rise* of prices—that took place in the first half of the same period.

PROOF AFFORDED BY THE FALL OF INTEREST.

If further proof were needed that gold has risen in value, it is, as I maintain, to be found in the coincident fact of a decrease of rates of interest on first-class securities. That decrease has kept even step and pace with the rise in the value of money.

The rise in the value of gold, as shown by comparison with large numbers of articles of commerce, has been between 35 and 40 per cent. The rate of interest on gilt-edged securities shows a corresponding decline. But unfortunately for the struggling people of the country the fall in the rate of interest on farm mortgages and on property remote from money centers has been nothing like so great, nor has it been so great as the fall in the price of agricultural lands and in the products of labor.

I hold, therefore, that a new axiom should be added to the science of political economy, namely, that as the purchasing power of money increases its income-producing power decreases and in about the same ratio, and, conversely, when the purchasing power of money decreases its income-producing power increases. In other words, when prices rise interest rises; when prices fall interest falls. When money is increasing in volume and decreasing in value, prices rise, and its investment in productive enterprises becomes more profitable, and as a consequence interest rises. When it is decreasing in volume and consequently increasing in value, prices fall, investment in property and productive enterprises becomes precarious and unprofitable, and, as a consequence, it avoids them, and seeks investment in bonds and gilt-edged securities, aptly termed "money-futures," which for years have been increasing and continue to increase.

Some thirteen years ago I indulged in a little prophecy concerning the rates of interest. I take no great credit to myself for it, but in 1877—four years after the demonetization of silver—before the rates of interest had materially fallen and when the same contention was made that is made now, namely, that money was cheap be-

cause interest was low and that the policies of the country were wise because our credit stood on such a high plane, I submitted to Congress the report of the Monetary Commission, from which I quote:

Money can be borrowed readily only upon such securities as bonds which are based on the unlimited tax-levying power of the Government, or upon the bonds and stocks of first-class trunk-lines of railroad corporations, whose freight and fare rates are practically a tax upon the entire population and resources of the regions which they traverse and supply. The competition among capitalists to loan money on these more ample securities has become very keen, and such securities command money at unprecedentedly low rates. These low and lowering rates of interest, instead of denoting financial strength and industrial prosperity, are a gauge of increasing prostration. Large accumulations of money in financial centers, instead of being caused by the overflow of a healthful circulation, or even a proof of a sufficient circulation, are unmistakable evidence of a congested condition caused by a decreasing and insufficient circulation. The readiness with which Government bonds bearing a very low rate of interest are taken, instead of showing that the credit of the Government has improved, is melancholy evidence of the prostrated condition to which industry and trade have been reduced.

There need be no haste in refunding the public debt at the rates now proposed and considered low. Unless the progress of the commercial world in the policy of contracting money by demonetizing silver is checked, bonds bearing a much lower rate of interest than any yet offered will be gladly accepted by capitalists here and in Europe. When the money stock is diminishing and prices are falling, the lender not only receives interest, but finds a profit in the greatly increased value of the principal when it is returned to him. A loan of money made in 1809, if repaid in 1848, would have been repaid with an addition of 145 per cent. in the purchasing power of principal and interest, besides all the interest paid. Those who have loaned money to this Government since 1861 have already received nearly as much in the increased value of their principal as in interest, and all the probabilities are, in respect to the four per cent. thirty-year national bonds now being negotiated, if they are redeemed in gold, that more profit will be made by the augmentation in the value of principal than through interest. Indeed the signs of the times are that the bonds of a country possessing the unbounded resources and stable institutions of the United States, payable in gold at the end of thirty years without any interest whatever, would, through the increase of the value of that metal, prove a most profitable investment.

All the facts of the situation to-day fully bear out the statements I then made.

So determined are the advocates of the single gold standard in defending the wisdom of its maintenance that facts whose existence would at ordinary times be readily admitted are, during a discussion of the money question, pointedly denied. For example, within the past few weeks we have seen in various eastern newspapers contributions from prominent writers taking direct issue with the advocates of silver as to the prevalence of general distress throughout the country. They declare that there is no such distress, assert that they have looked for it in vain, and derisively inquire where it is.

Perhaps the best authority I can cite in response to this inquiry is the principal commercial daily paper of the East, the New York Journal of Commerce, itself one of the most ardent and uncompromising advocates of the gold standard. In an editorial article in its issue of January 11, 1890, that journal said:

FAILURES IN BUSINESS.

The public have been startled by the announcement that during the year 1889 there were 11,719 business failures in the United States, against 10,587 in 1888 and 9,740 in 1887. The estimated liabilities of last year's insolvents were $140,359,000 and the assets were $70,599,000, against $120,242,000 liabilities and $61,999,000 assets for the failures of the previous year. Thus the failures in 1889 were more in number and far greater in liabilities than for 1888, and the proportion of assets to the obligations shows that the total insolvency was more disastrous. Why in a season of profound peace, with no blighting frosts or withering droughts, and the most abundant yield from the field, forest, and mine, so many in business have gone to the wall, no one seems able to answer. Many have tried their hand at a solution of the problem, and not one, as far as we can discover, has satisfied even himself with the result of his investigations.

HAS SILVER FALLEN?

In order to ascertain whether silver really has or has not fallen in value, it is necessary that all the facts be taken into account and the situation looked at from a correct point of view. If a person be seated in a boat that is headed to the stream and wishes to test whether or not he is making headway he must keep in view not the stream, but the shore. The occupant of a railroad car who observes a moving train on a contiguous and parallel track, frequently thinks his own train at a stand-still, when in fact it may be in motion.

Whenever a rise or fall appears to take place in the price of any one article or commodity, that is to say, whenever a difference takes place in the relation which that article bears to money—all other commodities remaining unchanged—such difference must naturally and properly be attributed to changed conditions affecting the commodity, and not to a change in the value of money. But wherever there is a fall in prices throughout the whole range of commodities then it is clear that this change is mainly due to a change in the value of money. Such however is the force of education and habit that the masses of the people are slow to suspect any change in the standard by which they have been accustomed to gauge or measure all values. Indeed they find it difficult to understand how under any circumstances any change can take place in it. Having their eyes fixed on the standard, and on that alone, they naturally attribute to the articles measured, and not to the standard, any difference that may seem to arise in the relation they bear to each other.

But the apparent is not always the real. Nothing seems more warranted by the evidence of our senses than that the earth is a stationary object, while the sun revolves around it. For thousands of years the world was convinced of the truth of the geocentric theory of the universe, and millions of men have lived and died in the confident belief that this planet was immovably fixed in space, while the sun was a rolling and ever-shifting body. Even yet, among the mass of mankind, so ever-present is this impression, derived from ocular demonstration, that in spite of the declarations of science the world continues in common use the phrases which originally described the process that took place, as men understood it; hence we speak of the "rising" and of the "setting" of the sun. In the same way we speak of the rise or fall in the value of commodities, without being particular to note whether the change that has taken place is strictly a change in the value of the article itself or a change in the money with which its value is measured. Perhaps I can best illustrate my meaning by an allegory:

THE BATTLE OF THE STANDARDS—THE ALLEGORY OF THE CLOCKS.

In an ancient village there once stood a gold clock, which, ever since the invention of clocks, had been the measure of time for the people of that village. They were proud of its beauty, its workmanship, its musical stroke, and the unfailing regularity with which it heralded the passing hours. This clock had been endeared to all the inhabitants of the village by the hallowed associations with which it was identified. Generation after generation it had called the children from far and wide to attend the village school; its fresh morning peal had set the honest villagers to labor; its noonday notes had called them to refreshment; its welcome evening chime had summoned them to rest. From time immemorial, on all festive occasions, it had rung out its merry tones to assemble the young people on the green; and on the Sabbath it had advertised to all the countryside the hour of worship in the village church. So perfect was its mechanism that it never needed repair. So proud were the people of this wonderful clock that it became the standard for all the country round about, and the time which it kept came to be known as the gold standard of time, which was universally admitted to be correct and unchanging.

In the course of time there wandered that way a queer character, a clockmaker, who being fully instructed in the inner workings of time-tellers, and not having inherited the traditions of that village, did not regard this clock with the veneration accorded to it by the natives. To their astonishment he denied that there was really any such thing as a gold standard of time; and in order to prove that the material, gold, did not monopolize all the qualities characteristic of clocks, he placed alongside the gold clock, another clock, of silver, and set both clocks at 12 noon. For a long time the clocks ran along in almost perfect accord, their only disagreement being that of an occasional second or two, and even that disagreement only at rare intervals, such as might naturally occur with the best of clocks. But the council of the village, in their admiration for the gold clock, passed an ordinance requiring that all the weights (the motive power) of the silver clock, except one, be removed from it and attached to those of the gold clock. Instantly the clocks began to fall apart, and one day, as the sun was passing the meridian, the hands of the gold clock were observed to indicate the hour of 1, while those of the silver clock indicated 12.15. At this everybody in the village ridiculed the silver clock, derided the silver standard, and hurled epithets at the individual who had had the temerity to doubt the infallibility of the gold standard.

Finally, the divergence between the clocks went so far that it was noon by the gold standard when it was only 6 a. m. by the silver standard, so that those who were guided by the gold standard, notwithstanding that it was yet the gray of the morning, insisted on eating their mid-day meal because the gold standard indicated that it must be noon. And when the sun was high in the heavens and its light was shining warm and refulgent on the dusty streets of the village, those who observed the gold standard had already eaten supper and were preparing for bed.

But this state of things could not last. It was clear that the difference between the standards must be reconciled or all industry would be disarranged and the village ruined.

Discussion was rife among the villagers as to the cause of the difference. Some said the silver clock had lost time; others that both clocks had lost time, but the silver clock more than the gold; while others again asserted that both clocks had gained time, but that the gold clock had gained more than the silver clock.

While this discussion was at its height a philosopher came along and observing the excitement on the subject remarked, "By measuring two things, one against the other, you can never arrive at any determination as to which has changed. Instead of disputing as to whether one clock has lost or another gained would it not be well to consult the sun and the stars and ascertain exactly what has happened?"

Some demurred to this because, as they asserted, the gold standard was unchanging and was always right, no matter how much it might seem to be wrong; others agreed that the philosopher's advice should be taken. Upon consulting the sun and the stars it was discovered that what had happened was that both clocks had gained in time but that the gain of the silver clock had been very slight, while that

of the gold clock had been so great as to disturb all industry and destroy all correct sense of time.

Notwithstanding this demonstration, there were many who adhered to the belief that the gold standard was correct and unchanging, and insisted that what appeared to be its aberrations were not in reality due to any fault of the gold clock, but to some convulsion of nature by which the solar system had been disarranged and the planets made to move irregularly in their orbits.

Some of the people also remembered having heard at the village inn, from travelers returning from the East, that silver clocks were the standard of time in India and other barbarous countries, while in countries of a more advanced civilization gold clocks were the standard. They therefore feared that the use of the silver clock might have the effect of degrading the civilization of the village by placing it alongside India and other barbarous countries. And although the great mass of the people really believed, from the demonstration made, that the silver standard of time was the better one, yet this objection was so momentous that they were puzzled what course to pursue, and at last advices were consulting the manufacturers of gold clocks as to what was best to be done.

Now our gold-standard men are in the position of those who first refuse to look at anything beyond the two things, gold and silver, to see what has happened, and who, when it is finally demonstrated that all other things retain their former relations to silver, still persist that the law which makes gold an unchanging standard of measure is more immutable than that which holds the stars in their courses. If they will compare gold and silver with commodities in general, to see how the metals have maintained their relations, not each to the other, but to all other things, they will find that, instead of a fall having taken place in the value of silver, the change that has really taken place is a rise in the value of both gold and silver, the rise in silver being relatively slight while that of gold has been ruinously great. And those who do not shut their eyes to the truth must see that the change of relation between the metals has been effected by depriving silver of its legal-tender function, as the want of accord between the clocks was brought about by depriving the silver clock of a portion of its motive power, the weights. The only thing that has prevented a greater divergency between the metals is the limited coinage by the United States—the single weight that, withheld from the gold clock, prevented its more ruinous gain.

PURCHASING POWER OF SILVER IN 1873 AND 1889.

If I can show that for a period of seventeen years, since its demonetization in 1873, silver has lost none of its purchasing power, none of its command over commodities; that is to say, if I can show that 412½ grains of silver to-day, uncoined, and shorn by hostile legislation of its principal element of value—the money use—will buy as much as would 412½ grains of silver in 1873 (when our silver dollar bore a premium over gold) of all the articles that enter into the daily consumption of the people, it must be manifest that silver has not fallen in value.

I present a table which I shall ask to have inserted in the RECORD as part of my remarks, showing the purchasing power of 412½ grains of silver, nine-tenths fine, in 1873 and 1890, respectively, so far as concerns several leading articles of daily consumption.

Comparative purchasing power of 412½ grains silver, nine-tenths fine, in 1873 and 1890, respectively.

412½ grains silver would buy—		1873.	1890.
Wheat	bushels	0.87	0.88
Corn	do	1.84	1.97
Cotton	pounds	5.32	6.71
Beef, mess	barrels	0.05	0.05
Pork, mess	do	0.07	0.06
Lard	pounds	12.89	11.75
Butter	do	5.40	4.63
Cheese	do	8.69	6.94
Sugar	do	9.80	10.34
Eggs	dozen	4.27	5.38

From this table it conclusively appears that while in 1873 the standard silver dollar of 412½ grains, which then bore a premium over the gold dollar, would purchase four-fifths of a bushel of wheat; to-day the same quantity of silver, without the advantage of coinage and merely as bullion, will also buy four-fifths of a bushel of wheat, the only difference between the figures for the two years being that at the present time 412½ grains of silver bullion, as will be seen by the table, will buy a fraction of a bushel more than would 412½ grains of coined silver in 1873.

If, then, silver has fallen, it is manifestly not in its relation to wheat.

By the same table it is shown that the silver dollar of 1873, containing 412½ grains of silver, nine-tenths fine, would purchase one and eight-tenths bushels of corn; in 1890, a like number of grains of silver, uncoined and estimated at its gold value, will purchase one and nine-tenths bushels of corn. Here again the advantage is slightly in favor of the 412½ grains of silver bullion of 1890. This shows conclusively that silver has not fallen in its relation to corn.

The figures of the same table show that in 1873 a coined silver dollar of 412½ grains would buy 5½ pounds of cotton; to-day 412½ grains of uncoined silver will buy 6¾ pounds of cotton. From this it appears that silver has not fallen relatively to cotton, the great staple of universal use, but that, on the contrary, it has advanced somewhat in its purchasing power when compared with that article.

In order to present the question from another point of view I submit another table showing the number of grains of silver that are required in 1890 and the number which were required in 1873 to buy a bushel of wheat, a bushel of corn, &c., by which it will even more clearly appear that silver has not fallen in value in respect to commodities.

Comparative purchasing power of silver bullion, in grains, nine-tenths fine, in 1873 and 1890, respectively.

Articles.		1873. Legal tender.	1890. Commodity.
		Grains silver.	*Grains silver.*
Wheat	per bushel	474.3	468
Corn	do	223.9	209.25
Cotton	per pound	77.55	61.42
Beef, mess	per barrel	8,662.5	7,560
Pork, mess	do	5,465.62	6,750
Lard	per pound	31.97	35.1
Butter	do	76.31	89.1
Cheese	do	47.44	59.4
Sugar, refined	do	42.07	39.82
Eggs	per dozen	96.52	76.68

From this table it will be seen that in 1873 it required 474 grains of standard silver, in the form of coined dollars, to buy one bushel of wheat; in 1890, only 468 grains of standard silver (and that merely in bullion form, or in other words, at its market value) are required to buy a bushel of wheat. This does not show that silver has fallen in value, in its relation to wheat, but, on the contrary, that it has risen in value.

In 1873 it required 224 grains of silver to buy a bushel of corn; to-day only 209 grains of silver are required to buy the same quantity. These figures fail to prove that silver has fallen in value in its relation to corn. On the contrary, again, it has risen.

In 1873 a pound of cotton could not be had for less than 77½ grains of silver; to-day the same pound of cotton can be bought for 61 grains of silver. Silver, therefore, has not fallen, but risen in value in its relation to cotton.

In 1873 96 grains of silver were required to buy one dozen eggs; to-day only 76 grains of silver are required to buy the same quantity of eggs. Silver therefore has not fallen, but risen in value, in its relation to eggs.

These comparisons might be continued with the same results as to a great majority of the articles entering into general use.

These figures demonstrate that in its relation to all commodities that enter into the daily consumption silver has not fallen in value, but, as is clearly seen, while holding a remarkably steady ratio to commodities, has slightly increased in value, as is shown by the fact that a less number of grains of the metal are to-day required to purchase the same quantity of the commodities mentioned than were required in 1873.

In relation to what, then, is it that silver has fallen? As it has not fallen in relation to commodities, there remains but one thing in relation to which it can be said to have fallen, and that one thing is gold. The phrase "the fall of silver" is the ingenious and cunning invention by which it is sought to cast on that metal the discredit of depreciation rather than subject gold to the suspicion of any change whatever. The term to correctly describe what has taken place would be "the rise of gold;" but that term is scrupulously avoided, as implying that gold does not remain immovably fixed. That gold has risen, however, admits of no doubt, except to those who willfully shut their eyes to facts of common observation. The true test of the increasing or decreasing value of any one thing is not to compare it with any other one thing, but with a large range of commodities generally dealt in. It is not of so much importance to know how much gold can be bought with a given amount of silver as it is to know how much bread, how much meat, and how much clothing can be bought, and how much of all the things that are necessary to the comfort and well-being of the people can be bought with that amount of silver.

PROOF THAT GOLD HAS RISEN.

In order to demonstrate that gold has risen, I will bring side by side the gold prices of a number of leading commodities of commerce in 1873 and 1889, respectively, and the amount in silver bullion that in 1889 would purchase an equal quantity of the same commodities, by a table prepared at my request by the Bureau of Statistics of the Treasury Department.

Average export prices of the following-named domestic commodities for the years ending June 30, 1873 and 1889.

Commodities.	Unit of quantity.	Average price of the year ending June 30—			
		1873.		1889.	
		In currency.	In gold.	In gold.	In silver bullion.
Bacon and hams	Pounds	$0.068	$0.077	$0.084	$0.108
Butter	do	.211	.184	.166	.212
Cheese	do	.130	.113	.092	.118
Corn	Bushels	.617	.539	.508	.650
Cotton:					
Unmanufactured, not Sea Island.	Pounds	.166	.164	.099	.127
Cloth, colored	Yards	.166	.145	.065	.083
Cloth, uncolored	do	.163	.142	.068	.087
Iron and steel:					
Bar-iron	Cwt	5.480	4.784	2.183	4.074
Pig-iron	do	2.498	2.181	.953	1.220
Railroad-bars	do	4.114	3.592	2.169	2.776
Lard	Pounds	.092	.080	.076	.097
Leather	do	.253	.221	.185	.237
Rice	do	.071	.062	.056	.070
Sugar:					
Brown	Pounds	.092	.080	.056	.072
Refined	do	.116	.101	.066	.084
Wheat	Bushels	1.312	1.145	.874	1.119
Wheat-flour	Barrels	7.565	6.604	4.703	6.020

What does an examination of this table show? It shows beyond dispute that gold has risen in value.

A bushel of wheat that, according to the figures of the Bureau of Statistics, cost $1.14 in gold or silver in 1873, and which, as will be seen by the table, still commands $1.12 in silver bullion, will to-day bring only 87 cents in gold.

A pound of cotton that in 1873 cost the purchaser, in gold or silver, 16 cents, and which still commands 13 cents in silver bullion, will bring only 10 cents in gold.

A pound of cheese that in 1873 cost the purchaser 11½ cents in gold or silver, and which now brings 12 cents in silver bullion, will bring only 9 cents in gold.

A barrel of flour which in 1873 cost the purchaser $6.60 in gold or silver, and which to-day commands $6.02 in silver bullion, will bring but $4.70 in gold.

A pound of butter that in 1873 brought 18.4 cents in gold or silver, and now commands 20.8 cents in silver bullion, will bring but 16.6 cents in gold.

Notwithstanding that 412½ grains of uncoined silver will to-day buy as much of the leading articles of commerce as the coined gold dollar would buy in 1873, yet the advocates of the gold standard characterize it as a 72-cent dollar. Then the gold dollar of 1873 was a 72-cent dollar. If the gold dollar of to-day be an honest and equitable dollar, that of 1873, which was worth much less, was a swindling and dishonest one; and if gold continues to advance as it has been advancing—and with the declining output of that metal there is no reason why it should not—it will be but a short time before any other kind of dollar whose value may be equal to that of the present gold dollar will be stigmatized as a swindling 72-cent dollar. There never was a dollar coined that did not legally and practically contain 100 cents. But the creditors stigmatize a dollar of the value of the gold and silver dollar of 1873 as a 72-cent dollar. May not the debtors, with much more propriety, denounce the gold dollar of to-day as a 140-cent dollar?

According to the admissions of the royal commission of England, the gold dollar of to-day is to the producers of this country, measured by their products, already at a premium of between 30 and 40 per cent. over the gold dollar of 1873. The advocates of the gold standard have no sympathy with our farmers and manufacturers who have to pay, in commodities, a premium of 30 to 40 per cent. on gold, to meet their engagements, but express extreme anxiety at the bare possibility that a few importers might have to pay even a small premium in any form. They insist that the money system of a population of 65,000,000 shall, like an inverted pyramid, be made to rest upon its apex in order to enable a few importers, most of whom are residents of foreign countries, to make their payments abroad in gold.

Verily, Mr. President, the single gold standard is an expensive luxury for our people to maintain.

Those who deride silver as a money-metal indulge in feeble attempts at sarcasm by inquiring why we do not advocate the use of tin and brass as money. They speak and write as though the idea of using silver as money were a recent discovery or invention of people engaged in silver mining. They also ignore the fact that the standard silver dollar of the United States, which, with much satisfaction, they stigmatize as a 72-cent dollar, requires a gold dollar to obtain it. It is worth a gold dollar in London, in Berlin, in Vienna, in Saint Petersburg, in Madrid, in Havana, and in all countries having commercial relations with the United States. It can at once be exchanged into the money of any country with only the slight deduction of cost of shipment to this country, as is the case in the United States with notes of the Bank of England, which are redeemable in gold.

Our silver dollar is not money in foreign countries and it is to our advantage that it is not, for were it money anywhere else than in this country we could not rely on its remaining here to maintain that steadiness of prices indispensable to prosperity. But, if any of our silver dollars are found abroad, let no one suppose he can get them by tendering 412½ grains of silver bullion for each dollar. He will find it will cost him precisely as much gold as it passes for in the United States.

SOME EFFECTS OF THE RISE OF GOLD.

If a cotton-planter in 1873 owed $10,000 he could then have paid it with 60,975 pounds of cotton. To-day, by reason of the increased command which gold has over commodities, it would take 101,010 pounds of cotton to pay that $10,000, notwithstanding that the money in which the debtor has paid the interest has each year become more valuable than it was at the time he contracted to pay it.

The cotton-manufacturer of the East who in 1873 owed $10,000 could then have paid it with 70,422 yards of uncolored cotton cloth; to-day owing to the rise in the value of gold it would require 147,059 yards to pay that debt, without taking into account the amount lost by the debtor in the greater sacrifice he had year by year to make to pay the interest.

The farmer of the North and West who in 1873 owed $10,000 could then have paid it with 8,733 bushels of wheat; to-day it would require 11,446 bushels of wheat to liquidate that debt, though he, too, has year by year been "cinched" through the progressive increase in the value of the money in which the interest has been paid. Or he could, in 1873, have paid his debt with 1,514 barrels of flour; to-day it would take 2,126 barrels of flour to pay the same debt.

The property of the country is fast passing into the hands of the creditors, and if the iniquitous system is not reversed the condition of our American farmers will be that of the farmers of gold-standard countries. Instead of owning their farms they will be tenants and rent-payers, a condition but little in advance of that which prevailed in feudal days.

Machiavelli, describing a turbulent period in the history of Florence, said:

The people perished, but the brigands throve.

The brigandage of the Middle Ages, whether in Italy or elsewhere, was a criminal defiance of law, but it was pursued at some risk and under manifest disadvantages. The brigand took his life in his hands. He knew that his calling was unlawful; and, although ruthless in his work, the method by which he exacted ransom of his occasional victim was less destructive to the prosperity of the community than the legalized brigandage of to-day, by which, through a vicious system of money, the great mass of the people are despoiled of their property. The distinguishing characteristic of the brigandage of the nineteenth century is that it scrupulously observes all legal forms and is conducted in the name of honor, honesty, good morals and "sound finance." Mortgages are foreclosed only in accordance with law, and the unearned increment which results from the increased and increasing value of the money is transferred from the debtor to the creditor, with punctilious regard for the statutes.

The demands of the brigand were enforced with guns and pistols; those of the creditor are enforced with bonds and mortgages; both exactions cruel and unjust, one by violence, the other by law. But, in the latter case, so indirect is the method of operation that many of those who are benefited by it are unaware of the perpetration of any wrong. So subtle is the process that the change seems to be only a change in the price of commodities, and thousands of men who would scorn consciously to exact from any one more than a just return for money loaned are beneficiaries of this vicious and ruinous system.

With regard to the great body of the working masses it is sometimes said they have no cause for complaint, that their condition now is better than ever before.

But, Mr. President, it is not enough that men are better off than they have been. When we reflect that nine-tenths of the inventions and improvements constituting all the material features of the civilization of this century have been made by working men, it is manifest that they are entitled to much more of the comforts and convenience of life than are now accessible to them. By watchful, repeated, and aggressive efforts through their trade organizations, the workingmen in many branches have been enabled to keep wages from sinking and occasionally to secure an advance; but, during a period of falling prices, what is gained in this way by those who are kept at work is lost to the working class as a whole by the remission to idleness of part of their number.

The statisticians who seem to be employed by some propaganda to prove by figures that prosperity prevails point exultantly to the fact that the wages of the working people seem constantly to have increased while prices are falling, and they cite this to prove that low prices are consistent with prosperity. They leave entirely out of the account the large numbers of workmen who of necessity are relegated to idleness on account of the lack of profit in business.

If you go into the workshops of any large manufacturing enterprise, while prices are low and lowering, and ask the managers what

they now do when a strike occurs among the workmen, they will tell you they find it impossible to shut down, because they have contracts extending through time that they must fill, but, they add, "We pay the wages demanded and we reduce the number of the employed."

If there are a thousand workmen employed, getting $2 each per day, that would be a wage fund of $2,000 a day. If, when prices fall and business becomes dull, the employers should want to reduce the pay of each workman to $1.50 a day, and if the workmen, by striking, should prevent that decrease, and if, then, 25 per cent. of their number should be discharged, the loss to the working class, as a body, and to the community at large, would be the same as though the wages were reduced to $1.50 a day. Until these people who present statistics can show us how many laborers are left out of employment there is no possibility of arriving at any correct conclusion as to what the wage fund is and how much wages are paid.

The loss to society is much greater when 25 per cent. of the people are unemployed than if all continued at work upon a 25 per cent. reduction of wages, because the relegation to idleness of 25 per cent. of the workmen reduces the producing force and lessens correspondingly the aggregate annual production.

INTEREST OF THE MINING STATES IN THE REMONETIZATION OF SILVER.

Those who in the Senate and in the other House of Congress represent mining constituencies are taunted with the selfish purpose of advancing the interests of their own States at the expense of those of the country. It is sought to discredit the State which I have the honor in part to represent on this floor, on the ground that the people, being largely silver miners, have a personal interest in the remonetization of silver.

The silver miners, Mr. President, need no defense here or elsewhere. They have asked no favors from the Government and ask none now. They are bold, adventurous, and self-reliant men, who have wandered across alkaline deserts and over pathless mountains, braved the assaults of hostile savages, the miasma of the Isthmus, and the storms of the Cape, and have planted the flag of a high civilization on the western confines of this Republic. No more patriotic or public-spirited class of citizens can be found within the borders of the Union. Their business is an honorable one. When they entered upon it they, in common with other citizens, had the warrant of time and the authority of all writers and thinkers on political economy for the belief that silver was, and would ever be, a money metal, entitled to that full credit which from time immemorial had been accorded to it. Silver, equally with gold, had been consecrated by all the ages to the money use, and was dedicated to such use by the Constitution of the United States.

When the Constitution declared that Congress should have power "to coin money and regulate the value thereof" and that "no State shall * * * make anything but gold and silver coin a tender in payment of debts," it warranted the belief, on the part of all who adopted the calling and undertook the business of mining, that gold and silver would continue to be money metals in the sense in which they had been for thousands of years in the past. The silver miners were warranted in presuming that when the Constitution esteemed so highly the legal-tender function in the two metals, gold and silver, as that it prohibited the States from making anything a legal tender except coin of those two metals, it would not warrant the Congress of the United States in taking from one of those metals the power of legal tender and conferring that imperial function exclusively on the other. Silver mining is a business requiring for its successful prosecution skill, experience, and energy, while nine-tenths of the gold of the world has come from placers, requiring neither organization, capital, nor skilled labor.

The production of gold is much more a matter of accident and much more liable to fluctuation than is the case with silver. The silver miners therefore had a right to believe that so long as 23.22 grains of pure gold should be entitled to recognition as one dollar 371.25 grains of pure silver would continue to be entitled to like recognition as one dollar and would possess the legal-tender function as such for the liquidation of all debts, public and private. On the strength of this warranty of the Constitution and of the unbroken experience of the ages, large sums of money were invested in mining property and in the employment of labor to develop the mines of the country. On the strength of this belief and conviction, shared in by all the people of the United States, that gold and silver would both remain the money metals of the world, debts to an enormous extent were incurred, and it was confidently believed that both metals would for all time be available for the payment of those debts.

The silver miners had learned from the history of mining, as well as from hard and bitter experience, that the mines might at any moment cease to yield, in which case their occupation would be gone and the capital invested would be a total loss. But they did not suppose that the verdict of all time would be reversed or that the implied warranty of the Constitution of the United States would be disregarded. They did not believe that either one of the money metals would ever be demonetized. And if a doubt had entered their minds on that subject they would naturally suppose that gold rather than silver would be demonetized, gold being too limited in quantity to answer alone the purposes of money in a rapidly advancing civilization, its yield being uncertain and capricious, and the prospect of a continued and sufficient supply becoming less from year to year.

But, Mr. President, the degree of special interest which the mining States have in this measure is not to be compared with that of the other States of the Union.

According to the report of the Director of the Mint, the total quantity of silver produced in the United States in the eleven years from 1878 to 1888 inclusive was 406,210,000 fine ounces. According to the same authority the commercial value of that silver was $436,260,000 and the coinage value $525,145,000. A very simple process of arithmetic shows that the difference between the commercial and the coinage value of that silver was $88,885,000, or an average of $8,080,544 each year. Assuming that amount to have been the annual difference between the coinage and commercial value of silver for the five years preceding 1878, we must add to the $88,885,000 the sum of $40,402,220, making a total of $129,287,220 as the amount which the silver miners, not of Nevada, but of the whole United States in the seventeen years ending 1889, lost by the demonetization of silver.

Having thus demonstrated in dollars and cents the degree of selfishness which, as is charged, is the motive of the miners in advocating the remonetization of silver, let us glance at the degree of selfishness which may be said to impel other classes of the community to advocate the same cause.

INTEREST OF THE NON-MINING STATES IN REMONETIZATION.

The price of cotton for the year 1873, in gold or silver (then of equal power), was 16.4 cents per pound. The price in 1889 was 9.9 cents.

The yield of cotton for 1889 was 7,000,000 bales, or 3,500,000,000 pounds.

Had not silver been demonetized that cotton would have brought as good a price to-day as it did in 1873. At the price of 1873 the account would have stood 3,500,000,000 pounds, at 16.4 cents, $574,000,000. At the price of 1889 the account stands 3,500,000,000 pounds, at 9.9 cents, $345,500,000, showing a loss in debt-paying and tax-paying power on cotton alone (only one article of merchandise) in the single year 1889, by reason of the fall in prices caused by the demonetization of silver, of $227,500,000.

Having shown that the loss to the silver miners by the discount on silver for the seventeen years from 1873 to 1889 was less than $130,000,000, it will be seen that the loss in one single year to the cotton planters of the United States is greater by $90,000,000 than the total loss for the entire seventeen years to the silver miners of the country.

But, inasmuch as the cotton crop of 1889 was exceptionally large, I will, for the purpose of my computation, discard it, and assume instead that an average yield for the years between 1873 and 1889 would be 5,000,000 bales per annum—which is a fair average and by no means high—5,000,000 bales, of 500 pounds each, are equal to 2,500,000,000 pounds.

At the price of 1873 the result of each year would be 2,500,000,000 pounds, at 16.4 cents, $410,000,000.

According to the figures given by the Bureau of Statistics the average price received each year of the seventeen was 13.1 cents per pound; 2,500,000,000 pounds, at 13.1 cents per pound, equal $327,000,000, showing a difference of $83,000,000, that being the average each separate year for seventeen years, or a total sum for the entire period of $1,411,000,000, which represents the loss in debt and tax paying power suffered by the cotton-planters by reason of the demonetization of silver.

This is the enormous tribute which has been exacted of the cotton industry of this country in behalf of the gold "standard" and of those who, for their own pecuniary advantage, cunningly induced the Congress of the United States to demonetize silver. This is the sum which the planters of this country have lost in debt-paying and tax-paying power by that mad act of folly. As will be seen at a glance, it is a loss vastly in excess of that suffered by the silver States in the discount on the price of silver bullion.

So that, if the silver miners are taunted with having a personal interest in the success of the movement for the full remonetization of silver, the cotton planter must be placed in the same category, and with tenfold more reason.

A like computation with regard to wheat will show a loss in debt-paying and tax-paying power of not less than $100,000,000 a year to the farmers of the North and West, by reason of the demonetization of silver, a total of $1,700,000,000 in the article of wheat alone in seventeen years.

Thus a loss, wholly unnecessary, of more than $3,000,000,000 in debt-paying and tax-paying power is shown to have been inflicted on the farmers and cotton-planters of this country.

In comparison with this enormous loss to farmers and planters, how paltry is the loss of $8,000,000 a year suffered by the silver miners.

But, however large the direct loss to the debtors and to the country by reason of falling prices, the losses that are indirect are of infinitely greater magnitude and stand out like a great mountain of wrong superimposed upon the most deserving class in the community, whose interests it should be the paramount duty of Government to protect, a wrong more calamitous in its consequences than any of the multitudinous wrongs which a shrinking volume of money inflicts upon society.

ENORMOUS LOSS OF POTENTIAL WEALTH THROUGH INVOLUNTARY IDLENESS.

The political economist, Mr. President, deals with property *in esse* and producers employed. I propose for a moment to deal with property *in posse* and producers unemployed. The wealth which the political economist discusses is realized wealth; that to which I now briefly invite your serious consideration is the wealth that might be and would be brought into existence were the energies of all the people utilized. For, while it has attracted but little attention from writers on economic science, it will be found upon examination that the non-employment of its members is incomparably the greatest loss which an increase in the value of money and the consequent disorganization of industry inflicts on society.

The great writers and thinkers on economic subjects discuss with care the elements that enter into the production and distribution of wealth. They follow in detail the manufactured article through all its stages, from the crude material to the finished product; and, when completed, they conduct it through the intricate channels by which it reaches the hands of the consumer. The greatest consideration is bestowed upon the labor employed and the wealth resulting therefrom, but scarcely any thought is given to the immeasurable mass of potential wealth not produced, but lying latent in the brains and hands of the millions who are condemned to involuntary idleness.

While no mere sum in arithmetic can represent the enormous loss suffered by a nation through this cause, let us see whether we can arrive by figures at an approximate conception, at least, of the loss of wages which it entails upon the working masses, and the corresponding loss of wealth to the country.

The most thorough and painstaking investigation into the conditions of labor in this country has been that which for many years has been conducted by the Massachusetts Bureau of Labor. Its work has been universally admitted to be free from bias and devoid of all attempt to establish any special hobby or to force, by figures, the proof of any preconceived theory.

SOME STATISTICS OF THE UNEMPLOYED.

An examination of the work of that bureau shows that, in 1887, there were 816,470 persons engaged in wage-earning in the State of Massachusetts. Of those, 241,589, or nearly 30 per cent., were idle during some part of the year, ranging from one to six or more months. The average of their unemployed time was about four months, or one-third of the year.

Now, 240,000 people idle for one-third of their whole time is equivalent, in money loss, to the total idleness of one-third of that number, or 80,000 people, for the entire year. The whole number of persons enrolled for labor in the State being 816,470, this is equivalent to the total idleness of one-tenth of the people engaged in all occupations.

If a number equivalent to one-tenth of the people in all occupations are idle twelve months in the year in a State like Massachusetts, where labor is better organized, better classified, and more efficiently ordered than elsewhere in this country, it can not be presumed that any other State of the Union will exhibit a smaller proportion of unemployed laborers.

The Census Report of 1880 states the number of persons employed in all occupations as 17,392,099, out of a population of 50,155,783, or a percentage of 34.68 of the entire population. Our present population being not less than 65,000,000, if we assume, as we are warranted in doing, that a like proportion of the population is engaged in occupations of all sorts, it is clear that we have to-day a working population of 22,254,000 persons.

Accepting as correct the careful deductions from the reports of the Massachusetts Bureau of Labor that a number equivalent to 10 per cent. of the people are always out of employment we find that at the present time there are 2,250,000 persons involuntarily idle in this country. How faintly does the term "the army of the unemployed" describe this vast number of eager and willing men seeking in vain the opportunity to earn a livelihood for themselves and families.

Were the business of the country in the active condition in which it could not avoid being if our money system were perfectly adjusted to industry and if employers were competing for laborers with the same degree of eagerness that laborers are competing for employment, the average wage of a day for a working man would not be less than $2. This would make but the moderate sum of $50 a month for each workman, which, under the most thrifty system of household economy, can not be considered more than enough for the support of an American family.

WAGE LOSS FROM INVOLUNTARY IDLENESS.

By multiplying the number of persons thus shown to be idle by this moderate average wage, we arrive at the amount of $4,500,000 as the daily sum which is lost to the wage-earners of the United States by the non-employment of labor. This is a money loss of $27,000,000 a week, $117,000,000 a month, or the amazing sum of $1,404,000,000 a year. A saving of this sum for a year and three months would pay our entire national debt. This being the loss in a single year, we can imagine (making due allowance for difference in the numbers of the population) how stupendous has been the loss to the nation during the past seventeen years, a loss exceeding incomparably all other losses whatsoever.

If a crop of wheat be lost, it is appropriately noted as a public misfortune; if a city be burned down or swept away by flood, it is properly regarded as a great national calamity and the sympathies of all the people go out in unstinted measure to the sufferers. But here is a loss as real and as deplorable as any ever caused by flood or fire, a loss whose consequences, while not so apparent, are as destructive to national prosperity as the burning of ten cities, or the occurrence of one hundred and forty Johnstown disasters every year, and always to the people who can least afford it. Yet it passes almost wholly unheeded except by the sufferers.

A war that would take a million of men from industry and deprive the country of the production which would result from their labors would be regarded as a calamity of unsurpassable magnitude, yet a shrinkage in the volume of money relatively to population withdraws much more than that number from productive pursuits and, without the salutary discipline and restraints of military life, subjects them to conditions of which the unavoidable results are poverty and crime.

Imagine, Mr. President, the unhappiness, discontent, and even despair implied in the mere statement that 2,000,000 men are constantly out of employment, or, what amounts to the same thing, that three times that number are idle for four months in the year! Imagine what it means to the working people of this country to be deprived of the enormous sum of $1,400,000,000 a year.

But, aside from the effect on the individual, what benumbing consequences are entailed upon the nation by the idleness of so large a number of its people. The loss of the wealth which the labor of those men might have created is a loss never to be retrieved. When the money volume of a country is sufficient to keep prices from falling, and thus to encourage capital to seek productive enterprises, in which labor is employed, every willing man is kept at work, and no country can enjoy any higher degree of prosperity than when all its people are employed and the products of their labor are equitably distributed.

Much, I believe, of the prejudice against silver money arises from an idea, conscientiously entertained by many, that gold money has the greater "intrinsic value." I shall, therefore, Mr. President, at the risk of being a little abstruse, discuss that point.

MEANING OF VALUE.

No discussion of the subject of money can be intelligently conducted without a correct conception of the meanings attaching to the terms employed, for a misconception of those meanings is the root of much of the confusion and difficulty by which the subject is surrounded.

"Value" is a word which, of necessity, is more frequently used—and, I will add, more frequently misused and misunderstood—than any other employed in the discussion of economic science. Volumes have been written upon it, and yet, from the daily misapplication of the word in leading magazines and newspapers, it is evident that its meaning is very imperfectly understood.

The idea involved in the word "value" is so broad and pervasive that within the limits of a speech it would be impossible to discuss it in all its bearings. I shall not, therefore, at this time, do more than present what I conceive to be a basic definition of it.

Value is human estimation placed upon desirable objects whose quantity is limited and whose acquisition involves sacrifice. In order that an object may have value it must not only be the subject of human desire, but there must be a limitation of its quantity and its acquisition must demand a sacrifice from him who would obtain it. The term "intrinsic value" is used by many writers with a total disregard of the idea involved in the word *value*. An article may have estimable qualities that are intrinsic, but no article whatever can have intrinsic value. Its "value" is the mental estimation of its qualities, as modified by the limitations of its quantity and the amount of sacrifice necessary to obtain it. In other words, value is subjective, not objective. In economic discussion, however, value is treated as though it resided in the object, rather than in the mind, and while, for convenience, I may occasionally use it in that sense, it is important to bear in mind the distinction.

In that acceptation, value is usually divided into value in use and value in exchange. Certain esteemed qualities of an object may make it of great value in use; but unless its acquisition demand sacrifice it can have no value in exchange. It is only with this class of value that economists deal. No matter how important the intrinsic qualities of any article may be, if there be no limitation of its quantity and its acquisition requires no sacrifice, it can have no value in the sense in which the word "value" is used in political economy. The air has qualities inestimable to mankind; it must be regarded as incomparably the most useful of all the objects of human desire; yet it has no value because there is no limitation of its quantity. By reason of its universality and accessibility, air requires no sacrifice to get it. If, however, circumstances should render air limited in quantity it is conceivable that it might become of surpassing value. A man confined in the Black Hole of Calcutta would give a fortune for free access to air. So water, where freely obtainable, without sacrifice, although indispensable to life, has no value in the economic sense, no value in exchange. But when not so obtainable, as in populous cities, where sacrifice of time and labor would be necessary to obtain it from river, lake, or spring, people pay

for the convenience of having it in their homes. The indispensable prerequisites of value in all objects are utility—either actual or attributed—combined with limitation of quantity and the sacrifice necessary to be made in order to obtain it.

But value is not a property inhering in any article itself. It is not intrinsic. If the value were inherent or intrinsic it could not be taken away.

To illustrate: A generation ago the cradle with which wheat was harvested was said to possess intrinsic value. It was undoubtedly one of the most useful of all the articles needed by man. All that was then in that machine is in it still, yet the value is gone. Had the value been something that was intrinsic, had it resided in the object, and not in the mind, that cradle would still be worth all that it ever was. So, on the other hand, an article may possess most estimable qualities, but if those qualities are not known or recognized by the human mind the article will have no value.

A few years ago cotton seed had no value as an article of general commerce. To-day it is exceedingly valuable, because it has been found to possess estimable qualities not before suspected.

Indeed so strongly does the idea of value rest upon the estimation of the mind that it is not even necessary for an article to possess in reality any desirable quality whatever in order to have value. It will be sufficient if such quality is popularly attributed to it. Numbers of instances could be cited in which there was present no element of value except limitation of quantity, added to a mere belief or conception of the mind that the article had desirable qualities. Many will remember that a few years ago a herb called "cundurango" was introduced into this country from Central America. It was generally believed to possess healing qualities in cases of cancer, and so came to have great value. As soon as this popular illusion was dispelled the article ceased to have even the slightest value.

Land, being indestructible and irremovable, is believed to be the embodiment of the idea of intrinsic value. Take, then, a lot on Madison avenue, New York; it is worth perhaps a thousand times as much as a lot of equal size in a village remote from the city. What proportion of its high price is derived from what is called its greater "intrinsic" value? A lot on that fashionable thoroughfare has no intrinsic attribute or quality that is not equally the attribute or quality of the village lot. The difference in its value, or, more correctly, the difference in the estimation in which it is held, as compared with that attaching to the village lot, is derived wholly from circumstances that are extrinsic, not from qualities that are intrinsic.

The action of society in utilizing land in the neighborhood of the city lot by building up around it gives that lot a value greater than one of equal size elsewhere.

But in order that a thing may subserve a useful or beneficent purpose it is not necessary that the quality which enables it to subserve that purpose should be intrinsic or inherent in the thing itself.

To apply this reasoning to the subject under discussion, whatever intrinsic qualities the metal, gold, may possess, they confer no force whatever on gold-money.

WHAT IS MONEY?

The money of a country is that thing, whatever it may be, which is commonly accepted in exchange for labor or property and in payment of debts, whether so accepted by force of law or by universal consent. Its value does not arise from the intrinsic qualities which the material of which it is made may possess, but depends entirely on the extrinsic qualities which law or general consent may confer.

Money is of transcendent importance to civilization. It is the physical agency to which society has assigned the function of measuring all equities, and it is the sole agency upon which that incomparable function has been conferred. It is in terms of money that society computes the material value of all human sacrifice, alike the highest effort of genius and the daily toil and sweat of the millions who labor.

In order to measure equitably the natural and inevitable mutations in the value of other things, money should itself be of unchanging value. That is to say, any given amount of money should, so far as human foresight can regulate it, require at all times an equal amount of sacrifice for its acquisition. Thus, in the case of a contract made to-day, requiring the payment of a dollar twelve months hence, that dollar when due should exact from the debtor precisely that amount of sacrifice, and no more, which would be required had he paid the debt the day after contracting it.

No one will deny that the most important quality that money can possess is that it shall truthfully measure and state equities.

As I have shown by the figures heretofore cited, gold has risen in value between 30 and 40 per cent. since the demonetization of silver. It is not therefore so faithful a measure of value as is silver, which, as illustrated by a variety of examples, has maintained almost undisturbed its relation to commodities.

VALUE OF MONEY, AS SUCH, NOT IN THE MATERIAL, BUT IN THE STAMP—MONEY IS AN ORDER FOR PROPERTY AND SERVICES.

The logic of the situation and the reasoning of all the leading authorities on money lead irresistibly to the conclusion that its value does not reside in the material, but in the stamp; in other words, on the legal-tender function impressed on that material. It is an order for property and services.

Aristotle, writing of money, says:

Money by itself * * * has value only by law, and not by nature; so that a change of convention between those who use it is sufficient to deprive it of all its value and power to satisfy all our wants.

And again he says:

But with regard to a future exchange (if we want nothing at present) money is, as it were, our security that it may take place when we do want something.

John Locke, in Considerations, etc., Regarding Money, published in 1691, says:

Mankind, having covenanted to put an imaginary value upon gold and silver, by reason of their durableness, scarcity, and not being very liable to be counterfeited, have made them, by general consent, the common pledges, whereby men are assured, in exchange for them, to receive equally valuable things to those they parted with, for any quantity of those metals; by which means it comes to pass that the intrinsic value regard in those metals, made the common barter, is nothing but the quantity which men give or receive of them, they having, as money, no other value but as pledges to procure what one wants or desires.

Bandeau, reputed one of the most eminent of an early school of French economists, says:

Coined money in circulation is nothing, as I have said elsewhere, but effective titles on the general mass of useful and agreeable enjoyment which cause the well-being and propagation of the human race.

It is a kind of a bill of exchange or order payable at the will of the bearer.

Adam Smith says:

A guinea may be considered as a bill for a certain quantity of necessaries and conveniences upon all the tradesmen in the neighborhood.

Jevons's Money and Exchanges, chapter 8, says:

Those who use coins in ordinary business need never inquire how much metal they contain. Probably not one person in two thousand in this kingdom knows, or need know, that a sovereign should contain 123.27447 grains of standard gold.

Money is made to go. People want coin, not to keep in their own pockets, but to pass it off into their neighbors' pockets.

Henry Thornton, in his work on Paper Credit, says:

Money of every kind is an order for goods. It is so considered by the laborer when he receives it, and it is almost instantly turned into money's worth. It is merely the instrument by which the purchasable stock of the country is distributed with convenience and advantage among the several members of the community.

John Stuart Mill says:

The pounds or shillings which a person receives are a sort of ticket or order which he can present for payment at any shop he pleases and which entitle him to receive a certain value of any commodity that he makes choice.

McLeod, Elements of Banking, Chapter I, says:

When persons take a piece of money in exchange for services or products, they can neither eat it, nor drink it, nor clothe themselves with it. The only reason why they take it is because they believe they can exchange it away whenever they please for other things which they require.

On that view of money McLeod feels justified in styling it credit, and he quotes, in support of such a use of the term credit, Burke's description of gold and silver as "the two great recognized species that represent the lasting conventional credit of mankind."

Prof. Francis A. Walker, Money, Trade, etc., page 25, speaking of carved pebbles, glass beads, shells, and red feathers, used as money in certain countries at certain times, says:

They were good money, though serving no purpose but ornament and decoration. They were desired by the community in general; men would give for them the fruits of their labor, knowing that with them they could obtain most conveniently in time, in form, and in amount the fruits of the labor of others.

On page 30 he says:

Men take money with the expectation of parting with it; this is the use to which they mean to put it.

Again, Mr. Walker says:

Money is that which passes freely from hand to hand throughout the community, in final discharge of debts and full payment for commodities, being accepted equally without reference to the character or credit of the person who offers it, and without the intention of the person who receives it to consume it, or enjoy it, or apply it to any other use than, in turn, to tender it to others in discharge of debts or payment for commodities.

Even Bonamy Price, who is wedded to the gold standard, in his Principles of Currency, says:

Gold, in the form of money or coin, is not sought for its own sake, as an article of consumption. It must never be regarded as valuable except for the work it performs, so long as it remains in the state of coin. It can be converted at pleasure into an end, into an article of consumption, by being sold; till then it is a mere tool.

How many people ever so "convert" it that earn it?

The great philosopher, Bishop Berkeley, one of the most acute reasoners, in my judgment, that modern times have produced, in The Querist, published in 1710, propounds the following pertinent and suggestive questions:

Whether the terms "crown," "livre," "pound sterling," etc., are not to be considered as exponents, or denominations? And whether gold, silver, and paper are not tickets or counters for reckoning, recording, or transferring such denominations? Whether, the denominations being retained, although the bullion were gone, things might not nevertheless be rated, bought, and sold, industry promoted and a circulation of commerce obtained?

Dugald Stewart, professor of moral philosophy in the University of Edinburgh, in his Lectures on Political Economy (Part I, Book II), said:

When gold is converted into coin, its possessor never thinks of anything but its exchangeable value, or supposes a coffer of guineas to be more valuable because they are capable of being transferred into a service of plate for his own use.

Why then should we suppose that, if the intrinsic value of gold and silver were completely annihilated, they might not still perform, as well as now, all the functions of money, supposing them to retain all those recommendations (durability, divisibility, etc.) formerly stated, which give them so decided a superiority over everything else which could be employed for the same purpose?

Supposing the supply of the precious metals at present afforded by the mines to fail entirely the world over, there can be little doubt that all the plate now in existence would be gradually converted into money, and gold and silver would soon cease to be employed in the ornamental arts. In this case a few years would obliterate entirely all trace of the intrinsic value of these metals, while their value would be understood to arise from those characteristical qualities (divisibility, durability, etc.) which recommend them as media of exchange. I see no reason why gold and silver should not have maintained their value as money, if they had been applicable to no other purposes than to serve as money. I am therefore disposed to think, with Bishop Berkeley, whether the true idea of money, as such, be not altogether that of a ticket or counter.

Appleton's Cyclopedia, defining money, says:

Anything which freely circulates from hand to hand, as a common acceptable medium of exchange in any country, is in such country money, even though it ceases to be such, or to possess any value in passing into another country. In a word, an article is determined to be money by reason of the performance by it of certain functions, without regard to its form or substance.

BASTIAT'S DESCRIPTION OF THE CROWN PIECE.

Bastiat, in his Harmonies économiques, describing money, used the following illustration:

You have a crown piece. What does it mean in your hands? If you can read with the eye of the mind the inscription it bears, you can distinctly see these words: Pay to the bearer a service equivalent to that which he has rendered to society. Value received and stated, proved and measured by that which is on me.

No words could more correctly describe the unit in a properly regulated system of money. And, notwithstanding the attempt to discredit silver coinage, no piece of money, as I have already shown, would better answer, by its steadiness of value, this description of Bastiat's than would the American silver dollar if silver were remonetized.

So far as it applied to gold Bastiat's description was much nearer accuracy in his day than it is in ours. In his life-time the mints of France and of the Continent were open for the coinage of silver equally with gold, and the money supply of the world was not constantly narrowing by being limited to the yield of a single metal whose annual output would hardly more than meet the demand for the arts.

Were Bastiat alive at this time he would reform his description so as to make it read as follows: "You have an American gold piece. You have had it hoarded in a bank vault for fifteen years. What does it mean in your hands? If you can read with the eye of the mind the inscription it bears, you can distinctly see these words: 'Pay to the bearer 50 per cent. more service than he has rendered to society; value not received or stated on me, but resulting from a cunning manipulation of the law of legal tender, through the influence of the holders of gold and of obligations payable therein, and as a reward to the bearer for having had this money hid away and for depriving society of its use for seventeen years.'"

When people are found everywhere working for money and not for the things which they really need, it is clear that they are working for money, not because of the material of which it is composed, but because it is an order for property which they can at any time obtain by parting with the money. To modify and elaborate Bastiat's description of the crown piece, it might be said of the money unit of the United States under a properly regulated system:

"You have a dollar. What does it mean in your hands? If you can read with the eye of the mind the inscription it bears, you can distinctly see these words: To all to whom this may come: Greeting. This is a dollar—a unit of money—part of the great instrumentality created by society to effect the multitudinous exchanges of property and services among men. The amount of its command is constant, because the increase in the volume of money is regulated by the sovereign authority of the nation, with strict regard to the increase of population and demand; hence the value of this unit remains unchanging through time. It is an order for all property on sale and all services for hire, the proportionate amount of such property and service to which its possessor is entitled being fixed by the universal competition to get it."

GRESHAM'S LAW.

Many persons fear an outflow of gold from the operation of what is known as "Gresham's law," namely, that "bad money will expel good." Sir Thomas Gresham, a financier of Elizabeth's time, stated that if a number of the gold or silver coins of any given denomination were deprived of part of their pure metal, and so made cheaper than the remainder, a successful circulation of the coins thus deprived would result in the melting up or exportation of the coins of standard weight. Writing of this, Mr. Jevons (Money and the Mechanism of Exchange, American edition, page 84) says:

Gresham's remarks concerning the inability of good money to drive out bad only referred to moneys of one kind of metal. * * * The people, as a general rule, do not reject the better, but pass from hand to hand indifferently the heavy and the light coins, because their only use for the coin is as a medium of exchange. It is those who are going to melt, export, hoard, or dissolve the coins of the realm, or convert them into jewelry and gold leaf, who carefully select for their purposes the new, heavy coins—

And avoid the light or abraded coins.

There is, however, a theorem which applies to all money, but which was recognized long before Gresham's time, although it has been erroneously called an "extension" of the law or theorem of Gresham.

That theorem is this: If, in any country, there are two forms of money, each of which is a full legal tender and one of which can be obtained with less sacrifice than the other, the one requiring the less sacrifice will be the cheaper, and if the unit of that cheaper money will perform in every respect the same function in the payment of debts and settlement of all obligations that can be performed by the dearer money, then, for obvious reasons, the cheaper money will come into universal use and the dearer money will disappear. But it does not follow that the cheaper money is bad money nor the dearer money good money.

The best money is always the money of the contract, that is to say a money whose dollar, whatever it may be made of, is equal in value to the dollar of the contract. If the money of the contract is the cheapest money, then that is the best money, that is the honest money, and that is the only tolerable money.

If that be the sort of "cheap" money that drives out the dear money, then manifestly the dear money is bad money.

A distinguished official of the Government, who was before a committee of this body the other day, insisted that the proposed Treasury notes should be redeemed in the "best money." I asked him what was the "best money." "Why," he said, "the money that is worth the most." Now, it strikes me, Mr. President, that if you have borrowed a dollar and, through a badly regulated money-system, are made to pay a dollar worth 25 per cent. more than the dollar you borrowed, you are not paying the best money, but the worst money; not an honest dollar, but a swindling and dishonest dollar.

CREDITORS' DEMAND FOR THE "BEST MONEY."

The creditors tell us that all they want is "good money." They and their friends glibly insist that all obligations must be paid in "the best money." This is the delicate and plausible euphemism resorted to in order to gloss over and, if possible, hide from the world the odious and repulsive fact that what the creditors always want is the *dearest* money, the money that costs the people the most sweat and toil to obtain and which, as time passes, grows dearer and dearer.

This cry for "the best money" is at last beginning to be recognized for what it is: the cunning device of creditors to "catch the conscience" of the people and play upon the sense of fairness that characterizes the great mass of mankind. These interested parties affect to believe that gold is, by nature, the only money metal, ignoring the fact that until silver was displaced by hostile legislation it was and for four thousand years had been the principal money metal of the world. But they will no longer be permitted to hide their sinister purpose under the cloak of a demand for the "best money." The masses of the people are aroused on this subject and are beginning to understand it.

According to all fair canons of construction the best money should be and is a money of unchanging value, a money that exacts from the debtor the same amount of sacrifice that he bargained for, and which is all that the creditor is equitably entitled to receive. In other words, the money of the contract, not a money whose exactions are increasing at the rate of 2 per cent. per annum. As McCulloch says, debts being stated in dollars and cents, it is not possible for the creditor openly to augment his debtor's obligation by changing the figures of the debt.

But, Mr. President, while they can not change the figures of the debt, they are enabled, by a crafty manipulation of the money-volume, to do that which, to the debtor, means the same thing, as the following story will illustrate:

A usurer of the coarser type had lent $10,000 on a neighboring farm, for which amount he took the farmer's note, secured by a mortgage on the property. He coveted the farm, and in his anxiety to secure it took his banker into his confidence. He informed the banker that he wanted to get possession of this farm, but it would bring $15,000 under the hammer and he did not care to pay so much for it. "I have a subtle chemical," said he, "by which I can obliterate from the note and mortgage all trace of the rightful amount ($10,000), and, that done, I can insert $15,000. Then, with the genuine signatures on the note and mortgage I can bring suit, and as the farm will not bring more than the face of the note I shall succeed to the property."

His friend, the banker, however, advised against this course, which he characterized as not only dishonest, but vulgar, and as subjecting the perpetrator of the act to serious penalties. "Honesty" said the banker, "is the best policy." "But," he continued, "I can suggest a plan by which you may accomplish the same end without running counter to law or the views of society. Why not join our propaganda in advocacy of 'honest money.' Gold is decreasing in quantity, and as the world has been ransacked for it in vain it is likely to continue decreasing. If we can strike down the twin metal, silver, and devolve the entire money function on gold, it will double the purchasing power of money. Then the foreclosure of your mortgage will be sure to take your neighbor's farm, and probably leave him in your debt besides. Instead of being punished for this, you will receive the plaudits of the 'best society' for the *finesse* you have displayed and the firm stand you have taken in favor of honest

money, and you will take high rank among 'the wisest and most conservative of our financiers.' If your neighbor makes any objection to your action, you may be able to secure his incarceration as a lunatic, but, if not, he will come to be regarded in the community as a dishonest 'crank' who wishes to pay his debts in a depreciated money; for it is the constant and assiduous care of our guild to teach that only the dearest money, that which is the most difficult for the laborer, the farmer, and the mechanic to get, is honest money, and the dearer it is the more honest it is."

ALL MONEY SHOULD BE LEGAL TENDER.

To be of the fullest service to civilization whatever medium is used to do the work of money should have full money power; that is to say, it should be a legal tender. It is not sufficient that it will satisfy the demands of the Government for taxes.

Whatever is given out by the Government in payment for services rendered (and there is no other way by which payments can be made from the Treasury) should carry with it to him, who has rendered the service and receives the payment, the absolute assurance that in any need or in any contingency it will serve him as money. There is no other means by which society can be saved from the effects of panics and monetary crises.

With a watchful and intelligent regulation of the money volume and with the legal-tender function attached to everything that is in use as money and doing the money work, so that it will serve as a universal solvent, panics will be impossible. Under present conditions when panics come, credit money—money not endowed with the legal-tender function, which, under ordinary circumstances, has always been accepted—is refused, and thousands of millions of dollars' worth of property has been confiscated by creditors, because of the scarcity of legal-tender money. As time advances and the method of doing business on credit becomes more and more extended, the more palpable it becomes that society can preserve itself from these periodical convulsions only by broadening, under proper regulation, the legal-tender basis on which, in the ultimate analysis, all business rests.

MONEY A MEASURE OF VALUE.

There is nothing upon which the prosperity and happiness of a people so much depend as on the integrity of their measure of values.

It is universally admitted that, after the making of a contract requiring future delivery of a specified number of pounds, bushels, or yards of any commodity, it would be subversive of all equity and justice to change the capacity of the measure constituting the foundation of the contract. These measures, to be just, must remain unchanged. But how infinitely more important is it that money, which is the measure of all other measures, should itself be unchanged. Of what avail is it that the subordinate measures remain intact while this, the supreme measure, into which all others are finally resolved, is constantly changing? Its "value" is but another name for its purchasing or measuring power. In the case of all time contracts, therefore, any change in the value of money works a destruction of equity, and one of the first objects of society should be to maintain and enforce equities at all times and in all places. This, so far as money can effect it, can only be done by an intelligent regulation of the volume in circulation.

In a note to his edition of Adam Smith's Wealth of Nations, (page 502) Mr. J. R. McCulloch says:

> Money is not a mere commodity, it is also the standard or the measure by which to estimate and compare the value of everything else that is bought and sold, and if it be, as it undoubtedly is, the duty of Government to adopt every practicable means for rendering all foot-rules of the same length and all bushels of the same capacity, it is still more incumbent upon it to omit nothing that may serve to render money, or the measure of value—a measure which is undoubtedly of the greatest importance—uniform or steady in its value.

Though a measure of value, money is a much more complicated instrument than a yard-stick, pound weight, or bushel. Were it not so, a child could fix value with the same precision as an adult.

As value resides in human estimation, it will frequently vary as to the same object. An intending purchaser may have one notion of the value of an article, an intending seller another. Money, therefore, is a measure of value in the sense that it is a measure of the average human judgment—from which results price. As Mr. McCulloch says, no means known to science or art should be left untried to keep the value of money unchanging.

When a man promises to deliver money or makes any time contract, he makes a mental calculation as to what amount of property or of the product of his labor will enable him to meet his engagement. If he be a farmer, raising wheat, there passes through his mind the thought of the sacrifice and toil necessary to raise it and the quantity he can raise; if a cotton manufacturer, the cost of spindles, of looms, and steam-engines, the wages of labor, and interest on plant.

I knew a cotton manufacturer who wanted $10,000. His business was good. He was sober, honest, and industrious, had a thorough knowledge of his trade, managed his employés himself, and took the greatest pains to conduct his business on the strictest business principles. He wanted the money to make some improvements in his factory. He knew how many spindles and looms he had, how much could be done with a pound of cotton, how much it cost, and how much each spindle and loom would do. He said to a capitalist, "I know all about cotton spinning and weaving, and do not know anything about this thing called money, but I want $10,000 of it." Said he, "My cloth is worth 10 cents a yard; it sells at that rate in unlimited quantities by wholesale; nobody can make it any cheaper; but I am not working a gold mine; I am not manufacturing legal-tender paper money, and the only way I can get money is to swap my cotton cloth for it. I will give you my note for 100,000 yards of cotton cloth, which will be equal to $10,000, and will pay 2 inches a yard each year as interest."

This was satisfactory to the capitalist, and the note was made, signed, and delivered accordingly, and the improvements were made in the factory.

During the year everything went smoothly; the spindles and looms worked well, repairs to machinery were light; cotton had been bought at proper rates; and no improved processes had been discovered or applied in the production of cotton-cloth. There was no hitch in any direction.

At the appointed time, the creditor called for his cloth. "I am ready," said the debtor, "to pay the hundred thousand yards of cotton cloth, with interest." When he came to measure it off, however, he was astounded to find he was short. Some painful suspicions crossed his mind. It seemed as though somebody had either robbed him of cloth or else he had not manufactured as much of it as he had supposed. There did not seem to be so many yards of the cloth as there ought to be. He knew he had used the same number of pounds of cotton that it had been his custom to use for 100,000 yards of cloth and for 200,000 inches of cloth in addition; still, there was no denying the fact of the shortage.

He measured it again and again, and had finally to admit that he was unable to keep his engagement. This was a source of great distress to him. He could not sleep that night. But, the creditor being importunate, the cotton manufacturer next morning borrowed enough cloth from the proprietor of a neighboring factory and paid his obligation. But, not understanding how his carefully made plans had failed and in order to avoid similar mistakes in the future, he had an examination made of the yard-stick and found that instead of being 36 inches long the yard-stick he had used was 40 inches.

In talking the matter over with his neighbor, the cotton manufacturer said: "I have been swindled; they 'rung in' on me a lengthened yard-stick, by the measurement of which I have paid my debt, and I have therefore paid in reality more than I contracted to pay."

"Well," said the friend, "I do not see that you are any worse off than I am. I borrowed as much as you did and at the same time; but I agreed to pay my debt in money, and gave my note for $10,000 with interest. The increased command over cloth acquired by the dollars I have had to pay, caused by the demonetization of silver, has juggled me out of as much cloth as you have been juggled out of by the lengthened yard-stick. But you have one recourse; you can put into the penitentiary the man who 'rung in' the lengthened yard-stick on you, while the increase in the value of the dollar which I have paid has been effected in the name of the gold standard and honest money, and leaves me without recourse."

In its ultimate analysis, money is the yard-stick, the bushel, and the pound weight of commerce.

When you shrink the volume of money and so increase the measuring power of the dollar, you lengthen the yard-stick, enlarge the specific gravity of the pound and the cubical content of the bushel, in violation of all equities.

It is utterly impossible to secure a proper regulation of the money volume with gold alone, the yield of which has declined from an average of $130,000,000 a year between 1851 and 1873 to $105,000,000 a year between 1873 and 1889.

VALUE OF MONEY FIXED BY THE COMPETITION TO GET IT.

Everbody admits that the value of all other things is regulated by the play against each other of the forces of supply and demand. No reason has been or can be given why the value of the unit of money is not subject to this law.

WHAT IS THE DEMAND FOR MONEY?

The demand for money is equivalent to the sum of the demands for all other things whatsoever, for it is through a demand first made on money that all the wants of man are satisfied. The demand for money is instant, constant, and unceasing and is always at a maximum. If any man wants a pair of shoes or a suit of clothes, he does not make his demand first on the shoemaker or clothier. No man except a beggar makes a demand directly for food, clothes, or any other article. Whether it be to obtain clothing, food, or shelter—whether the simplest necessity or the greatest luxury of life—it is on money that the demand is first made. As this rule operates throughout the entire range of commodities it is manifest that the demand for money equals at least the united demands for all other things.

While population remains stationary, the demand for money will remain the same. As the demand for one article becomes less, the demand for some other which shall take its place becomes greater. The demand for money therefore must ever be as pressing and urgent as the needs of man are varied, incessant, and importunate.

WHAT IS THE SUPPLY OF MONEY?

Such being the demand for money, what is the supply? It is the total number of units of money in circulation (actual or potential) in any country.

The force of the demand for money operating against the supply is represented by the earnest, incessant struggle to obtain it. All men, in all trades and occupations, are offering either property or services for money. Each shoemaker in each locality is in competition with every other shoemaker in the same locality, each hatter is in competition with every other hatter, each clothier with every other clothier, all offering their wares for units of money. In this universal and perpetual competition for money, that number of shoemakers that can supply the demand for shoes at the smallest average price (excellence of quality being taken into account) will fix the market value of shoes in money and, conversely, will fix the value of money in shoes. So with the hatters as to hats, so with the tailors as to clothes, and so with those engaged in all other occupations as to the products respectively of their labor.

NO ALTERNATIVE FOR MONEY.

The transcendent importance of money and the constant pressure of the demand for it may be realized by comparing its utility with that of any other force that contributes to human welfare.

In all the broad range of articles that, in a state of civilization, are needed by man, the only absolutely indispensable thing is money. For everything else there is some substitute, some alternative; for money there is none. Among articles of food, if beef rise in price, the demand for it will diminish, as a certain proportion of the people will resort to other forms of food. If, by reason of its continued scarcity, beef continue to rise, the demand will further diminish, until finally it may altogether cease and center on something else. So in the matter of clothing. If any one fabric become scarce, and consequently dear, the demand will diminish, and, if the price continue rising, it is only a question of time for the demand to cease and be transferred to some alternative.

But this can not be the case with money. It can never be driven out of use. There is not and there never can be any substitute for it. It may become so scarce that one dollar at the end of a decade may buy ten times as much as at the beginning; that is to say, it may cost in labor or commodities ten times as much to get it, but at whatever cost the people must have it. Without money the demands of civilization could not be supplied.

Money was the most potent instrumentality in the evolution of society from a low to a high plane of civilization. It is valueless to man in isolation. It is indispensable to man in organized society. It is as necessary for the proprietary distribution of wealth as railroads and steamships are to its physical distribution. The aggregate force of the demand for money in any country depends upon the numbers of the population; with a stationary population the demand is steady; with an increasing population the demand increases; and in order to maintain undisturbed the equation of supply and demand the volume of money should be increased in at least a ratio corresponding to that of the increase of population.

There are certain circumstances that to some extent disturb the relations between population and money supply, such as the broadening of the areas of population and the multiplication of money centers. These circumstances might render necessary a larger percentage of increase in the money volume than would be indicated by the increase of the population.

But under any circumstances the smallest money-increase that will suffice to maintain the equity of time contracts is an increase corresponding to the increase of numbers of the population.

Under conditions of unvarying demand and unvarying supply the value of the unit of money would be unvarying. If, as population and demand increase, the supply of money be proportionately increased, there is no possibility of a change in the value of the unit of money.

The constant and unceasing effort to exchange services and all forms of property, which have but limited command over the objects of human desire, for money, that sole instrumentality that has unlimited command over such objects, is and ever will be eager, intense, and unwavering.

With population and consequent demand rapidly increasing how do the advocates of the gold standard expect to increase the money volume of the country in this proportion, while the yield of gold, instead of increasing in proportion to demand, is every day becoming less and less capable of meeting the requirements of the arts alone?

THE QUANTITY OF MONEY IN CIRCULATION SHOULD INCREASE IN A RATIO NOT LESS THAN THE RATIO OF INCREASE OF POPULATION.

It will be admitted that if the population of a country be increased by any given percentage there will be a proportionate increase in the demand for all articles that supply human needs. If the population increases by 3 per cent., there will be needed 3 per cent. more house-room, 3 per cent. more furniture, 3 per cent. more food, 3 per cent. more of all things that enter into consumption. These things can only be got by a demand first made on money. Then why not 3 per cent. more money?

The present monetary circulation of this country, including gold, silver, and paper, is represented to be $1,700,000,000. As our population doubles in thirty years, the rate of increase is 3½ per cent.

If the money volume be not increased by a proportion at least as great as this, the true relation between the supply of money and the demand for it will not be maintained. The demand increasing as the population increases, while the supply either does not increase at all or increases in a degree incommensurate with the demand, the money volume shrinks and the purchasing power of the unit becomes greater by reason of the increased keenness of competition to get it. This is but another mode of stating that the prices of all products of human labor decline. Prices falling, business ceases to be profitable, stores and work-shops close, and men are relegated to idleness.

QUANTITATIVE THEORY OF MONEY—THE VALUE OF EACH DOLLAR DEPENDS ON THE NUMBER OF DOLLARS OUT.

Thus by the universal competition to get it the value of the dollar is made to depend upon the number of dollars that are out. This is a principle that lies at the very foundation of the science of money. The law, stated broadly, is that the value of each unit of money in any country at any given time depends on the whole number of units in circulation in that country. The larger the number of units out, population remaining the same, the less must be the value of each unit; the smaller the number of units out, population remaining the same, the greater the value of each.

Notwithstanding the variance sometimes found between the premises and the conclusions of economic writers, there is no economist of repute who does not admit this to be a fundamental principle.

On the theory I have propounded, therefore, 3½ per cent. of $1,700,000,000, or $56,000,000, is the minimum amount of money that should be added to the currency of this country during the present year.

Assuming the population of to-day to be 65,000,000 and the ratio of its annual increase 3½ per cent., the population of next year will be 67,166,600. The percentage of monetary increase to be provided for that year should therefore be based on the increased number. And so on for each succeeding year.

I have thought best to collate a variety of citations from the most distinguished authorities on financial economy to support my contention that, *cæteris paribus*, the value of each dollar depends on the number of dollars in circulation.

John Locke, in his Considerations, etc., published in 1690, said:

Money, while the same quantity of it is passing up and down the kingdom in trade, is really a standing measure of the falling and rising value of other things in reference to one another, and the alteration in price is truly in them only. But if you increase or lessen the quantity of money current in traffic in any place, then the alteration of value is in the money.

Locke further said:

The value of money in any one country is the present quantity of the current money in that country, in proportion to the present trade.

The historian, Hume, says:

It is not difficult to perceive that it is the total quantity of the money in circulation, in any country, which determines what portion of that quantity shall exchange for a certain portion of the goods or commodities of that country.

It is the proportion between the circulating money and the commodities in the market which determines the price.

Fichte says:

The amount of money current in a state represents everything that is purchasable on the surface of the state. If the quantity of purchasable articles increases while the quantity of money remains the same, the value of the money increases in the same ratio; if the quantity of money increases while the quantity of purchasable articles remains the same, the value of money decreases in the same ratio.

James Mill, in his treatise on political economy, says:

And again, in whatever degree, therefore, the quantity of money is increased or diminished, other things remaining the same, in that same proportion the value of the whole, and of every part, is reciprocally diminished or increased.

John Stuart Mill (Political Economy) says:

The value of money, other things being the same, varies inversely as its quantity, every increase of quantity lowering the value and every diminution raising it in a ratio exactly equivalent.

And again:

Alterations in the cost of the production of the precious metals do not act upon the value of money, except just in proportion as they increase or diminish its quantity.

Ricardo (reply to Bosanquet) says:

The value of money in any country is determined by the amount existing. * * * That commodities would rise or fall in price in proportion to the increase or diminution of money, I assume as a fact that is incontrovertible.

Ricardo further says:

There can exist no depreciation in money but from excess; however debased a coinage may become, it will preserve its mint value; that is to say, it will pass in circulation for the intrinsic value of the bullion which it ought to contain, provided it be not in too great abundance.

In this case Ricardo's illustration is the supposed case of a country actually using one million gold pieces each containing 100 grains. He maintains that they would be of the same purchasing power, if the Government took out 1 grain, or even 50 grains, the quantity remaining the same, but that if, from the grains so deducted, an additional number of pieces were struck, a corresponding depreciation would result.

William Huskisson (The Depreciation of the Currency, 1819) says:

If the quantity of gold in a country whose currency consists of gold should be increased in any given proportion, the quantity of other articles and the demand for them remaining the same, the value of any given commodity measured in the coin of that country would be increased in the same proportion.

Sir James Graham says:

The value of money is in the inverse ratio of its quantity, the supply of commodities remaining the same.

Torrens, in his work on Political Economy, says:

Gold is a commodity governed, as all other commodities are governed, by the law of supply and demand. If the value of all other commodities, in relation to gold, rises and falls as their quantities diminish or increase, the value of gold in relation to commodities must rise and fall as its quantity is diminished or increased.

Wolowski says:

The sum total of the precious metals is reckoned at 50 milliards, one-half gold and one-half silver. If, by a stroke of the pen, they suppress one of these metals in the monetary service, they double the demand for the other metal, to the ruin of all debtors.

Cernuschi says:

The purchasing power of money is in direct proportion to the volume of money existing.

Prof. Francis A. Walker, in his work on Money (page 57), says:

The value of money in any country is determined by the amount existing.

Its [money's] power of acquisition depends not on its substance, but on its quantity. [Paulus, author of the Pandects, sixth century.]

Professor De Colange, in the American Cyclopedia of Commerce, article on "Money," says:

The rate at which money exchanges for other things is determined by its quantity. * * *

Supposing the amount of trade and mode of circulation to remain stationary, if the quantity of money be increased, its value will fall and the price of other commodities will proportionally rise, as the latter will then exchange against a greater amount of money; if, on the other hand, the quantity of money be reduced, its value will be raised, and prices in a corresponding degree diminished, as commodities will then have to be exchanged for a less amount of money. * * *

In whatever degree, therefore, the quantity of money is increased or diminished, other things remaining the same, in that same proportion the value of the whole and of every part is reciprocally diminished or increased.

A curtailment of the volume of money in a country will, *cæteris paribus*, increase the value of the money of that country. All the authorities agree that this law applies to all forms of money, whatever the material; so that it applies to paper money with precisely the same force that it applies to metallic money.

Mr. Stanley Jevons, in his work on Money and the Mechanism of Exchange, says:

There is plenty of evidence to prove that an inconvertible paper money, if carefully limited in quantity, can retain its full value. Such was the case with the Bank of England notes for several years after the suspension of specie payments in 1797 and such is the case with the present notes of the Bank of France.

Mr. Gallatin said:

If, in a country which wants and possesses a metallic currency of seventy millions of dollars, a paper currency to the same amount should be substituted, the seventy millions in gold and silver, being no longer wanted for that purpose, will be exported, and the returns may be converted into a productive capital, and add an equal amount to the wealth of the country.

In his Proposal for an Economic and Secure Currency Ricardo says:

A well regulated paper currency is so great an improvement in commerce that I should greatly regret if prejudice should induce us to return to a system of less utility. The introduction of the precious metals for the purposes of money may with truth be considered as one of the most important steps toward the improvement of commerce and the arts of civilized life; but it is no less true that with the advancement of knowledge and science we discover that it would be another improvement to banish them again from the employment to which, during a less enlightened period, they had been so advantageously applied.

Mr. J. R. McCulloch, in commenting on the principles of money laid down by Ricardo, says:

He examined the circumstances which determine the value of money * * * and he showed that * * * its value will depend on the extent to which it may be issued compared with the demand. This is a principle of great importance, for it shows that intrinsic worth is not necessary to a currency, and that, provided the supply of paper notes, declared to be a legal tender, be sufficiently limited, their value may be maintained on a par with the value of gold or raised to any higher level. If, therefore, it were practicable to devise a plan for preserving the value of paper on a level with that of gold, without making it convertible into coin at the pleasure of the holder, the heavy expense of a metallic currency would be saved.

It appears, therefore, that, if there were perfect security that the power of issuing paper money would not be abused—that is, if there were perfect security for its being issued in such quantities as to preserve its value relatively to the mass of circulating commodities nearly equal—the precious metals might be entirely dispensed with, not only as a circulating medium, but also as a standard to which to refer the value of paper.

In adopting a paper circulation—

Says Lord Overstone—

we must unavoidably depend for a maintenance of its due value upon the adoption of a strict and judicious rule for the regulation of its amount.

Lord Overstone further declared that—

The value of the paper currency results from its being kept at the same amount the metallic currency would have been.

Alexander Baring, in his evidence before the secret committee of the House of Lords in 1819, said:

The reduction of paper would produce all those effects which arise from the reduction in the amount of money in any country.

Prof. F. A. Walker says:

Let me repeat, money is to be known by its doing a certain work. Money is not gold, though gold may be money; sometimes gold is money and sometimes it is not. Money is no one thing, no group of many things having any material property in common. On the contrary, anything may be money; and anything, in a given time and place, is money which then and there performs a certain function. Always and everywhere that which does the money-work is the money-thing.

Sir Archibald Alison says:

The suspension of specie payment in 1797, making bank notes a legal tender receivable for taxes, by providing Great Britain with an adequate internal currency, averted the catastrophe then so general upon the Continent, and gave it at the same time an extraordinary degree of prosperity. Such was the commencement of the paper system in Great Britain, which ultimately produced such astonishing effects and brought the struggle [of the Napoleonic wars] to a triumphant close.

TRUE MONEY STANDARD.

The true money standard of any country is not the material of which the money is made. The standard is not a concrete object, but a numerical relation. It is the relation between the number of units composing the monetary circulation of the country and the numbers of the population.

It is the legal-tender function that constitutes money. It is the power which the law imparts to any material to pay debts and liquidate obligations. It can not for a moment be doubted that the money function, being conferred by the supreme authority, is the all-sufficient guaranty of the money value. There is no necessity for re-enforcing that value with any inferior value that may attach to the material on which the money stamp is placed. The money function is immeasurably the most important that can be conferred by society upon any material, and it is absurd to urge that that function is not of itself sufficient for the maintenance of the value of money. All the value that money can possibly have—the totality of value that can exist in the shape of money in any country—will attach to anything upon which the sovereign authority stamps it, whether the material on which the stamp is placed be gold, silver, paper, or anything else. Legislators or executive officers of the Government, by increasing or decreasing the volume of money, correspondingly decrease or increase the value of each unit of that money; for, no matter how many or how few the units may be, the total value of the money of the country will be comprised within the total number of those units. A change in the number of the units effects a proportionate change in the value of each unit, and, whatever the value of the unit may be, it is of the utmost importance that that value should remain undisturbed.

It is absurd to maintain that a gold unit, which, as time goes on, is constantly increasing in purchasing power, is a better unit than a unit of any other material that maintains unchanging value through time.

Whenever the business of the country accommodates itself to a given number of units, the only question for the Government to to deal with is to maintain that value as free from disturbance as possible; and according to all authorities on political economy that can only be done by increasing or decreasing the number of units in circulation in accordance with the demands of increasing or decreasing population.

If it be admitted that one of the most important offices of government is to see that the equities are preserved between its citizens (and, if this be not so, to what purpose are our courts of equity instituted?), then it can not be denied that it is one of the highest offices of government to see that money, which measures all equities and which must for all time continue to be the principal measure in the service of civilized society, shall be of unchanging value. It is impossible to secure this characteristic of uniformity in the value of money if we are to select as the only material on which to stamp the money function a substance whose yearly production is becoming more and more limited and the prospect of whose sufficient yield becomes less and less encouraging.

IF SILVER REMAIN DEMONETIZED AND GOLD CONTINUE INCREASING, WHERE IS THE WORLD'S FUTURE MONEY SUPPLY TO COME FROM?

If the distinguished authorities I have quoted are correct, that a diminution of the volume of money increases the value of the money unit—which is but another form of stating that it lowers prices and produces stagnation, distress, and discontent—what good reason can be offered by the advocates of the gold standard for confining the business of this rapidly growing country to a basis of gold, when it is well known that the entire stocks of gold and silver together are now insufficient to serve the purpose of the world's money and have to be supplemented and re-enforced by large issues of paper notes? Do they not reflect that the production of gold is constantly diminishing and is likely to continue to diminish? And do they not know that our population is growing at the rate of over 3 per cent. per annum and will double in thirty years? Do they mean that the money volume which serves a population of 65,000,000, and is far below the needs of that population, will suffice for the 130,000,000 of the next generation? To be sure, if we are to take no note of prices, the question is a simple one.

But prices must be taken into account. The entire money question is one of prices. When it is said that money is scarce, what is meant is that business is depressed and that money is difficult to get at the present range of prices. Should prices fall 25 per cent. money would be found plentiful enough to conduct exchange at the lower range. But when prices fall goods sell below cost, business is unprofitable, workshops are closed, and men are thrown into idleness. If lowering prices do not affect injuriously either the business or the prosperity of the country, then it makes no difference what the volume of money may be; a small amount will meet the requirements as well as a large amount. In that case, the gold standard is as good as any.

But if gold alone is sufficient to bear all the enormous monetary burdens of the Western world, why do the advocates of the gold standard admit the necessity for any more circulation? To be log-

ical, instead of favoring an increase of credit money, which has always lurking within it an element of danger to the business of the community, they should demand the retirement of the $347,000,000 of greenbacks and the $350,000,000 of coined silver, and base the business of the country exclusively on what they call "honest money." If that should be done all that could happen would be a fall in prices. Judging by the experience of the past it would not be surprising if the next move of the gold-standard men would be an agitation for the retirement and cancellation of the greenbacks. Such a movement is fully in harmony with the opinions of the gold-standard advocates for the past twenty years. Indeed, the Secretary of the Treasury who took charge of the finances at the opening of the last Administration, himself a banker, recommended the demonetization of the greenbacks almost as vigorously as he opposed silver.

MONEY VALUABLE ONLY FOR THE IMPORTANT SERVICE IT PERFORMS.

Money is valuable rather for the service which it performs than for the material of which it is composed.

When we consider the transcendently important character of the service which money performs—when we reflect that, without it, the achievement of an advanced civilization would be impossible, we can not escape the conclusion that, compared with the value of that service, the commodity value of any material on which the money function may be stamped is too trifling to merit serious attention.

This will be made clear by reflection on the necessities of the situation.

So long as society chooses to maintain the automatic or metallic-money system, it must be obvious that to escape the evils that would result from a sudden and overwhelming increase in the supply of the money-material as compared with the entire stock in existence, and the infinitely more serious evils that would result from a wholly insufficient yearly addition to that stock, it must have on hand an enormous accumulation of the metals on which the stamp is placed. It must be manifest that no material would be fit for universal acceptance for so important a function as money unless there were available so great a quantity of it that no sudden shock could be inflicted on society by ordinary fluctuations in the current yield or in the current consumption in the arts.

But, in the nature of things, a supply sufficient to effect that result would be so enormous as practically to destroy the market value of the material as a mere commodity if the money function and use were withdrawn from it.

THE MONEY DEMAND, NOT THE COMMODITY DEMAND, THAT GIVES GOLD ITS VALUE.

Mr. Giffen, the statistician of the London Board of Trade, in an article recently published in an English magazine, berating and deriding the bimetallists, maintains that it is not the demand for gold as money, but for gold as a commodity, to be used in the arts, that determines its value.

To prove his case, Mr. Giffen states that the supply of gold is about $95,000,000 per annum, the annual demand for the arts $60,000,000, or about two-thirds of the annual supply; while the demand for money is only $35,000,000, or about one-third that supply. He therefore argues that the art demand, being the greater of the two, contributes more largely to the maintenance of the value of gold than does the demand for that article as money. It is hardly necessary to point out the absurdity of this claim.

The commodity demand in any one year is not made upon the current year's supply, but upon the entire amount in existence, which, is estimated to be about $4,000,000,000. If the demand for the arts entirely ceased, would the addition, to the money volume, of the $60,000,000 now used in the arts produce any appreciable effect on the value of the $4,000,000,000 in existence?

On the other hand, what is the demand on gold for the money use? All the labor and all the salable property of the Western world are constantly offered in exchange for it. It is a moderate estimate to assume that each dollar is earned, demanded, and paid once a week, or fifty times in each year. This constitutes a total annual money demand of $200,000,000,000, compared with which colossal sum how inconsequential is the commodity demand of $60,000,000 in maintaining the value of gold.

The amount of gold annually used in the arts is not very definitely ascertained, but in 1886 it was estimated by the then Director of the United States Mint to be $46,000,000 per annum. Mr. Giffen estimated it at $60,000,000. It is my opinion that the arts forage on the money-stock of gold to the extent of about the entire annual yield. The bullion or commodity value of that metal being determined by its money value, whoever desires to use it for any purpose other than money, takes the bullion at its coinage value or else melts up the coin.

Were gold demonetized and deprived of its money function and its demand confined solely to that arising from its adaptability for various other purposes, the present stock of that metal on hand and in use as money would, according to the estimates of the Director of the Mint, supply the art demand for more than seventy-five years to come. But, assuming that the estimate of the Director of the Mint is too low and that my own is nearer the truth, there is at least fifty years' supply on hand. Were there fifty or seventy-five years' supply of any other commodity on hand in the market, what would be the commercial value of that commodity? What would be the value of copper, of brass, or of iron, if there were fifty or seventy-five years' supply of either of those metals in the market for disposal at one time? Nobody can pretend that any commodity of which there is an available supply on hand equivalent to the whole demand for fifty or seventy-five years can have any but the most trifling value.

Contrary, therefore, to the generally received conviction that the commodity demand is the dominating force in fixing the value of gold I maintain and insist that the commodity demand, if entering into the account at all, is insignificant. It is the supremely important *money* demand, as correlated to the supply, that fixes the value of all money of every description whatsoever.

The demand for gold as a commodity is limited and fluctuating, but when that metal is invested by law with the higher function of money, and thus constituted a common denominator of all values, that limited and fluctuating demand is changed to an unlimited and constant one, which fixes its value for other and inferior uses. If the commodity demand for gold were, as many believe it to be, essential to its acceptance as money, it would be a great misfortune to society. The happiness and prosperity of the world, if not wholly dependent upon, are largely influenced by, steadiness in the value of money, and this can not exist without steadiness in its volume. Whatever demand exists for gold as a commodity can only affect the volume of money injuriously—that is to say, by decreasing it. The admonition of history is that a deficiency in the money supply is more probable and infinitely more to be feared than an excess, and this deficiency is, in great measure, caused by the insidious and constant encroachment upon the precious metals of demand sfor them for other than the money use. When we contrast the magnitude of the world's interests and equities, which rest on steadiness in the value of money, with the comparative unimportance of the uses of the metals as commodities, it becomes apparent that the subjection of the value of money to disturbance from the demands for gilded signs, looking-glasses, bangles, and breast-pins is an evil for which society is but poorly compensated by the benefits derived from such uses.

Whatever other quality gold may possess than as the bearer of the money function is inconsistent with the healthful and proper exercise of the task assigned it as such. Whenever any portion of the metal is used for any other purpose than money it destroys the money and thus changes the value of every unit of money in circulation, for, as already stated—other things remaining unchanged—the value of each dollar depends on the number of dollars that are out. Without forewarning and without knowledge on the part of the people, large amounts of the money volume, on which so infinite a number of equities rest and on the basis of which all debts and time contracts have been entered into, are, as it were, surreptitiously abstracted and appropriated to other and always inferior uses, for by far the highest and noblest use of any material upon which the money function has been conferred is the money use. No other use can possibly be so high or so noble as that of maintaining all equities undisturbed.

It seems unworthy a highly developed civilization, which, as to all subjects other than money, regulates its affairs by the application of intelligence and bases its policies upon exact data, scientifically ascertained and correctly applied, to depend for its money system upon the accidents, makeshifts, and expedients to which primitive society, by reason of the limitation of its powers and the undeveloped condition of the human mind and hand, was compelled to resort. If the quantitative theory of money be correct—if the money standard be, as I insist it is, a steady and duly proportioned numerical relation existing between the units of population and units of money—it is the duty of society and government to see that as far as practicable that principle is put into operation.

The history of the production of the precious metals from the remotest ages demonstrates that under the automatic system of money this can only be effected by the unrestricted coinage of, and conferring the full legal-tender function on, both metals.

THE PROPOSITION THAT THE GOVERNMENT SHOULD LEND MONEY ON THE SECURITY OF REAL ESTATE.

If a change in the whole number of money units in circulation relatively to population and business do not affect the value of each unit, then no objection can be found to the proposition recently presented in the Senate by the distinguished Senator from California, which created some surprise among Senators. The resolution of that Senator contemplates a loan by the Government to holders of real estate based upon the security of the property and the issue of a large amount of Treasury notes for that purpose. Certainly, if a dollar, in order to perform properly the money function, must have in it or back of it a dollar's worth of material, there can be no safer security found than that suggested by the Senator from California, namely, the arable land of the United States.

It is the most absolutely secure of all securities; it can neither run away nor be stolen, it can not be burnt up, lost, or destroyed.

Arable land is, in and of itself, capable of supplying all basic wants, and must be always in demand, while gold, so far as concerns any use to which it is or can be applied, might be dispensed with altogether with scarcely any inconvenience to society.

Certainly money based on land would seem to be better than money based on gold. Senators who are sticklers for so-called "in-

trinsic value" money and "full-value" money should be found supporting that proposition. But it must, on reflection, be obvious that, other things remaining unchanged, whenever the total number of units of money (or dollars) in the circulation of a country increases, the value of each unit will decrease. It is an axiom of political economy that no amount of increase in the number of units of money in a country increases the aggregate value of the money of that country.

The aggregate value of the money in circulation in a country can, *cæteris paribus*, be increased only by an increase of population and business, that is to say, by an increase in the demand for it.

If, without increase of population, the money of a country be increased from, say, $1,000,000,000 to $2,000,000,000, the effect would be not to add to the aggregate value of the money of the country, but to decrease the value or purchasing power of each unit of the money, so that it would take ten dollars to buy what had before cost but five.

GOLD A FETICH—DEMAND FOR A STANDARD OF JUSTICE.

The history of the world affords no example of a money system regulated by human prescience and intelligent calculation. It is not too much to say that the money system of the world—the most important associative instrumentality of civilization, in so far as it is not controlled for their own advantage by the creditor classes—is practically the result of accident. We are even less logical than the ancients, for they availed themselves of the entire supply of money possible to their civilization and development. They used the full yield of both silver and gold, while we, in order to line the pockets of a privileged caste of money-lenders, reduce the money volume to the lowest possible minimum by discarding one of those metals and making all debts payable in the other.

Gold has been erected into a fetich by methods familiar to the pagan priesthood, who forbade investigation of the claims of their idol to the superstitious veneration of their followers. The quality of a universal standard claimed for gold has been set up by the classes which, like that priesthood, had interests to be served by the superstition. All things else may be subjected to the test of reason and argument, but the slightest approach to a scrutiny of the claims of gold as a much-vaunted universal standard of valuation has been repelled by interested casuists and sophists who constitute the sacred guard of the temple of the idol.

The people of this country, Mr. President, begin very seriously to doubt the sacredness of a so-called standard by which they have been robbed of thousands of millions of dollars, a standard that despoils and impoverishes the toiling masses in order to swell the plethoric pockets of the favored few. From all parts of the Republic we learn that the people have become aroused on this subject, that they have discovered gold to be a standard, not of valuation, but of spoliation and confiscation.

The world at large shares to a great extent in the doubts entertained by the people of this country as to the orthodoxy of the continuing worship of gold. Throughout all Europe the suspicion is beginning to make itself felt, among those who have no personal interest at stake, that the constantly appreciating value of this metal bodes no good to society, however advantageous it may be to the moneyed classes, and especially the money-lenders. It begins to be feared that there may be too long a persistence in this artificial standard and that the pressure upon the people, in the fall of prices and the increase of the burden of debt and of taxes, which multiply with time, may have serious consequences upon public order. The stock of gold, never half enough to meet the wants of the people anywhere, is year by year being drawn upon more and more for use in the arts, while the yield from the mines is decreasing and giving no promise of any material increase from any quarter.

The pressing need of the time, the standard for which the people are calling, is a standard of equity, a standard of justice, a standard that shall measure fairly and impartially the rights of both parties to a contract, that will not wrongfully and stealthily add to the burden of the obligation on either side, that will not, under the guise of fair dealing, rob one of the parties for the benefit of the other. The first indispensable step to a realization of that standard is the full restoration of silver to its rightful position as a part of the money of the world.

In any discussion of the question, it would be uncharitable not to make allowance for the force, on many conscientious minds, of what, to the free and unprejudiced inquirer, can only be regarded as an absurd and meaningless superstition, which, notwithstanding the advance of thought in other directions, still persists in disarranging the industries and vexing the civilization of an enlightened age. It is to the strength of this obdurate superstition that we must ascribe the horror with which many minds contemplate the possible loss to the country of a part of its gold.

FEAR OF THE OUTFLOW OF GOLD.

Any prospect of the outflow of gold is regarded as the opening of a veritable Pandora's box, from which must issue forth all the evils that can afflict mankind.

It is to this fear, no doubt conscientiously entertained, that we must attribute the declaration of the President of the United States that we do not dare to tread on the edge of so dangerous a peril. It is not difficult to make the statement, but it will be very difficult to prove that we stand on the edge of any peril whatever if most or even all our gold should go.

We heard this same apprehension expressed, and with equal, if not greater, force twelve years ago, when the silver question was before this body. We were then assured by the ablest of our so-called "financiers" that the country would be denuded of its gold and that all manner of dreadful catastrophies would result. The prospect was represented to be appalling, although I do not remember that any reasons were given to show how or why gold should leave the country, nor that any statement was made as to exactly how this country would suffer if it did leave.

For my own part, Mr. President, I regard it as a matter of very little consequence whether gold goes out or not. Certainly if, in order to retain gold, we must sacrifice justice, then I say let gold go.

It is not of so much consequence that we should retain gold for the benefit of a small coterie of importers as that we should preserve the equity of time contracts between the millions of our own people who import no foreign goods. It is monstrous to think of violating all equities in time transactions—and nine out of every ten of our domestic business transactions are of that character—for the absurd and inconsequent purpose of keeping in this country some particular commodity, whether it be designated as money or otherwise.

The hoarding or the outflow of gold is a hardship when, under the law, somebody is obliged to have it, as was the case during the war, when gold alone would pay duties on imports. Combinations to hoard gold at that time frequently involved great loss to the importer. But, thanks to the silver legislation of 1878 and other legislation making our Treasury notes receivable for customs dues, no damage could now result from any attempted corner in gold.

The creditors of this country never can convince the enterprising and energetic people who form the debtor class that it is to our interest that a certain material shall be kept in the country as money, if the expense of keeping it is that the debtors shall continue to be despoiled as they have been for the past fifteen years.

If we can only retain gold at the expense of steady and unwavering prices and at the expense of a steady and unchanging value in money, then the quicker gold goes out the better. The constantly increasing value of gold by reason of its increasing scarcity means the constantly increasing burden of all debt and involves the final absorption of all the property of the country by the creditor classes. Under the operation of the present system, by which prices are constantly falling and money is constantly increasing in value, the surplus earnings of the people are flowing in a steady stream into the vaults of money-lending institutions and into the pockets of creditors.

In a very intelligent article published in a late number of an influential magazine—the Political Science Quarterly—there is the significant statement, apparently derived from the best sources, that in the year 1879–'80 one-half of all the mortgages in the State of Indiana were foreclosed.

It were better for society that property should at once be confiscated than that the great masses of the people in every community should have to struggle through years of painful and exhausting effort in the face of constantly falling prices and then in a large percentage of cases to lose their property at last. But this can not be avoided so long as we attempt to keep up what is called the gold standard. It is a necessary consequence of the gold standard that we shall have the scale of prices that obtains in gold-standard countries. If the presence of gold in this country is to destroy our people, who doubts that it should go? If its presence is to result in the destruction of equity and justice, who doubts that it should go?

Nearly every witness who testified before the secret committee of the House of Commons in 1857 agreed that gold could only be held by paralyzing the business of the country. It is estimated by witnesses who testified before that committee that in the panic of 1847, in Great Britain, the property of the country, by reason of the measures rendered necessary to maintain the single gold standard, was depreciated $1,500,000,000. I commend that report to the careful and serious perusal of the advocates of the single gold standard in this country.

Among the witnesses before the committee were John Stuart Mill, Lord Overstone, and many other men distinguished in the world of letters and finance. I am informed by the Librarian of Congress that there is but one copy of the work in the United States. It would be well worth while for Congress to order a number of copies of it printed, for there is no work with which I am acquainted that contains so much practical information as to the working of the single gold standard. According to the testimony taken before that committee, the experience of Great Britain since 1819 shows that gold alone, even when re-enforced by paper money convertible exclusively into gold, instead of being a beneficent instrument of valuation, has proved a cruel instrument of injustice.

RATIONALE OF THE MOVEMENT OF GOLD.

A brief consideration of the causes which affect the movement of gold will not be out of place in this connection.

Why is it that gold leaves one country and goes to another? For one reason only: the advantage of its owner. Whenever he can make a profit by sending it out, the gold goes; and the period when that profit can be made is indicated when the prices of goods that are in-

ternationally dealt in are either rising in the country which it leaves or falling in the country to which it goes. It is only to pay for importable goods that gold ever leaves the country in which the owner resides. Being an international money and receivable everywhere at its full face value, gold loses nothing by transfer; hence it is sent wherever it will for the time being have the greatest purchasing power.

Whenever the general range of prices in this country of commodities internationally dealt in becomes higher than the general range of the same commodities abroad, it is manifest that then gold can be used to advantage by purchasing those articles abroad and selling them here. If the gold that goes out goes from stock that has been hoarded here, the outflow has no immediate or direct effect upon prices in this country, although, by increasing or "inflating" the volume of money abroad, it assists in raising prices there and thus tends to secure for our exported products a better price in the foreign market. But if the gold goes from the amount that is in active circulation here and if the void created by this outflow is not filled with other forms of money, such as silver, or paper, it results in a reduction of the volume of money in actual use in this country, while at the same time increasing the volume of money abroad.

This increase in the foreign money stock causes a rise of prices abroad, while the corresponding reduction of our currency causes a proportionate fall of prices here; hence there is a constant tendency to an equilibrium of prices of all articles of international commerce.

No outflow of gold would follow a rise of prices here except in so far as that rise affected articles internationally dealt in. No rise of prices of such articles as we do not import would tend in any way to drive out gold. If, for example, raw cotton should increase in price in this country, that fact would not tend to drive out gold, because we do not import raw cotton. But should the prices of articles of manufactured cotton rise here above what those same articles could be bought for in any foreign country our merchants would send abroad for them, provided that, after paying the freight charges and customs dues, they could make a profit on them.

So, also, if crockeryware were made in this country and its price should rise to, say, double the present price, then, instead of buying the American, or home-made article, our crockery merchants, finding that they could buy in England, France, or Germany cheaper than they could buy in this country, would decline to buy the American crockery, and would send abroad for any article, provided that, after paying freight charges and customs dues, they could sell it here at a profit. That would tend to increase the shipments of gold to foreign countries.

That an outflow of gold does not follow from a rise of general prices, but only of prices of articles of international trade, is manifest from the fact that if land becomes cheap in other countries gold does not leave this country to buy it. When real estate is cheap in Brazil, or Australia, or in Germany, France, or even England, the owners of gold in this country do not send it abroad to make purchases of real estate.

So wages of labor may rise in this country, or compensation for all manner of services that must be performed here, and gold would not leave as a consequence. But if cloth were cheaper, quality considered, in England, France, or Germany, or at the remotest ends of the earth than in this country, our merchants would send gold for it in order to sell it here at a profit.

Altogether too much importance is attached to the possession of a large stock of gold, unless that stock form part of the active circulation of the country. So long as it remains in circulation it sustains prices and develops industry and internal commerce. But the tendency of gold being to find the most profitable field for operation, its continued presence in the country can never be relied upon.

When we take gold from other countries prices in those countries fall, owing to the reduction of the volume of money there and owing also to the action of the foreign banks in immediately raising their rates of discount on commercial paper and suddenly calling loans. As there is less money left in such country with which to pay for commodities, we are obliged to accept lower prices for the products we ship to it.

The larger the stock of gold, therefore, accumulated by us the lower, necessarily, must be the price which we can receive for our surplus agricultural products.

In order to maintain parity between the metals, it is not necessary for us to have all the gold we now have; $200,000,000 or even $100,000,000 of gold would maintain that parity. The parity between the metals can never be broken until all the gold leaves, and, provided we retain one or two hundred million, the rest can not be placed more advantageously than where our languishing surplus products must be sold.

When gold leaves this country it is because prices here are rising. Prices are now lower than they have been since 1847. Must they continue declining in order that we may be able to retain all our gold? It is manifestly impossible for the people of this country to prosper with a constantly lowering range of prices. It is equally impossible for the present level of prices to be maintained with a constantly increasing demand for, and as constantly diminishing a supply of, gold. It is universally admitted that an increase in the money circulation of this country at the present time is an exigent necessity. The advocates of the single gold standard, while admitting that we must increase our money volume, the effect of which must be to maintain, if it does not raise, the level of prices here, insist that we shall let none of our gold go in order that prices abroad may rise.

Mr. BLAIR. May I ask the Senator a question?

Mr. JONES, of Nevada. Certainly.

Mr. BLAIR. Does the Senator mean to be understood that the falling of prices is an absolute demonstration of the increased value of the money without limitation?

Mr. JONES, of Nevada. I have already, in the early portion of my remarks, had occasion to state that when a fall in prices was brought about by a larger subordination of the forces of nature to the uses of man, as where the comforts and conveniences of life could be produced with less sacrifice than before, it was not an injury to society, but an advantage. In other words, if, by a certain amount of sacrifice seventeen years ago, only one pair of shoes could be produced and if by the same sacrifice two pairs could be now produced, there would be a lowering of the price of shoes to about one-half of what it was seventeen years ago, which would be a very great benefaction to mankind.

But, as I then stated, there is one certain sign that that is not, except to the slightest extent, the cause of the present universal fall of prices. When prices fall owing to improvements in manufacture, business revives, the masses of the people are at work, those who toil find themselves possessed of more of the comforts, of the conveniences, and even of the luxuries of life than before. They are better contented with their condition and more buoyant and hopeful than before. On such occasions money becomes more and more in demand than it was before, and instead of being hoarded is put into active and productive business where it will make a profit. But when interest falls, *pari passu*, with the fall of prices, it shows that the fall of prices is not due, except in the smallest degree, to improved methods of production, but to the increased value of money.

Mr. BLAIR. I was not controverting the Senator's theory as to the existing facts in this country, but I understood him to be laying down an absolute principle, applicable under all circumstances and in all times, that the fall of prices is a demonstration of the increased value of money. I supposed that the fall in prices resulting from a protective tariff was beneficial, and not an indication of an increase in the value of money, and that that fall of price was not owing to the increased value of money, but was by improved machinery and all that. So it is possible that some of the fall in prices in this country may be owing to increased facility in the matter of production and to the beneficial operations of the protective tariff.

Mr. JONES, of Nevada. Mr. President——

Mr. REAGAN. If the Senator from Nevada will permit me, I wish to ask the Senator from New Hampshire if he means to be understood as assuming that a protective tariff reduces the value of the commodities produced.

Mr. BLAIR. I was simply asking for information of the Senator from Nevada, and he can answer that question much better than I; but the Senator from Texas understands very well that I do believe a protective tariff reduces prices.

Mr. JONES, of Nevada. Mr. President, so far as a tariff has the effect of reducing prices in any country, it is not by reason of the levying of any certain percentage of duty on the imported goods. The first effect of the tariff certainly always must be to raise prices. The fundamental theory of the tariff is—whether it be correct or not I am not now discussing—that by that tariff you place the price of manufactured goods up to a range at which they can be produced in the country in which the tariff is levied, and upon the level of the range of wages and manner of living which obtain in that country. By so doing, if you have a proper volume of money, you set all your people at work and keep them at work at a variety of occupations. In such case every forge, furnace, and factory becomes a school, every machine-shop an academy, and every cunning device and invention becomes a lesson, teaching the people how to deal with the subtle forces of the universe. So far as this country is concerned the theory of the tariff is that 65,000,000 people should have a varied and complete system of manufactures, which should supply practically all their own wants, instead of an abnormal proportion of them being driven into the single occupation of farming and relying on foreign manufacturers to supply such finished products as they need. To draw out and develop the aptitudes of a people a large variety of occupations is indispensable. When all men are employed at their aptitudes new inventions multiply, progress is accelerated, and the secrets of nature are more rapidly unfolded. Hence the McCormick reaper; hence the sewing-machine, that great instrument which clothes the world, because of the discovery that the eye of the needle should be at the point; hence the air-brake, the telegraph, the electric light, and thousands of other inventions that a protected people originate and develop, which would perhaps not have been originated or might have been long delayed if it had not been for the discouragement to imports caused by the tariff, and the encouragement to our people to go into manufactures by which their varied talents are drawn out and cultivated.

There is no doubt that eventually, as our conditions improve, increasing numbers of our people will by degrees emerge from agricultural and enter manufacturing pursuits. A tariff, by stimulating the

organization and development of industries, trains men to greater skill and perfection of workmanship in a variety of departments, and with greater skill come greater efficiency of labor and so greater economy of time. In that way the prices of certain products are in time reduced; but that is not a reduction of which any one complains.

The true cause of the present discontent will not be found in the protective tariff, but in the exactions of the single gold standard.

Fifteen years ago England was on the gold standard. It is on the gold standard to-day; yet prices in England are 35 per cent. lower than they were fifteen years ago. There being no reason why there should be any change in the trend of prices, so long as a fierce contest for the possession of gold shall be waged between England, France, Germany, and the United States, we are justified in assuming that a proportionate decline of prices will continue. That means a further decline of 30 or 35 per cent. in prices during the next fifteen years. Where is this tendency to stop? and, if it does not stop, how long will it be before the masses of the people become the bond slaves of the creditors? It is shocking to the moral sense of mankind that a few money-lenders and bondholders should thus be able, silently and insidiously, to wreck the business of every country in the world by constantly increasing the value of the money unit.

While admitting the necessity of more monetary circulation, our gold-standard friends fail to show us how it is possible for an increase in the volume of money to benefit our merchants, farmers, or mechanics if the prices that prevail in gold-standard countries are to prevail here; for that is what the gold standard means for us, Mr. President. It means that the prices that rule in gold-standard countries are to rule here.

The extreme indefiniteness with which the term "gold standard" is used has so befogged the relation which gold money bears to industry and commerce that people lose sight of the essential feature of that relation. It is impossible to have a clear conception of the gold standard without keeping in view exactly what is implied by the term. What men must mean in this country by "the gold standard" is not the touch of the metal, for they never touch it and rarely, if ever, see it. The maintenance of the gold standard here simply means the maintenance here of the range of prices that prevail in gold-using countries; that is to say, that low and lowering range of prices rendered necessary by the attempt to measure the value of the constantly increasing mass of the products of industry in all the western world by the constantly diminishing volume of gold. No relief can come to the toiling masses of this country until we can lift our prices above those that now prevail in gold-using countries.

Even if our prices remain as they are and do not increase, gold will eventually leave the country if it continue to increase in value as it has been increasing during the past fifteen years. We have been enabled to maintain the gold standard here for the past twelve years notwithstanding a considerable addition of money other than gold to our currency, but we have been able to do so only because other countries have been using an equal or greater amount of money other than gold. We have been using no greater proportion of silver or paper money than other countries having the gold standard are using; hence we have been able to maintain their level of prices and still keep the metals together. But whenever we shall attempt to prevent a further fall of prices in this country, it will be impossible for us to retain our gold so long as prices in gold-using countries continue to decline as they have been declining. Gold will leave as quickly because of contraction abroad as of inflation here, if by "inflation" is meant a coinage of money sufficient to maintain prices at a steady level.

Should gold leave the country, then, in order to supply its place, in order to maintain the *status quo* in prices and prevent a further fall from the present low range, we should need to have as many dollars of silver in circulation as there are now dollars of gold. Gold would go out only because our prices were rising, and as it went prices would cease to rise. That process might continue until three or four hundred million dollars of gold had gone. In all this, where would be the disadvantage to our people?

Considering the rapidly increasing population and wealth of this country, all the silver that can be procured from the mines will be necessary to maintain the level of prices and to keep pace with the increasing demands for money. If, however, it slightly exceeds—and it could not at the utmost more than slightly exceed—the amount actually demanded by increasing population and business, the overplus of each year would take a great many years to drive gold out of the country, dollar for dollar; for, when prices here, of things internationally dealt in, are at an equilibrium with prices of the same articles abroad, gold can not go any faster than silver comes in.

IF $2,500,000 SILVER PER MONTH HAS NOT DRIVEN OUT GOLD, HOW MUCH WILL DO SO?

For twelve years past we have had a silver coinage of nearly $2,500,000 a month, yet no gold has been driven out. Having tested the capacity of that quantity of silver to drive out gold, we find that instead of driving it out its coinage has resulted rather in bringing gold in; for, to whatever cause the influx of gold may be ascribed, it is unquestionable that the gold has come, and it has needed all that gold and all the silver that we have coined to maintain international prices here.

It is admitted by all that gold can not go out except by reason of a rise in this country of the prices of articles of international commerce beyond the prices of the same articles prevailing abroad. It is only then that it becomes more profitable to send out gold in payment for our foreign purchases than to send out commodities, the products of our own country. Commodities will always be sent out in payment for other commodities so long as it is more profitable to send them than gold, and when, by reason of low prices prevailing abroad and high prices here, it is no longer profitable to send out commodities purchasers send out gold, but only because it is to their advantage to do so.

Now, having seen that the coinage of $2,500,000 of silver each month was insufficient to so raise prices in this country as to induce gold to go abroad, but that on the contrary it resulted in an influx and accumulation of a large amount of gold, we may safely assume that only so much of the amount of silver which Congress shall now provide for as exceeds $2,500,000 a month will have any influence in raising prices in this country above international prices, and so providing a stimulus for gold to go abroad in payment for commodities imported into this country.

If the amount of silver which shall be now provided should be, say, $5,000,000 a month, the excess over the present coinage would be $2,500,000 a month. This, then, would be the amount that would drive out gold. As one dollar of silver would drive out no more than one dollar in gold, no more than $2,500,000 could go out monthly. That would leave in circulation the same amount of money that is in circulation now. There would still be no increase in the money volume of the country, and, with no increase in the volume of money, prices here would not rise above international prices. At the rate of $2,500,000 a month, it would take twenty years to drive out $600,000,000 of the $700,000,000 of gold now in this country. It would take even longer than that, because the $600,000,000 driven out would tend to raise international prices abroad, and so check the outflow of gold from here.

Mr. McPHERSON. Will the Senator yield to me for a question or does he prefer to go on?

Mr. JONES, of Nevada. I am always ready to answer a question.

Mr. McPHERSON. I do not want to interfere with the Senator's line of argument or with his speech in any form, but it does seem to me that there is something fallacious about the Senator's argument or else my judgment and the experience of the world is all wrong. I wanted to ask the Senator this question: If it be known that the Government of the United States, if you please, by such an increase of the silver coinage in this country as will be produced by the free coinage of silver, to which theory, as I understand, the Senator is fully committed—if that be the theory of the Government hereafter by the command of Congress, I want to ask the Senator if he broadly and boldly asserts that no gold can be driven out of the country to a greater extent than dollar for dollar for the silver that comes in.

Mr. JONES, of Nevada. Absolutely; I say so.

Mr. McPHERSON. Then I want to ask the Senator another question, which seems to me pertinent. Does the Senator assert that if a 72-cent dollar, the value in bullion of a silver dollar during the year 1889, as has been furnished us by the Director of the Mint and the Secretary of the Treasury, were coined without limit (I say without limit, the limit being, of course, the amount of bullion that is brought to the Treasury to be coined) and the people of this country who have been in favor of a safe and honest currency, a currency either gold or as good as gold, which the Treasury has been able to maintain, having forced no silver upon the people if they did not wish it, and in that way the silver dollar having been maintained equal to the gold dollar—I want to know, with the people of this country to-day the holders of $500,000,000 of gold, how it is possible for the Senator to believe that with a 72-cent dollar to take its place the gold coin would circulate for a single week, or a single day, or a single hour. If they have the gold will they not hold it?

Mr. JONES, of Nevada. The Senator has so involved his question with his argument that I can scarcely get at what he wants me to answer.

Mr. McPHERSON. The question I want the Senator to answer is this: Will the people of this country, the financiers of this country, the banks, the moneyed men holding $500,000,000 of gold, with a certainty of the free coinage of silver and going to a silver basis—for that is what it means—put their gold in circulation, or will they hoard it? Will it disappear?

Mr. JONES, of Nevada. I scarcely know what the Senator means by a "silver basis." He talks about a 72-cent dollar. We have never seen a 72-cent dollar. The papers in the East have told us that the silver dollar was worth 72 cents. I recollect talking on that subject once with some Senators in the cloak-room. During the conversation one of the Senate pages brought me a telegram, on which he said the telegraph messenger had told him there were 50 cents due. I gave the page a silver dollar and said to him: "I have been informed by some very respectable and intellectual gentlemen in here, some of them candidates for the Presidency even, that this dollar is worth only 75 cents. I do not want to cheat a little boy. Take this out, and if the boy thinks it worth only 75 cents he can send me back 25 cents, and if he thinks it is worth a dollar he can send me back 50 cents. I will leave it to him." The page brought back 50 cents and said the telegraph boy told him he did not know what those old

"duffers" in there might say, but it was as good a dollar as he wanted and was very hard to get. [Laughter.]

The Senator talks about the bullion value as though that had anything whatever to do with the value of the dollar. I have attempted to demonstrate that the material that was in the dollar has nothing whatever to do with it. Let me illustrate. Suppose the entire supply of silver of the world to-day were $60,000,000. Suppose the law limited the coinage of it to $58,000,000, and every dollar coined was at par with gold. Suppose there were a demand for half a million dollars of silver, to be used in the arts, and that the remainder ($1,500,000) of uncoined silver were barred from the imperial money use. That supposes a supply of $2,000,000 left after satisfying the requirements for coinage and supposes only half a million dollars' demand for use in all the arts. In that case there would be a $2,000,000 supply bearing down a half million dollars' art demand, or a proportion between supply and demand of 4 to 1. Suppose that under those circumstances silver bullion went to 50 cents an ounce. Would the Senator then say that 50 cents an ounce was the value of the $58,000,000, and all the rest of the coined silver of the Western world, while by coining another million and a half, which would be nothing to a country like this, all the silver would be at par with gold? Every ounce of silver coined in Europe and the United States is at par with gold, a thousand or twelve hundred million dollars of it to-day in France, $200,000,000 in Germany, $370,000,000 of it here. We are not dealing with the price of silver bullion, that portion of silver that is deprived of its immemorial use as money. We do not say what the commodity demand for silver may make that worth. Such a consideration has no bearing whatever on the value of money.

I will suppose that in some one county of the United States a law were passed that the wheat grown in that particular county should have no right to go through the grist-mill, and that that wheat, as it might very naturally do, being deprived of use, fell to one-half the price of the wheat grown elsewhere in the country. Would the price of the wheat of that one county thus under interdiction and denied the grist be a fair gauge by which to measure the value of the entire wheat crop of the country? Manifestly not. All we have to do is to take up the little "slack" of silver, and all of it will at once be at par with gold; then we shall hear no more about the "commodity value" of silver. That is the contention that the bimetallists make.

Mr. HEARST. It will be $1.29.

Mr. JONES, of Nevada. It will be $1.29 an ounce in one week—in three days—in fact the very moment you give it back its ancient right of coinage and restore to it its full money power. You coin of gold all that is brought to the mint and you deny to a certain portion of silver that same long-established privilege, and then you measure the value of the whole supply of silver by that of the little fraction that is not coined, and which therefore has to find a market as a commodity.

Mr. McPHERSON. Then, if the Senator will permit me, he necessarily proposes that the Government of the United States shall take up all this "slack," as he calls it, in the surplus quantity of silver and shall use it in the coinage. The mints of Europe being closed against the coinage of silver, there is no other place where it will be coined. Now, if the Government of the United States should use all the surplus silver in the country, which has simply forced the price down since we remonetized silver in 1878 more than 20 per cent.——

Mr. JONES, of Nevada. Gold has risen 35 per cent.

Mr. McPHERSON. Then I think the Senator's argument is upon this idea and upon this plan, that after we are upon a silver basis, as we should be most assuredly, there would be no inequality in the money, because it would be all silver.

Mr. JONES, of Nevada. And no inequality between it and gold.

Mr. McPHERSON. Certainly not, because there would be no gold in circulation. But let me ask the Senator another question. While he can use his short-legged silver dollar for the payment of debts, when he comes to make a new obligation would not the price of the goods assume a price equal to the difference between gold and silver? In other words, while you can use a debased currency for the payment of debts, if a legislative decree requires that you shall accept it, you can not use it for any other purpose.

Mr. JONES, of Nevada. I can not understand the Senator. We have not provided any "short-legged" dollar. The Senator is assuming a good many facts and attempting to adjust me to them. I ask the Senator to wait until he has heard my argument, and I invite the Senator then to make reply to it.

Mr. McPHERSON. I am sorry that I interfered with the Senator.

Mr. JONES, of Nevada. It was no interference on the part of the Senator, except that I can not separate the Senator's questions from the argument and assumptions that he makes. As to the outflow of gold, as I have said, it would take a long time for even $400,000,000 of it go. The amount of gold driven out would tend to raise prices abroad by making money more plentiful there, and so check the outflow of gold from here. When Senators speak about $600,000,000 of gold being withdrawn from circulation here a question that is a little curious arises. What are these people who own it going to do with that gold after they have withdrawn it from circulation? Are they going to invest it in Great Britain? Are they going to invest it in France? Are they going to the Cape of Good Hope to invest it? If they are they will reverse the policy that English capitalists are pursuing now and have been pursuing for years—bringing their gold over here for investment. The Senator tells us that gold is to disappear from circulation. What will the owners do with it? Where and in what are they going to invest it?

Mr. McPHERSON. It will be held for a premium.

Mr. JONES, of Nevada. But who will buy it at a premium? Who needs it at all? For what purpose is it needed? Who is going to pay any premium for it? Nobody is "short" on it, and there is no law which forces anybody to have it.

Mr. President, nobody wants it enough to give a premium for it. It is only worth what is daily paid in the markets of the world and nobody is going to pay a premium for it. It is a bogy with which to frighten the people who demand reform in the currency of this country. Let them withdraw their gold.

I tell the Senator it is not the men who hoard the gold in vaults who maintain or promote the prosperity of this country, but the toilers in the wheat-fields and on the farms of the country, the men who work in the planing mills, the forges, the furnaces, the factories, and in all our institutions of industry. It is they that bring us our prosperty, and not these people who are gambling for premiums on gold.

Let them gamble among themselves; let who lose and let who win, the people care nothing. The people of the United States are going to institute a money that shall install and maintain justice as between the citizens of this country, and they will not be impeded. I can tell the Senator that neither his party nor the Republican party will ever impede the march that this great country is about to make—the first in the world, I am glad to say—in adjusting to the demands of industry and commerce that great instrument, money, the non-adjustment of which, as I have already stated, has, in my belief, caused more misery than was ever caused by war, pestilence, and famine.

But to resume at the point where I was interrupted.

The gold going out would tend constantly to restore the equilibrium between our prices and those of the gold-using countries, making the proportion of the gold outflow each year less than that of the year before. If there be included in this computation the remaining $100,000,000 of gold, which would remain after the outflow of the $600,000,000, we shall be compelled to come to the conclusion that the time when our stock of gold can be driven out will be almost indefinitely postponed.

But even should all our gold go by reason of the remonetization of silver, it will not be to the injury of the gold standard, but to its great advantage and to the equally great advantage of the masses of the people, as well of this country, which the gold may leave, as of all countries to which it may go. It will make the "gold standard" consistent with the prosperity of the countries maintaining it. But instead of preserving the gold standard of to-day, which is a standard of wrong, it will inaugurate a gold standard that will approximate to a standard of justice.

The new "gold standard" that would be established by the outflow of our gold would be a standard of prices resulting from the influx into England, France, and Germany, the principal gold-using countries of Europe, of more than $600,000,000 of money.

So considerable an addition to their money-stock would raise prices in those countries and, by remaining there, would, with the current production, which we could spare to them, tend to maintain prices at a steady level. Such a condition would be an inestimable boon to the overburdened masses of Europe, and their prosperity would not be attained at the expense of the people of the United States. We could well afford to let gold go, since, by the coinage of silver, our own money volume would not be reduced. The rise of prices which it would effect in Europe would not only, as I have stated, secure better prices for our exported goods, but would undoubtedly enable us to maintain prices here at a substantial parity with those of Europe, that is to say, with those of the new, more rational, and more beneficent gold standard which would be established by the full remonetization of silver in this country.

PRACTICALLY NO GOLD MONEY IN THE UNITED STATES.

But, aside altogether from this consideration, the gold that we already have is really a surplus; it is practically a dead and useless article. Gold, Mr. President, can not with entire truth be said at the present time to form any part of the money of this country. Who but a bank clerk ever sees a gold piece? With the exception of a few million dollars on the Pacific coast, gold is not really in circulation in this country. It is performing no useful function whatsoever. While I am engaged in delivering these remarks I venture to say no Senator within the sound of my voice has in his pocket a single gold coin of any denomination whatever or any paper representative of one.

This is the answer to the fear expressed by some Senators that when those who hold gold shall observe the enlargement of the money circulation by the issue of the proposed Treasury notes they will be likely to hoard it. They are already hoarding it. Every body knows that that is about all that gold is used for in this country. It is hardly possible for it to be hoarded to any greater extent than

it is at the present time. So little is this metal in circulation that I do not deem it any exaggeration to say that there are millions of people in the United States, "native here and to the manner born," who have never in all their lives seen a gold coin.

How absurd, then, is the claim that any loss is to be suffered by the alleged future hoarding of gold or that any calamity can occur to 65,000,000 people by the disappearance of that which has long since disappeared.

THE ARGUMENT BASED ON OUR BALANCE OF TRADE.

One of the staple arguments of the advocates of the single gold standard is that if our stock of gold were greatly reduced we should be unable to make payments to foreign countries in case the balance of trade turned against us. It is only through an excess of imports over exports that gold could go, and this country now produces of nearly all articles almost all that it consumes. With the exception of two years there has not been a balance of trade against us for fourteen years, as the following table will show:

Value of merchandise imported into and exported from the United States from 1876 *to* 1889, *inclusive; also annual excess of imports or of exports—specie values.*

Year ending June 30—	Total exports.	Total imports.	Total exports and imports.	Excess of exports over imports.	Excess of imports over exports.
	Dollars.	*Dollars.*	*Dollars.*	*Dollars.*	*Dollars.*
1876	540,384,671	460,741,190	1,001,125,861	79,643,481	.....
1877	602,475,220	451,323,126	1,053,798,346	151,152,094	.....
1878	694,865,766	437,051,552	1,131,917,298	257,814,234	.....
1879	710,439,441	445,777,775	1,156,217,216	264,661,666	.....
1880	835,638,658	667,954,746	1,503,593,404	167,683,912	.....
1881	902,377,346	642,664,628	1,545,041,974	259,712,718	.....
1882	750,542,257	724,639,574	1,475,181,831	25,902,683	.....
1883	823,839,402	723,180,914	1,547,020,316	100,658,488	.....
1884	740,513,609	667,697,693	1,408,211,302	72,815,916	.....
1885	742,189,755	577,527,329	1,319,717,084	164,662,426	.....
1886	679,524,830	635,436,136	1,314,960,966	44,088,694	.....
1887	716,183,211	692,319,768	1,408,502,977	23,863,443	.....
1888	695,954,507	723,957,114	1,419,911,621	.....	28,002,607
1889	742,401,375	745,131,652	1,487,533,027	.....	2,730,277

This table shows that, while for last year there was a balance against us of $2,730,277 and the year before of $28,002,607, for all former years from 1887 back to 1874 the balances were in our favor, all the way from $23,000,000 in 1887 to $265,000,000 in 1881. But the total want of significance so far as the movement of gold is concerned attaching to any figures showing a balance of trade against the United States will be seen by an analysis of the figures for any one year. Let us take for example the imports and exports for 1889 and analyze them by countries.

I now present a table in which I place in one group the gold-using countries and in another the silver and paper using countries.

Exports and imports of the United States to and from the various gold-using and silver-using or paper-using countries of the world for the fiscal year ending June 30, 1889.

Countries.	Exports.	Imports.
Gold-using countries:		
Canada	$42,141,156	$43,009,473
Belgium	23,345,219	9,816,435
Denmark	3,903,937	846,904
France	46,120,041	69,566,618
Germany	68,002,594	81,742,546
Great Britain	382,981,674	178,269,067
Greece	165,079	988,923
Italy	12,604,848	17,992,149
Netherlands	15,062,939	10,950,843
Portugal and its possessions	3,206,814	1,282,556
Spain	11,946,348	4,636,661
Sweden and Norway	2,615,569	2,983,319
Turkey	.....	4,687,731
British possessions in Africa	2,936,213	895,344
British possessions in Australia	12,321,980	5,998,211
Silver and paper using countries:		
Austria-Hungary	726,156	7,642,297
Russia	8,364,545	2,985,631
Mexico	11,486,806	21,253,601
Central America	4,325,923	8,414,019
Hawaii	3,375,661	12,847,740
Argentine Republic	9,293,856	5,454,618
Brazil	9,351,081	66,403,804
Chili	2,972,794	2,622,625
Peru	780,835	314,032
Colombia	3,821,017	4,263,519
Uruguay	2,192,848	2,986,964
Venezuela	3,738,961	10,392,569
Cuba	11,601,311	52,130,023
Hayti	5,340,276	5,211,704
Porto Rico	2,224,931	3,707,373
British West Indies	10,453,973	20,723,268
Dutch West Indies	887,778	654,320
China	6,477,512	18,503,678
India, British	4,330,413	26,029,601
India, Dutch	2,249,604	5,207,254
Japan	4,619,985	16,687,992

By this table it is seen that the only gold-using countries having a balance of trade against us are Canada, $868,317; France, $23,446,577; Greece, $823,824; Germany, $13,739,952; Italy, $5,387,301; Sweden and Norway, $367,850; Turkey, $4,687,731—making a total balance against us in gold-using countries, $49,321,452—against which we have a balance in our favor with Great Britain alone of over $200,000,000.

The balance against us in favor of all the silver-using countries could of course be readily settled in silver; and by carefully noting the figures of the table last given it will be seen that it is in the last degree improbable that there will ever be a balance of trade against us in the gold-using countries, taken as a whole.

Hence it is clear that if we had no gold at all we could readily settle all foreign balances that might be against us.

Nations, however, ultimately, and on the whole, square their accounts with commodities. Every nation must buy what it wants with its own products. In this country especially have we nothing to fear, because any temporary balance against us could always be met by the yield from our own mines. No country has any difficulty by reason of any difference in money systems in buying what any other nation has to sell.

This view is supported by all writers on political economy. I need quote but one. Professor Cairnes, professor of political economy in the University College of London, in his able work on Some Unsettled Questions in Political Economy (1874), says:

> It appears to me that the influence attributed by many able writers in the United States to the depreciation of the paper currency as regards its effects on the foreign trade of the country is, in a great degree, purely imaginary. An advance in the scale of prices, *measured in gold*, in a country, if not shared by other countries, will at once affect its foreign trade, giving an impulse to importations and checking the exportation of all commodities other than gold. A similar effect is very generally attributed by American writers to the action on prices of the greenback inconvertible currency.
>
> But it may easily be shown that this is a complete illusion. Foreigners do not send their products to the United States to take back greenbacks in exchange. The return which they look for is either gold or the commodities of the country; and if these have risen in price in proportion as the paper money has been depreciated how should the advance in paper prices constitute an inducement for them to send their goods thither? The nominal gain in greenbacks on the importation is exactly balanced by the nominal loss when those greenbacks came to be converted into gold or commodities. The gain may, in particular cases, exceed the loss, but if it does, the loss will also, in other cases, exceed the gain. On the whole and on an average, they can not but be the equivalents of each other.

Mr. President, the best place in the world where we can have gold is not in the Treasury of the United States, not in any subtreasury, but in circulation, if not in our own country, then in the foreign countries where our surplus products are sold. That is where gold would do us the most good by making money plentiful and prices correspondingly high. It does us no good here whatever, locked up as it always is and doing none of the work of money, but simply reduces to the minimum the tax-paying and debt-paying power of our wheat and cotton growing communities.

An unjust money should not be tolerated, whatever the material of which it may be composed, and the people of this country will not tolerate it. They do not fear the outflow of gold. If, in order to retain it, they must continue to lose as they have been losing for the past fifteen years, they will favor its going and raise a shout of joy when it does go. With a perfect money system in our own country the range of our domestic prices would continue stable and equitable without regard to the prices of foreign countries, our foreign trade would take care of itself, and, whatever the balances might be, they would be much oftener in our favor than against us, and in reality concern only the importing merchant, and not the Government or the people of the United States. The difficulty of gold-using countries to get our money, in which to pay us the balances they would owe us, would be much greater than our difficulty in getting their money, in which to pay them the occasional balances we might owe them.

Much the more serious question (if it be a serious question at all, which I deny) is how they shall get our money, not how we shall get theirs. As the balances would be for the most part in our favor, it is for them to take such steps as may be necessary in order to pay us. But there is no just reason to apprehend difficulty in either case. A great country like the United States will have no trouble in buying the money of any other country at equitable rates, at rates regulated by the purchasing powers of the moneys of the two countries, respectively.

No country in the history of the world, having a money local to itself, has ever found the slightest difficulty in buying, upon ratios determined by the relative purchasing powers of the two kinds of money, a sufficient amount of foreign exchange (which simply means the money of another country) to meet all adverse balances of trade.

While earnestly advocating the full remonetization of silver and the maintenance in this country of a money volume sufficient to insure a steady level of prices and an unchanging value in the money unit, I entirely disclaim any desire for an inflation of the currency. My contention is that without silver we can not keep prices from further decline and can not have enough money to serve the growing needs of population, industry, and commerce.

At the same time I can not refrain from expressing the conviction that, as between inflation and contraction, no careful student of history and of economic science can for a moment hesitate in deciding

that the evils inflicted on society by contraction have been longer in duration and infinitely greater in degree than any that have ever resulted from inflation. During all periods in which there has been a generous increase in the money-volume of a country or of the world, activity and prosperity have been its accompaniment. I challenge the citation of an instance to the contrary.

With a volume of money increasing at a rate sufficient to meet the demands of a growing population, and especially if the money be such as will not leave the country, but, under all circumstances, will remain in it, to sustain prices, preserve equities, and reward labor, no country with a proper co-ordination of its industries can be otherwise than prosperous.

The property of mobility—of fluidity—which is so much lauded in gold, is precisely the property least to be desired in the money of a country, if that property of mobility or fluidity is to keep alternately bringing money into and taking it out of the country, disturbing prices and disarranging equities. When it comes, if it enters into circulation, prices rise; when it goes, prices fall, and thus, instead of having a steady and level platform of prices on which the trade and industry of the Republic may rest, like the firm and level platform of liberty upon which all our citizens stand, we, whose business it is to "see that the Republic take no harm," furnish our people with an "inclined plane" of finance on which all their business must be conducted. Men buying this month at the elevated end of the platform find themselves selling next month at the depressed end.

Whenever in the history of a country there has been least reliance on international money (gold) and more reliance on merely national money (even of paper when reasonable limits were placed upon its quantity), prosperity has been everywhere present. I need not recall to the minds of Senators the wave of prosperity that swept over this country when it was without any international money and resorted to the "greenback" currency.

When, as a result of the Franco-German war, France was deprived of international money, suspended specie payments, and resorted to a properly limited paper currency, her progress was unbounded.

No period in the history of Great Britain can compare for activity, prosperity, or achievement with the twenty years preceding 1816, when specie payments were suspended, and during which period, as testified to by witnesses before the secret committee of Parliament, the discount rate of the Bank of England did not suffer a single change; whereas from that period to 1847 the rate was changed sixteen times, and from 1847 to 1874 as many as 274 times, the fluctuations being sometimes of the most violent character.

When gold threatens to leave Great Britain the rate of discount at the Bank of England is raised, with the view of discouraging, if not preventing, the outflow. Raising the rate of discount is like putting the brakes on a railroad train; lowering the rate is like letting off the brakes.

These changes were not due to any greater demand for money, but to the movements of gold. There was frequently, in the condition of business, no warrant whatever for a rise in the rate of discount. The only reason for it was to prevent gold from performing what "our most conservative financiers" denominate its "noble" function of "mobility," of "fluidity," namely, the function of going "where it was wanted." This function of going "where it is wanted" is described as the great "mission" of gold, and it is assumed that it will never be wanted at more than one place at a time. Yet hear what the chancellor of the exchequer of Great Britain said a few days ago in the House of Commons:

> I admit that, as interested in the commerce and monetary system of this country, I feel a kind of shame that on the occasion of 2,000,000*l.* or 3,000,000*l.* of gold being taken from this country to Brazil, or any other country, it should immediately have the effect of causing a monetary alarm throughout the country. (Speech of the chancellor of the exchequer in the House of Commons, April 18, 1890.)

This is a suggestive admission, from so well informed a source, as to the operation of the single gold standard. I commend it to those who would circumscribe and hamper the prosperity of this country by making gold alone the standard of all values.

I have thought it necessary, Mr. President, to state what I conceive to be the true principles of the science of money, the principles that, with the progress of time and growth of intelligence, must prevail the world over; because, without a clear understanding of the relation which the quantity of money in a country bears to the prosperity and happiness of its people, there would be no justification for an addition of either silver, gold, or any other form of money to the quantity already in circulation. If the value of money depends on quantity, then, as long as the world adheres to the automatic theory of money, my contention is that all the silver produced from all the mines of the world should be transmuted into coin; and even then, if the wants of the world continue to increase as they have been increasing, it is only a question of time, and that not far distant, when the combined supply of both metals will be insufficient to maintain the equities in time transactions.

The world having decreed to stand by the automatic system we are now dealing with the question as a practical one.

The only relief that can be had is to adhere strictly to that system and give it full scope. Remove all legislative restrictions and let the world have the full benefit of all the precious metals that are yielded by the mines.

THE WORLD'S SUPPLY OF GOLD AND SILVER.

Since for thousands of years the world recognized both silver and gold as money, can anybody tell what has happened to render one of them unfitted for the money use?

No argument based on fluctuations in the current supplies of either of the metals can militate against the use of both as money. The fluctuation in the annual yield of both, taken together, is much less violent and less frequent than the fluctuation of either taken separately. By the use of both, society has much greater security against the evil of an insufficient money volume. While a large yield, now of one and again of the other, has taken place, there is no instance in the history of the world of an extraordinary yield of both occurring simultaneously, except in the single instance of the first discovery of the mines of America. When the gold mines have been yielding largely, there has been no special increase of silver, and during the period when silver has been produced in comparatively large quantities the gold mines have been less productive.

This will be illustrated by the following table showing the yield of both gold and silver, from the discovery of America to the present time.

Annual average production of the precious metals throughout the world from the discovery of America to 1872.

[From Director of United States Mint.]

Periods.	Gold.	Silver.
1493-1520, average for each year	$3,855,000	$1,953,000
1521-1544.....do	4,759,000	3,749,000
1545-1560.....do	5,657,000	12,950,000
1561-1580.....do	4,546,000	12,447,000

1831-1840.....do	13,484,000	24,788,000
1841-1850.....do	36,393,000	32,434,000
1851-1855.....do	131,268,000	36,827,000
1856-1860.....do	136,946,000	37,611,000
1861-1865.....do	131,728,000	45,764,000
1866-1870.....do	127,537,000	55,652,000
1871-1872.....do	113,431,000	81,849,000

World's production of gold and silver for the calendar years 1873 *to* 1889, *inclusive.*

Calendar years.	Gold.	Silver.		
	Value.	Fine ounces.	Market value.	Coining value.
1873	$96,200,000	63,267,000	$82,120,000	$81,800,000
1874	90,750,000	55,300,000	70,673,000	71,500,000
1875	97,500,000	62,262,000	77,578,000	80,500,000
1876	103,700,000	67,753,000	78,322,000	87,600,000
1877	114,000,000	62,648,000	75,240,000	81,000,000
1878	119,000,000	73,476,000	81,644,000	95,000,000
1879	109,000,000	74,250,000	83,383,000	96,000,000
1880	106,500,000	74,791,000	85,636,000	96,700,000
1881	103,000,000	78,890,000	89,777,000	102,000,000
1882	102,000,000	86,470,000	98,230,000	111,800,000
1883	95,400,000	89,177,000	98,986,000	115,300,000
1884	101,700,000	81,597,000	90,817,000	105,500,000
1885	108,400,000	91,652,000	97,564,000	118,500,000
1886	106,000,000	93,276,000	92,772,000	120,600,000
1887	105,300,000	96,189,000	94,265,000	124,300,000
1888	109,900,000	109,911,000	103,316,000	142,107,000
1889	118,800,000	125,830,000	117,651,000	162,600,000

From this table it will be seen that from 1801 to 1820 the average yearly yield of gold was $9,710,500; of silver, $36,847,500—four of silver to one of gold.

From 1821 to 1840 the average yearly yield of gold was $11,466,000; of silver, $21,964,000—two of silver to one of gold.

From 1841 to 1860 the average yearly yield of gold was $85,150,000; of silver, $34,826,500—two and a half of gold to one of silver.

From 1861 to 1880 the yearly average yield of gold was $117,091,850; of silver, $68,043,900—nearly two of gold for one of silver.

From 1881 to 1889 the yearly average yield of gold was $105,500,000; of silver, $122,540,388—one-sixth more silver than gold.

From those figures it is plain that no continuous, extraordinary yield of silver, such as might warrant the slightest fear of an unnecessary addition to the money volume, is to be expected. On the other hand the continuous drain of gold for use in the arts, as dentistry, gold plate, jewelry, gilding, and articles of decoration generally, is seriously encroaching upon the annual supply.

Both metals possess in common, and neither in any different degree from the other, all the qualities which are recognized as necessary in a commodity money. Silver enjoys in an equal degree with gold the quality of indestructibility, of divisibility, of malleability, and of resistance to chemical changes. The stock of both existing in the world (the product of all time) is estimated to be about equal, the production of the past 500 years being set down as—

Gold	$7,240,000,000
Silver	7,435,000,000

That silver mining has not proved exceptionally profitable in this country is proved by the comparatively small number that have engaged in the business. This country has been thoroughly explored in the search for additional mines without any of great value being discovered. The allurements of the business lie in its uncertainty; and for the occasional prize that is drawn thousands of blanks are found. There is always enough hope of results to induce continued effort, but there is also sufficient doubt and discouragement to deter an undue number from engaging in the business.

The mines of Mexico have been worked for hundreds of years; and up to 1873 the business of silver mining in that country had all the stimulus that a parity at 15½ to 1 could give to it. It is not, therefore, probable that any material increase of output can be expected from that quarter.

Conceding, for the sake of the argument, the eventual possibility of so superabundant a yield of silver as to work injury and inequity to the interests of creditors, is it not manifest that it is in the power of society at all times to remedy the evil by a limitation of the coinage? And, on the other hand, is it not equally manifest that for an insufficient supply there is no remedy?

If great mountains of silver should be discovered, does not Congress meet constantly? If there should seem to be too much, could not the coinage be readily limited to prevent depreciation? But, on the other hand, when we dedicate the monetary function solely to one metal, of which there is manifestly and admittedly the world over an insufficient supply, where is the remedy? What can Congress do to enlarge that supply? Absolutely nothing.

GOLD USED IN THE ARTS.

The Director of the United States Mint a few years ago estimated that of the $100,000,000 gold annually produced from the mines of the world $46,000,000 are consumed in the manufacture of jewelry, gold plate, plated ware, gold-leaf, etc., and in various processes of dentistry.

The single standard of gold, therefore, is maintained by the creditor nations in the face of the admitted fact that but $50,000,000 of that metal are annually added to the money stocks.

Not only is this encroachment of the commodity demand on the money supply becoming greater year by year, with the growth of population, but the supply of gold from the mines is itself becoming less, having declined from an average of $137,000,000 between 1856 and 1860 (the period of greatest yield from California and Australia), to an average of $107,000,000 for the past ten years. Of the entire gold supply of the world, nine-tenths of it have come from placer mines, readily discoverable and easily worked, because requiring little or no capital. All known fields of those are practically exhausted, and there is no reasonable prospect of the discovery of others. Hardy, adventurous, and skillful miners from the United States and capitalists from all countries have ransacked the world in vain for new fields of gold. Why, then, with the knowledge of those facts before us, should we discard from the full money use and function the only metal that gives to the world any prospect of relief from the money famine from which civilization is now suffering and from which, if silver be not speedily restored to its ancient use and function, the world is destined to suffer much more?

If it be conceivable that the demonetization of either metal were necessary, why demonetize that which promises the greater and more steady yield? If for any reason society should decide that one of the metals should be discarded, should it not rather be that one which promises the smaller future yield than that which promises the larger?

Silver is the money-metal best suited to the mass of the people and to the variety and character of transactions that constitute the interchanges of daily life. The supplies of both metals, if united by law in the full money function, would have a steadiness of value which can not be attained by either separately.

TREASURY NOTES SHOULD NOT BE REDEEMED IN BULLION.

The proposition to redeem the proposed Treasury notes in silver bullion or in anything but lawful money of the United States will never meet the approval of the people.

What the people of this country want is money and what they should have is money. These notes will represent full value received, the evidence of which is the bullion in possession of the Government. When issued, they will enter into circulation. They will have to do the work of money among the people. They will go to make up the volume of the currency. On the basis of that volume each dollar acquires a certain value and represents a given amount of sacrifice. On that volume and on those conditions, bargains will be made, prices established, debts contracted, values adjusted, and equities created. If any portion of that money be withdrawn from circulation (for that is what "redemption" means) without an equivalent amount of money in some other form being issued to take its place, the circulation will to that extent be contracted, every dollar in circulation will increase in value, prices will fall, property-values established on the basis of the larger circulation will shrink, and equities will be destroyed.

The redemption of any number of those notes in silver bullion means the withdrawal of so many dollars of money from circulation and the destruction of so much of the money of the country. Money is not a thing that can be destroyed with impunity. It should be kept in use among the people. It is to industry what the blood is to the human body; it is the life-giving and life-sustaining medium. The money volume of a country should not be subject to frequent and violent changes. In a new and growing country, it should be characterized by that steady accretion that characterizes the increase in the quantity of blood in the human body as it progresses from infancy to maturity. It is no more unreasoning, empirical, or unscientific to be alternately withdrawing blood from and injecting blood into a human body than to be constantly contracting and expanding the money volume of the country. And as activity of circulation of the blood is essential to the health of the body, so activity of circulation in money is indispensable to the well-being of society. The possession of any mere commodity, whatever its value, will never compensate a country for the destruction of any considerable portion of its money, upon the entire volume of which vast equities rest.

MONEY SHOULD BE REDEEMABLE IN ALL THINGS.

Money should be redeemed in all things, not in one thing alone. The peculiar characteristic of true money, that which distinguishes it from all other things whatsoever and constitutes it a prime factor in civilization, is that it is at all times redeemable in any thing that is on sale. Being an order for property, it should be redeemed in any form of disposable property which the holder may desire.

A guinea—

Said Adam Smith—

may be considered as a bill for a certain quantity of necessaries and conveniences upon all the tradesmen in the neighborhood.

Any form of money the condition of whose existence depends on redeemability in one thing alone can not be money in the full sense, and whenever an urgent demand for real money springs up the other ceases altogether to be money.

The redemption of money should be reciprocal between the Government and the people and between and among all individuals in the community. It should not only be redeemable by the Government by acceptance for taxes, but also redeemable by and among the people for all property for sale and services for hire. Its quantity should be so regulated as that its unit (the dollar) should neither increase nor diminish in value, and it should be kept constantly in circulation, and not be permitted to lie uselessly in the Treasury. Any other money than this is to a certain extent counterfeit; it is false money, because when most needed it fails to be money and has to be "redeemed" in something else (gold) which can not be got except at ruinous sacrifice.

It is of the very essence of money—its pith and marrow and protoplasm—that it should be a legal tender, a universal solvent, the ultimate of payment, and redeemable, at the prices ruling, in everything that is on sale. If the volume of such money be properly regulated, while there may from time to time be variations in the prices of particular articles, the general range of prices will be maintained practically undisturbed.

What an absurdity it is for the Government to put its stamp on one thing in order to make it redeemable in another thing imprinted with the same stamp, but which nobody wants except for the purpose of getting a third thing that could have been got just as well without the intervention of the second. As well might he who, wanting water, is given a silver cup wherewith to get it, on going to the spring, be forbidden to drink until he exchanges his silver cup for a gold one.

The real reason why it is insisted that all other things than gold shall be exchangeable into gold is that gold is getting dearer by reason of decreasing supply and increasing populations. The necessity for convertibility into gold implies that, in ordinary times, a range of prices higher than the gold range will prevail, and when, by reason perhaps of increased activity of business, redemption comes to be demanded prices are at once precipitated to those of the gold standard and below, to the great advantage of the creditor classes, who, as owners of bonds, may be considered in the language of the stock exchange "long" on money, and to the equally great injury of the producing class, who, being in debt, may be considered as having sold money "short."

The supreme consideration is that the money of a country shall be so regulated as that prices may not fall from any cause inhering in the money system. The value of money—in other words, the sacrifice necessary to obtain it—should be no greater at one time than at another. In order to effect that object of prime consequence, to maintain the value of money unchanging, there should be no hesitancy whatever in changing the material of which it is made.

Nobody who has reflected on the subject for a moment doubts that what gave "value" or exchangeable power to the greenback was

not the promise made on its face, without date, to pay a dollar, but the inscription on its back which declared it a legal tender for all dues and demands, public and private, except duties on imports. It was a misfortune to mankind that the words "promise to pay" were printed on it, because by it millions were led to believe that the "value" or exchangeable power resided in the promise instead of in the legal-tender power conferred upon it.

There is no object in redeeming in gold, except to maintain gold prices, that is to say, the range of prices prevailing in gold-using countries, and as those prices are constantly tending downward, any country that insists on maintaining the gold standard must accept the consequences in a corresponding fall of prices. The advocates of the gold standard, in effect, maintain that no matter to what extreme prices may fall, we must be content, we must bow in humble submission to the inevitable, since, in their view, it is more necessary to maintain the sacredness of the gold standard than to establish justice, promote prosperity, or to maintain equity in all time transactions.

It is in no way necessary, on account of any intrinsic or inherent quality of gold, that we should have that particular metal, and that alone, for money.

It is boasted that gold is a universal measure. Why is it universal? Why is gold accepted in every country of the world? Not because the gold is wanted for any quality inherent in the metal, but because it is an order for property in gold-using countries, such as England, France, and Germany, whose trade is largely a foreign trade. At whatever rate gold will exchange in England, it will exchange in all countries having trade relations with England, because it is an order for goods in a country with which they are dealing. Will not the money of this country equally and for like reasons, whether gold or silver, have acceptability in every country with which the United States have trade relations? not for any quality inherent in the metal, but because it is an order for property in the United States. Will it not be willingly accepted by those who wish to buy in this country?

POSSIBLE EFFECT OF REDEMPTION IN BULLION.

In order to see the effect of the redemption of these Treasury notes in bullion, we have but to look at the possibilities of the situation. Suppose there were in the Treasury $300,000,000 worth of that bullion, which, by the taking up, little by little and month by month, of the amount not used in the arts, would be taken by the Treasury at or about par. Then, suppose that for any reason, such as fear of approaching panic or otherwise, $100,000,000 of the Treasury notes were suddenly presented for redemption, and canceled, and the bullion as suddenly put on the market, what would it be worth? What would gold bullion be worth if it had not the privilege of coinage and if $100,000,000 of it, deprived of the money use, was suddenly put on the market? Can there be a doubt that the abrupt output of so large a quantity would have the effect of immediately and enormously depreciating its value? In the case under consideration, the result would be that the silver remaining in the Treasury would not bring one-fourth the sum necessary to redeem the outstanding Treasury notes, so that not only would a heavy loss result to the Government, but, by reason of the sudden and serious contraction of the money volume, an infinitely greater loss would result to all the people.

But if it be deemed a remote contingency that any extraordinary amount would in that manner be suddenly taken from the Treasury, there is another danger which can not be put aside as improbable, but which, on the contrary, is to be looked for with almost absolute certainty, and, to my mind, constitutes an irremovable and insurmountable objection to any system of bullion redemption.

A large number of merchants in London need, monthly, millions of dollars' worth of silver to make payments in India. They will naturally want to get it at the lowest price, and it is not to their advantage to intensify the competition for it. On the contrary, it is to their direct advantage to depress the price to the lowest possible point.

As the Treasury of the United States would buy silver at the lowest price, the London merchants would refuse to enter the open market in competition with our Government for its purchase. But no sooner could the silver be stored in the vaults of the Treasury than the agents of the London merchants would appear and before any opportunity had offered for a favorable change in the price of the bullion could present as many millions of these notes as might suit their purpose and receive bullion therefor. A Secretary of the Treasury who conscientiously believed that it was his duty to maintain the gold standard at all hazards would naturally feel compelled—certainly it would be in his power—to put out whatever amount of bullion he might deem necessary to accomplish that purpose, even if it all had to go.

Thus the United States Treasury would become the convenient and capacious conduit through which silver should immediately flow from this country to England, depriving our people, notwithstanding the legislative measures for their relief, of practically all use of silver as money, inasmuch as the four and a half million dollars of Treasury notes would be withdrawn and canceled about as soon as issued.

Thus would our Treasury Department be made practically the purchasing agent in this country of any syndicate or combination of English merchants who might desire silver for the East India trade.

If it be said that no Secretary of the Treasury would attempt thus to defeat the will of the people as expressed in the law, the sufficient reply is that a conscientious man who believes that the honor of the United States is pledged to the maintenance of the gold standard, and that it is indispensable to the prosperity of the people, will exercise all the power vested in him by law to prevent a departure from that standard and will regard himself as for the time being the savior of the Republic by keeping it from "the edge of so dangerous a peril" as the execution of the people's will.

Certainly no man will deny to the present Secretary of the Treasury entire rectitude of motive in all his conduct. From the well known fact that since the passage of the limited coinage act of 1878 all our Secretaries have refrained from purchasing more silver than they were compelled to do by the mandatory provision of that law, it is reasonable to infer that none of them, if called upon to execute a law containing a silver bullion redemption clause, such as is suggested, would feel called upon to make a net purchase of more than $2,000,000 worth in each month and that none of them would hesitate to exchange for Treasury notes all the monthly purchases of bullion in excess of that amount.

A PLANK FROM THE REPUBLICAN PLATFORM.

I must be pardoned for directing the attention of Senators on this side of the Chamber to a short declaration of the last Republican national convention:

The Republican party is in favor of the use of both gold and silver as money.

If party platforms mean anything that clause meant that the Republican party went before the country pledged to the use and to the equal and non-discriminating use of both silver and gold as money. It was well known that throughout the entire West the question of the remonetization of silver was deemed of vital importance, and party orators and the party press throughout that entire section were severe in their denunciation of the prior Administration for its unfriendly attitude toward silver.

I wish in all solicitude and sincerity to advise my Republican friends of the East that this plank in the party platform was construed by the Republicans of the West to mean precisely what it says. They are looking with confidence to this Congress for such action as will fittingly embody in the statutes the principle laid down by the party now in the responsible direction of the Government.

SHALL WE BE FLOODED WITH SILVER?

We are told that if silver is given free access to the mints we shall be flooded with it from all parts of the world. Does anybody show where the flood of silver is to come from? Where are the reservoirs that contain it? Not in England, where it is difficult for the people even to get a sufficiency of it for small change to transact the business of the country; not in Germany, where the scarcity of money was so pressing that the government had to abandon the idea of selling silver. Though the stock in France is large her people will never give it up. Silver has been the "shield and buckler" of the French Republic. All she has is coined at the ratio of 15½ ounces of silver to 1 of gold, and its shipment to this country would involve a loss to France, not only of the 3 per cent. difference between the French relation (15½ to 1) and ours (which is 16 to 1), but of 3 per cent. additional in the cost of gathering and shipping it. And after that she could only exchange them for Treasury notes. The silver stock in India and the Orient is performing indispensable duty as money, and no "flood" of it can be expected from that quarter. From time immemorial India has been absorbing all the surplus silver of the world. She has never got so much as to appease her appetite for more. So insatiable is her desire for that metal that she has long been known as the "Sink of Silver." China has not a piece of the metal that she can dispose of. Mexico has no stock whatever of silver on hand, except the limited number of coined pieces forming her moderate money circulation, and not a dollar of it can be spared. No country of Central or South America has any surplus silver. Every piece of coined silver in every country in the world is part of the monetary circulation of that country, and even when of short weight and classified as a mere "token" is passing at par as full valued money. No gain could possibly accrue, therefore, to the owners of coined silver anywhere by shipping it to this country for any purpose, and there is no surplus stock of bullion anywhere.

If anybody doubts this statement let him make the attempt in all the money centers of the world to buy from accumulated stock even $5,000,000 worth of it. He will fail to get it in London, Paris, Berlin, Calcutta, New York, or San Francisco, or in all combined. There is no source from which to get silver except the current supply from the mines, and whatever that is now it is not likely ever greatly to increase. The occupation of mining is not attractive to many, and in the nature of the case the number who follow it will always be comparatively few. The Argonauts of old were but a small band of hardy adventurers; those of the new era are destined to bear no larger proportion to the population. But, even were this not so, nature herself draws the line. To the eye of the experienced prospector silver mines are as discernible on the surface of the earth as are mountains, and the world has been explored in vain for further

"finds." Those who talk, therefore, of "floods" of silver coming here for coinage simply show their ignorance of existing conditions.

I may add that of all the shafts that have been sunk for silver mines in the world where they have found silver croppings on top in ninety-nine out of every hundred, and I think I am stating it moderately, the veins have not penetrated the earth, mineralized, fertilized, to the depth of 50 feet; rarely have they penetrated the earth to a depth exceeding 1,200 feet, and the most prolific yield of silver mines has been from a depth not exceeding 800 feet.

The very fact, Mr. President, that, with all the world searching for gold and silver mines—a search that has continued throughout all history—the amount of the two metals yielded by the mines is about equal, shows that the historical relation existing between them is the relation at which they can be profitably produced.

It is apparent that if there were a great advantage in the production of silver over gold at the relation of 15½ to 1 that advantage would be seen in the largely preponderant production of silver; but instead we find that the result of thousands of years of mining has given us about equal quantities of both metals.

CAN THE UNITED STATES ALONE HOLD THE METALS AT A PARITY?

We are told that the United States, unaided, can not, if it would, restore silver to a parity with gold, that no one nation acting alone can achieve so difficult a feat. But it is incapable of denial that throughout all vicissitudes of production of gold and silver from 1803 to 1873 the law of France—one nation alone—accomplished it.

As I have shown in greater detail elsewhere, by reference to the table of annual production of the metals, it will be observed that from 1803 to 1820 the production was in the proportion of four dollars of silver to one of gold; from 1821 to 1840, two of silver to one of gold; from 1841 to 1850, one dollar of silver, to one of gold; from 1851 to 1860, four dollars of gold to one of silver; from 1861 to 1865, three of gold to one of silver; from 1866 to 1870, two of gold to one of silver; in 1871 and 1872, one and a half of gold to one of silver. Notwithstanding these extreme variations in the relative annual production the law of France constituted a ligature sufficient to hold the metals in line at the ratio of 15½ to 1, and this not for France alone, but for the whole world. If that period does not offer sufficient proof of the power of law, under varying conditions of supply, to tie the metals together and keep them so, no degree of proof will suffice, for the vacillations of their relative production have been greater during this century than at any former period in the history of the world.

IS AN INTERNATIONAL AGREEMENT NECESSARY?

If that could be done by a nation with a population of 25,000,000 to 35,000,000, what difficulty could be experienced by a nation of 65,000,000 in accomplishing the same result? Yet we are told that international agreement is necessary to restore silver to its ancient right as a full money-metal. Those who suggest such an agreement forget that while this nation is a borrower of money the first and principal nation to demonetize silver is the greatest money-lender known to history. Is it for a moment to be supposed that the shrewd English creditor classes will enter into any agreement which will deprive them of the spoils of so delicate and ingenious a system of usury, a system not only not banned by law, but, on the contrary, having the special approval and protection of statutes and the active support and approval of all the complaisant moralists, philosophers, and financiers of the age?

While they are diligently gathering in the proceeds of this operation a diversion is kept up for the occupation and amusement of *dilettante* financiers and economists, by invoking a discussion of the ratio that should be maintained between the metals. The ratio is the pretext on which conference after conference has been called.

The advocates of the single gold standard contend that hostile legislation had no influence in effecting the separation of the metals and that the reversal of that legislation can not and will not restore them to a parity unless the principal commercial nations of the Western world join in the work of rehabilitation. As illustrating the force of law on the relation of the metals I will read a suggestive paragraph from the report of the royal commission of England (1886), Part I, section 192:

> Now, undoubtedly the date which forms the dividing line between an epoch of approximate fixity in the relative value of gold and silver and one of marked instability is the year when the bimetallic system which had previously been in force in the Latin Union ceased to be in full operation, and we are irresistibly led to the conclusion that the operation of that system, established as it was in countries the population and commerce of which were considerable, exerted a material influence upon the relative value of the two metals.
>
> So long as that system was in force we think that, notwithstanding the changes in the production and use of the precious metals, it kept the market price of silver approximately steady at the ratio fixed by law between them, namely, 15½ to 1. Nor does it appear to us *a priori* unreasonable to suppose that the existence in the Latin Union of a bimetallic system with a ratio of 15½ to 1 fixed between the two metals should have been capable of keeping the market price of silver steady at approximately that ratio.

The paragraph quoted ascribes the effect thus produced to the bimetallic treaty of the Latin Union, a combination of Italy, Belgium, Switzerland, and France, entered into in 1865 for the purpose of maintaining similar conditions of coinage. But it will be observed that, so far as the ratio was concerned, precisely the same effect had been produced by France alone during the sixty-two years from the passage of its law of 1803 to 1865.

Not only did the French law keep the metals together at a time when the larger annual yield was of silver, but it kept them together when the larger annual yield was of gold. Had not that law been in operation during the '50s, when a flood of gold poured from the mines of California and Australia, gold would have fallen, as in early times it more than once fell, to the ratio of 1 to 10, at which but 10 ounces of silver (instead of 15½) would buy an ounce of gold. Thus the law of one country alone, a country then of not one-half the present population of the United States, held the metals together, so that to whatever extent gold fell in relation to commodities from 1848 to 1865, by reason of the large output of the mines, silver fell to the same extent, notwithstanding the enormous decrease in its production relatively to gold during that period.

What is claimed for law in this connection is not that it directly controls the relative values of gold and silver any more than of anything else, but that on the slightest separation of the metals there instantly arises, under the law of the double standard, a demand for the cheaper metal, while the demand for the dearer one is suspended. In this way the double standard accommodates itself to the law of supply and demand, which is admitted to be the governing factor in the determination of value. It is not contended that a small or insignificant country could keep the metals together, but all experience goes to show that a great nation like the United States would have no difficulty whatever in doing so.

So thoroughly are the advantages of the gold standard to the creditor classes recognized in England that the English commissioners, who, for form's sake, have been sent to the several monetary conferences held on the continent, have never been invested by their Government with any power whatever. And it is but a few weeks since the House of Commons overwhelmingly voted down a proposition, made in good faith by Mr. Samuel Smith, looking to the calling of a new conference, which was supported by petitions to Parliament signed by 60,000 persons, not merely as individuals, but as representing large organizations of the toilers of England.

The ratio is not the difficulty. Those who wanted silver demonetized do not want it added to the money volume of the world at any ratio. Why then shall we wait? Macaulay, commenting on the impregnability of intrenched prerogative, observed that if the announcement of the discovery of the law of gravitation had militated against the personal interests of any vested or privileged class its general acceptance might have been long postponed. Shall we, then, postpone relief to the suffering industries of this country till we can secure from the privileged classes, from the money-lenders of the world, an agreement to cease their exactions?

No, Mr. President, we need not wait and we *will* not wait. All that is necessary is to *act*, and, so far as the rules of order and of parliamentary procedure will permit, we propose to act, promptly and decisively. The world can not expect the initiatory movement for any change to be taken by those whose interests are served by the continuance of present conditions. Such conditions being consistent with their own welfare, they find no difficulty in arriving at the conclusion that they are for the welfare of society at large.

The dogma that cupidity is a synonym for virtue will never fail to find ready converts among the beneficiaries.

> * * * Plate sin with gold.
> And the strong lance of Justice hurtless breaks.

CONCLUSION.

I predict that the restoration of silver to its birthright, Mr. President, will mark an epoch in the history of this country. It will place in circulation an amount of money commensurate with our increasing population. It will give assurance to our languishing industries that the volume of our circulating medium is not to continue shrinking and that the tendency of prices shall no longer be downward. It will increase the wages of labor and the prices of the products of labor; it will reduce the price of bonds and other forms of money futures, it will lighten, but not inequitably, the burden of mortgages; it will increase largely, though not unjustly, the debt-paying and tax-paying power of the people. It will loosen the grasp of the creditor from the throat of the debtor.

By the remonetization of silver, money will cease to be the object of commerce and will again become its beneficent instrument, activity will replace stagnation, movement will supplant inertia, courage will banish fear, confidence will dispel doubt, hope will supersede despair.

The lifting up of silver to its rightful plane by the side of gold will set in motion all the latent energies of the people. It will banish involuntary idleness by putting every willing man to work. It will revive business and reanimate the heart and hope of the masses. Capital, no longer fearing a fall in prices, will turn into productive avenues. The hoards of money lying idle in the bank vaults will come out to bless and enrich alike their owners and the community at large; while the millions of dollars now invested at low interest in gilt-edged securities will seek more profitable investment in the busy field of industry, where they will be utilized in the payment of wages and the consequent dissemination of comfort and happiness among the people.

And this it will accomplish not for the United States alone, but for civilization. For it is not too much to say, Mr. President, that upon the decision of this question depend consequences more mo-

mentous than upon that of any other question of public policy within the memory of this generation. In a broader sense than any other question attracting the general attention of mankind it is a question of civilization. It embodies the hopes and aspirations of our race.

The act of Congress which shall happily solve it will constitute a decree of emancipation as veritable as any that ever freed serf from thralldom, but more universal in its application. It will proclaim the freedom of the white race the world over, it will lift the bowed head of labor, it will hush the threnody of toil. It will inaugurate the true renaissance, a renaissance of *prosperity*, without which industry, learning, science, literature, art, are but as apples of Sodom. [Applause in the galleries.]

The Tariff.

SPEECH
OF
HON. WILLIAM S. FORMAN,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 9, 1890.

The House being in Committee of the Whole, and having under consideration the bill (H. R. 9416) to reduce the revenue and equalize duties on imports—

Mr. FORMAN said:

Mr. CHAIRMAN: I am well aware, sir, that nothing which I can say, nothing which any gentleman upon this floor can say, will in the least degree affect the final result as to the question under consideration. The decree rendered by a Republican caucus will be executed to the letter and this bill passed substantially as it comes from the hands of the committee. Yet, sir, this fact ought not and does not deter me from earnestly protesting against the passage of this measure. It has been frequently stated that the Presidential campaign of 1888 settled this question; that this bill had been ratified, as it were, in advance by the election of a Republican President and a majority of the members in this House. I deny it. No political party would have dared face the American people in 1888 without an express promise to reduce taxation. This is not a bill for that purpose. It is what its title implies, "A bill to reduce the revenue and equalize duties on imports, and for other purposes."

Had the Republican party said to the people that in case of party success no reduction of duties should be had except upon sugar and molasses, that with this exception the duties should be increased as provided by this bill, or in other words, had this bill been made the party platform, Mr. Harrison would not have carried half a dozen States in this Union. The people demanded cheaper sugar, but their demands did not, and do not to-day, stop at this point.

It is not even certain that this bill will bring about any great reduction in price to the consumers of sugar, since most of the sugar admitted free under its provisions is of a quality requiring refining before it can be used. And to-day we have listened to a dialogue between two distinguished Republican members from Iowa, one attempting to prove that the price upon sugar to the consumer will by this bill be reduced, and the other doubting the effect of its provisions in that particular.

Of one thing we are assured, We have lost $55,000,000 of revenue. We are to pay a bounty of $7,000,000 annually to the sugar-growers of this country, thus making a difference in our finances of $62,000,000 per annum. But, sir, I see in this provision the brightest ray of hope for an overtaxed and overburdened people. It is the "beginning of the end" of this most outrageous system of discrimination, falsely termed "protection." This is an admission in terms so plain, in language so certain, that the tariff is a tax, and paid by the consumer of the article upon which it is laid, that the most ignorant can understand it. This act of the majority of the Ways and Means Committee removes the pleasing sophistry by which the people so long have been deluded. You propose to take from the public Treasury $7,000,000 per annum, gathered from all sections of the country, and pay it to one particular class. In other words, that he who raises sugar shall receive from the Government a bounty at the rate of fifty to sixty dollars per acre, while the Illinois farmer continues to raise his wheat and corn at a loss.

As to the constitutional objection to the Government taking from all other classes money and paying it as a bounty to another, the gentleman from Iowa [Mr. GEAR] slides over it with an ease and facility truly refreshing. He says that it is clearly within that clause of the Constitution which empowers the General Government "to promote the general welfare." Hereafter all that the Republicans need to do to set aside the Constitution is to convince themselves that a particular measure is for the promotion of the public welfare, and all constitutional barriers are at once removed.

I suppose our Louisiana friends are not deceived by this donation offered them from the public Treasury. In my humble judgment, if it had not been for the sugar-beet raiser of California and the sorghum-grower of Kansas, the Southern sugar-planter would have been kindly permitted to take care of himself. They may console themselves with the fact that the company in which a man is found frequently fixes his fate.

Mr. Chairman, it is the boast of the protectionists that this bill is prepared with the single object of continuing what they are pleased to term "the American system," "our industrial system," and like alluring terms, and sustaining those manufacturing industries which have grown up under the legislation now in force. But they do not seem to be satisfied with the number of enterprises now clamoring for Government assistance. The corridors of this Capitol are now swarming with well-dressed capitalists asking for Governmental protection. But the committee, not content with the horde of leeches hanging upon us, have been prosecuting their inquiries in other directions in search of other silent partners in this infamous scheme to rob the people. Other capitalists are wanted to unite their destinies with that of the Republican party and share the plunder to be obtained. Hence, sir, this bill more than doubles the duties upon tin-plate, though not a pound of it is manufactured in this country, and the chairman of the committee reads with great gusto the following letter:

ST. LOUIS, *November 27, 1888.*

DEAR SIR: In answer to yours of the 22d instant, in reference to the manufacture of tin or terne plates, we are at liberty to state that one of our mills has already been arranged for tin-plate work and if a sufficient duty is put on the articles to cover the difference between the English and American scale of wages we will be ready to turn out plates on short notice. It is also very evident that in case a proper duty is fixed on tin or terne plates the large number of English manufacturers will move their works over to this side. The question as to whether these plates will be made in this country, therefore, depends solely upon proper legislation. We have for the last few years contemplated building an additional mill, but did not, under the existing circumstances, consider the investment a safe one. This danger, however, is in a measure removed by the Republican victory; and if the fact, as I believe it to be, can be generally established in the minds of the people that the Republicans will continue to govern this country in the future, there will be plenty of money forthcoming to embark in a manufacture of tin and terne plates.

Yours, very truly,

F. G. NIEDRINGHAUS, *President.*

W. C. CRONEMEYER, Esq., *Demler, Pa.*

This is to my mind substantially a bid from a wealthy gentleman, who holds a seat upon this floor, to this committee to increase the duty upon tin-plate, and he would engage in its manufacture. But he states in his letter that "one of our mills has been arranged for tin-plate work." The manufacture of tin-plate must have offered an inviting field at the present duty, or Mr. NIEDRINGHAUS would not have arranged that one mill before he knew of the success of the Republican ticket. But the committee has acted upon the proposition, and the consumers of this most useful article must pay $16,000,000 per annum, based upon present imports, to pile yet higher the fortunes of certain gentlemen, both in and out of Congress, and another step taken in making stronger the combination of capital to render permanent and perpetual the bondage in which the people are now held.

Every argument in favor of this bill in this discussion so far has begun, continued, and ended in an appeal in behalf of the laboring men of this country.

Some weeks ago, I heard an old member of this House say that he had been here long enough to know that when men came to Congress asking the passage of a measure the real object of the proposed legislation was never given. So in this instance, if the real object of the passage of this bill was boldly stated, namely, filling the pockets of the rich with money extorted from the poor, not a single man upon this floor would dare to defend it.

PROTECTION TO THE FARMER.

The Republican politicians for years have to the farmers sung the siren song of the home market, have whispered in their ears mournful warnings as to the foreigner who was proposing to ship corn and wheat and oats and beef steers across the ocean, produced by the pauper labor of Europe, to compete with him in the home market, or that Canadians would send across the line their eggs, their cabbage, poultry, and other products of the farm, to be sold in competition with his. At this late day no farmer is fool enough to be captured with the first argument, but the Canadian scare has served its purpose well.

Suppose we had free trade with Canada, what would be the result? I take great pleasure in quoting from a speech made upon this subject by the Hon. BENJAMIN BUTTERWORTH, of Ohio, before the Committee on Ways and Means. It must be remembered that Mr. BUTTERWORTH is a Republican and a protectionist, and that he has perhaps given more attention to this question than any man in public life, but he has sufficient intelligence to see the truth and the honesty to proclaim it. He says:

In the years 1883, 1884, and 1885 Canada purchased more from us than all the other countries and islands on the western hemisphere, and during the existence of the reciprocity treaty from 1855 to 1866 she bought from us more than she sold to us—the large sum of $50,136,256; and from the years 1850 to 1889, inclusive, a period of forty years, there have been only seven years in which the balance of trade has been against us with that country. In thirty-three years it has been in our favor. * * *

It is suggested that the farmers of this country would find themselves in the vocative if the agricultural products of Canada were admitted to the United States. It is difficult to hear with patience such a statement. The farmers have for many years been participating in wronging themselves. The idea is, I suppose, that it is the duty of the Government to create a famine in order to supply a market, but aside from all that the experience of our own country abundantly proves that in the matter of competition we find our most healthful prosperity, not only so far as agriculture is concerned, but in every possible direction and department of industrial effort. Any one who will study with care the statistics of the development and growth of this country will see how absurd the suggestion of danger to the farmer is. * * *

Mr. CARLISLE. If the trade between the United States and Canada is beneficial to the United States, why should we complain if it is also beneficial to Canada?

Mr. BUTTERWORTH. We should not. But the trouble is, Mr. CARLISLE, that partisan politics rather than statesmanship may guide in this matter. There are a few manufacturers who would suppress all competition at home as well as abroad if they could, who are potential in certain Congressional districts along the border. These, joined with a handful of fishermen and farmers near the line and holding in some measure the balance of power, could control the economic policy of a nation and are potent to shape the destiny of 60,000,000 of people. We must cut loose from mere partisan politics and local selfishness in dealing with questions of this character and appeal to broad statesmanship which solves problems of state, not merely for the approaching fall election, but for the century and for the paramount and lasting good of the whole people. * * *

I insist as a Republican and a protectionist that if the narrow-gauge policy suggested by some distinguished gentlemen is adhered to the protective wall all around the United States will be thrown down except for purposes of revenue, and we will be brought to a realizing sense that the protective system is to impart the quality of fairness and humanity to competition, and not to destroy it in the interest of combined and aggregated wealth. Unfortunately, as the world goes, Congress is not likely to take an affirmative action on any given proposition until the wild clamor from the people in its favor fairly lifts members from their feet, and then the sound must be absolutely certain and clear before they will consent to act.

Gentlemen will discover before our party is many years older that we are fast running upon the rocks by continuing to abuse a policy wise in itself but which may be so persecuted as to be condemned by three-fourths of the people who thoroughly understand it. I insist, and shall continue to insist, that the policy which has sole reference to certain conditions, which impart to the competition where those conditions exist the leaven of injustice, inequality, and inhumanity, shall not be applied where those conditions are not found. Nor am I, for one, content to remain deaf and silent in the midst of this conflict, awaiting for favorable winds to blow me to a harbor of political rest, setting my sail after the current of the trade winds has become obvious and their course and force manifest.

OUR PROSPERITY.

The gentleman from Ohio [Mr. MCKINLEY] says:

We have now enjoyed twenty-nine years continuously of protective-tariff laws, the longest uninterrupted period in which that policy has prevailed since the formation of the Federal Government, and we find ourselves at the end of that period in a condition of independence and prosperity the like of which has never been witnessed at any other period in the history of our country, and the like of which has no parallel in the recorded history of the world.

Again he says:

No sane man will give up what he has got, what he is in possession of, what he can count on for himself and his children, for what is promised by your theories.

Sir, there are many men in this country who would not think of giving up what they have, neither will they give up the system which has builded their princely fortunes without a struggle, and from a worldly view I can not blame them. But let us see whether this prosperity is so universal as the gentleman would have us suppose. The farmers have been told to vote the Republican ticket. We will increase tariff duties, increase the number of factories, increase the number of laborers, and sell to those laborers the produts of the farm at enormous profits. Now, sir, I know that the argument I propose to make is not pleasing music to the ears of my Republican friend when he connects it with that boasted "prosperity" the like of which has never been witnessed. And when we allude to the condition of the farmer and the laborer we are met with a sneer from the other side of this Chamber, and are accused of casting odium upon the people we represent.

I would be the last man who would say aught in derogation of the grand State which I have the honor in part to represent in this body. I am proud of Illinois. I regret her true condition, and deplore the policy which I believe is mainly responsible for it. I congratulate her people that her abundant natural resources prevent its being infinitely worse.

ILLINOIS—THE CONDITION OF HER FARMERS AND LABORERS.

Illinois is to-day by the best ascertainable statistics the first State in this Union in the value of her agricultural products. By the census of 1880 she was fourth in manufactures. I believe the present census will place her third, perhaps second, in manufactured products. Chicago, that marvel of western enterprise, with her 1,000,000 souls, and St. Louis, that great commercial mart of the Mississippi Valley, with her half million of inhabitants, furnish us with the best markets of the West. With an extensive system of railroads and two great rivers, the Mississippi upon the west and the Ohio upon the south, with a soil of inexhaustible fertility, her manufactories scattered all over the State, with as industrious, intelligent, and economical a people as ever engaged in the battle of life—this ought to furnish a fair test of this boasted American system and under the most favorable conditions for the protectionists. Here the factory hand and the farmer are in close contact. Could better conditions be selected for the demonstration of the experiment of the twenty-nine years to which the gentleman from Ohio alludes?

FARM AND OTHER MORTGAGES.

I find that for the district I represent, in the year 1887, the mortgage records of the several counties made the following showing:

Lands	$5,013,116
Lots	3,188,317
Chattels	675,159
Total	8,876,599

When I looked upon these figures I was astonished beyond measure, and thinking, perhaps, that my district was not a fair illustration, I turned my attention to other portions of the State. I find that the Thirteenth Congressional district, composed of the counties of Christian, Mason, Menard, Morgan, Sangamon, and Tazewell, had for the same year, 1887, a real and chattel mortgage indebtedness of $15,770,410; that the Ninth district, composed of the counties of Ford, Iroquois, Kankakee, Livingston, Marshall, and Woodford, had a real and chattel mortgage indebtedness of $17,635,610, and the Eighth district, comprising the counties of Du Page, Grundy, Kendall, La Salle, and Will, had a real and chattel mortgage indebtedness of $18,265,996.

From the report of the Bureau of Labor Statistics, from which the above figures were taken, we are informed that the real and chattel mortgage indebtedness of the State of Illinois in 1880 was $204,361,254, that in 1887 it had increased to the enormous sum of $416,379,048, which are the last obtainable figures. This ratio of increase, and no one familiar with the State would deny that the increase has been continued at this rate, would by a fair calculation place this indebtedness at $550,000,000. This represents mainly those who are so reduced that they find themselves without individual credit and are forced to place mortgages upon their realty. The chattel mortgage indebtedness tells the story of a greater degree of poverty, as it is usually the last resort in raising means. This does not include the indebtedness at the banks and to private individuals. I am satisfied, sir, that tens of thousands of the farmers of Illinois who appear on the surface to enjoy a reasonable degree of prosperity are but tenants awaiting the inevitable foreclosure and the loss of farms upon which they have spent the best years of their lives in the hardest drudgery.

By the report of the State board of agriculture of Illinois we find that the farmers of that State sustained losses upon the three staple crops, wheat, corn, and oats, for the last seven years, as follows: Upon wheat, $3,085,942; corn, $5,776,133; oats, $23,321,000, making the grand total of losses sustained by farmers in the last seven years on these three crops $32,182,115.

With no hope to stimulate them to further exertion, knowing of no source from whence succor can come, are you astonished that the farmer has come to the conclusion that every other man's hand is against him? Is it surprising that he is organizing "offensive and defensive" all over the land? Are you surprised that he knocks at the doors of this Congress with a vehemence never heard of before?

THE WOOL QUESTION IN ILLINOIS.

The only agricultural product of any consequence which any honest man of ordinary intelligence can say will be benefited by the provisions of this bill is wool. Happily we are not left to grope in darkness upon this subject, as we have enjoyed the blessings of a protective tariff on wool for years, and let us apply the test which the gentleman from Ohio [Mr. MCKINLEY] has erected, namely, "prosperity." Let us again refer to Illinois. Illinois has a climate well adapted to sheep culture. We have a vast variety of soil, including the finest pasture lands which can be had at reasonable prices; yet we are informed by the State board of agriculture of that State that the number of sheep has gradually and steadily decreased since 1880. The wool clip for 1880 was 4,757,938 pounds. It gradually decreased until it touched the lowest point in 1889, when it amounted to but 2,767,585 pounds. But this is not all. The price as stated by the same authority was 34 cents per pound in 1880 and 23 cents in 1889. Thus the wool clip in 1880 was worth $1,617,698.92, and for 1889 only $636,544.55, or $931,154.37 less in 1889 than in 1880. In 1880 the Illinois farmers marketed 261,230 head of fat sheep, worth $938,861, while in 1889 they only sold 146,675 head, worth $517,756, or a loss of $221,105, making a total falling off in receipts for wool and fat sheep of $1,118,259.37.

But this is not the end. We increased our stock of cattle from 1,715,586 in 1880 to 2,786,239 in 1890; horses from 853,738 in 1880 to 1,123,793 in 1890; our swine from 2,703,343 in 1880 to 5,433,250 in 1890, while our sheep decreased in number from 1,568,286 in 1880 to 688,387 in 1890. We thus find that the American sheep is rapidly and surely retiring from business in Illinois, the victim of an unwarranted discrimination which prevents the wools of his relatives in other countries from being shipped here and mixed with his own fleece, thus securing successful manufacture. The same history can be told in about the same ratio in the State of Ohio, and perhaps in other wool-growing localities.

CONDITION OF THE LABORERS.

From the deplorable condition of the farmers let us turn to that of the laborers, and, if possible, we will find a tale of deeper woe. Sir, we can not go to the mortgage records to ascertain his lot. These records stand mute and silent, giving us no information. I have a per-

sonal knowledge as to the circumstances which surround a large number of these people in my State, but I am not making assertions on my own account, but shall call into requisition the last report of the bureau of labor statistics for the State of Illinois. I believe, sir, that the laborers of the State of Illinois ought to be under as favorable conditions as those of any other part of the United States. Here the producer and consumer of farm products meet. The laborer has the advantage of cheap meat, cheap butter, and cheap bread. All men agree that when work is plenty, wages good, and living cheap, peace and contentment prevail. Yet what is the record? From the authority above alluded to we find that in the year 1886, the last for which we have statistics, there were in the State of Illinois 1,060 strikes, involving 105,833 employés, and lockouts involving 18,228 more; total involved, 124,061.

Do our friends stop to reflect upon the consequences of 106,000 laborers who in a single year in a single State rebelled against their surroundings, laid down their work, demanding better wages or fewer hours, or refused to submit to a reduction of wages or longer hours of labor? You who shed your crocodile tears and bewail the lot of the laborers, how do you like the picture of 500,000 women and children bereft of their means of support because their husbands, fathers, and brothers could no longer endure the conditions by which they were confronted? I may be told that this was an unusual year; but I reply it was the result of twenty-six years of your boasted "protection," and I suppose an evidence of the "prosperity" to which the gentleman from Ohio alludes, and that, too, in one of the leading States of this Union in both manufacturing and agricultural development.

The same authority informs me that the laborers in that single year, on account of these strikes, lost $254,856, while their employers lost but $246,475, with this difference, that the employers could well afford the loss, while the men were brought to the very verge of starvation. Even in the strikes partially successful it required months of weary work to regain what had been lost. Again, the legislation of Illinois since 1886 has been aimed at the suppression of strikes. The boycott and conspiracy laws have since been placed upon the statutes, so that the laborer finds himself hedged in and surrounded by restrictions, and he has not forgotten the unequal war he waged in 1886. One thing, and one thing alone, saves him from abject slavery, and that is his labor organizations.

Nothing ought to convince one more readily than facts. You may construct your finest sophistry, you may indulge in your wildest dreams of fancy, you may calculate with apparent certainty the effects of certain causes, but when you find conditions running contrary to your theories one or the other must surrender.

The farmer and the laborer have lost all patience with a principle and theory of protection which when put in practical operation fails to protect. Let me quote from Victor E. Piollet, a past grand master of the State Grange of Pennsylvania, a former Republican and a former believer in the doctrine of protection. In a letter to the Farmers' Friend, he says:

> Were farmers of my way of thinking and acting, they would not give a vote for the election of any man to Congress who would not pledge himself to use his influence and vote to make leather and the manufactures of leather free from the payment of duty. Free hides, free leather, free boots and shoes.

Now, if free hides, free leather, and free boots and shoes are so desirable, why not extend the doctrine to free wool, free clothing, and free blankets?

Again I quote from Ralph Beaumont, esq., the chairman of the Knights of Labor legislative committee at Washington, a gentleman to whom I need not introduce the laboring men of this country, who writes an open letter to Mr. McKINLEY upon the Republican caucus silver bill, and which will appear in the National Economist to-morrow morning. It is as follows:

> You, as the leader of your party in the House, are on the point of pressing a measure through the House known as the tariff bill, which you say is to protect these tillers of the soil from ruinous competition from abroad. Let me again beg, warn you that since the last campaign that was fought out upon that issue these same tillers of the soil have come to the conclusion that during that campaign they were laboring under a delusion, and that they have come to a further conclusion that it is not from competition from abroad that they are suffering, but on the contrary it is from legal discriminations against them in the interests of corporate wealth by just such unfair legislation as is contained in this bill.

That the farmers and laborers may see how much their burdens are lightened by this bill, I give the following table as to a few articles largely used by the people:

Articles.	Present duty.	Proposed duty.
	Per cent.	*Per cent.*
Worsteds, knit goods under 30 cents	73.20	130
Worsteds, knit goods, 30 to 40 cents	68.41	147
Worsteds, knit goods, 40 to 60 cents	67.60	130
Worsteds, knit goods, 60 to 80 cents	68.96	112
Worsteds, knit goods, above 80 cents	71.22	90
Worsted shawls	61.82	93
Belts for presses (printing)	58.14	101
Blankets and flannels and hats	69.70	110
Women and children's dress goods	68	103
Women and children's dress goods	60	73
Do	85	110
Clothing, ready-made	54	84
Cloaks, dolmans, etc	60	82
Webbings and gorings, etc	64	99
Common window-glass, 10 by 15	67.61	73.72
Common window-glass, 16 by 24	115.41	123.10
Common window-glass, 24 by 30	128.58	135.54
Common window-glass, above that	132.29	138.01
Freestone, granite	20.22	40
Freestone, granite, hewn or dressed	20	50
Cotton-ties	35	115
Tin-plate	34	74
Steel ingots, etc., above 15 cents per pound	11.89	45
Wire-fence rods, No. 6	45	54
Pen-knives, etc	30	75
Table cutlery	35	50
Shotguns	35	60
Mica	Free.	35
Fish, fresh	Free.	52.10
Tobacco	81	200
Plushes	40	100
Hosiery	40	60
Shirts and drawers	40	63
Burlaps	20	50
Brown and bleached linens	35	50
Do	35	60
Yarns	65	100

A protective theory which after thirty years of trial calls for repeated increases in the duties upon imports and fails to discharge its appointed functions, like the "heathen Chinee," must go.

While the subject is a serious one, and so important to us all, it is amusing to see the labored effort our friends on the other side make to discover some reason for the general depression of agricultural pursuits. And I have waited patiently for some Republican to solve the problem.

The only attempt in this direction is the objection I hear raised against the interstate-commerce law. The only way in which this law could by any possibility affect the farmer to his disadvantage would be to increase the rates on grain from the West to the Atlantic seaboard.

It will be remembered that the interstate-commerce act went into effect in 1887. By reference to the report of the Bureau of Statistics we find that the average grain rate from Chicago to New York, all-rail route, in 1886 was 16.5 cents per bushel; in 1887 it was 16.3 per bushel; in 1888, 14.5 per bushel, and in 1889, 15 cents per bushel. By lake and rail the average rate in 1886 was 12 cents per bushel; in 1887, 12 cents; in 1888, 11 cents, and in 1889, 8.7 cents per bushel. Or by lake and canal the average rate between those points in 1886 was 8.71 cents; in 1887, 8.51 cents; in 1888, 5.93 cents, and in 1889, 6.89 cents per bushel, or nearly 2 cents per bushel less than before this act was passed.

Again, the rates from St. Louis to Liverpool by way of New York in 1886 were 24 cents; in 1887, 24.8 cents; in 1888, 22.95 cents, and in 1889, 24.97 cents per bushel. We see, therefore, that this supposed enemy to the farmer vanishes under the most casual examination.

In times of prosperity it is claimed by the advocates of the protective theory that the high protective tariff is the source of all our blessings; so, upon the same reasoning and with equal truth, in times of depression we may charge upon it all our evils.

It is certainly true that the demonetization of silver, the failure by the Government to furnish and maintain a volume of currency commensurate with our increasing population and business necessities, has had the effect to depress prices, make money more valuable and powerful in the hands of the capitalists, but to the farmer the restrictive policy of protection is the prime cause of his trouble. For while he has hitherto and always will have a large surplus of the great staple agricultural products, corn, wheat, oats, and cotton, he is shut out of the markets where for a hundred years he has found his best customers. Even among manufacturers it can not be fairly adjusted, for we are informed that while the glass manufacturers of Indiana, Illinois, and Ohio are running presumably at a profit, those of Massachusetts are standing idle and are now obtaining an increase of duties to enable them to start their establishments in competition with their more enterprising and fortunately situated rivals in Indiana, Illinois, and Ohio.

This bill is the most unpopular measure of its kind ever presented to Congress, if we may judge from the number of remonstrances which every mail brings to members of this House. It is not satisfactory to a large number of Republican members, but party necessity and caucus dictation will overcome their better judgment. But to those who represent districts in Western States will be propounded many troublesome questions when they again stand before the people whom they are now misrepresenting.

But the worst feature in this whole theory is that it destroys the enterprise and thrift of the individual citizens for which the American people have a world-wide reputation. Men have turned their attention to making money by law and amassing fortunes by statute.

In conclusion, I would say, that the Democratic party would lay violent hands upon no established American industry. We will re-

quire for years to come revenues amounting from $350,000,000 to $400,000,000 per annum, and this vast sum must always be derived largely from duties on imports. But we would adjust those duties in such a manner that wealth would not accumulate so rapidly in the hands of a few; that great wealth and extreme poverty should not be so common; that privileged classes should be put upon common grounds with the plain people; that duties should be highest upon luxuries and lowest upon necessities; that high-priced goods should pay in proportion to their value, so that the rich consumer should pay his fair share of taxation on the articles consumed.

We have been told that this is a Republican measure to be passed by Republican votes. Be it so. Take it with all its inconsistencies, all its unjust discriminations; adopt it as your offspring, which it is, and be answerable for the train of evils which will surely follow its enactment. But I warn the Republican party not to be puffed up by their temporary lease of power. "Pride goeth before destruction, and a haughty spirit before a fall."

The Tariff.

SPEECH
OF
HON. WILLIAM H. WADE,
OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 10, 1890.

The House being in Committee of the Whole and having under consideration the bill (H. R. 9416) to reduce the revenue and equalize duties on imports—

Mr. WADE said:

Mr. CHAIRMAN: All parties agree that the moneys to pay the expenses of the National Government may be raised by duties levied on imports. The power of the Congress to impose such duties is not questioned.

The difference between the parties in this Congress is the manner in which the duties are fixed. The Democrats maintain that they should be levied for revenue only, placed at such a rate as would encourage importation of goods of a like character as those made in this country. The Republicans demand that they be levied both for revenue and protection, and that rates of duty should be so arranged as to prevent largely the importation of foreign-made goods that come in competition with the same class of goods which are manufactured in this country.

The last national Republican platform declared, "We are in favor of the American system of protection." The American system of protection means the preservation of the markets of this country for our manufacturers and the right to the artisans of the country to make the articles consumed by our people. The platform of the Republican party in its position on the tariff is in line with the one taken on the same subject by the fathers of our country. The first law passed under the Constitution was a tariff bill, the preamble of which recited: "Whereas it is necessary for the support of the Government, the discharge of the debt of the United States, and for the encouragement and protection of manufactures that duties be laid on goods, wares, and merchandise imported." This act was approved July 4, 1789.

It may be said that at the time this act was passed our manufactures were in their infancy and needed protection, to be enabled to compete with the old established plants in Europe, but to-day they are fully developed and able to compete with any in the world. There can be no question as to the ability of our manufacturers to successfully compete with those of other countries, the conditions as to cost of labor being equal. Granting that the cost of the difference in labor should be given the American manufacturer, would it then be wise in this Congress to fix a rate of duty to cover the difference of cost of labor, and thus open the markets of this country to the foreign manufacturer? The revenue reformer, the free-trader, and the Democratic party say yes. The Republican party, the citizen who is for his own country first, the rest of the earth next, and who wants to give to the millions of unemployed men in this nation work and to those already employed shorter hours of labor, say no.

No man acquainted with the conditions of the people of this country as they exist to-day will, if he be wise, say that in revising the tariff the only question to be dealt with is that of revenue. While in the aggregate the nation is prosperous and the increase of wealth satisfactory, yet there is much complaint in many localities from the farmers and the laborers and there come from these classes demands for relief.

The productions of the farm are selling below the cost of production; the laborer is out of employment. It is the plain duty, then, of Congress in revising the tariff to do so in such a manner as to give the needed relief to the classes named so far as it may be done through that measure.

The committee in framing the bill under consideration have so framed it as to give employment to the unemployed citizens of this country by raising the duties on imported articles the present duties on which permit the foreign manufacturer to bring his goods into our markets and to sell them in the place of home-made goods.

The question which, in my judgment, is to be considered by the members of this House in revising the tariff is its relation to the employmenr of American labor and the retention of the money earned by our labot and capital in this country.

In discussing the proposition that the tariff should be so revised as to retain the money earned by our capital and labor, I know no better arguments to present than the condition of our country after a period of free trade or revenue reform. The student of the history of our country knows that the leading cause that led to the formation and adoption of the present Constitution was the condition of the country brought about by unrestricted trade with foreign countries.

In 1789 every branch of trade and business was paralyzed. The merchant was without customers, the mechanic without employment, and the farmer without a market for his productions. The cause of this distress was the drain of money from this country to pay for foreign goods. From 1784 to 1789, the excess of imports over exports amounted to $49,000,000. This balance of trade was paid for in gold, and the country was without money. No condition of this country was ever worse than that presented at this date. It should be borne in mind that this was a period of absolute free trade.

The same conditions have always followed a period of low tariff brought about by the same cause, namely: the exportation of the money of the country to pay the balance of trade against us caused by large importations of foreign-made goods.

As heretofore stated, the purpose of the increase of duties in this bill is to prevent the importation of foreign goods to the end that the money earned in this county might be retained. I have shown that the country just after its War for Independence had been impoverished by the exportation of $49,000,000 to meet the balance of trade against it made by the unrestricted importations, and asserted that following every period of a tariff for revenue only the same conditions existed.

No country can be prosperous that imports more than it exports. No nation purchases anything from another simply because that nation sells it what it has to have. There is no sentiment in trade. Commerce is an interchange of commodities and is governed by supply and demand. We can only as a nation sell to other nations the things we produce and they want, and only then when we sell our productions at the market price.

If we wish to be prosperous we must supply our wants from our own resources when it can be done and bring back in exchange from the markets of the world for the articles we sell money or articles we can not produce.

After the enactment of the tariff of 1842 the nation was prosperous because our manufactories were making the goods used by our people and the money paid for them was kept at home, went into the channels of trade, and gave life and energy to all business enterprises. President Polk, in his message to the Twenty-ninth Congress, second session, in speaking of our domestic manufacturers and the effect the reduction of duties under the Walker tariff would have upon them, says:

> With such advantages it is not doubted that our domestic manufacturers will continue to prosper. Indeed, so far from requiring the protection of even incidental revenue duties, our manufacturers in several leading branches are extending their business, giving evidence of great ingenuity and skill and of their ability to compete with increased prospects for the open markets of the world.

No one could give a better description of the wonderful effects of protection in building up our domestic manufactures than President Polk has given in his words quoted. I again quote from him to show the general prosperity following the enactment of the tariff of 1842:

> Labor in all its branches is receiving an ample reward, while education, science, and the arts are rapidly enlarging the means of social happiness. The progress of our country in her career of greatness, not only in the vast extension of her territorial limits and in the rapid increase of our population, but in resources and wealth and in the happy condition of our people, is without an example in the history of nations.

These quotations from President Polk show the wonderfully prosperous condition of our people in 1846. Notwithstanding the evidences of prosperity and development the country presented, Polk advocated a revenue tariff, and secured its passage. The same arguments were used by him that are used by the Democrats to-day, namely, that reduced duties and increased importations would give a market to farmers for their productions and stimulate and build up manufactures in the country.

To his class history teaches no lesson and the lamp of experience is no guide to their conduct. The history of the country had shown that the country had been uniformly prosperous under a protective policy. I quote from a speech of Henry Clay, made in the Senate of the United States in 1832, to prove that national prosperity and protection went hand in hand:

> In short, sir, if I were to select any term of seven years since the adoption of the present Constitution which exhibited a scene of the most widespread dismay and desolation, it would be exactly that term of seven years which immediately preceded the establishment of the tariff of 1824. If the term of seven years were to be selected of the greatest prosperity which this people have enjoyed since the establishment of their present Constitution, it would be exactly that period of seven years which immediately followed the passage of the tariff of 1824.

The Democratic party, or the party representing its policy, demanded and secured the repeal of the tariff of 1824. The same conditions of distress and bankruptcy followed, the farmer being the greatest sufferer. I quote from a prominent writer of that date to show the condition of the country following the enactment of the tariff of 1832:

Again financial depression followed; assignments and bankruptcies resulted everywhere; manufacturers suspended operations, and business grew worse and worse till the culmination was reached in the financial crash of 1837, one of the most disastrous financial revulsions ever known—severer even than that which followed the repeal of the first tariff in 1816. Very few persons could save themselves; property of every description was disposed of at astounding sacrifices. In some parts of Pennsylvania bank-notes were divided into halves, and even into quarters, money was so scarce. In Ohio it was hard to get money enough to pay taxes. So little money was there that at sheriffs' sales good horses sold for $2 each, cows at $1, and hogs at 6¼ cents apiece. In Missouri a large ox was sold for 12½ cents, hogs at 1½ cents each, and tobacco at 62½ cents per hogshead.

W. H. Harrison was elected President of the United States in 1840 on a protective platform. The condition of the country under it has been shown by the words of a Democratic President, a man who was elected President by carrying the State of Pennsylvania on the campaign slogan of "Polk and Dallas and the tariff of '42." Dallas, a Pennsylvanian, had said to his townsmen that he would suffer his right arm to be torn from its socket before he would do anything to repeal that tariff, yet cast the vote in the Senate that passed the Walker tariff act. The evil results of this tariff were not felt for some time, on account of the discovery of gold in California in 1849. The gold brought from there took the place of that which was exported to make good the balance of trade against us, caused by the increased importations which the low rates of duty encouraged.

Neither were the promises realized which were made to the farmers. The purchase of large quantities of foreign-made goods did not increase the quantity of farm products sold abroad or add to the price paid for them. The foreigner then as now purchased only what he had to have and from the seller who sold at the lowest price.

President Fillmore, in his message to Congress, said:

The value of our exports of breadstuffs and provisions, which it was supposed the incentive of a low tariff and large importations from abroad would have greatly augmented, has fallen from $88,000,000 in 1847 to $21,000,000 in 1851, with almost a certainty of a still further reduction in 1852. The policy which dictated a low rate of duties on foreign merchandise, it was thought by those who established it, would tend to benefit the farming population of this country by increasing the demand and raising the price of our agricultural products in foreign markets. The foregoing facts, however, seem to show incontestably that no such result has followed the adoption of this policy.

What was true in 1851 is true to-day. The farmer can not be benefited by free trade. Increased importation means the payment of our money to balance our accounts with foreign nations.

In 1861 President Buchanan said in his message to Congress:

With unsurpassed plenty in all the elements of national wealth our manufacturers have suspended, our public works are retarded, our private enterprises of different kinds are abandoned, and thousands of useful laborers are thrown out of employment and reduced to want.

This description of the condition of business and the people of our country may be properly called the culmination of the benefits of the tariff for revenue only enacted in 1846.

The people of this country do not want to see its effects again. They are willing that history may teach them, and that the light of the lamp of experience may be shed upon the pathway that leads to the future, and will not be misled by the cry of the revenue reformer or the song of the Cobden Club singer.

If there is any one thing that has been definitely established by the history of our country it is the fact that excessive importations are always followed by depression in business and hard times. The remarkable fact that the leader on the other side of this House takes the position that large importation leads to prosperity and development is presented by the speech of the gentleman from Texas [Mr. MILLS].

He takes pig-iron as an illustration of his theory and attempts to show from the statement made relative to its importation that the development and prosperity of the pig-iron industry in this country depends upon its importation. The wonder to me has been that in this day of trusts, if the gentleman's theory be correct, the American makers of pig-iron have not gone into a trust with the foreign makers and gotten them to import large quantities of pig-iron, and thus perpetuated a never-ending boom in the pig-iron industry.

Mr. MILLS says that in 1870 we imported $2,500,000 worth of pig-iron; the same year we produced in this country $52,000,000 worth. In 1871 we imported $3,000,000 and we produced $56,000,000 worth. In 1872 we imported $5,000,000 worth and produced $119,000,000 worth. Mr. MILLS asks, if the Republican doctrine be true, if every ton of this imported pig-iron did not take the place of a ton of American pig-iron, and then points to the fact that the American production increased from $52,000,000 worth in 1870 to $119,000,000 worth in 1872 as a proof that it did not, and goes further with his deductions and proves to his own satisfaction that the increased production in this country was due to the importation of foreign pig-iron.

I ask Mr. MILLS or any other man endowed with even limited reasoning faculties if he does not believe that every dollar's worth of the imported pig-iron took the place of a dollar's worth of American iron. If in three years, because of the demand, we increased our productions from $52,000,000 worth to $119,000,000 worth, did we not have the furnaces, the coal, the iron-ore, and the labor to manufacture the $10,500,000 worth imported? Everybody knows that we had and that the importation of that amount of pig-iron took from the American laborer the work necessary to produce it and from the channels of trade in this country the $10,500,000 which it took to pay for it and conferred nothing upon the nation in the way of compensation.

Mr. MILLS again says that—

In 1873 prices began to go down and continued downward until they touched bottom in 1878. The consequence was importation fell off—just what this bill is proposing to accomplish now. What was the result? The importation of pig-iron declined from $7,000,000 in 1873 to $3,000,000 in 1874, to $2,000,000 in 1876, and $1,250,000 in 1878.

Mr. MILLS, at the dates these importations were declining was an able-bodied, robust statesman; why did he not, as a friend of the importers, go to them and tell them to increase their importations?

The importers might as a matter of fact have said to him that nobody wanted to buy; but Brother MILLS should have reminded them that principles are eternal, and a little matter of the want of purchasers could not stand in the way of carrying out a great economic principle, upon which rested the grand superstructure of free trade.

Mr. MILLS pursues in his argument the relations of the importation of pig-iron to the prosperity of the American producer of that article to considerable length, and evidently satisfies himself that he knows how to bring prosperity to the American producer, and that the way is to encourage importation.

I want to assure the gentleman that, if in his next canvass he should happen to meet one of his constituents who is engaged in raising cattle, and that constituent were to say to him that he had a thousand head of cattle on his pasture, but there was only grass enough on it for five hundred, and ask Mr. MILLS if he did not think he should sell half of the cattle, it will not be safe to apply his doctrine and advise his constituent to go and buy another thousand herd of cattle and turn on his pasture. No cattle-man will stand that kind of nonsense or vote for the man who would give it.

There is in this country to-day a debtor class whose debts were contracted when farm products commanded a better price than they do now. An increase of the volume of money brings an increase of prices. The converse of this proposition is true.

In the years cited by Mr. MILLS in his remarks relative to pig-iron we imported in pig-iron and its equivalent (old scrap-iron) $100,000,000 worth. We had the unemployed labor, the raw material, and the furnaces to produce the amount of pig-iron imported in addition to what we produced.

One hundred millions added to the volume of the currency of the country would have stimulated every line of business, and the fact that after a period of large importation there came one of depression proves this to be true.

The people of this country are demanding an increase of money. During the last year we imported $50,000,000 worth of iron and its products, $32,000,000 worth of cotton goods, $21,000,000 worth of tin-plate, $25,000,000 worth of agricultural products; other importations of articles we could have produced in this country will increase the amount of needless importations to $150,000,000 for the year 1889.

This vast sum taken from the volume of our currency can not fail to produce disastrous results, and when we take into consideration the fact that the labor to produce the articles imported has been taken out of the hands of the American laborer and artisan, need we be surprised that there is an army of unemployed men in the country?

Every State Legislature in the Union has, at the demand of organized labor, passed laws relative to convict labor. Why do the labor organizations demand that convict-made goods shall not come into competition with the articles made by their number? I answer, because the labor organizations wish to make the goods manufactured by the convicts.

It is one of the things past my comprehension how a man can ask for the suppression of convict labor, which manufactures only a small amount of goods, and then vote for the party which asks that all restrictions may be removed from importations and that manufactured goods may be imported to the amount of hundreds of millions.

The markets of the world appear to have an unlimited attraction for Democrats. They are asking that our manufactures be given them.

The bill under consideration has made raw material free. Now let our manufactures go out and take in the markets of the whole earth; nobody is holding them.

For years we have been exporting large quantities of raw cotton. If the raw material of which cotton goods are made has not been free then there is no such thing as free raw material. Have our manufacturers of cotton goods possessed the markets of the world? Not to any great extent. They have not held the markets of our own country. Last year we imported $32,000,000 worth of cotton goods. Why did we do this? I answer, because the articles imported required much labor to make them. Cheap labor is much more essential than free raw material. Because of it the European manufacturer buys our cotton, exports it, and sends it to us in the manufactured article.

The cotton goods made largely by machinery and manufactured at home sell in our markets as cheap as in those of Europe. The best

market that the American can find is the home market. We manufacture and consume more than England manufactures, consumes, and exports. Our manufactured goods stand in proportion to England's as 1,000,000,000 to 800,000,000. We purchase more than any other nation, live better, and our markets are worth more than the markets of the world. There is no equivalent we can get for them, nor is there anything we can obtain, which we do not now have, by surrendering any part of our home markets.

We do not want to go into partnership with any set of foreigners for the purpose of regulating prices. The statement that the import duty is added to the price of like articles made in this country, and that the duty is a tax paid to American manufacturers, is not true.

For the first barbed wire I bought I paid 9 cents per pound. I bought barbed wire last fall at retail for 3½ cents per pound. The duty was not added to this. I purchased steel nails for 3½ cents per pound. The duty is 4 cents. Deducting freight and profit, the manufacturer got but little over 2 cents, or half the duty.

The tax on clothing is one that causes the Democratic mind much trouble. The manufacturer of woolen goods, if you were to believe their stories, is piling up wealth by the millions, wealth wrung from the toiling masses through the tariff.

I can best illustrate the fact that woolen manufacturers are not making large profits by quoting from the speech of Hon. John E. Russell, of Massachusetts, made in this House on May 16, 1888. Mr. Russell is a Democrat, consequently truthful:

Mr. PERKINS. I understood the gentleman to say that all the woolen manufacturers of the East had gone into bankruptcy without exception in the last few years.

Mr. RUSSELL. You misunderstood me. I have not said so.

Mr. PERKINS. What did the gentleman say?

Mr. RUSSELL. I have said over and again that the business was not prosperous, and I may say that many large and small manufacturers have become insolvent in the past ten years, some of them not once, but two or three times. When mills are burned they are left unrestored, and I made other statements showing the difficulties of the trade.

Mr. Russell was making a speech in favor of free wool. Had he been making a speech in favor of free woolen goods and followed the instincts and habits of Democratic speakers when discussing the tariff the condition of the woolen manufacturer might have been presented in different colors. Mr. Russell spoke the truth, and I assert that there is no legitimate manufacturer in this country who is to-day making or has in the past made more than a reasonable profit on his investment; many have not made as much. By legitimate manufacturer I mean a manufacturer not protected by a patent. Manufacturers making articles covered by patents have in the past made large fortunes because of the monopoly it gave them. But to-day the average profits made by manufacturers in this country who are making goods which come in competition with goods imported does not exceed 8 per cent. on the capital invested.

The statements made by free-traders relative to the profits made by manufacturers are misleading and not in harmony with the truth. As an illustration take the manufacturers of salt. The Democratic orator loves to talk about salt to the farmer and to tell him how he is taxed by the tariff 70 per cent. on the salt he gives to his cattle, with which he cures his meat and salts his butter. Two hundred and eighty pounds of salt in a barrel that costs 23 cents is sold by the producer in Michigan for 50 cents. Deducting cost of barrel, 7½ bushels of salt is sold for 27 cents. There can be no large profit in this to the manufacturer; neither is it possible that the duty is added to the cost.

Mr. Cleveland laid down the doctrine of his party and made a broad misstatement of facts when he said:

The effects of this tariff taxation is not limited to the consumer of imported articles, but the duties imposed upon such articles permit a corresponding increase in price to be laid upon the domestic production of the same kind, which increase is paid by all our people and consumers of home productions.

Do Democrats believe the doctrine taught by Mr. Cleveland? Do they believe that the imported duty is added to the price of every imported article and the same amount placed upon the value of all articles of the same kind made in this country? If they do why did they give to the country the Mills bill? Why do they not declare themselves for free trade pure and simple, thus proving by their works the faith that is in them?

The estimate of customs receipts this year is $235,000,000. Our manufactured products as a nation will this year be nearly $8,000,000,000. Estimating half of this production to be of like character as goods imported and admitting that the import duty is added to the cost of these articles, then the American people have taxed themselves $1,500,000,000 to get $235,000,000 into the Treasury, and this vast amount, more than the national debt, has been put into the pockets of the American manufacturers.

The mere statement of this proposition proves its falsity. No one believes that we paid such an amount to the manufacturer. But if the doctrine laid down by Mr. Cleveland be true we did pay it, and the plain duty of the American people is to abolish at once import duties on any article imported into this country the like article being manufactured here.

In the light of Mr. Cleveland's declaration there is no place in this country for a revenue reformer. He is a full partner with equal privileges with the robber barons created by the tariff, of whom my colleague from Missouri [Mr. BLAND] speaks so often.

Direct taxation is the only honest method of collecting money to pay the expenses of the Government. Every man would then pay his share of taxes, things would be cheap, and everybody prosperous. This is the logical deduction from the doctrine of the Democratic party, but that party neither believes its doctrine nor puts it into practice. The Mills bill only reduced the robbery of the tariff 7 per cent.

I wish to give one illustration of the absurdity of the proposition that import duties are added to the cost of the like article produced in this country.

I demonstrated by quotations from Mr. Russell's speech that the woolen manufacturers of this country were not a prosperous collection of citizens. It is safe to estimate the production of woolens in this country for the year 1890 at $400,000,000; 40 per cent. of this, $160,000,000, goes into the pockets of a class of manufacturers who, according to Mr. Russell, are bankrupts. Mr. ARNOLD, a member of this House and a manufacturer of woolen goods, informed me that he would operate his mill for 4 per cent. on the money invested. Evidently the 36 per cent. of duty which he proposes to forego is not flowing into his pocket, and the doctrine that the duty levied on imported goods is added to the like articles made in this country is not true.

Mr. Speaker, as an introduction to what I shall say in connection with the relation of the farmer to the tariff, I quote from a letter from General Andrew Jackson, a President of the United States and Democratic patron saint, to Dr. Coleman. This letter is dated April 26, 1824:

This tariff, I mean a judicious one, possesses more fanciful than real dangers. I will ask what is the real situation of the agriculturist? Where has the American farmer a market for his surplus products? Except for cotton, he has neither a foreign nor a home market. Does not this clearly prove, when there is no market at home or abroad, that there is too much labor employed in agriculture and that the channels of labor should be multiplied?

Common sense points out at once the remedy. Draw from agriculture the superabundant labor, employ it in mechanism and manufactories, thereby creating a market for your breadstuffs, and distributing labor to a most profitable account, and benefit to the country will result.

Take from agriculture in the United States six hundred thousand men, women, and children and you at once give a home market for more breadstuffs than all Europe now furnishes us. In short, sir, we have too long been subjected to the policy of the British merchants. It is time we should become a little more americanized, and, instead of feeding the paupers and laborers of Europe, feed our own, or in a short time, by continuing our present policy, we shall all be paupers ourselves.

The conditions of agriculture in the world points to the inevitable conclusion that to the American farmer there is soon to be no market for his breadstuffs save the home market.

Russia has unimproved lands when brought into cultivation sufficient to feed the people of the earth. These lands are unsurpassed in fertility, and vast in extent. They extend from Poland on the west far into Siberia, in Asia, and comprise an area of 450,000 square miles, or nearly 300,000,000 of acres.

These lands, or the greater part of them, are treeless like the prairies of our Western States, and only need to be broken by the plow to be in cultivation. One of our consuls, in speaking of these lands, says: "The wild grasses grow 7 and 8 feet high upon them, and they are as fertile as the delta of the Nile." The Russian Government sells these lands at 50 cents per acre.

When this vast Territory is put into cultivation and brought into communication with the market of Western Europe by railroads where will the American farmer find a market for his surplus? The emigration from Western Europe to Russia is rapidly increasing, and the condition of its liberated serfs is improving. With the changed condition of its people a change in its domestic and foreign trade takes place, and this change directly affects the American farmer. In 1887 the United Kingdom of Great Britain purchased from the United States 49,000,000 cwt. of wheat, over 50 per cent. of its purchase from foreign countries. The same year it purchased from Russia 5,000,000 cwt., or about 16 per cent. of its purchase. In 1888 she took from us 30,000,000 cwt., and from Russia 21,000,000 cwt. In 1888 we exported 19,000,000 cwt. less to England than we did in 1887, Russia 16,000,000 cwt. more. This statement needs no amplification to show to the intelligent American farmer that Russia, with its cheap and fertile land and cheap labor, will soon drive us from the only foreign market we now have for our surplus wheat.

The farm laborer in Russia boards himself and works for $6 per month. Much of the work in harvesting wheat in Russia is done by women, and they work for an average of 13 cents per day.

To show the wonderful development of the export trade of Russia in cereals, the American consul at St. Petersburg cites the exports of cereals in 1886, amounting to $86,762,800, and that of the following year, 1887, to $123,032,000, an increase of $36,000,000 in one year.

The bread-food of all Eastern Europe is rye. Russia, in 1887, raised 750,296,418 bushels of rye. Her production of rye for that year exceeded our production of wheat, rye, and barley by 257,000,000 bushels, and the same year she raised 280,000,000 bushels of wheat, the greater part of which was exported.

India is making rapid progress in wheat-growing. The English Government is using every effort to increase the production of wheat in India, and is constructing long lines of railroad to facilitate its movement to the seaboard.

India has over a hundred million acres of wheat land. If one-fifth of this was sown in wheat, at an average production of 10 bushels per acre, she would raise 200,000,000 bushels. As the natives do not eat wheat, this amount, less seed, will be for exportation. With her present facilities India can export 40,000,000 bushels.

I need not discuss the cheapness of production, as all know that labor in India is cheap beyond comparison with that of any other country.

South America, which in the past has been an importer of breadstuffs, has entered the trade as an exporter. The Argentine Republic in 1888 produced 24,000,000 bushels of wheat, one-half of which was exported. The amount of wheat exported from Buenos Ayres in 1888 was 15,000,000 bushels. There is an immense area of land in South America which produces wheat. Emigration from Europe is turning in a strong stream to South America and these lands are being settled by an industrious and thrifty class of farmers. Its rapid development is a settled question, and that it will be a strong competitor, both in breadstuffs and meat products, no one questions.

Our exportation of wheat and flour as wheat amounted in the year 1889 to 88,600,745 bushels. Of this the United Kingdom took 55,289,584 bushels. With the competition present and that which the future is sure to bring can the American farmer hope to increase the sale of exported wheat? Is it not certain that the sales must diminish? Does it not, then, behoove him to accept the advice of General Jackson to vote with that party which proposes to build up manufactories to give employment to labor and a home market to the farmer?

The Republican party, always in advance on all questions that better the condition of all classes, has, through its Committee on Ways and Means of this House, framed a bill which will diversify the productions of the American farm. It has offered a bounty on sugar and silk and put a duty on hemp and flax.

When I went to Missouri I settled in Saline County, a county that contains more good land than any other county of its size in the United States or the earth. Before the war that county engaged largely in the production of hemp. Its farmers did not raise wheat enough to feed the people who lived in the county.

Since the war the farmers of Saline County have gone out of hemp-raising and turned their attention to wheat.

We have by the duty in this bill made it possible for the farmers of Missouri to again engage in the cultivation of hemp. How much to the advantage of the farmers of my State it would be if the Farmers' Alliance would take up the question of hemp-raising and the manufacture of binder twine from it.

Hemp fit to make binder-twine can be produced at a profit at 5 cents per pound. The twine could be made for 2 cents per pound. The Missouri farmer would be able to buy his binder-twine for 7 cents per pound instead of 14, and Missouri would be benefited by keeping at home the thousands of dollars annually sent abroad to purchase twine, and relieved from the extortion of a foreign syndicate which controls the price of the material from which binder-twine is now made. Missouri can raise hemp enough to make twine to bind all the wheat in the United States. In doing this a large area of her best wheat-producing lands would be employed, thus reducing the quantity of the surplus wheat that to-day is finding an unremunerative market; besides it would give employment to more laborers and create new industries within her borders.

I especially commend this clause of the pending bill to my colleagues from the Eleventh and Third districts of our State, and trust they will support the bill on account of this provision, as it will enable our farmers to keep the money at home expended for twine to pay the interest on their mortgages, as well as to get an increased price for their products to pay off the mortgages when due. Flax grows in any part of our State, and large quantities are now produced for the seed. Should it prove profitable to grow flax for the fiber, we can produce enough to meet the wants of our own people and much to spare.

If our people understood the handling of the silk-worm I have no doubt that silk would be produced in large quantities in our State. The leaves of the osage-orange, a tree which grows all over Missouri, furnish the best quality of food for the silk-worm. The bounty given by this bill will encourage the growth of silk, and I have every hope that the silk industry will soon be one of the permanent pursuits of our farmers.

The farmers of our country are intelligent, thinking men; they are studying the conditions surrounding them and will come to sensible conclusions. They are not going to follow any plan of farming that does not pay, nor depend upon any market that does not offer a steady and remunerative demand for their productions. They fully believe in diversified productions and that their prosperity depends upon the prosperity of the laborer, the artisan, the manufacturer, and the business man. They understand that manufactories build up town and city and enhance the value of both their farms and productions. They have studied statistics and history, and know that the demand for their productions outside of the home market is confined to one country, England. They know that no tariff, either high or low, will change the demand of that country for their productions, and that other nations are sending the English people food products.

We exported about 170,000,000 pounds of beef, four-fifths going to England. Of the 520,000,000 pounds of pork exported three-fourths went to England. If England is the only country we can supply with our farm products the demand can not be increased and the talk of the free-trader about feeding the millions of Europe is the merest bosh.

From reports made by the census enumerators it appears that there are citizens of Europe working in the mines of this country so low and degraded that they are tagged like animals. These people would make poor customers.

Mr. MILLS wants to send over to Europe our wheat to feed the inmates of the government soup-houses of that country. Paupers are not good customers. What would we gain by feeding these men save the approbation of Heaven? and the Lord would withhold that if we did it for gain.

Mr. Chairman, I had intended in my remarks to discuss the duty on wool, the relation of manufactories to the value of farm lands and the price of labor. These questions have been presented both to this House and the country, and I will conclude by saying that the bill under consideration meets my approval and will receive my vote.

The Tariff.

SPEECH

OF

HON. BENJAMIN F. SHIVELY,

OF INDIANA.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 8, 1890.

The House being in Committee of the Whole and having under consideration the bill (H. R. 9416) to reduce the revenue and equalize duties on imports—

Mr. SHIVELY said:

Mr. CHAIRMAN: Though the tariff question is somewhat hackneyed, the pending bill involves the vast and complicated interests of 65,000,000 people and merits the closest scrutiny, the most careful and dispassionate investigation. Under an equitable division of the allotment of time, arbitrarily fixed by the majority, each member would be entitled to less than five minutes for general debate. This House has ceased to be a deliberative body. We are engaged in the mere perfunctory registration of the decrees of a caucus. There is, therefore, nothing left for the member to do but to characterize this bill in general terms and leave to a vigilant and faithful press the dissection of its details and the exposure of its injustice.

This proposition comes to us as a distinctively protective measure. In this respect it is a marked departure from the tariff legislation of the past. It makes the issue broad, plain, and sharp between the principle that the taxing power of the Government should be employed primarily for the purpose of raising the revenue to pay the public expenses and the other principle that the taxing power of the Government should be farmed out to a part of the people to enable them to collect tribute from the remainder of the people. To meet the revenue necessities of the Government is the last consideration underlying it; to respond to the demand of private interests for protection against the regulating power of competition is its first and controlling principle. So the contest is on between a tariff for revenue, with attendant protection, and a tariff for monopoly, with incidental revenue. On this line this controversy must naturally proceed until that justice which alone insures permanency is made the essence of the law.

At this late day, Mr. Chairman, it is unnecessary to quote statistics to show the effect of our present tariff upon agriculture. The majority report admits the depression of this industry. The swelling notes of distress and discontent which reach this Hall from every corner of the Republic attest to the utter failure of so-called protection to secure to agriculture that degree of prosperity to which it is entitled. The system has located the farmer between a buying and a selling market, neither of which he controls. He buys in a domestic market, dominated more or less by trusts and combinations which limit production and maintain prices, and sells in a market where prices are fixed by the competition of the whole world. Farm lands have fallen in value in the last ten years from 25 to 50 per cent. The profits of agriculture have disappeared. Farms are going by the thousand under the hammer of the auctioneer. Evidences accumulate on all hands that our rural population under this system have lost their ancient and commanding position in the structure of our laws.

Nor need we quote statistics to show the effect of the tariff on the workingmen, the wage-earners of the country. Under it has been ushered in the era of the strike, the boycott, and the lockout. Workingmen have felt compelled on all hands to organize to resist the constant downward trend of wages. They are engaged in a ceaseless struggle against the increasing strain of harassing environments. Their opportunities are narrowing every hour. The conditions of life to them

are fraught with doubt, with misgiving, with uncertainty. Such are the results to labor of a quarter of a century of tariff.

Nor need we quote statistics to show the effect of our tariff on domestic commerce. The forces of exchange and distribution are unbalanced. We behold the monstrous spectacle of the farmer burning his corn for fuel while the coal miner famishes for bread. Warehouses are crowded with manufactured and agricultural products, while one-half our population press the border lines of subsistence. The markets are dominated by combinations, and price is no longer based on cost, but to a large extent on conspiracy against the laws of demand and supply. Splendid fortunes for the tens and a struggle to keep even in the race of life for the millions is the order of our political internal economy. Engrossing, forestalling, and monopolizing, all crimes at the old common law, are becoming the chief forces of our domestic commerce. Monopoly is simply absence of competition. The domestic monopolist, who is safely intrenched behind the Federal statute, assures us that the tariff is an unmixed blessing and warns us against the dangers of pauper-labor competition.

Nor is it necessary to quote statistics to show the effect of our tariff on our foreign commerce. Everybody knows that we have substantially no foreign commerce left. What England in two wars against us and we in four years of terrific war among ourselves could not do, our tariff has most successfully accomplished. In the ocean marts of commerce appear the flags of all nations but our own. The Stars and Stripes, with exceptions few and far between, has taken farewell of the seas. The emblem of our country's honor and power no longer flaunts in proud rivalry with those of other nations against every sky. The American seaman, once the boast and pride of our nation, is only a memory. The remnants of our foreign trade are carried under alien flags, in alien bottoms, manned by alien seamen. We have built ramparts against the highway of nations. We have sentineled our seacoast against the commerce of the world, and have been left to our own folly. The commerce that once carried the rugged and commanding influence of our civilization to the uttermost parts of the earth has been sacrified to the destructive force of obstructive legislation.

Nor need we quote authority, Mr. Chairman, to show the effect of the tariff in this country on society in the concrete. Everybody admits that the benefits of the tariff go in the first instance to the employer. If the employé becomes a partner in such benefits it is only by the grace of the employer. So the statute itself operates to make a nation of patrons and dependents. The millionaire and the *prolétaire* are embalmed in the law. The natural and legitimate fruits of the system are ripening all around us. The chemistry of our whole social structure is changing. Society is being resolved into castes. It is being stratified on lines as harsh and inflexible as ever marked the feudal ages. The tragedy of Dives and Lazarus is on. The rainbow of promise and hope will yet span the abyss between these dismal characters, but it will not be flecked with the figures which in the sacred name of protection tax the millions to add to the treasures of the tens.

With these results of a quarter of a century of obstructive tariff before us we are confronted with a bill which in nearly every schedule increases the rates of duty. The majorityof the Committee on Ways and Means ground their proposition on a promise to enlarge the area of successful production. Our warehouses are crowded and our granaries full to overflowing. Yet we are constantly told that this is a question of production. Many industries are operated only a part of the year and the remainder of the time the laborer languishes in enforced idleness or crowds his fellow-laborers in other occupations. Still we are reminded that this is simply a question of production.

If this is a problem of production, Mr. Chairman, and the future prosperity of this country is to depend on its solution by the enactment of statutes, we might as well close our doors, lock this Hall and go home. The conditions of production are unalterably fixed by laws far beyond the control of human legislation. The soil, the climate, the location and extent of the various mineral deposits of the earth, the location and extent of the forests, prairies, mountains, and rivers, are among the conditions of production. No law since the great legislator of Israel handed down his statutes on tablets of stone has changed even to the slightest extent these natural conditions. Statutes can not make the pineapple grow on the banks of the St. Lawrence nor wheat on the banks of the Savannah. Your legislative fiats are as powerless to improve the natural conditions of production as are the puny wings of the nightingale to shake the rocks of Gibraltar.

I freely admit that by pensioning off one industry or another you may neutralize the advantages of favorable conditions in the latter, and, carried to a sufficient extent, such policy would destroy the industry itself; but even this rebellion against the justice of nature leaves the conditions unchanged. You may let in the sunlight or obstruct the sun's rays, but you can not compel the sun to shine. This bill is simply an effort of plethoric statesmanship to amend the ordinances of Almighty God.

But, Mr. Chairman, it is not a problem of production. The problem of production has been solved. Its solution was not accomplished by statutes. Gentlemen on the other side seem to think that a tariff law possesses some innate potentiality for the production of wealth. The whole law of production is labor, and this law comes to us through the centuries. By skill of hand, brawn of muscle, and vigil of brain, labor has harnessed the forces of nature and multiplied the producing power of mankind from ten to a thousand fold. The problem of production has been solved by the thousands of inventions that have leaped from the human brain. So complete has been this solution that we witness combinations forming on all sides to limit production and keep up prices against the cheapening forces of skill and invention.

The real problem which confronts the American people is that of exchange and distribution. Yet this bill and the report in support of it are drawn on the theory that commerce is a swindle and trade a fraud. The bill is purely a non-intercourse measure. It erects new barriers to commerce. It raises higher the old ones. It narrows the limits within which the American people may do business. We are to be made prosperous by housing ourselves in from the outside world and industriously collecting taxes, bounties, and profits from one another.

The chairman of the Committee on Ways and Means [Mr. McKINLEY] in his opening speech admits that this bill is intended to embargo our foreign commerce. In the same breath he frankly demands that we subsidize American steam-ship companies. The American people are to be taxed to erect walls against commerce. Then they are to be taxed to subsidize commerce over the walls. We are to tax ourselves to keep strangers from doing business with us. Then we are to tax ourselves again in order that we may do business with them. Thus are we to usher in the millennium of wealth by statute and riches by taxation.

At no point is commerce at war with the order of nature. It grows out of it and is in entire consonance with it. The soil and climate of Brazil are adapted to the production of coffee. The East Indies are adapted to the production of spices. Our Northern States are adapted to the production of corn and wheat. Our Southern States are adapted to the production of cotton and rice. A like variety of adaptabilities attaches to manufacture. Adaptability here means those natural conditions under which a given article is produced with least sacrifice of time, labor, and capital. The production of rice in Indiana, or cotton in Ohio, or wheat in Georgia, or corn in Florida, or spices in Minnesota, or coffee in Kentucky would involve the greatest possible sacrifice of labor and capital for the least possible result. The function of commerce is to save this needless loss, to avoid this needless sacrifice.

Commerce is not a swindle. It is the great economy of civilization. It is a time, labor, and capital saving institution. In recognition of this fact we have tunneled mountains, spanned rivers, and bound up the continent in a net-work of railroads and telegraph lines. On this conviction we have pending a bill to expend over $20,000,000 in improvement of our rivers and harbors to liberate internal trade. The sea requires no improvement. On the highway of nations all comers are welcome without price. The blessings of commerce are only limited by limiting its volume and its extent.

Soil and climate suggest the location of profitable agriculture. Timber, coal, iron, other minerals, natural gas, and other natural products suggest the location for profitable manufacture. Distance to market counts but little against favorable conditions of production. It is cheaper for Chicago to transport figs from California than to raise them in Cook County. It is cheaper for the American people to transport tea from Japan than to raise it in the United States. Nature, not nations, fixes the lines of profitable production. The despotism of the ages has been exhausted in vain to nationalize human belief against the constitution of the human mind. Even more dismal must be the failure of legislative effort to localize production and commerce against the bounty, the generosity, and the justice of nature.

This bill is a proposition to destroy competition. The function of competition is to preserve equitable relations between cost and price. Cost is the measure of sacrifice involved in the production of a given article. Price is what the consumer pays for it. The tariff neither creates nor distributes favorable conditions of production. It simply circumscribes the area over which the regulating force of competition operates. Surrounded by a prohibitory tariff, oranges might by the use of artificial appliances be produced in Canada. When the consumer pays his dollar apiece for such oranges, he pays 5 cents for the orange and 95 cents as pension money for the support of the so-called "domestic industry."

The law does not change the climate or soil. By shutting out all competition it increases the exchange value of oranges. Domestic competition could not reduce the price below the cost. In this case, therefore, the tariff would increase both cost and price. Ninty-five per cent. of the total price of the orange crop would be the net financial loss to the community. This is what the advocates of this measure would call diversifying industry! Canada would have one more industry and the census-taker would count the orange crop as riches. But common sense would pronounce such riches a fiction and such an industry an expensive mendicant, subsisting on the charity of other industries.

Commerce had its origin in the same motive and desire as the cotton-gin and the steam-engine. Both multiply human comforts and diminish human toil. To needlessly abolish commerce is as insane as to abolish steam, electricity, and natural gas. To reinvent the sickle and by statute compel the farmer, for the benefit of the maker of sick-

les, to use it in preference to the self-binder would be no more unjust than to enact a statute to enable one industry by monopoly to lay all other occupations under contribution for its special aggrandizement. In the first instance the sickle is merely an incident, while the statute is the real source of gain. In the second instance the industry is the plausible pretext, while the statute is the real instrument of profit. In neither instance has the statute any inherent producing power. In both instances the statute merely enables those for whom it is enacted to transfer the wealth of the community to themselves without compensation. There is no necromancy in your bill that can add one farthing to the wealth of the country. Its first, last, and only function must be to enable the few to confiscate the earnings of the many.

To narrow the field of competition is the office of a prohibitory tariff. To the extent this object is accomplished must relative prices of protected articles be increased. This is done by increasing the cost of production in some industries and facilitating the formation of combinations in others. The advantages of the tariff fall to those whom it can protect from competition. The burdens of the tariff fall on those whom it can not protect from competition. This bill places a duty on corn, wheat, hay, straw, and other agricultural products. We have every year a surplus of corn, wheat, beef, and pork which we send to foreign markets. The price received for this surplus in the world's markets fixes the price received for that sold in this country. If our corn, wheat, beef, pork, or cotton brings 1 cent more in the home market than in the foreign market, why do we every year send millions of dollars' worth abroad? If wheat were a dollar a bushel in Chicago, who would send it to Liverpool for 90 cents?

The competition of the whole world fixes the prices of the farmer's products. Though the figures in this bill were made ten times higher it could not protect agriculture. The tariff on binder-twine and barbed wire shuts out foreign competition and renders easy the organization of the domestic trust. Your bill protects the twine and wire that the farmer must buy, but can not protect the wheat and corn that he has to sell. Your bill protects the iron, steel, and lumber which go into the farm machinery that he must buy, but can not protect the beef and pork that he has to sell. Your bill protects the cutlery, glassware, earthenware, tinware, cotton and woolen goods that he must buy, but can not protect the oats, cabbage, or potatoes that he has to sell. Sir, your tariff can not enrich the soil, add warmth to the sunshine, nor freshness to the rain. It can not keep off the fly, the rust, the drought, the frost, or the flood. It begins by loading the farmer with burdens and ends by bankrupting and destroying the oldest and most independent occupation of history.

It is alleged with the usual vehemence that this bill is to protect the American workingmen. Yet the very men who are clamoring most loudly for its passage are in theory and practice free-traders in labor. They have literally emptied the pauper asylums of protected Italy, Austria, and Hungary into our mills, mines, and workshops to break our labor market and press down our rates of wages. Intrenched behind our tariff walls they have organized iron, steel, and coal trusts, and by agreement closed their mills and mines for a part of the year in order to limit the product and keep up prices. The laborer is rewarded with enforced idleness and high prices for the necessaries of life which the remnants of his wages will buy. The laborer does not appear in the bill except as a victim. He, like the farmer, is to sell his labor at competitive prices and buy his subsistence at protected prices.

The tradesman, clerk, and professional man likewise appear only on the debtor page of this ledger of taxation. Neither the profit of the merchant, the wages of the clerk, the salary of the teacher, nor the fee of the lawyer is protected by its provisions. These are to contribute, not to receive. They are to pay bounties, not to enjoy them. Such is the left-handed protection vouchsafed by this measure to the great body of our people. It contemplates the relation of guardian and ward between the ten and the ten thousand, with the guardian in perpetual default. It is the gentle protection extended by the highwayman to his victim.

Nor does this bill give even-handed protection to all our manufacturers. Loud and deep and earnest are the protests which reach this Hall from many manufacturers against its merciless provisions. Even this great department of human industry is summoned to lay sacrifices on the altar of wealth by taxes. The factory which depends on merit, not combination, for its success is assailed. The factory which must make a new schedule of prices to meet the increased bounties on raw material is assailed. The factory which, by the intelligent application of skill and invention, has reached the minimum cost of production is assailed. Those real captains of industry, who have defied distance and the "pauper labor" of the world and placed their products on sale in the farthermost parts of the earth, are assailed. The most capable, generous, self-reliant, and self-respecting of our manufacturers are by this legislation sacrificed both in their factories and in their markets.

The iron, steel, earthenware, glassware, barbed-wire, binder-twine, and a few other industries are on the dividend page of this bill. The degree of protection in each case depends on the degree of monopoly of the American market which the tariff secures and the amount of exactions on raw material which it compels. The net protection on a given finished product is that which is left after deducting the bounty paid by the manufacturer on his raw material. Thus, even among directly protected industries, the advantages are unequal. The nearer the approach of the article to what is termed raw material the broader the field for the collection of bounties in the way of increased prices on it. Iron and steel form the basis of a large per cent. of manufactures and are incidents to the remainder. Iron is the basis of stove manufacture. Steel is the basis of cutlery manufacture. Lumber is the basis of furniture manufacture, but the workmen use iron and steel in fashioning the product. Hides are the basis of leather and shoe manufacture, but the machinery in the factory is of iron and steel. These are the metals of civilization. How vast must be the burdens which a tariff on them for monopoly visits on society.

In 1883 it was shown in an equity suit that the Jackson Iron Mining Company of Michigan paid in twenty years $5,355,000 in dividends on an investment of $300,000. This was an average annual dividend of 89½ per cent., and the plant increased in value to $1,500,000 in the mean time. Andrew Carnegie admits that he drew $1,500,000 in dividends in a single year, or $5,000 a day, out of the Edgar A. Thompson Steel Works. These millions were struck into the metals as a part of their price. They followed these metals through the various grades of manufacture until they reached the consumer of the finished product. There they were fastened in the shape of the increased price which the last purchaser had to pay.

Every farm, home, and factory is thus laid under contribution. Prohibitory tariff is a patent of monopoly. It is not granted to reward genius or encourage invention. It is granted to reward greed and encourage grand larceny. It gives to odious privilege the character of legal right. In the nature and the constitution of the system it picks ten thousand pockets to make one plethoric purse. Iron and steel well illustrate the amount and distribution of its bounties and its burdens.

Yet, Mr. Chairman, the title of this bill announces its purpose to be to "equalize duties." If this were true it would fall to pieces in five minutes. If it equalized the bounties and burdens of the tariff the influences outside and inside this House which clamor for its passage would drop it as if it were a serpent. It is its unequalizing purpose alone that secures it support. It is the Government partnership which it creates with a few industries, at the expense of all other interests, that commends it to the combination back of it. The Government is to hold the hands of the millions of consumers while the tens pick their pockets by increased prices. It is a partnership in which the Government compels the many to stand and deliver while the few pocket the plunder. It is these characteristics that endear this bill to the few who cultivate the taxing power of their Government while the many cultivate their farms or toil in the mills and mines.

Gentlemen reply that the tariff does not increase prices, but rather decreases them. Human nature is not made of the stuff that comes to Washington to clamor for a tariff to decrease the price of what it has to sell. The purpose of monopoly is always to increase or maintain prices. He who asks for protection simply asks for the removal of competition. The men and corporations who demand the passage of this bill would strangle it to-morrow if it were intended to decrease the price of their products or increase the wages of their workingmen.

It is insisted that the tariff cheapens, and the prices of calico and steel are again quoted to prove it. By what process do figures in a statute cheapen the cost of the products of labor? As well say that to the yellow fever is due the increase of population, or to the eclipse of the moon the fate of political parties. The faith of the advocates of this bill in the efficacy of parchment is sublime. They attribute good crops to the tariff. They seem to believe that the soil, sunshine, rain, and dew are regulated by the tariff. The school, the lyceum, the library, and all other agencies for the elevation and culture of society have been, in the course of this debate, attributed to the tariff. The providence and beneficence of nature are discounted and every blessing is ascribed to the tariff.

Lord Macaulay observes that, with a pecuniary consideration involved, plenty of talent can be found to deny the law of gravitation. How perfectly the arguments employed in defense of the pending bill illustrate and confirm the truth of this observation. What miraculous power a statute with high percentages in it has. It gives skill and cunning to the hand of labor. It energizes the gray matter of the human brain and suggests inventions in rapid succession to the human mind. It will enable us to make tin-plates whether we have the tin or not. It will enable us to find plenty of tin-mines whether they exist or not. It will make peanuts blossom on the summit of the Rocky Mountains and dates grow on the banks of the Aroostook. Only place the figures in your tariff statute high enough and keep them there long enough and we will make nice fine wool grow 2 feet long on a hydraulic ram!

But, Mr. Chairman, however miraculous the power of the tariff, it is still unequal to its logic. The defender of this bill says that the necessaries of life have grown cheaper in this country, and ascribes it to the tariff. Then he asks protection to our industries from the cheaper products of England, which cheapness he ascribes to free trade. He assures us that free trade means low wages and protection means high wages. Yet he admits that wages in free-trade England are 50 per cent. higher than in protected Germany, 75 per cent. higher than in protected Italy, and 100 per cent. higher than in protected Spain. The

authority is conclusive that wages in England have advanced from 25 to 40 per cent. in the last quarter of a century, while in the same period they have decreased in the United States in about the same ratio. He assures us that the tariff lowers prices all along the line, and then proceeds to put duties on corn, wheat, potatoes, and straw for the benefit of the American farmer. He assures us that free trade means poverty, and yet admits that 98 per cent. of the poverty-stricken populations that press through Castle Garden every year come from the protected countries of Europe.

The truth never involves its advocates in such inexplicable inconsistencies. Facts do not require their defenders to occupy every sign in the zodiac. Justice never faces both ways. Only the evangelists of error and the missionaries of greed need shift their position or flank themselves with passion, prejudice, assumption, and falsehood.

By the invention and application of the Bessemer process the cost of producing steel rails has been vastly reduced. The price fell from $166 per ton to $27.50. But within the past eighteen months the price of steel rails has been advanced over $9 per ton, while the wages of the labor that produced them have been reduced 20 per cent. Invention cheapened the cost of steel rails. The tariff which shut out competition enabled the domestic combination to advance the price $9 per ton, and, by limiting the product, cut off the demand for labor and made possible a reduction of wages.

A century ago Adam Smith pointed to the fact that one man could make an average of 4,800 pins a day as a triumph of invention and division of labor. To-day one man in the same length of time makes 7,500,000 pins, or over 1,562 times as many as a century ago. To-day the winds are pumping water on our farms, the streams are grinding our flour, steam is throwing our shuttles and whirling our spindles, electricity is abolishing time and distance and bringing all our people face to face. The forces of nature are thus harnessed under the direction and superintendence of human skill and human industry. The magnificent bounty and benevolence of nature are in ceaseless co-operation with the genius, skill, and energy of labor to decrease the burdens and multiply the comforts and happiness of mankind. Only obstructive legislation, with its emissaries of selfishness and maxims of greed, is left to strew the wake of progress with the wrecks of poverty.

We are told that the increase of price on the protected article is at best but a trifle. The difference between the price of the farmer's crop and the total of the mechanic's wages on the one side and the cost of subsistence to them on the other fixes their financial status. If the exactions of the tariff are trifling, why not leave the trifles in the pockets of the consumers? It is the vast accumulation of these so-called trifles in the relative increased cost of all necessary articles of consumption that is pressing the non-protected farmer, non-protected laborer, non-protected tradesman, and certain departments of non-protected manufacture across the dead line of bankruptcy. Trifles eat away the margin of profit and swell the debit column on the balance-sheet of receipts and expenditures. The pending bill is intended to multiply these trifles, to increase these exactions. The colossal fortunes gathered by the beneficiaries of our tariff are but the accumulated trifles extorted from American consumers. Petty larceny is no more justifiable than grand larceny. This bill is a proposition to legalize both.

The farmer again receives the old and familiar assurance of a home market. In 1860 we sold 90 per cent. of our farm products at home; in 1870, 80 per cent., and in 1880 only 70 per cent. In 1860 we were compelled to send only 10 per cent. abroad; in 1870, 20 per cent., and, in 1880, 30 per cent. Indiana's wheat crop last year was 5,000,000 bushels more than manufacturing New England consumed. Manufacturing Pennsylvania does not furnish a market for all her own agricultural products. Such is the home market that a quarter of a century of high tariff has given the American farmer. Three-fourths of our exports are farm products. It is the farm that is furnishing what foreign commerce we have. This is a bill to compel the farmer to buy at home even if he must submit to being swindled right and left, and leaves him to sell in competition with the whole world. It simply furnishes him with splendid opportunities to pay high prices for inferior articles. So far as the home market is concerned the protection secured to the farmer by this bill is the protection tendered the Judean traveler from Jerusalem to Jericho.

Gentlemen point us to the $20,000,000 worth of tin-plates brought into this country every year, and say that by this bill it is proposed to make the tin-plates here and keep these millions at home to buy our farm produce. It is our farm produce that goes abroad now to pay for these tin-plates, as well as other imports. With our present high tariff on tin-plates their production in the United States has been a failure. This bill can not give us tin-mines or change the conditions of production. It proposes simply to increase the duty on tin-plates 150 per cent. and pension off an embryonic tin-plate industry on the farmers and other non-protected classes. Every member on the other side admits that it will raise the price of tin-plates. So every consumer in the United States is to pay an increased price for the tin can, the tin pail, the tin roof, and all articles of tinware as pension money to support the alleged industry.

The canning industry and the tinware manufacturers are to be mulcted for their share of the contributions. It is said this new industry will give 20,000 American workingmen employment, at a total wages of $10,000,000 per year. It is capable of mathematical demonstration that this duty will increase the cost of tinware to the American people on the basis of present consumption at least $15,000,000 annually. The American people would save $5,000,000 a year if they paid each of the 20,000 workingmen $500 a year to remain in idleness. The American farmers are to contribute at least $7,000,000 to procure a home market for $4,000,000 worth of produce. In other words, the farmer is to make the so-called tin-plate industry a gift of $1 for a chance to sell 60 cents worth of his farm and dairy products.

And this is what gentlemen call establishing an industry! A poor-house is a flourishing industry and a public soup-house a gold mine in comparison with it. If the conditions for the production of tin-plates in this country are favorable, the present duty is ample; if unfavorable, then your industry can represent nothing but waste of time, waste of capital, and waste of labor. From the beginning the so-called industry is to be the pretext, while the power conferred by this bill to collect bounties from the consumers of tinware is to be the real source of dividends. It is not to be profitable production of tin-plates, but profitable plunder of the people. Such union of the farm and the factory is the union of Sinbad the Sailor and his dead wife.

It is such monstrous abuses of the principle of protection that are to-day destroying agriculture and impoverishing the wage-earners of the country. This bill simply licenses the few industries which it can protect to increase their exactions from the industries which it can not protect. It turns loose additional mendicants to feast on the taxing power of the Government. It arms greed and selfishness, not with power to produce wealth, but with power to collect it from honest toil and self-sustaining enterprise.

The framers of this bill, Mr. Chairman, with refreshing frankness, lodge the sugar industry directly on the public Treasury. All grades of sugar, up to and including No. 16, Dutch standard in color, are placed on the free-list. The duty is retained on refined sugar. By this process the national Treasury loses $55,000,000 annual revenue. To this must be added the proposed bounty of 2 cents a pound on domestic sugar, or $7,620,000 annually on the basis of last year's product. This bounty is made to run for fifteen years, so that the more sugar we produce the more expensive is to be the bounty to the tax-payers. The net results of this provision are $62,520,000 annual loss of revenues to the public Treasury, free raw sugar to the sugar trusts and sugar refiners, and a duty on the refined product to keep up the price of sugar to the American consumers.

All other industries must contribute to pay the 2 cents a pound bounty to the domestic sugar producer. The trust and refiner are furnished free raw sugar. They are protected on the finished product. The millions of consumers are left substantially as before, except instead of their $55,000,000 going as heretofore into the public Treasury most of it is to go to the sugar trust and refiner, and $7,520,000 besides taken out of the Treasury and handed over to the sugar industry which is thus pensioned by the Government. Is it any wonder that the price of sugar trust stock arose $11 on the hundred within two days after this bill was reported to the House? Instead of turning this vast revenue from the Government over to the sugar combinations, why not, while about it, make all grades of sugar free, and thus save the $55,000,000 to the consumers?

This provision of the bill renders it unnecessary to argue that a prohibitory tariff and a bounty are the same thing. The proposed duty on tin-plates is to enable the producer of them to collect his bounty from the consumer in an increased price. The duty is taken off of sugar and the Government pays the bounty of 2 cents a pound direct out of the people's taxes in the Federal Treasury. In effect both systems are the same. In one case the Government collects and pays the bounty and in the other the individual collects it for himself. One is an open public pillage of the tax-payer; the other, a constant, cunning, complicated, and insidious pillage of the consumer.

The rational protectionist claims that in levying import duties the rate should be made to cover the difference in wages and cost of capital as between this and foreign countries. Such a policy, he insists, produces the necessary revenue, protects the domestic producer from bankrupting competition, and yet leaves enough of the regulating power of foreign competition to protect the domestic consumer from extortion by domestic combinations. No one can pretend that such is the doctrine of this bill. The census of 1880 showed that the producing power of labor in the boot and shoe industry in the preceding ten years had increased 28 per cent., while the wages had fallen 33 per cent. Owing to improved methods and machinery during the last ten years the producing power of labor in all departments of manufacture has greatly increased.

The census of 1880 shows that even at that time less than $13 in wages were paid in this country in producing $100 worth of average chemicals, oils, and paints. Yet this bill, coupled with the provisions of the McKinley administrative bill, places an average duty of $45 on each $100 worth of these articles. The rate of duty not only covers all possible difference between the foreign and domestic rates of wages, but covers the total domestic wages three times over. The chemicals, oils, and paints schedule is mentioned for illustration. Total absence of any possible relation between wages and the rate of duty charac-

terizes every schedule of this bill. Protection, not to wages, but to monopoly, is the sole maxim applied. It is a scheme for the consumption of wages, not for their protection.

It is claimed that this bill will increase the opportunities of American workingmen. It facilitates combinations to limit production and stop employment. It increases the cost of subsistence, and thereby lessens consumption, which in turn cuts off demand for labor. It offers additional employment only against conditions where all other forms of employment must be plundered to make good the waste of labor and capital. It proceeds on the doctrine that waste is wealth. Its policy would burn cities to give opportunity to carpenters, destroy books to give opportunity to authors, invoke famine to give opportunity to agriculture, and invite pestilence to gladden the heart of the undertaker.

The specter of "foreign pauper wages" is again conjured up to humbug American workingmen into the support of this bill. The sum paid to labor in the production of a given amount of product is the crucial test as to whether wages are relatively high or low. The labor of the man who receives $2 per day and produces three times as much as the man who is paid $1 per day is much the cheaper labor to the employer. Parallel columns of relative per diem wages always deceive. They never state the fact that the higher-rate column represents energetic, wide-awake, skilled, and hopeful labor, nor that the lower-rate column represents stupid, careless, unambitious, hopeless toil. They fail to show the fact that each dollar in the higher-rate column secured for the employer as much or more product than each dollar in the lower-rate column. The men who quote these columns and in theory lament most loudly the condition of foreign labor are in practice the most careless as to the condition and rewards of domestic labor.

One factory pays a man $2 per day and he weaves 400 yards of cloth. Another factory pays a man $1 per day and he weaves 150 yards of cloth. The defender of this bill would insist that the former secured the higher wages, but the employer knows that in the former case he pays one-half cent a yard for weaving and in the latter two-thirds cent a yard and that the so-called higher priced labor is at least 16 per cent. the cheaper. These illustrations point out a rule that is universal as between American and foreign labor and indicate the misleading character of comparative tables of wage statistics unless based on the relative wages paid in producing a given article. With rare exceptions a given amount of wages produces more for the American employer than for the foreign employer.

This is not, Mr. Chairman, a matter of conjecture, but of ascertained fact. Actual tests and comparisons demonstrate it. Mr. Evarts, when Secretary of State, made a thorough and critical examination of the whole subject. On page 36 of his report to Congress he says:

> The average American workman performs from one and a half to twice as much in a given time as the average European workman.

After quoting authority and statistics he adds, on page 37:

> One workman in the United States, as will be seen from the foregoing extracts, does as much as two workmen in most of the countries of Europe.

Mr. Blaine, when Secretary of State in 1881, made a special investigation of the cotton industry. In his report he demonstrates by undisputed statistics that the wages paid in our cotton factories were less at that time, both by the hour and in proportion to the product, than in England. It is safe to appeal from the jugglery and sophistry of a Presidential campaign to the facts ascertained by these men and deliberate judgment expressed by them when oath-bound officers of the Government.

When Brassey was building railroads in India he found that high-priced British labor was cheaper than 12 cents a day native labor. A gentleman who assisted in building the Mexican Central railroad tells me that he found it much cheaper to hire workmen from the United States at $1.50 per day than to employ Mexican labor at 37 cents per day. A Republican ex-Secretary of the Treasury who has spent much time in England says that even the hostlers and house-maids do from two to three times as much work in this country in a day as the same class of laborers do abroad. This bill is not drawn to protect a difference in wages. It is drawn to protect an arbitrary difference in price, which is made a direct charge on the wages and profits of consumers.

It is alleged that this is a proposition to increase production. Quite the reverse is true. The non-protected farmer seeks to increase his income by increasing his crop. The protected coal operator seeks to increase his income by limiting his production and advancing his prices. The non-protected plow and furniture manufacturer seeks to increase his profits by increasing his production and his sales. The protected steel and iron manufacturer stops production, limits the supply, and seeks profits from arbitrary prices. Non-protected labor must increase its income by increased industry. Protected wire and twine manufacturers aim to increase their profits by limiting the supply and collecting high bounties from the consumer. The many are left to increase the wealth of the country by increased production; the few are to sponge up the wealth of the country by the machinery of monopoly. The many are to seek profit by abundance; the few are to gather fortunes by partnership with scarcity and the tariff.

I recognize, Mr. Chairman, a primary obligation to my immediate constituents. Neither pride of opinion nor attachment to party can require me to sacrifice either the most powerful or most humble among them. In revising the tariff, American labor and American capital should have the benefit of every doubt. But as far as this bill applies to the great body of the people whom I represent there can be no doubt. It sacrifices them right and left, regardless of party and occupation. It increases the duty on many lines of raw material and removes it on none. It compels a revision of price lists and disorganizes the domestic market. It flaunts the black flag in the face of every foreign nation into which the products of our factories have been pushed. It strikes down every hope which the late Pan-American Congress inspired of enlarged markets for our goods in Mexico and the Central and South American states. Even where the duty on the finished product is increased, all advantage is neutralized by its increased exactions on raw material. It has called out many petitions from my people against its provisions and not one in favor of them. Some of the ablest and most far-seeing Republicans in and out of this House are denouncing it. The leading Republican papers of the great Northwest are exposing its injustice. The conscience of the nation and the moral sense of the great mass of the people are in revolt against it. The despotism of a caucus may compel its adoption, but no amount of force can reconcile thoughtful and just-minded men to many of its provisions.

This Congress, Mr. Chairman, has increased the appropriations for every department of the Government. New lines of expenditure have been established. Many more propositions have been reported and are now on the Calendar awaiting action. The majority of the Committee on Ways and Means claim that the pending bill will reduce the Federal revenues over $71,000,000. If it results, as predicted by many of its friends, in the total exclusion of many dutiable articles, the reduction must be even greater. It threatens in any event to disorganize our national finances and bankrupt the Treasury within six months after it goes on the statute-book. In the mean time the people are in no wise relieved of the burdens of taxation. The streams of taxation are simply diverted from the national Treasury to the coffers of select and favored beneficiaries of this legislation. The taxing power is simply lessened for public purposes and increased for private purposes.

In good faith this should be entitled a pension bill. Its only purpose and effect is to pension off its beneficiaries on the rest of the community. The sugar-planter is pensioned directly from the public Treasury, and the wire, twine, tin-plate, and other select industries are armed with the taxing power of the Government to secure domestic monopoly and pension themselves out of the pockets of the people. The pension is not for wounds received in battle, nor for disability contracted in the line of duty. Nor is it for honorable service rendered in defense of the flag or free institutions. It is a pension to selfishness and greed. It is a pension to the men who reap where others sow and gather where others plant. It is a pension to the men who debauch the ballot and gamble in public trusts. It is a pension to the men who seem to have no possible use for the grandest Government on earth except to prostitute it to their individual profit and private gain.

Whatever party, Mr. Chairman, undertakes a revision of the tariff is confronted with many difficulties. The perfect system of taxation has not yet been devised. The vast revenue necessities of the Government during the late war opened the doors to private interests to lodge themselves on the labor and enterprise of the nation by the machinery of our taxing power. Privilege thus invited to the feast soon took possession of the host. While the people for years after the war were borne along on the waves of stimulated patriotism and passion, the men who had found in the taxing power the secret of wealth by bounties lost no opportunity to intrench and fortify their position. Each beneficiary of privilege from his safe retreat behind the clouds of passion that enwrapped the nation could join in the boast of the King of Assyria, "My hand hath found as a nest the riches of the people: and as one gathereth eggs that are left, have I gathered all the earth; and there was none that moved the wing, or opened the mouth, or peeped."

The influence of these men and these powerful interests involve every effort at revision of the tariff in a maze of complications and embarrassments. The announced policy of the dominant party, that duties are to be levied primarily for the benefit of private interests and that the public revenues are to be a secondary consideration, was a complete surrender of the sovereign power of Federal taxation. From that moment public interests were made subservient to private ends. The insolent brood of protected extortioners hatched by the abuses of our present tariff accepted your invitation and took full possession. The taxing power was turned over to them and they proceeded to revise the schedules to suit themselves. The conflict of contending interests raged around the committee-room. Taxes were handed about. Increased duties were met by compensating duties. Figures were compared. The number of victims were estimated. The prizes in the lottery of taxes were distributed. The combinations were perfected, the clamor hushed, and we have now before us one of the most marvelous charters of taxation ever conceived by the human brain.

The beneficiaries of this bill may realize the fruits of their victory. Its defenders here are certainly welcome to the fruits of their surrender. It is a dearly purchased servitude. But it will secure the patronage of the combination of special interests back of this bill for the domi-

nant party for a time. These creatures of privilege will print tons of literature, as in the past, to convince the people of the beauty of their system; they will eulogize as American the policy that is American only in the sense that it victimizes Americans. As in the past, they may cover the floors of our factories with improvised tables of statistics and heart-rending articles on the pauper labor of other countries; they may furnish editorial free to every rural newspaper that will publish it; they may send their sleuth-hounds into every close district to hunt down the public man who denounces their larcenies. All this they may do for the dominant party, but only so long as that party responds to their commands and devotes itself to their service.

Amid the raging tempest, when the clouds are low and the stars are dead, the mariner turns to his compass and chart to locate his bearings and avoid the shoals. Amid the fury of contending interests about this Capitol we may confidently revert to first principles to measure the just and safe and locate the unjust and dangerous exercise of public power. These principles, older than the Decalogue, struck by the hand of Heaven into the eternal order of things, are no more immutable in their nature than universal in their application. The boast of the Assyrian monarch, "I have removed the bounds of the people, and have robbed their treasures," marked the beginning of the end of that proud and powerful dynasty. The long and bitter struggle for political and civil liberty has been in the main a revolt against abuses of the taxing power. Kings seized on the property of their subjects to satisfy their lust for wealth and were met by armed revolt. They farmed out the public revenues to their favorites and lost their thrones. They granted monopolies to their ministers and trod the narrow steps of the scaffold. After centuries of resistance to the doctrine of the divine right of taxation the principle was conceded that taxes were voluntary contributions by the subject through the commons to the crown. It is too late in the nineteenth century to revive with permanent success the dogmas of despotism and make the taxing power of our Government an instrument of profit for a few favored citizens. The garniture of well set phrase and the embelishments of shrewdly handled statistics may allure and deceive for a time, but certain defeat at last awaits any system based on the assumption that taxation in any possible form can add wealth to a nation or insure prosperity to a people.

Taxation is a consuming force. It is a necessary evil. It is a penalty society pays because of the imperfections of human nature. The man does not live who returns thanks for his opportunity to pay taxes. In the practical affairs of life taxes are always credited as expenses. Legislative jugglery can not change their character. These facts suggest that in any revision of the tariff the first aim should be to limit revenue to the actual necessities of the Government. The second aim should be to preserve the public character and purpose of the tax. The third aim should be to place the burden where it least cripples the producing energy of the nation. The duties should be reduced and so far as possible remitted on the necessary articles of consumption. To tax the necessary subsistence of a people is to discount the very source and supply of wealth. Articles of luxury should be taxed up to the collection point, not simply because they are articles of luxury, but because to tax luxuries is to effect the object of taxation with least subtraction from the producing force of the people. To tax the workman's breakfast table is to discount his day's labor; to tax the jewel-case is to provide for the public expenses with least harm to labor. Taxes should be reduced on raw material. To tax the basis of manufacture is to increase the cost and narrow the market of the finished product. Finally, the principle should be observed that reasonable competition is a stimulant to improvement in the means of production, a weapon with which superior skill and industry take the market, and a safeguard against unjust exactions from the consumer.

Elaborate statistics have been thrown into the current of this debate to show the progress of this country in material wealth. On this point no authority is required. The wildest dream of the romancer is dull prose compared with the marvelous miracle of our industrial growth. The shadows are also here. Jay Gould and Lazarus are together worth $200,000,000. The carnival of flood and drought, plenty and poverty, luxury and famine is on. This bill promises no relief. It means disorganization of our industries. It insures further disorder in the body politic. It can only add to the disease already too apparent in our economic system.

But, Mr. Chairman, out of this delirium of political economy will come the soberness of reason. The illusion of wealth by statute and riches by taxation will pass away. The use and control of the Federal taxing power will be restored to the Government. The Government will dissolve its partnership with the classes and again become the impartial umpire of all the people. By prudent methods the evils of vicious taxation will be removed and our economic system will be restored to harmony with our political system.

Nor will the American people solve the vexed problem for themselves alone. Pride and patriotism alike repudiate the sacred folly that this nation must be a hermit. It is at once the example and the missionary of free government. It is well equipped for the majestic task of peacefully proselyting to the gospel of liberty. It has passed through the saddest dramas and grandest triumphs in all the course of time. Beyond its wealth of mine and mill and field is its rich legacy of traditions, its proud heraldry of freedom, its sublime galaxy of martyrs to its faith. These are the guardians of its past, inspirations to its present, and hostages to its future. To these silent but mighty influences are due in no small degree the ruggedness of character, the sturdy self-reliance, the decisive individuality, the imperious aggressiveness of the American people.

It were humiliating to such a people to speak with awe of the competition furnished by the labor of nations loaded down with vast standing armies, expensive aristocracies, and the accumulated paralysis of centuries of tyranny. In intelligence, genius, skill, energy, courage, and productiveness American labor in all lines of production to which our climate, soil, and natural resources are adapted stands in a clear majority against all the outside world. It is only in the petty domain of obstructive legislation that the most inferior nation on earth can double the figures in her parchment and laugh at our power.

No, Mr. Chairman, the influence of this nation is not to be circumscribed by red lines on the map or the incidents of the sea. If in the sacred name of protection we are only to set a slender fraction of our people to feeding as parasites on the labor of the country, how vain these centuries of sacrifice. If we are to present to the nations only an example of monstrous extremes of wealth and poverty, republican institutions must stand discredited. If a little brood of protected aristocrats are to write our laws and wield the power of taxation to disfranchise labor of its earnings, then the Mayflower and Plymouth Rock are senseless fictions and Lexington and Yorktown stupendous jokes.

But the faith of our fathers was not vain. Here already have their children subordinated the forces of nature and solved the problem of production. The problem of exchange and distribution is certain of solution. The products of American skill and industry will go in unfettered ships into the markets of the world. The products of American loom and spindle will go to clothe the millions on the south of us to whom our obstructive laws have almost made us commercial strangers. Our factories will furnish the farm machinery for the world. The petty era of taxes and ad valorems and percentages will give way to enlarged markets for our products, larger demand and juster compensation for labor, and a solid basis of prosperity to the whole people. Our merchant marine will no longer dangle a miserable mendicant from the ragged edges of the United States Treasury.

Relieved of the weights that our own laws have hung about it, it will again course the highway of nations and command that commerce which above all others is most profitable to mankind. American ships, sailing under the American flag, manned by American seamen, will carry the finished products of American labor over every sea into every port. They will return laden with the fruits of other climes, impossible of production here, and with the raw material, which American skill will shape into finished products and again send out among the nations. This is no idle dream. It is what we have done in every instance where raw material has been released from odious exactions and American labor released from the manacles of obstructive laws.

With the white sails of our enfranchised commerce on every sea and the Stars and Stripes again floating from our mast-heads against every sky, the commanding influence of our free institutions will again be felt. Every ship will be an evangelist of liberty. Every sail will be a parable of freedom. Our flag will everywhere tell the story of self-government. Other nations must then disband their standing armies and unload their aristocracies and give hope and enterprise through enlarged liberty to their labor, or fall laggards in the friendly rivalry for the supremacy of the seas. By such policy the American people, made up of every nation, tongue, and clime, will, on their own congenial soil, work out the problem of civilization for themselves and reflect the beneficence of their institutions over all the world. It is this principle, withheld only in our economic system, that makes the American people, rejected by the architects of despotism in other lands, the chief corner-stone in the temple of political and civil liberty here dedicated to all mankind.

APPENDIX.

Table compiled from the Tenth Census by Mr. Seaton, Superintendent, showing value of various manufactured products, per cent. of labor cost, rate of duty existing and proposed.

Industries.	Value of product.	Labor.	Percentage of labor.	Present tariff.	Proposed rate.
Carpets	$31,792,802	$6,835,218	21.5	46.31	60.88
Cotton goods	210,980,383	45,614,419	21.6	35.64	38.00
Bolts, nuts, etc	10,073,330	1,981,300	19.7	32.00	30.00
Nails and spikes	5,629,240	1,255,171	22.3	62.00	41.00
Iron pipe, wrought	13,202,162	1,788,258	13.4	74.00	62.00
Oil, linseed	15,393,812	681,677	4.4	44.00	53.00
Screws (smallest)	2,184,532	456,542	20.9	72.00	84.00
Wool hats (cheap)	8,516,569	1,893,215	22.2	68.00	111.00
Woolen goods	160,606,721	25,836,392	16.1	71.00	90.00
Worsted goods	33,549,942	5,683,027	16.9	67.00	103.00

Table showing increase in rate of duties on many articles in common use.

Articles.	Present duty.	Proposed duty.
116. Common window-glass, 10 by 15.....per pound...	67.61	73.72
116. Common window-glass, 16 by 24.....do.....	115.41	123.10
116. Common window-glass, 24 by 30.....do.....	128.58	135.34
116. Common window-glass, above that.....do.....	132.29	138.04
131. Freestone, granite.....	20.22	40.00
131. Freestone, granite, hewn or dressed.....	20.00	50.00
144. Cotton-ties.....per pound...	35.00	115.00
147. Tin-plate.....	34.00	74.00
150. Steel ingots, etc., above 16 cents per pound.....	11.89	45.00
151. Wire-fence rods, No. 6.....	45.00	54.00
169. Pen-knives, etc.....	50.00	75.00
171. Table cutlery.....	35.00	50.00
348. Plushes.....	40.00	100.00
350. Hosiery.....	40.00	60.00
350. Shirts and drawers.....	40.00	65.00
363. Burlaps.....	30.00	.....
368. Brown and bleached linens.....	35.00	50.00
369. Brown and bleached linens.....	35.00	60.00
390. Yarns.....	69.00	100.00
391. Woolens and worsted, knit goods, etc.....	94.59	125.00
391. Worsteds, knit goods, under 30 cents.....	73.20	130.00
391. Worsteds, knit goods, 30 to 40 cents.....	68.41	147.00
391. Worsteds, knit goods, 40 to 60 cents.....	67.60	130.00
391. Worsteds, knit goods, 60 to 80 cents.....	68.98	112.00
391. Worsteds, knit goods, above 80 cents.....	71.22	90.00
391. Worsted shawls.....	61.82	93.00
391. Belts for presses (printing).....	53.14	101.00
392. Blankets and flannels and hats.....	69.70	110.00
393. Women's and children's dress goods.....	68.00	103.00
394. Women's and children's dress goods.....	85.00	110.00
395. Clothing, ready made.....	54.00	84.00
396. Cloaks, dolmans, etc.....	60.00	82.00
397. Webbings, gorings, etc.....	64.00	90.00

The Tariff.

New England extends to the great West and South her congratulations that their progress and prosperity is evidence of the national beneficence of that protective-tariff system in support of which she has been and continues active.

SPEECH

OF

HON. CHARLES A. RUSSELL,

OF CONNECTICUT,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 20, 1890.

The House being in Committee of the Whole on the state of the Union and having under consideration the bill (H. R. 9416) to reduce the revenue and equalize duties on imports—

Mr. RUSSELL said:

Mr. CHAIRMAN: I have listened somewhat patiently and attentively to this tariff discussion until these closing hours and now suppose that I ought to be able to give a somewhat intelligent synopsis of the information acquired.

Several MEMBERS. Oh, no!

Mr. STRUBLE. Do not try it. [Laughter.]

Mr. RUSSELL. Well, I do not propose to rehearse the great mass of buncombe statements for home consumption or to refer to the notorious proceedings which have in a measure characterized the efforts of our Democratic friends to retard consideration of the bill. The country has already, I believe, recorded its judgment that Congress is convened for legislative action, and not for swagger and braggadocio, and on that judgment the country will weigh the action and not the pretense of the political parties here represented. But gentlemen will agree generally with me when I state that this tariff debate has evoked the information that the country is prospering and has been increasing in its prosperity for the last three decades.

How often during the progress of this discussion have our free-trade and revenue-tariff friends, when forced to the admission that the particular States and districts represented by them on this floor show a marked and steady prosperity, bolstered their tariff policy by the equivocation that it has all been "in spite of the protective tariff." I submit that any industrial system which, on the admission of its enemies, "in spite" of itself creates and enhances, during long years of trial, prosperity to a country is neither to be spurned nor to be blackmailed. It is rather to be continued and extended.

During the last eight days while this bill has been under discussion by schedules and while the discussion has been frequently irrelevant to the particular schedules under consideration the great States of Kansas, Iowa and Missouri—especially the latter—have occupied a considerable portion of the time. I think it must be admitted that the consensus of opinion on the part of the gentlemen speaking for these States is that their respective States are generally prosperous. The same opinion has been repeatedly expressed by gentlemen speaking for other States in our great Union. The possible exceptions are our two Democratic friends from Massachusetts [Mr. ANDREW and Mr. O'NEIL], who bemoan the decadence of and danger to Massachusetts manufactures. I will extend my remarks to show the error of their wail, though I had supposed that the rest of the country considered New England, and especially Massachusetts, a remarkable beneficiary under the protective system.

Thus, while some gentlemen have been disposed to deprecate a lesser prosperity in other States than existed in their own, they have all, as I have stated, generally admitted the prosperity of their respective States. Varying conditions of thrift, economy, and intelligence on the part of the individual citizen regulate in large measure the degree of prosperity to the community and the State. Whether the gentlemen who express concern for a greater prosperity to their neighbors recognize the force of these conditions I know not. They should, for these conditions are necessary to give scope and power to whatever legislation we enact.

THE PROTECTIVE SYSTEM NATIONAL AND NOT SECTIONAL.

However, brotherly solicitude for the common welfare on the part of our Democratic friends is agreeable to note. It is a conviction which precedes a conversion to the general industrial policy which has for its ultimate object protection to every branch of American industry. [Applause.] It is a recognition of the protective system. It is an admission of the desire and beneficence of that result which is claimed and proven for a protective tariff: common concern for every home industry, general regard for home labor in its every diversity, and national legislation for national interests. [Applause.]

The section of the country from which I come, New England, is sometimes spoken of by our free-trade and revenue-tariff friends as a great manufacturing monopoly which reaps in unequal proportion the benefits of the protective tariff. What New England has received from the protective system is only the possibility and the surety to every other section of the country by the continuance and extension of the system. Time is proving that assertion, and the statements of facts in this discussion are evidence of its truth. If it be a revelation interesting to our section of the country that the great agricultural State of Iowa has deposits in its savings-banks which increased per capita during the last statistical year in excess of the increase in New England savings-banks; that the State of Missouri, with its manufacture and agriculture, has its bonds quoted at a rate equal to those of the National Government, and higher than those of some of the older and more distinctively manufacturing States, and that its expenditure for educational puposes is the greatest in the Union; that the magnificent and booming State of Kansas, in whose farm mortgages are invested the savings of the wage-earners of New England and the Middle States, is meeting the interest and reducing the principals of those mortgages, which in reality are not disproportionate to the mortgages in manufacturing property in the country—if, I say, this condition of things be a revelation, it is by no means an occasion for jealousy or anger on the part of New England. We rather extend to the great West and Southwest our congratulations that their progress and prosperity are evidence of the national beneficence of the protective-tariff system in support of which our section has been and continues active. [Applause.] We share as part of the whole in whatever good and gain comes to your Kansas, and your Iowa, and your Missouri. You, gentlemen of the West and the South, share in what prosperity we enjoy.

I wish, Mr. Chairman, to incorporate in my remarks statements in evidence of the point which I have endeavored to impress upon this committee, namely, that a protective-tariff system in its application and its results is national, and not sectional. I refute the idea that now or ever the protective system in its benefits has been "a local issue."

NATIONAL WEALTH AND PUBLIC DEBTS.

A nation, like an individual, must gauge its prosperity in large measure by the accumulation of its wealth and the lessening of its debts. Recent and careful estimates place the wealth of the people of the United States at the present time at $60,000,000,000, against $43,000,000,000 in 1880. That is an average of almost $970 per capita, as compared with $860 per capita at the time of the last census. A trade journal prints the following on the increase of our national wealth:

The addition of new buildings, with the new farms and improved lands, and the new railroads, mines and manufacturing establishments, must have exceeded $18,000,000,000, if the estimate of the Census Bureau for ten years ago was correct. The railroad property alone has increased about $5,000,000,000. The new farms may perhaps be counted at half as much more, and the increase in the value of old farms by the vast extension of railroad facilities must be considerable in spite of cheap crops. The value of other real estate has also been much enhanced, particularly in the villages of the West and South. A comparison of these facts seems to warrant the supposition, which is supported by the insurance returns, that the entire gain in wealth during the decade has been fully 43 per cent. It is believed that the assessed valuation, in the cities at least, has increased nearly as much as that, and, if so, actual values must have grown considerably more.

In 1880 the aggregate debts of all the States and Territories in our Union were $260,000,000. To-day these debts on careful estimate are $215,000,000. This shows a reduction in the decade of $45,000,000. In 1880 the county, city, town, township and school-district debts aggregated, in addition to State and Territorial debts, $942,000,000. They are estimated to-day at $782,000,000. This shows a reduction in the decade of $160,000,000. The national debt on the 1st of January, 1880, was $2,120,415,000; on the 1st of January, 1890, it was $1,052,000,000, a reduction of $1,068,415,000. The aggregate public indebtedness of all kinds is, therefore, some $1,274,000,000 less than it was ten years ago. According to the statistical abstract as published by the Treasury Department, the increase in the amount of taxable property, as assessed in the States during the past year, has been $1,381,024,835.

GENERAL PROSPERITY.

Now, I contend, Mr. Chairman, that the foregoing measures of our prosperity are not balances of increase and decrease between different sections or different interests or different classes in our country. The nation is too large, its interests are too diversified, its industries too much interwoven, and its internal relations too complex and mutual to allow this wonderful record of increased prosperity to result from the balance of profit of any one or any several sections or classes over the loss of others. It is the aggregate measure of increasing prosperity which has been and is general throughout the land. It is possible to multiply evidence on evidence of the general prosperity of our East and our West and our North and our South under the prevailing industrial system which the Republican party now proposes to revise along the line of protection to our existing industries and to extend along the same line to the creation of new industries and the growth of new and increased products which can be under the natural condition of things manufactured or grown here. From the Atlanta (Ga.) Southern Industrial Record, in its issue of February 20, 1890, is gathered the following:

Three hundred and twenty-five new manufacturing enterprises were inaugurated in the ten cotton States during the past two weeks, employing over $6,000,000 capital. This does not include the many new railroad enterprises, employing many millions of dollars' capital, developing vast extents of country, rich in minerals, coal, timber and agricultural lands. Industrial development is spontaneously springing up all over the South which will eventually make it populous and rich.

NEW ENGLAND INDUSTRIES.

And lest some doleful mugwump in my own New England from the foregoing item of Southern prosperity hearkens for the echo of "decadence to New England industries," let me give the following from a recent issue of a Boston journal:

The hives of industry are so full that the swarming process may naturally lead to new swarms and new hives at distant points. These work no injury to New England. We can spare them. Not 1 per cent. of the substantial manufacturing concerns of New England have migrated South or West in a decade. Any general exodus is a fancy of the prejudiced operator. New England in 1889 invested $50,000,000 in new manufacturing plants at home. Deposits in her savings banks increased over $50,000,000 in 1889. The situation is most hopeful for 1890. Let our people look at the bright facts instead of the doleful misstatements of interested parties.

And here is an extract from the Lowell (Mass.) Mail, referring to the erection of a cotton-mill plant in its vicinity, which will involve the expenditure of $3,000,000:

When it is done it will furnish work for 2,000 operatives, whose wages will support directly at least 6,000 people. These people will eat bread and meat and vegetables and dairy products and fruit from American farms. They will wear clothing made in American shops from cloth manufactured in American mills. They will use American boots and shoes, furniture, crockery, and iron and wooden ware. They will burn American coal and oil. They will employ American physicians, lawyers, teachers and preachers, and read American books and papers. They will patronize American railroads, theaters and baseball nines. They will buy American watches and jewelry, and in almost every conceivable way they will help to make a demand for the products of American skill, industry and enterprise.

Mr. Chairman, my Democratic friends from Massachusetts, who imagine that the McKinley tariff bill is neglectful of New England interests because it continues on the dutiable list wool and coal and iron, are deceived by the petitions which have been sent to them for "free raw materials." I think I read between the lines of the signatures to these petitions. I think I discern a selfish inclination towards a lessening of the number of competitors in our manufacturing industries which can surely be accomplished by a free-trade or revenue-tariff system. With that lessening will come the survival of the wealthy and the creation of a manufacturing monopoly which exists to-day only in the visions of our Democratic friends. With a lessening of competition comes to the survivors the possibility of forcing labor conditions which would be the equal of those in England and other foreign countries. Foreign manufactures, I regret to say, some of our friends would rather have as competitors than honorable American industries manned by honest, intelligent, prosperous American laborers. I say with emphasis and with full regard to the meaning of my words that the American workman should view with distrust that manufacturing interest which seeks "free raw material." It seeks as well less competition in manufacture and a surplus of workmen.

SAVINGS BANKS.

Now, let me give from the great agricultural West clippings from the general evidence that under the protective system our prosperity has been national. In his speech in this committee, on Friday last, the gentleman from Iowa [Mr. CONGER] confuted the charge that the New England States were prospering over his West by reference to the statistics of savings-banks deposits. The exhibit was a most striking blow to our Democratic friends. It showed that during the last year the deposits per capita in the savings-banks of Iowa had increased $19.06 to each depositor, the number of depositors increasing as well. That was an increase of rising $20 more than the greatest increase in any New England State, namely, in Rhode Island, which showed the handsome increase of $21.55 per capita. I append the table of the gentleman from Iowa, taken from the statistical abstract of 1889:

States and Territories.	1886-'87.			1888-'89.		
	Number of depositors.	Amount of deposits.	Average to each depositor.	Number of depositors.	Amount of deposits.	Average to each depositor.
Maine	114,691	$37,215,071	$324.47	124,562	$40,969,663	$328.91
New Hampshire	132,714	50,822,762	382.94	145,021	57,300,590	395.12
Vermont	53,810	15,587,050	289.67	61,759	17,801,327	288.24
Massachusetts	906,039	291,197,900	321.40	983,202	315,185,070	320.57
Rhode Island	119,159	53,284,821	447.18	123,102	57,699,884	468.71
Connecticut	266,888	97,424,820	365.04	287,776	105,850,078	367.82
New York	1,264,535	482,486,730	381.55	1,362,852	523,677,515	384.25
New Jersey	98,137	27,482,135	280.04	114,627	30,696,529	267.79
Iowa	*39,638	9,969,019	251.50	*43,669	13,125,058	300.56

* Partially estimated.

Now here is the evidence of a Wisconsin farmer, as published in the public press:

Around me is a territory embracing about 16 square miles, of which I am personally fairly posted as to the condition of its farming community. As I sit at my table writing this, I make a tally-sheet headed, "In debt," "Not in debt." Following the different highways, I note the conditions as to debt of each farmer and tally them under the appropriate heading. In this list I include the small farmer as well as the large. One hundred farmers are embraced in the list, and forty of these I find more or less in debt; not all are mortgaged; perhaps a little over one-half of those in debt have mortgages on their real estate. Many that are in debt are thrifty, prosperous people who will soon be out of debt. Sixty out of one hundred are practically free of debt. Quite a percentage of the sixty have money at interest or invested where they consider it well placed.

MORTGAGES.

It seems to me that much of the talk about mortgages is not only exaggerated, but is misconceived. A mortgage is not necessarily an evidence of poverty or even an evidence of the want of prosperity; oftener than not it is evidence of an exactly contrary condition of things. It is the means by which thrift is given opportunity to expand and reap its reward. It is a handmaid of industry and economy. It is the resource of manufacturing as well as agricultural industry. It is to the benefit of those wage-earners who seek investments for their savings. You see now and then a sky-rocket explosion on account of a foreclosed mortgage or a defaulted interest; but against these exceptions place the many, many mortgages which have been released and are being released, and which have given the prosperous and honest man of to-day his start in life, and which have given to thousands the profits of investments furnishing the comforts of old age or the education of children.

I suppose during the last few weeks the country has heard much of Kansas mortgages. I do not suppose the common-sense citizen has been unduly frightened at the writhing of our Democratic friends over "mortgaged Kansas," but I wish to incorporate in these remarks a colloquy which occurred in this committee on Monday last. It was as follows according to the RECORD:

Mr. DOCKERY. Does the gentleman mean to admit that there are $100,000,000 on the farms of Kansas in the shape of mortgages?

Mr. PETERS. No, sir; I deny it most emphatically.

Mr. DOCKERY. I so understood the gentleman.

Mr. PETERS. Yes, and you are understanding a good many things that are equally as unreliable. But the record will show the facts. A careful examination of the records of Kansas shows that the mortgages upon farms of that State do not exceed $50,000,000. And yet when the Democratic campaign was going on the Democratic crowd went all over Kansas proclaiming that there was over $300,000,000, and the statement has gone abroad throughout the whole length of the land. Now, what does that include? Why, it includes mortgages upon all the railroad property. The Atchison, Topeka and Santa Fé Railroad has a mortgage upon its road-bed and rolling-stock recorded in every county through which it runs. The same is true of the Missouri Pacific, San Francisco, and the Rock Island——

Mr. ANDERSON, of Kansas. And the Union Pacific.

Mr. PETERS. Yes; and the Union Pacific. Of course if the amount of mortgages on all of the railroads in the State is taken into consideration, and they have to be recorded in every county through which the lines run, you can fix the amount of the mortgage indebtedness of the State at almost any figure you please, and create the impression that Kansas is mortgaged to death. But I state on high authority that an examination of the records will show that the farm mortgages of Kansas to-day do not exceed $50,000,0000, and it is more——

Mr. PEEL. Will the gentleman yield for a question?

Mr. PETERS. Yes.

Mr. PEEL. I would like to ask the gentleman whether, if they have an indebtedness even of $50,000,000, there is market enough for corn, Kansas corn raised in the State, to pay it off?

Mr. PETERS. Yes, sir; and let me tell the gentleman that the increase in price in the last thirty days from 13 to 23 cents a bushel on corn has made Kansas $20,000,000 alone [applause on the Republican side], because we have that quantity of corn on hand ready to sell, and the increase in value of 10 and 12 cents a bushel will bring to that State $20,000,000 of surplus money. [Applause.]

CONNECTICUT LABOR STATISTICS.

Now, Mr. Chairman, in this discussion, as in the tariff debate of two years ago, our Democratic friends seem to strive to make the protective system the wedge by which to separate and antagonize sections and interests. That is an old-time and favorite method of theirs. They seem to have great difficulty to get away from a sectional feeling and adopt a national policy. Their adherence to that old method has cost the country much of treasure. In the debate of two years ago I remember it was vigorously and tauntingly flaunted before us that the protective system disproportionately distributed its rewards between capital and labor. I believe that the charge was well refuted in the following election, which sent from the districts of our producing sections a majority into the Republican side of this House.

But that I may further refute the charge I desire to refer to the findings of the bureau of labor statistics of the State which I in part represent. Some five years ago the State of Connecticut established a bureau of labor statistics. It called to the head of that bureau a gentleman eminent in letters and a professor of political economy, Professor Arthur B. Hadley, of New Haven. The efficient and instructive work which he began has been continued by the present commissioner, Samuel M. Hotchkiss, whose impartial and intelligent direction of the bureau is recognized by all. Mr. Hotchkiss has recently published the fifth annual report of the bureau, and it is specially instructive in the details of the cost and profits of manufacturing in Connecticut. For the year ending November, 1889, a personal investigation was made of two hundred and forty-one manufacturing establishments, covering twenty-two branches of industry. That the investigation was extensive and is valuable in its results is declared by the fact that the establishments considered employed 53,147 work-people and turned out an annual product of the value of $85,929,133. The investigation was made by a personal examination of books by agents of the bureau. The cost of production was divided as follows:

COST OF PRODUCTION.

Items.	Cost.	Per cent.
Stock and materials	$45,368,000	57.2
Wages	22,432,000	28.2
Interest, taxes, and rent	1,691,000	2.5
Miscellaneous	9,190,000	12.1
Total	78,681,000	100

It should be noted that the number of work-people and the wages as given above do not include the officers, superintendents, clerks, book-keepers, salesmen and non-producers connected with the manufacturing establishments considered. These people are classified under a schedule by themselves and number nearly three thousand additional. The capital employed in these establishments is $85,863,522.26, and the value of the productions, the cost of producing which is shown in the foregoing table, is given at $85,929,133.43. Thus it will be seen that the difference between the cost of production and the value of the product is in even figures $7,248,000. This sum represents the profit of capital, or 8.4 per cent. on the amount of capital employed.

The tables which show the per cent. net profits of capital indicate quite a difference of per cent. of profit in different industries. For instance, the clock, cutlery, printing and publishing, and rubber-goods industries, with a capital of over $7,000,000, show profits averaging less than 3 per cent., the rubber-goods industry being the poorest, with profits of less than 1 per cent. on $4,367,000 capital. On various other important industries, such as woolen goods, shoes, hardware, cotton goods, and silver plating, the profits have averaged less than 8 per cent. on a capital of over $40,000,000. Various other industries, including paper, silk goods, machinery, hats, corsets, and brass works, with a capital of about $35,000,000, show profits of from 9 to 13 per cent. A limited number of industries, with capital of about $5,000,000, show profits of from 13 to 16 per cent., and only one branch, the manufacture of paper boxes, with a capital of $170,000, shows profits of more than 16 per cent.

PROFITS OF MANUFACTURE.

The report of Mr. Hotchkiss has carried the investigation of Connecticut manufacturing further, and the report makes a comparison of eighty-five similar establishments for the years of 1887 and 1888. These establishments cover twenty-one industries, employ 27,000 work-people and $49,000,000 of capital, and produce a value of $45,000,000. For these eighty-five similar establishments the following table of per cent. net profits of capital and per cent. wages (not including superintendence and selling), of cost, and per cent. value of stock, and per cent. cost of manufacture (less rent, interest, and taxes), and per cent. of rent, interest, and taxes, is given:

Industries.	Per cent. net profits of capital.		Per cent. wages of cost of goods manufactured.		Per cent. of value of stock and materials of goods manufactured.		Per cent. of cost of manufacture (less rent, interest, and taxes) of value of goods manufactured.		Per cent. of rent, interest, and taxes, of value of goods manufactured.	
	1888.	1887.	1888.	1887.	1888.	1887.	1888.	1887.	1888.	1887.

* Loss.

PROTECTION FOR LABOR.

The foregoing official statements from the investigations of the Connecticut Bureau of Labor Statistics disprove the grossly exaggerated assertions respecting the profits of manufacturing which prevail somewhat among politicians in their arguments for free trade. They show that the average profit to capital for the years 1887 and 1888 has been less than 7 per cent., and that is no more than is frequently obtained in well selected investments with little hazard and no work. They show further that the great industries of Eastern Connecticut—the cotton, woolen, silk, rubber, and machinery manufacture—have averaged for the two years a profit on capital of 6 per cent. The two greatest industries—the cotton and woolen manufacture—average a profit on capital of only 4 per cent.

Another conclusion results from these investigations; it is an obvious fact. The tariff is not a bonus to capital. It is protection to the wages of those who produce and those who distribute products. It is along the line of continuance of this protection that the Republican tariff bill is drawn. For instance, in the hosiery manufacture the bill seeks to preserve and extend the industry here at home. A gentleman who was for ten years hosiery buyer for the largest hosiery jobbers and importers in Boston said that he ascertained when in Germany buying hosiery that the average price paid per day to hosiery mill employés was one mark, or 25 cents in our money. Last year we imported more than $5,000,000 value of hosiery, and the bill proposes, instead of 35 per cent. ad valorem duty, a specific duty of from 20 cents to $1 per dozen, with an ad valorem of from 20 to 40 per cent.

PROTECTION FOR AGRICULTURE.

But the tariff bill under consideration extends its protection not alone to those who are employed in our manufactures. The farmers are "in the bill." The agricultural products are given, almost for the first time, proper consideration; especially are the products of New England agriculture secured from a continuance and extension of foreign importation.

I append the following table, showing the importations of the last year, the present duty, and the proposed duty on the agricultural products in which New England is largely interested:

Article.	Imported 1889.	Present duty.	Proposed duty.
Horses and mules	$2,146,514.50	20 per cent	$30 per head.*
Cattle	542,764.71	20 per cent	Over one year, $10 per head; under one year, $2 per head.
Hogs	4,770.80	20 per cent	$1.50 per head.
Sheep	1,189,192.38	20 per cent	$1.50 per head.
Barley	7,678,763.58	10 cts. per bushel	30 cts. per bushel.
Buckwheat	25,469.85	10 per cent	15 cts. per bushel.

*Provided that horses valued at over $150 shall pay an ad valorem duty of 30 per cent.

Article.	Imported 1889.	Present duty.	Proposed duty.
Oats	10,178.19	10 cts. per bushel.	15 cts. per bushel.
Oat-meal	55,995.00	¼ cent per pound.	1 cent per pound.
Butter	17,689.41	4 cts. per pound	6 cts. per pound.
Cheese	1,132,143.28	4 cts. per pound	6 cts. per pound.
Milk	5,684.87	10 per cent.	5 cts. per gallon.
Beans	759,802.28	10 per cent.	40 cts. per bushel.
Beans, pease, and mushrooms, prepared or preserved.	No data.	35 per cent.	40 per cent.
Pease:			
Green or dried	Included with beans.	10 per cent.	40 cts. per bushel.
Split	$52,738.00	20 per cent.	50 cts. per bushel.
In papers, cartons, or packages.		Not provided for.	1 ct. per pound.
Cabbages	No data.	10 per cent.	3 cts. each.
Eggs	2,419,004.37	Free	5 cts. per dozen.
Hay	1,082,685.50	$2 per ton.	$4 per ton.
Hops	1,100,408.00	8 cts. per pound.	15 cts. per pound.
Onions	No data.	10 per cent.	40 cts. per bushel.
Plants, trees, shrubs, etc.	323,762.82	Free	20 per cent.
Potatoes	321,120.26	15 cts. per bushel.	25 cts. per bushel.
Garden seeds, agricultural seeds, etc.	187,488.69	20 per cent.	40 per cent.
Vegetables:			
Prepared or preserved	369,512.42	30 per cent.	45 per cent.
Pickles and sauces	334,926.71	35 per cent.	45 per cent.
In their natural state	437,377.57	10 per cent.	25 per cent.
Straw	28,921.00	Free	30 per cent.
Apples:			
Green or ripe	No data.	Free	25 cts. per bushel.
Dried or prepared in any manner	No data.	Free	2 cts. per pound.
Bacon and hams	45,899.51	2 cts. per pound	5 cts. per pound.
Beef, mutton, and pork	14,293.09	1 cts. per pound	2 cts. per pound.
Poultry:			
Live	154,866.26	10 per cent	3 cts. per pound.
Dressed		10 per cent.	5 cts. per pound.
Flaxseed or linseed, poppy-seed, and other oil seeds	3,969,640.00	20 cts. per bushel.	30 cts. per bushel.
Leaf-tobacco for cigar-wrappers:			
Not stemmed	1,417,302.40	75 cts. per pound.	$2 per pound.
Stemmed		$1 per pound.	$2.75 per pound.
All other tobacco in leaf:			
Not stemmed	8,126,091.34	35 cts. per pound.	35 cts. per pound.
Stemmed	476,679.25	40 cts. per pound.	50 cts. per pound.
Cigars, cigarettes cheroots of all kinds	3,657,316.02	$2.50 per pound and 25 per cent.	$4.50 per pound and 25 per cent.

Mr. Chairman, I commend the Republican revision of the tariff as a national issue in which all the industries of our country and all our home labor have vital and beneficent interests.

The Tariff and the Bagging Trust.

SPEECH

OF

HON. WILLIAM ELLIOTT,

OF SOUTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 31, 1890.

The House being in Committee of the Whole and having under consideration the bill (H. R. 9416) to reduce the revenue and equalize duties on imports—

Mr. ELLIOTT said:

Mr. CHAIRMAN: I move the following amendment to paragraph 365:

Amend paragraph 365 by striking out all after "jute butts," in line 6, and inserting "three-eighths cent per pound."

The object of this amendment is to reduce the duty on jute bagging to the rate fixed by the Mills bill, which, in connection with free jute butts, would sufficiently compensate the manufacturer for the increased cost of labor in this country. In order that the committee may fully understand the subject-matter of this amendment it will be necessary to go back to the attempted tariff legislation in the Fiftieth Congress.

During the winter and spring of 1888, while the tariff was under consideration by the committees of the two Houses of Congress, the manufactures of jute bagging appeared before them and made statements relative to that product. Bagging was then at its usual selling price of about 7½ cents a pound.

THE JUTE-BAGGING TRUST.

Later on, in the month of July, without any apparent reason, the price of bagging was increased 100 per cent. It became at once known that a trust on this article had been formed. During the month of August both Houses of Congress—the House through its Committee on Manufactures and the Senate through its Finance Committee—commenced investigations on the subject. The persons known to be prominently concerned in this conspiracy were summoned before these committees, and it was developed that on the 16th of April preceding each of eight firms or corporations had signed, with S. Waterbury & Co., of New York, a contract as follows:

A.

This agreement, made the 14th day of April, 1888, by and between the Eagle Mill, of New York, party of the first part, and L. Waterbury & Co., of the city of New York, party of the second part, witnesseth:

The party of the first part hereby sells and agrees to deliver to the party of the second part free on board in the city of New York, in car-load lots as required, all the bagging belonging to it now on hand and wheresoever situate, and all the bagging that may be manufactured by it during the remainder of the current year 1888, at and for the following prices, namely: 1½ pounds at 5½ cents per yard; 1¾ pounds, at 5¾ cents per yard; 2 pounds, at 6¼ cents per yard; 2¼ pounds, at 7¼ cents per yard, bagging in the South to be at the above prices plus actual freight and insurance charges incurred in transportation.

The party of the first part shall, as soon as may be after the 30th day of April, instant, file with party of the second part a true and correct invoice of all its stock of bagging on hand at said date, and thereafter shall in like manner file monthly, as soon as may be after the last day of each month during the current year 1888, a like invoice of all bagging manufactured by it during each month, and upon the filing of such invoices from time to time the party of the first part shall be given credit upon the books of the party of the second part for the amount of the same at and after the prices above named, respectively.

The party of the first part hereby agree to sell, or cause to be sold, in behalf of the party of the second part, all bagging so invoiced at prices which shall be fixed from time to time by this party of the second part, hereby guarantying full payment in cash upon all sales made, and will render promptly and regularly to the party of the second part full and correct accounts thereof.

The party of the first part further agrees that immediately after the 31st day of October next ensuing it will pay and make over to the party of the second part the entire proceeds of all sales of bagging made by it hereunder, first deducting therefrom an amount which shall be equal to the invoice of the bagging sold and a commission of 5 per cent. upon the gross amount of sales, and as well deducting therefrom interest upon the total amount of all invoices of bagging filed, at the rate of 6 per cent. per annum from date of filing and the actual expenses incurred by it in carrying such bagging.

The amount so deducted shall be retained by the party of the first part, and is in full payment for the bagging sold with commissions thereon and the cost of carrying all bagging invoiced to that date.

In like [manner] the party of the first part will, immediately after the 31st day of December, 1888, pay over to the party of the second part the proceeds of sales of all bagging effected by them since the 31st day of October aforesaid, first deducting therefrom the invoice prices thereof and commission of 6 per cent. per annum upon the total invoices and cost of carrying the bagging, accruing since the 31st day of October, which reduction shall be retained by the party of the first part in full payment for bagging so sold with commissions thereon and all costs of carrying accrued since the last settlement.

All said bagging remaining unsold on the 31st day of December, 1888, shall be retransferred and delivered to the party of the first part in full satisfaction and discharge of all and any liability of the party of the second part with respect to the same.

The party of the first part agrees that during the pendency of this contract it will carry at its own expense for the party of the second part all bagging herein agreed to be sold and delivered to them; will fully insure and protect the same, and thereby undertakes and agrees that the party of the second part shall be put to no cost, charge, or expense by reason of the premises.

The party of the second part agree that as soon as may be after the 31st day of October, 1888, they will pay and make over to the party of the first part—— of the profits realized by the said second party on all bagging sold by them or for their account to the 31st day of October aforesaid.

In like manner the party of the second part agrees that as soon as may be after the 31st day of December, 1888, they will pay and make over to the party of the first part —— of the profits realized by said second party on all bagging sold by them or for their account after said 31st of October, 1888.

In witness whereof this agreement is duly executed by the parties hereto the day and year first above written.

Then on the 10th of April all these parties signed the following contract:

B.

This agreement, made the 16th day of April, 1888, between the firm of L. Waterbury & Co., of New York City, party of the first part, and the Charleston Bagging Manufacturing Company; Nevins & Co., of Boston, Mass.; The New York Bagging Company; The Eagle Mills; Southern Mills Bagging Company; Standard Mills Bagging Company; Muncie Bagging Manufacturing Company, and The Empire Bagging Company, parties of the second part, witnesseth:

Whereas the said parties of the second part, in and by certain contracts made by them respectively with the said party of the first part, bearing date the 14th day of April, 1888, have each agreed to sell and deliver to said first party all their bagging then on hand, as well as such as might thereafter be acquired or manufactured by them respectively during the remainder of the year 1888, upon terms and in the manner in said contracts provided; and

Whereas some of said parties of the second part have acquired by lease or purchase certain bagging mills, with their machinery and stocks on hand, and as well have made contracts with certain other manufacturers of bagging for the product of their mills, upon terms therein provided, as follows: Hart Bagging Company, J. C. Todd, Peru Bagging Company, Crescent Jute Manufacturing Company, St. Louis Bagging Company, Louisville Bagging Manufacturing Company, Eben S. Stevens, Troy Burlap Manufacturing Company, and Ludlow Manufacturing Company, under agreements, copies of which are hereto attached; and

Whereas in so doing said parties have acted in behalf of and for the joint benefit and account of all of the parties of the second part hereto, in the proportion of their several respective interests in the common enterprise and this contract, as hereinafter agreed and declared:

Now, in consideration of the premises and their mutual covenants, it is agreed and declared as follows:

(1) That the respective interests of the parties of the second part in the common enterprise herein contemplated are, and all loss and profit thereon shall be, shared by them in proportions, as follows, to wit:

	Sixty-sixths.
J. M. Waterbury, Chauncey Marshall, and the New York Bagging Company	12
Southern Mills Bagging Company	12
Charleston Bagging Manufacturing Company	11
Nevins & Co	8½
Muncie Bagging Manufacturing Company	7½
Standard Mills Bagging Company	7½
Empire Bagging Company	4
The Eagle Mill	3½

(2) That the parties of the first part, in fixing the sales prices of bagging, shall

be governed by the vote of a majority of the parties of the second part, which shall be indicated to them in writing.

(3) That each of the parties of the second part, within the limits of their respective capacities, shall operate their mills to such extent as shall be decided by the vote of a majority of the representatives of the parties of the second part.

(4) Upon the expiration of this contract all the several stocks of bagging remaining unsold in the hands of the parties of the second part shall be distributed amongst them in the proportion of their respective interests in the common enterprises as hereinbefore declared, at the original invoice prices in their respective contracts with the party of the first part.

Witness the parties hereto the day and year first above written.

[SEAL.] L. Waterbury & Co.; New York Bagging Company, J. M. Waterbury, treasurer; J. H. Waterbury, Chauncey Marshall, The Eagle Mill, Appleton Sturgis, president; Standard Mills Bagging Company, by Joel Wood, president; Muncie Bagging Manufacturing Company, by L. F. Jones, president; The Empire Bagging Company, by John D. Filley, president; Southern Mills Bagging Company, by B. B. Graham, president; Charleston Bagging Manufacturing Company, by Jas. S. Murdock, secretary and treasurer; Nevins & Co.

These contracts were clearly intended to and did constitute a trust in the strictest sense of the word. The eight parties agreed—

1. To make a sham sale, without delivery, to Waterbury & Co. of all bagging on hand or to be manufactured by them during the year.

2. To sell the same for Waterbury & Co. and to make returns to them.

3. That they should, by a majority vote, fix the price at which each should sell and that no sales should be made below such price.

4. That each should manufacture only so much bagging as the majority should decide.

5. They fixed the interest each should hold in the trust, and provided for distribution of the proceeds amongst the members of the trust according to such interest.

No more complete trust could have been formed, and throughout the investigations there was no claim made that it was not a trust, except upon the pretense that all bagging manufacturers in the country had not joined in it.

CIRCUMSTANCES FORMING THE TRUST.

In order to show the true character of the outrage perpetrated by this bill on the cotton farmer, I will quote liberally from three investigations made into this subject by Congress in 1888, one by the Finance Committee of the Senate in June, another by the same committee in August, and the third by the House Committee on Manufactures in the same month. At the June hearing before the Senate Finance Committee the bagging manufacturers presented a memorial signed by "all the mills," elaborately setting forth the condition of the industry, both in this and foreign countries, a part only of which I need read:

MONDAY, *June* 11, 1888.

Memorial of the manufacturers of bagging in the United States.

The present tariff on bagging for covering cotton is 1¼ cents per pound, equal to 3 cents per yard on 2-pound bagging.

Under this protection about twenty-five mills have been established in this country, situated in the following States: Massachusetts, Connecticut, New York, New Jersey, Illinois, Indiana, Ohio, Missouri, Kentucky, Virginia, Georgia, South Carolina, Alabama, Louisiana, and Texas.

* * * * * * *

In view of these facts the manufacturers of bagging would respectfully ask that they be treated with the same consideration extended to other manufacturing industries in the United States.

In placing jute butts on the free-list, as provided in the present bill, a reduction will be made in the cost of the raw material used by us of $5 per ton, or a little less than one-quarter of a cent per pound.

The present duty on the manufactured article is 1¼ cents per pound, equal to 3 cents per yard for 2-pound bagging, which is the average weight used, and if this duty were made 1 cent per pound, equal to 2 cents per yard, it would be a reduction of one-half cent per pound, or more than double the reduction effected in the raw material, and would enable the home manufacturers to maintain this industry as against foreign capital and cooly labor.

For reasons given above, the manufacturers of bagging in the United States would respectfully ask that the following be adopted as an amendment to schedule J, line 343 of the present tariff:

"Bagging for cotton or other manufactures suitable to the uses for which cotton-bagging is applied, composed in whole or in part of hemp, jute, jute butts, flax, gunny bags, gunny cloth, or other material suitable for covering cotton, 2 cents per yard."

Ludlow Manufacturing Company, Ludlow, Mass.; Nevins & Co., Salem, Mass.; New York Bagging Company, Brooklyn, N. Y.; Eagle Mills, Brooklyn, N. Y.; The Hart Bagging Company, Brooklyn, N. Y.; E. S. Stevens, Quinnebaug, Conn.; Horicon Mills, Manchester, N. J.; J. C. Todd, Paterson, N. J.; Charleston Bagging Manufacturing Company, Charleston, S. C.; Hinde, Preer & Iliges, Columbus, Ga.; James Sherry, Eufaula, Ala.; Crescent Jute Manufacturing Company, New Orleans, La.; Galveston Bagging and Cordage Company, Galveston, Tex.; Louisville Bagging Manufacturing Company, Louisville, Ky.; Southern Mills Bagging Company, St. Louis, Mo.; Standard Mills Bagging Company, St. Louis, Mo.; St. Louis Bagging Company, St. Louis, Mo.; Empire Bagging Company, Champaign, Ill.; Muncie Bagging Manufacturing Company, Muncie, Ind.; W. H. Hessin & Co., Huntington, Ind.; Peru Bagging Company, Peru, Ind.; Troy Bagging Company, Troy, Ohio.

The memorial nowhere complains that the mills were then or had been suffering from low prices; on the contrary they asked that the duty on bagging be reduced from 3 cents to 2 cents per yard, a reduction of 33⅓ per cent. All the mills in the United States asked this. It will be observed that this hearing took place nearly two months after the trust agreements of April 14 and 16, and yet a witness who had signed those agreements as a representative of one of the companies in the trust gave the following testimony:

The CHAIRMAN. Have you any trust now to regulate prices for production?

A. No; we had an association, but it broke up in 1885.

Senator ALDRICH. That was not a trust I suppose?

A. No; it was just an association where we curtailed production to about the wants of the country, but we always made sufficient to supply the crop and carry over a fair amount to the next season. That kept the prices about fair.

And yet the trust had been organized nearly two months before, was then in full operation, as appears by the testimony that follows, and the witness was a leading and active party to it. Comment is unnecessary. In August following this testimony was given before the same committee:

The CHAIRMAN. I see those contracts bear the date of April 14.

Mr. STURGIS. April 14 and 16.

The CHAIRMAN. You were before us on the 11th of June?

Mr. STURGIS. Yes, sir.

The CHAIRMAN. These contracts were in existence then?

Mr. STURGIS. Yes, sir.

The CHAIRMAN. And fully perfected?

Mr. STURGIS. Yes, sir; as they are now.

* * * * *

Senator BECK. The foreign manufacturers could not make bagging for the cotton raised in America, could they?

Mr. STURGIS. They could not, under the present tariff laws.

Senator BECK. I am speaking of the laws as they exist. They could not make it under the present laws, and therefore they only make the bagging that is needed for the other one-quarter?

Mr. STURGIS. Of course.

Senator BECK. Therefore you caught them without any supplies.

Mr. STURGIS. Yes.

Senator BECK. This contract was made in April, was it not?

Mr. STURGIS Yes.

Senator BECK. And you were here in July?

Mr. STURGIS. In June.

Senator BECK. And you kept the fact concealed from the committee, then?

Mr. STURGIS. I did, and from everybody else I could.

Senator BECK. And you did it on purpose to keep the people of the country from ascertaining the existence of your pool, so that no bagging could be made anywhere else?

Mr. STURGIS. Most certainly. We were in to make money, as I have testified.

Here is an express admission that the existence of the trust had been kept secret and for a purpose, even though one of the parties to it had been questioned about it under oath. If the truth had been told at the June investigation the conspiracy would have been unearthed and the farmers could have protected themselves. Hence the denial.

The CHAIRMAN. Who was the active person to manage this?

Mr. GRATZ. It was done principally through the office of Warren, Jones & Gratz, and some part of it at the office of L. Waterbury & Co. I think we made eight or ten leases or contracts to close mills, and probably twenty contracts of purchase of material; and L. Waterbury & Co. made four contracts with mills, one contract for the purchase of material; and Nevins & Co., of Boston, made one contract with a mill.

The CHAIRMAN. So that your concern and Waterbury & Co. did the active work?

Mr. GRATZ. We did the active work. We think to-day we could get 25 cents a yard for bagging as easily as 12 cents, but we do not care to put up the price so high, as it would look like extortion. The additional price now being charged amounts to about 35 cents a bale on cotton, and as the average cotton-planter raises about five bales annually, the additional tax on the average planter amounts to $1.75 a year; somewhere in the neighborhood of the same amount of money he spends per month for tobacco.

The CHAIRMAN. That is, if he uses it.

Mr. GRATZ. He mostly uses it, and mixes it with whisky.

The CHAIRMAN. You say that the advance you have already made is over 7½ cents; or what do you mean?

Mr. GRATZ. I figure over and above 7½ cents.

The CHAIRMAN. That only amounts to about 35 cents a bale.

Mr. GRATZ. Only about 35 cents a bale.

Senator BECK. Have you any reasonable data for assuming that five bales is the average product? I suppose that is the way the negroes manage now.

Mr. GRATZ. The reason I say five bales is because the general merchants in the South tell me that the ordinary negro farmer raises from three to four bales a year, and I did not want to put it too low.

The CHAIRMAN. Most of the cotton now is raised in a small way, is it not?

Mr. GRATZ. Mostly in a small way. Even those who call themselves large planters lease out their land. They consider that they are planting 1,000 or 2,000 acres, although they may have from twenty to one hundred tenants on their land who raise the cotton, and whose cotton it is, and who also pay for the covering, as a rule.

Before the House committee Mr. Gratz testified:

Q. Your sales are practically south and southwest of those mills which you have been enumerating?

A. Our sales are from Athens and Macon clear around to Texas. We furnish covering for two-thirds of the cotton crop.

Q. You sell from Athens and Macon to the Rio Grande, Georgia, and up to the northern limit of the cotton country?

A. Yes, sir.

Was there ever displayed more unblushing insolence and effrontery than this? Here is a member of a firm controlling two-thirds of the bagging used by the farmers, out of whom alone their profits come, deliberately slandering and insulting the men who annually produce 7,000,000 bales of cotton, worth $3,500,000, export price, and excusing the robbery of a part of their hard-earned income on the ground that, as they had so little, were so accustomed to be plundered, the exaction of something more would make no difference to them. I beg to call especial attention to this display on the part of manufacturers, not only of antagonism to the farmer, but of contempt for him, feelings engendered directly by the lordly dominion over the farmer which a prohibitory tariff gives him. No wonder that he thinks that anything more than doubling the price to the farmer "would look like extortion!" And I will also emphasize to the majority of the Ways and Means Committee the fact that by means of the present duty the price of this article could just as well be raised to 25 cents a yard as to 12 cents.

I quote further from the testimony:

The CHAIRMAN. Go on with your statement.

Mr. GRATZ. After buying enough bagging and securing control of enough mills to get two-thirds of all the bagging required for this year's crop, we waited to see whether the Mills bill would give us a rate of protection sufficient to enable us to continue in business another year. It was agreed that in case there was protection sufficient to insure us the continuance of our business the price of bagging would not be materially raised; that, however, in case no sufficient protection was left, we would advance the price of bagging from time to time as much as was deemed advisable, in order to get out of the business this year as nearly as possible enough money to pay for our machinery. This policy has been pursued to this day, and we hope and expect to continue it.

Here is a plain admission that the sole object of this conspiracy was, not simply to exact from the farmer excessive profits, but to rob him in one year of enough money to pay for all the machinery owned by twenty-five mills:

Senator BECK. Answer my question, please. What enabled you to put up the price?

Mr. STURGIS. It was decided that the smaller mills had better not open again, and they were either leased or their product bought or some arrangement made that was satisfactory to them. As a general thing they were leased, not by corporations, but by individuals. That gave the larger manufacturers the field to produce their own cloth and to sell it.

Before the House Committee on Manufactures the following testimony was given by Mr. Gratz:

Q. How many mills controlled by Warren, Jones & Gratz have closed?

A. I will give the names of the companies: There is the St. Louis Bagging Company; the Louisville Bagging and Manufacturing Company; the Crescent Jute Company; James Perry, of Eufaula, Ala.; and the Troy Burlap Company, of Troy, Ohio; the Peru Bagging Company, of Peru, Ind.; and the mill at Richmond, Va.

* * * * * * *

Q. Now, you said something about the importing of bagging into this country; that there is or has been in the past an importation on account of which you could give no estimate of the amount needed.

A. We believe it will be impossible to produce any sufficient quantity of bagging in time so as to interfere materially with the sales of our bagging, no matter what the prices should be. We investigated that point very carefully and found the mills abroad were so full of contracts for other goods that they had but very few looms which could make this particular kind of bagging set up in their mills, and that it would take so long a time to get the mills ready to manufacture this bagging that they could not wait these other contracts for the other goods.

EXCUSE FOR THE TRUST.

Throughout the August investigations the plea was put forward that the sole reason for forming the trust was the danger of the passage of the Mills bill. I believe this to be a mere pretense, and that the following testimony before the House Committee on Manufactures shows that for years before there had been in existence a pool, trust, or combine of some sort, sometimes two of them, intended to limit production and control prices, and that it existed up to the formation of this trust in April, 1888:

Q. There was, I suppose, an association of some kind between all the manufacturers of bagging for wrapping cotton some years ago.

A. There was an association between most of the manufacturers, but there were one, two, or three mills who were not in it, and the firm of Warren, Jones & Gratz was not in that association. That association expired in 1884, and was not afterwards in use.

Q. I wish you would tell me when that association began, and what its nature was, and how close an association it was.

A. That was an association which we call a pool. It ran but three bagging establishments. It operated principally by reducing its production in a way that was extremely costly, and enhanced the cost of making bagging to the others, to each mill, because in reducing the production they reduced proportionately all around. Therefore a mill would receive orders to run one-quarter time or three-quarters time, all running the same. The net result as far as we can find was an increase in the actual cost of making bagging amounting to more than 2½ per cent. of the working expenses. In addition to that there was a pooling system by which balances were paid back and forth and percentages on sales. The whole arrangement was an absolute violation of all economic laws, and opened the way to a very successful competition by any manufacturers who might be of a mind to have gone outside of it.

Q. It was a crude attempt?

A. Yes, sir.

Q. At getting a commercial regulation?

A. Yes, sir.

Q. But it was profitable at the time?

A. Yes, sir. It was open to fraud. One of the members of the institution perjured himself and stole some considerable quantity of money.

This is the testimony of Mr. Gratz, and evidently does not refer to the following association, mentioned by Mr. Charles E. Pearce:

Q. Have you been a party in such compact or agreement at any time since the formation of your company?

A. Well, in 1883 there was an association formed by the bagging manufacturers of the country, or the most of them, the object of which was to diminish the output of bagging to the consumptive demand, with about five or six millions of yards surplus in general distribution throughout the country. That association, however, had only that object in view and did not undertake, as I recollect, to make any prices. Any man sold his own goods at whatsoever price he pleased. If he chose to sell it at a loss it came out of his own pocket, the idea being parties could then do their proper legitimate business, provided the surplus did not enter into active competition with the stock which was required. That association held up for three seasons, and then went to pieces.

The following is by Mr. Gratz:

Q. Had you anything to do with the negotiations of this contract?

A. Yes, sir. I modeled those contracts after some contracts that had been in existence for the past three years between the Southern Mills Bagging Company, the Standard Mills Bagging Company, and the firm of Warren, Jones & Gratz, and included for two years the Muncie Bagging Company.

Q. And have you copies of those contracts?

A. No, sir; but the idea is embodied entirely in this contract.

Q. Are there still in existence contracts between those parties and your firm?

A. There is one contract still in existence, but subject to the execution of this contract, so that it does not affect the actual business for the season. There is one material difference between these contracts and the contracts between the Southern Mills Bagging Company, the Standard Mills Bagging Company, the Muncie Bagging Company, and Warren, Jones & Gratz, and that is that the division profits or losses under these last-named contracts were to be in exact proportion to the number of yards of bagging furnished by each mill to the account. So if there was any profit in the business there was a premium offered for extra production. Under these contracts, A and B, the percentage of profits is divided on a fixed basis and has nothing to do with the product on. The others were contracts covering proper and exactly legitimate business, and these are contracts to control production, as well as to divide the profits. Therefore they might be called illegitimate business contracts.

Testifying in August, 1888, the witness says that contracts had been in existence for the "past three years," and, of course, they were not those previously mentioned, all of which had expired. If anything was required to fix the character of the agreements of April, 1888, it is found in the frank admission of the witness, that they were "illegitimate."

Q. Had you at the beginning of the firm's operations any understanding with other parties who are members of the association, or were you simply undertaking as one firm to regulate the whole market?

A. No, we didn't undertake to regulate the whole market. We began in combination with the stockholders of the Southern Mills Bagging Company and the Standard Mills Bagging Company, and we bought last December the mill at Champaign, Ill.

Q. That mill has been closed?

A. That mill has been closed. Then we gave stock of that concern to some parties at Dixon, Ill., and took their machinery. Then we bought a little mill——

Q. Why did you take that machinery?

A. To put it in the mill at Champaign, Ill.

Q. And the other?

A. Both are there. They are set up in the mill and they are beginning to run it. Then we bought a little mill at Alliance, Ohio. That was also removed and brought to Champaign and consolidated with the others, and the entire consolidation is called the Empire Bagging Company, and each one of the parties in interest took some stock in it, our idea being that we would gradually get a sufficient control of the Western bagging market to avoid competition in our own markets, as it were, to a ruinous extent.

Q. You began that policy when?

A. We began that policy two years or more ago when we bought the mill in Muncie, Ind.

Q. That was done to get control of the Western production?

A. Yes, sir.

Q. And, as I see, you went down into Virginia?

A. That is only lately, after this other arrangement; that was beyond our reach before.

The "policy," then, of getting a "sufficient control of the Western bagging market to avoid competition" had been commenced "two years or more ago," and finally culminated in the April agreements, which undoubtedly would have been made if the Mills bill had never been heard of. It is a common device of persons enjoying such monopolies to try to create among their victims the impression that the real friends of the people are responsible for such outrages. That the Mills bill had nothing to do with the organization of this odious trust is further shown by the fact that its members maintained their outrageous prices on bagging until December, months after it had become certain that the Republican Senate would not pass the bill, if, in fact, there had ever been any doubt on that subject.

LOSS TO THE FARMER.

What loss did the cotton-planter suffer in one season by this conspiracy? Let the parties themselves answer:

Senator BECK. I want to bring out just what you are squeezing out of the American cotton-planters under the operation of a law that you say protects American labor.

Mr. STURGIS. We are going to get back a little of the money squeezed out of us during the last two years, when we were obliged to sell below cost.

Before the House committee Mr. Gratz testified:

Q. What was the price of 2-pound bagging before this association went into operation—say the last of March or the first of April?

A. From the last of February until the middle of March a large amount was sold at prices South from which, if the freight was deducted, the prices in New York would have been from 5¾ to 6¼ cents for 2-pound bagging.

* * * * * * *

Q. Let us see what the increase would be. Bagging last spring was 7¼ cents, how much higher now do you say it is than 7¼ cents?

A. It was 7¼ cents, and it is 12½ now.

Q. That is 5 cents a yard from the mill to the merchant?

A. Six and a half by five would be 32½ cents a bale.

Q. Without the merchant's profits having been added to it, however?

A. He would charge a profit on the 7¼ cents, being what you would call probably a legitimate profit, but he would also charge a proportionate profit on the 5 cents, which would probably make an increased cost to the planter, say of 5½ cents, bagging being sold in the South on very close margins. It would be 6½ times 5½ cents, which would be 35 cents a bale.

Q. That would be $350,000 per million bales and seven times that would be $2,450,000. Have you a definite idea of the amount of capital invested in bagging mills?

A. It is very hard to say the amount of capital, because the real estate in some instances would be necessarily measured with the bagging mill as part of the institution, and in others it would be difficult to divert the other business, some buildings being made especially for this and fit for nothing else, and some property being applicable for this and for nothing else; so I could not estimate exactly the amount of capital invested.

Q. You have seen an estimate?

A. I have not seen an estimate except in the rough. As far as our own institution is concerned, our calculation is that if we could secure in this year's business 60 per cent. of the profits you talk about here we would have gotten pretty much our whole investment, but that would not apply to others, because we own more real estate, and that estimate covers nothing except bare bagging machinery.

The loss to the planter, then, in one season, according to the estimate of this adverse witness, was $2,450,000! And this in addition to the usual profit made on their sales. My own conclusion, Mr. Chairman, based upon careful examination, is that the actual loss arising out of this

trust was $3,000,000. A more accurate idea of the outrage on the farmer is found in the witness's statement that "if we could secure in this year's business 60 per cent. of the profits you talk about here we would have gotten pretty much our whole investment." That they did make such profit is clear from the tact that they had entire control of the market and managed it as they chose.

The CHAIRMAN. What is the price of bagging now? I believe I have not asked that.

Mr. GRATZ. Twelve and one-half cents a yard to-day; will be one-fourth of a cent higher Monday.

The CHAIRMAN. What is occurring to advance the price?

Mr. GRATZ. We thought we could get that much more.

Senator BECK. You have the market effectually cornered?

Mr. GRATZ. We have it effectually cornered, and there is no power on earth can stop us except some of us die or turn thieves on the rest.

* * * * * * *

Senator BECK. The result of this arrangement is that you are making as much in proportion to the amount of sales, while your mill is not running at all, as you would if it was running?

Mr. STURGIS. Certainly.

Senator BECK. Certain mills are running and certain mills are closed, and each, in proportion to what was the estimate of its capacity or right under this contract, receives a proportion of the sales?

Mr. STURGIS. Of the profits; not of the sales.

PROHIBITORY DUTY THE CAUSE OF THE TRUST.

The Republican party, Mr. Chairman, contend that a prohibitory tariff does not breed trusts. It is difficult to give to such a plea respectful consideration. Take the present case as an example. For nearly twenty years in consequence of a prohibitory duty, as I will show it to be on cotton-bagging, none of it substantially had been imported from abroad, and the production in this country was carried on by twenty-five mills, which were competing with each other to a greater or less extent. Eight of these mills, having got rid of all competition from abroad and wishing to stop that at home, obtain control of the other seventeen, form a trust, and immediately increase the price to the consumer 100 per cent. Could this have been done if there had all the time been importations of this article from abroad? How could it with the foreign article competing with the domestic? Production could not have been limited, nor could prices have been advanced by the home manufacturer. Is the duty prohibitory? Clearly so, according to the testimony of the manufacturers themselves given in these investigations. Here is what they say:

Senator HISCOCK. What do you say about reducing the duty on bagging?

Mr. MURDOCH. That if an additional half cent per yard be taken from the bagging duty it will be as much as the manufacturers can stand and continue in the business, and that should jute butts be made free of duty the manufacturers would save nearly half a cent per yard and could afford a corresponding reduction in the duty on bagging.

Senator HISCOCK. Do you think you could stand that reduction and then absolutely control the market here?

Mr. MURDOCH. Yes, sir; I think with that reduction it would place us nearly on an equality with them; they might possibly at times bring in a little bagging, but it would make the market pretty nearly equal. It would put us on an equality with Calcutta, giving them a slight advantage, but then they are 16,000 miles away.

Senator HISCOCK. How much of that Calcutta bagging comes here now?

Mr. MURDOCH. None at all; no bagging comes here. It is all made in this country.

Senator ALDRICH. You represent all these different mills?

Mr. MURDOCH. Yes, sir.

* * * * * * * *

Senator ALDRICH. How long have you had the exclusive control of the American market?

Mr. MURDOCH. I suppose from fifteen to eighteen years.

* * * * * * *

Senator BECK. Any tariff protections?

Mr. STURGIS. I repeat what I said before, that the tariff is entirely prohibitory to the extent of any foreign bagging coming in.

The same witness says:

By Mr. CROUSE:

Q. There was one question asked one witness yesterday which I would like to ask of this witness, namely: In your judgment, what protection would be necessary in order that the mills of this country could retain the trade in cotton bagging at a fairly profitable basis?

A. I have given the matter a great deal of thought and attention. I have gone into statistics and facts; I have cabled to Calcutta, and written letters, and have received letters from Dundee; and, in fact, I have made a thorough and exhaustive examination into this subject, and it is my honest belief that the bagging manufacturers can not possibly get along without a protection of at least 2 cents per yard. That is one-third less than the present duty which we are receiving. As testified to yesterday, the present duty is prohibitory. I do not think that a protection of 2 cents a yard would be. It would put us all on our mettle. It would leave competition open to the foreign market at times of dull trade and low wages, and at the same time such protection would be in an ordinary season an inducement for the medium-sized and smaller mills to continue work and not to close their mills entirely down, which must be the case if the price is made too low for them to continue to manufacture at a living profit.

* * * * * * *

Senator JONES. Is the present duty fully protective?

Mr. STURGIS. It is more than we need. We have already agreed to accept a considerable reduction, one-third.

The manufacturers themselves admitted that the duty was prohibitory, that it was too high, and asked that it be reduced one-third, or to 2 cents per yard, equal to 1 cent per pound, and we may be certain that they did not ask any too great reduction. Under these circumstances what does the Ways and Means Committee do in the present bill? The manufacturer and the cotton-planter were both before the committee, and each presented his side of the case. The planters asked that jute butts and bagging be both put on the free-list, and in their statement said:

This is one of the most important questions that will come up of interest to the Southern cotton-planter.

The people are anxiously awaiting results and are desirous of showing [knowing?] if our legislators feel more interest in enrichment of half a dozen men who control the price of jute bagging manufactured in America, or their millions of constituents who are striving to feed and clothe their loved ones by an honest effort.

The manufacturers asked that in their interest the manner of laying the duty be changed from so much a pound, as the law had always been, to so much a square yard. It was at once done. As to the rate of duty, they admitted that the rate was too high if jute-butts were put on the free-list, and asked that, with jute-butts free, the duty on the class of bagging most in use should be 1.6 cents per square yard. The committee gave them exactly what they asked for.

The cotton-planter need not further worry himself with the question whether their "legislators feel more interest in enrichment of a half dozen men who control the price of jute bagging manufactured in America, or their millions of constituents who are striving to feed and clothe their loved ones by an honest effort." They have their answer, not only as to jute bagging, but as to everything else they use in making and marketing their crop. In fact, they need never have doubted that the Republican party would show more interest in a half dozen manufacturers than in millions of farmers. That is their record: to legislate for the privileged few against the people, for the classes against the masses. In the report of the majority on this bill the chairman says:

We have not been so much concerned about the prices of the articles we consume as we have been to encourage a system of home production which shall give fair renumeration to domestic producers and fair wages to American workmen, and by increased production and home competition insure fair prices to consumers.

If they could ever have been induced to break their record here was a splendid opportunity for them. Out of their own mouths it has been proved that these manufacturers, through the tariff, had a complete monopoly of the American market; that for years prior to 1888 they had one or more combinations to keep up prices; that, not satisfied with this, in April, 1888, under the false and absurd pretense of alarm at the passage of the Mills bill by a Republican Senate, having bought up or closed up as many mills as they thought necessary, eight of them formed a perfect trust to limit production and increase prices; that not only was its existence kept secret, but it was denied by them under oath before a Senate committee, that the avowed purpose of secrecy was to prevent introduction of foreign bagging to come in competition with them; that when this purpose was accomplished the price of bagging was advanced, almost at one leap, 100 per cent., and their admitted and express intention was to rob the cotton-planter in one year of enough money to pay for their whole investment, and that they did, in that single year, so rob the planter of at least $2,400,000.

Not only so, but the committee knew that these transactions had created intense excitement throughout the South; that out of them had grown the solid, compact Alliance organization which had waged war against this iniquitous trust; that the farmer, already beset to make both ends meet, had been driven from one substitute for bagging to another, many of them more costly than jute bagging, rather than submit to the outrageous demands of the bagging trust. Notwithstanding all this, when the manufacturers, at the very next Congress, demand certain legislation the committee blandly complies and gives them just what they want.

It is no answer to say that the duty on bagging has been somewhat reduced. The rate is just what they asked for and no one can be deceived by the pretense that they would ask for anything that would injure them. It is not in human nature to do that, and we may be certain that, either in the change of law fixing the duty by the yard instead of the pound, or by making jute butts free, or by both, these gentlemen expect to gain much more than they will lose by the decrease in duty. If, Mr. Chairman, there was anything near equality in the number of persons interested and the value of the product on the one side and the other it might be easier to understand the action of the committee. It can not be charged to sectionalism, because, to their shame be it said, many of these conspirators lived in the section plundered, some of them in cities that would no longer exist if the cotton industry were destroyed. And the Ludlow Manufacturing Company of Boston was an honorable exception in refusing to enter the trust.

BAGGING AGAINST COTTON.

But how stand the opposing interests?

On the one side are a few manufacturing companies, probably not over eight having any real interest, employing, according to the testimony, not more than about 2,500 hands and producing 50,000,000 yards of bagging, worth about $3,500,000, an article made solely for a temporary purpose, to serve simply as a covering to get a product to market.

The great body of the stockholders in these companies have simply invested a part of their surplus wealth in them; they do no work in connection with the business and have only to draw their dividends,

greater or less, according to whether prices are run up 100 per cent. or less. On the other side stand the more than million men who, during the present season, have made 7,300,000 bales of cotton, worth at export prices the enormous sum of $365,000,000. During the year 1889 they shipped to foreign countries 5,390,926 bales, worth $264,806,905, over one-third of the whole of our exports.

They, as a rule, have no other means of support. They do all the work, endure all the exposure, stand all the chances of success or failure. From the beginning to the end of the year they are hard at work, and no sooner is one crop disposed of than another is taken in hand. They are scattered throughout the cotton States of the South and can not, because of their number and surroundings, combine to fix their prices.

Everything they buy is in a protected market, while the price of their cotton is fixed in a free-trade market 3,000 miles away, in competition with the cotton of the world. And yet they have received no more consideration at the hands of this committee than if they had never existed, in fact much less, for if they had never raised a bale of cotton and had come before the committee and said they could do so with a prohibitory duty, the committee would immediately have granted it, as in the case of cotton-ties, of which none are made in this country, and the committee, with the avowed purpose of helping some imaginary manufacturer at the expense of the cotton-planter, have increased the duty thereon from 35 to 103.71 per cent. A greater outrage than this was never perpetrated, not even by the bagging trust.

Mr. Chairman, nearly two years ago in a public address, I said:

Some persons are disposed to belittle this tariff question, gentlemen, but a recent development has fixed the attention of the country upon it in the sharpest manner. The annual consumption of bagging for cotton amounts to about 47,000,000 yards. Substantially all of this is produced in this country, the duty, about 50 per cent., being almost prohibitory. In 1886 the tariff duties collected on improved bagging amounted to only $11,515. In April last a few companies, controlling pretty nearly the whole production of this country, formed a combination for the purpose of forcing up its price. They, in form, sold their entire production to a certain party in New York for from 5½ to 7½ cents per yard, according to weight, reserving the right to a majority of the parties interested to fix the price at which it was to be put on the market for the joint benefit of all concerned.

The one object of this combination was to extort outrageous exaction from the farmers of the South. The only foreign mills producing this material are in Calcutta. Up to July, no increase in price was announced. At that time, when it was impossible for sufficient bagging to be imported in time for the present crop, the price was suddenly forced up to from 11 to 12½ cents per yard. The year before they sold the same material, made at the same or less cost, at 7½ cents. The practical result to the planter has been doubling of the price and the extortion of over $3,000,000 in a single year. Was ever a greater outrage perpetrated?—an outrage the greater to bear because of its impudence. Think of it, gentlemen, a few manufacturing companies throttling the entire cotton industry of the South, that last year produced 7,000,000 bales! If this conspiracy can be successfully carried through what hope is there for escape for the people from like exaction in matters of smaller importance? In this view the people of this and other States may as well make up their minds to face the issue and settle it once for all.

In Congress many measures of relief have been prepared, substantially providing two modes of prevention, the one declaring such combination illegal and criminal and the other authorizing the President to remit the duties on imported bagging so long as the combination continues. As to the first, constitutional questions and the usual delays in Federal courts will render a final decision improbable under several years. As to the last, the Republicans will not permit it to become a law, because they stoutly deny that the tariff has anything to do with trusts and combines. What relief, then, can the people look for from this and like oppression? My judgment is that each State can most efficiently protect her people. If laws adequate to the emergency are not in existence others must be promptly passed. It can not be that the power to prohibit and punish does not lie anywhere.

Lately, with a great shout and flourish of trumpets you passed a bill against trusts. When your actions in this bill are considered it is impossible to believe that you were in earnest in passing that measure. You now give the trusts everything they want. Not only that, but you have voted down the only measure calculated to hinder them. One of your own party has offered this amendment to this bill:

That the President may suspend the rate of duty on any imported article when, in his judgment, the production, manufacture, or sale of such article is monopolized or attempted to be monopolized or controlled by any trust or combination.

You immediately voted it down, only two on your side joining the Democrats in its support.

I have taken the trouble, Mr. Chairman, to go fully into the history of this worst of trusts, because my belief is that trusts are to-day a most serious menace to the peace and prosperity of our country and are the means of sore oppression to all consumers, especially the farmers. Had it not been for the splendid fight made by the Alliance against the bagging trust, that trust would to-day have been plundering the cotton-planter annually of millions of dollars. The men who formed that trust never dreamed they would stir up such an upheaval; they had been made bold by immunity; they thought the cotton-planter to be nothing but a dull, patient, clumsy beast of burden, living and drudging only for the benefit of his oppressor and incapable of resenting and resisting an outrage. They have found out their mistake; they have been beaten and disgraced.

Just think, Mr. Chairman, what a gross outrage it must have been to make the millions of cotton-planters in twelve great States, the most peaceable, conservative, law-abiding, and home-loving people on the face of the earth, never given to combinations, because in the very nature of things each had to depend upon his own unaided exertions in his daily life and work—what an outrage, I say, it must have been to make these men suddenly throw off the habit of their lives and form in solid mass against this oppressor. And what a reproach to the country that this duty should have been forced upon these men; that there was no remedy for this wrong except that worked out by themselves.

This is not the only trust that has oppressed the people. Their name is legion. This one has only made itself more conspicuous by its folly and rapacious greed. It made too big a bite and thereby got strangled. Here are some of the others, a list made by the gentleman from Tennessee [Mr. ENLOE]:

		Per cent.
Earthenware trust	average tax	56
Glassware trust	do	62
Plow-steel trust	do	45
Bessemer-steel trust	do	45
General steel trust	do	45
Nail trust	do	45
General iron trust	do	45
Copper trust	do	25
Zinc trust	do	52
Tin trust	do	32
Lead trust	do	74
Glass trust	do	55
Soap trust	do	26
Linseed-oil trust	do	34
Rubber-shoe trust	do	25
Castor-oil trust	do	194
Envelope trust	do	25
Paper-bag trust	do	35
Barb-wire trust	do	60
Cordage trust	do	25
Sugar trust	do	76
Salt trust	do	80
Jute-bagging trust	do	54
Lead-pencil trust	do	30
Oil-cloth trust	do	40
Borax trust	per 100 pounds	$5
Ultramarine trust	do	25

Mr. Chairman, when the anti-trust bill was before the House I tried to get the floor to offer the following amendment, previously offered in the Senate by the distinguished Senator from Mississippi [Mr. GEORGE]:

And in all such actions in any court of the United States it shall be lawful for any number of persons complaining of such injuries committed by the same defendant against each of them separately, to join as plaintiffs, and the court or jury trying the issues of fact in any such cause shall find the amount of the separate damages sustained by each plaintiff and may also find in favor of a part of said plaintiffs and against the others, as the proof shall warrant, and the court shall render judgment accordingly. And in the proceedings in such cause the court may, if justice so requires, proceed with the trial thereof as to a part of said plaintiffs and continue the cause to a future day as to the remainder, and this may be done as often as justice may require. And whenever there shall be a motion for a new trial in any such cause the court may sustain the same as to a part of said plaintiffs and overrule it as to others, accordingly as the right and justice of the case may require. Execution shall issue on any judgment rendered in such cause in favor of each plaintiff for the amount recovered by him and for his reasonable attorney's fees, and also for such share of the costs as the court shall determine to be fair and reasonable.

Under our new rules, allowing substantially neither amendment nor debate, I could not get the floor for the purpose. Its object was to provide a mode by which any number of persons injured by a trust, each in small amounts, as in the case of the cotton-planter by the bagging trust, could combine in one suit to get redress, and thus encourage such suits and at the same time save expense. But I could not even offer it. I fear the bill, if it becomes a law, will afford but little remedy in such cases. So my advice to the cotton-planter still is: Insist upon State legislation against trusts, and all the time keep a close watch on your old enemy, the bagging trust.

The Tariff.

SPEECH

OF

HON. CHARLES TRACEY,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 21, 1890,

On the bill (H. R. 9416) to reduce the revenue and equalize duties on imports.

Mr. TRACEY said:

Mr. CHAIRMAN: The distinguished gentleman from Kentucky [Mr. CARLISLE], during his long service in this body, has often demonstrated his devotion to high principles and his pre-eminent ability to give patriotic advice to his countrymen.

He has performed the closing act of his career on the floor of this House in offering the following resolution affecting the McKinley bill:

Resolved, That the pending bill be recommitted to the Committee on Ways and Means, with instructions to report the same back to the House at the earliest possible day, so amended by substitute or otherwise as to reduce the revenues of the Government by reducing the burdens of taxation on the people, instead of reducing the duties by imposing prohibitory rates of taxation upon imported goods.

Mr. Chairman, I question whether a resolution was ever offered in the House of Representatives which was more thoroughly in accord with the views of a large majority of the people of this country; and,

although the House will pass the bill, we have ample evidence that, in addition to the entire Democratic side, a large number of the majority is much more disposed to favor the line of tariff policy indicated in the resolution than to impose prohibitory rates of duty. Is this bill satisfactory to anybody in the House? Even the chairman of the Committee on Ways and Means has stated in debate that he would prefer that some portions were different.

The gentleman from California [Mr. McKENNA], a member of the majority of the committee which framed the bill, dissented from the report of his colleagues. He was supported in his opposition by Republican members from Kansas, California, Nebraska, Louisiana, Iowa, Ohio, and Pennsylvania. Other Republican members from Illinois, Minnesota, Massachusetts, Missouri, New Jersey, Indiana, and New York indicated their dislike to some of its features. How many were dissatisfied in all I can not say, but at least forty gentlemen came under my observation who either by speech or by offering amendments displayed their desire to alter the bill; some of them apologized for supporting it at all by expressing the belief that the Senate will make great improvements in it.

To those of us who were in the Fiftieth Congress and supported the Mills bill there has been during the consideration of the measure a steadily increasing feeling of satisfaction. Although we have been given but a short time for general debate and have not had even the privilege of submitting all our amendments to a vote of the Committee of the Whole, we have had sufficient time to see how superior a bill was ours to the one now before the committee. From the district which I have the honor to represent there came to me but few protests against the passage of the Mills bill.

It satisfied the aniline-dye manufacturers, the roofers, canners, and numerous other industries using tin-plates; the stove industry did not complain, nor the photographers, lumber-dealers, tobacco manufacturers, stone-cutters, seed-dealers, hardware merchants, brewers, and maltsters, all of whom have petitioned Congress not to deliberately do them such injury as they see will result from this bill becoming a law.

The knit-goods mills are content; but so they should have been with the Mills bill, which gave free wool, a provision that worsteds be classified as woolens, and ample protection against competition from manufactured goods.

There are some provisions in this bill to protect the farmers. I am glad to see their interests guarded, but the burdens imposed on them are so numerous that they can not be satisfied by merely increasing duties which already give fair protection. What benefit to the farmer to place on produce duties so high that in times of short crops the poor people in the cities are compelled to pay exorbitant prices to buy articles which must be brought from abroad after our own supply is exhausted?

Is this consoling to the farmer who at all times is being taxed for the clothes he wears, his farm utensils, the lumber for his house and barns, the tins and stoves in his house, and in a hundred different ways? Some of these taxes which affect people indirectly go unnoticed for a time, but they are always doing their work to the detriment of the people. In Kansas and Missouri it appears the farmers have at last realized that they can not get rich, nay, more, that they can not even get enough to support themselves.

In New York State the day will come, if it has not already arrived, when our farmers will acknowledge that they might better have accepted the Mills bill as it was, rather than have been frightened into opposing it because of the false statement that it put potatoes on the free-list. I desire to call the attention of the committee to the fact that in my district it is the manufacturers that are loudest in complaints of injury done by this too high tariff.

From New York City you have heard the appeal of importers. I doubt not that a large interest in that line will be seriously affected in all the cities of the country, but it is through the manufacturing interest that our workingmen will be made most seriously to suffer. In Albany, N.Y., the principal city of my district, the high tariff is bringing disaster to numerous large industries.

In his message to the common council, the Hon. James H. Manning, recently elected mayor by the unprecedented majority of 7,200 votes, makes the following allusion to the subject of Federal taxation:

> The necessity for rigid economy in city expenditures and for the levying of the lowest taxes for municipal purposes, consistent with efficient local government, is the more incumbent upon us at this time because our people are still compelled to pay, directly and indirectly, exorbitant and unnecessary taxes under the Federal tariff law, and it is proposed at Washington further to increase those burdens. The budget of the city for this year amounts, as stated, to $910,645.58, or less than $9 for each inhabitant of the city. The Federal tariff laws extort annually several times this amount from each person in the city. I am informed by the head of one of the largest manufacturing establishments in this city that the tariff taxes his establishment is required to pay annually from which it derives no benefit, but, on the contrary, injury in the curtailment of its market, are fully ten times larger than the entire amount of taxes it pays for city, county, and State purposes combined, and that legislation now before Congress will add to its taxes more than the entire amount of local taxes paid by the establishment.
>
> You can, of course, do nothing directly, except in your capacity as American citizens, to reform this wrong, which is especially oppressive upon the manufacturing and industrial interests of Albany, preventing the normal growth of its trade and depriving labor of its just remuneration. Indirectly, however, by making the lesser burden of local taxation as light as is possible, you may assist our industries in bearing the much greater burdens which unjust and unnecessary Federal tax laws still impose upon them. If the tariff bill now before Congress should become the law, your utmost endeavors for retrenchment in local taxation will be required to offset the drain upon the city's resources which that bill will cause.

Mr. Chairman, I greatly fear that those who expect the Senate to improve this bill will be disappointed. Some mysterious influence has forced this much-condemned measure through the Committee on Ways and Means. The chairman of that committee is a gentleman of such high character and possesses such a delicate sense of honor that no one would dare to approach him with a suggestion that grateful acknowledgment must be made to those who provided funds for a Presidential campaign or that the means whereby future campaigns are to be carried on must be considered in revising the tariff. And, indeed, no member of the committee would neglect to resent an affront of the kind were it offered to any member.

Nevertheless, many believe that an influence has been at work in this direction, without the committee realizing it, and that its spirit runs through the bill. Why should we expect the Senate to steer clear of these adroit efforts to accomplish by indirect methods results marked out by unscrupulous persons who are prepared to deceive men of honor or to take advantage of their ignorance or amiability; and, Mr. Chairman, no matter how great our confidence may be in the integrity of our colleagues, we will not hesitate to expose to the country a party that twenty-five years after the close of the war which necessitated taxing the people has the effrontery to place on the statute-books an act greatly increasing the burdens which bear so heavily on the people.

The Tariff and the Farmer.

SPEECH

OF

HON. JAMES B. McCREARY,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 20, 1890.

On the bill (H. R. 9416) to reduce the revenue and equalize duties on imports.

Mr. McCREARY said:

Mr. CHAIRMAN: In a speech delivered by me in this House May 1, 1888, I discussed generally the tariff bill reported by Hon. ROGER Q. MILLS, entitled "A bill to reduce taxation and simplify the laws in relation to the collection of the revenue."

My remarks to-day will be confined mainly to the effect of the tariff bill reported by Hon. WILLIAM McKINLEY on the farmer and the laboring man.

THE TARIFF.

as it is usually understood is a tax or duty imposed on foreign articles imported into this country. It is first paid by the importer, but ultimately comes out of the consumer. When levied and collected for the Government it is a revenue tariff, when it is levied for the purpose of aiding individuals in their business or private enterprises it is a protective tariff.

The average tariff rate in 1850 was 27 per cent. In 1857 it had been reduced to a little over 18 per cent., but it was raised to an average rate of 40 per cent. on dutiable goods between the years 1862 and 1866, inclusive. In 1883 the average tariff rate amounted to 41.63 per cent., but in 1884 after the tariff commission recommended a reduction of 25 per cent. the average rate was increased to 42.60 per cent. In 1885 these duties went up to an average rate of 47.21 per cent. and since that time the average tariff rate has been about 47 per cent. The bill under consideration makes the average rate 51 per cent.

MANUFACTURERS GET MOST OF THE MONEY.

The tariff brings more money to the manufacturer than to the Treasury. The aggregate value of the manufactured products of the United States is reported by the Bureau of Statistics to be in round numbers $6,000,000,000 annually. More than two-thirds, or four billions, are sold in this country. The increased cost to the consumer in consequence of tariff duties is, according to the estimates made by Professor Arthur L. Perry, $869,159,572 per annum which goes into the pockets of manufacturers and private persons outside of the amount received in the Treasury on imports. Therefore the tariff law which in 1888 put $217,289,892 into the Treasury put $869,159,572 into the pockets of manufacturers and private persons, being $4 into their pockets for every dollar put into the Treasury. If we reduce the tariff we not only provide for a reduction of the surplus, but for every dollar we leave out of the Treasury we leave $4 in the pockets of the people.

THE FARMER AND THE TARIFF.

A wise man said many years ago, "God made the country and man made the town." I wish to say now with emphasis God made the farmer and the laboring man, who toil unceasingly in the country, and

the Republican party made the present tariff, which like an incubus is crushing the people down and, like "the pestilence that walketh in darkness and the destruction that wasteth at noonday," is blighting every part of our great Republic. The first man created was a farmer; the foundations of all human progress, the success of all human efforts, are intimately connected with the sweat and toil of the farmers. It is estimated that about twenty millions of the present population of the United States are living on farms or engaged in the cultivation of the soil, and from their productive labor the Government draws its main support and all citizens derive most of their wealth and prosperity. Farmers furnish food for our whole population and they send abroad about three-fourths of the entire exports that go from the United States to foreign countries. They create one-half of the wealth of our country and receive as their share only about 4 per cent. on their investment and are required by the protective-tariff system to pay an increased cost on the articles they use of about four hundred and twenty millions of dollars annually. No protective tariff benefits the farmer. He is compelled to sell his crops at prices fixed in the great markets which draw their supply from the whole world and he is compelled to compete with all kinds of labor.

The farmer is not asking for tariff protection, but he is asking in thundering tones for equality under the law. He is demanding that the system of legalized robbery under which his hard earnings have been wrung from him for many years and used to enrich monopolists, millionaires, and manufacturers shall cease. He at last knows his rights and he dares to maintain them, and henceforth he intends to watch as well as work. He has determined to be an important factor in the great problem of elections and show his power all over the Republic, as he has but recently done in Ohio, Indiana, Iowa, and Oregon.

WAR TAXES.

More than a quarter of a century ago taxes were imposed by a Republican Congress on home manufactures, which yielded annually about $120,000,000; on incomes, which yielded about $70,000,000 annually; on gross receipts of railroads and express companies, which yielded annually about $11,000,000; on bank checks, legacies etc., which yielded annually about $5,000,000.

A tax of $2 per gallon was imposed on whisky and brandy, and a tax of 24 cents on tobacco, and tariff taxes were imposed on thousands of articles, embracing both the luxuries and necessaries of life.

All these taxes were war taxes. They were imposed to carry on the war to preserve the Union, and the people were told that these taxes should be removed when the war closed. After four years of strife, bloodshed, and suffering, such as the world never witnessed or heard of before, the Angel of Peace smiled on our country, war ceased, fraternity and friendship were re established, the tax on incomes, on home manufactures, on railroads and express companies, on bank checks, etc., were repealed, and the tax on whisky and brandy was reduced to 90 cents on the gallon, and the tax on tobacco was reduced to 8 cents per pound; but the tariff tax, which was the heaviest and most burdensome of all taxes and reached nearly everything the people used in their shops, on their farms, and in their homes, was not reduced, but was increased.

The Democrats in the last Congress presented and passed a bill making a considerable and equitable reduction of all the schedules in the tariff, thereby cutting down the burdens of the people over sixty millions of dollars annually without injuring any American industry by unfair discriminations, but the Republican Senate refused to pass the bill.

The Republicans, in their national contest for the Presidency, misrepresented the Democrats on the tariff, but they gave their solemn pledge in their platform and in their public speeches "to correct the irregularities of the tariff and to reduce the surplus." How well they have reduced the surplus may be seen in the following tabulated statement, made by Hon. JOHN D. STEWART, showing the receipts and expenditures of the Government for the last year of Cleveland's Administration and for the ensuing year under a Republican Administration:

Total appropriations from June, 1888, to June, 1889, were:	
Agriculture	$1,669,770.00
Army	24,315,615.73
Diplomatic and consular	19,800,250.00
District of Columbia	5,682,409.91
Fortifications	1,233,594.00
Indian	8,677,453.39
Legislative	20,843,615.81
Military Academy	902,766.00
Navy	21,602,510.27
Pensions	81,758,700.00
Post-Office Department	66,606,344.28
Sundry civil	25,297,341.65
Total regular annual appropriations	260,060,146.73
Total permanent annual appropriations, sinking fund, etc	108,691,055.95
Deficiencies, second session, Fiftieth Congress	16,330,518.30
Miscellaneous, Fiftieth Congress	10,255,795.28
Grand total appropriations for said year	395,337,516.26

The foregoing shows total appropriations as well as making up deficiencies for the last year of a Democratic Administration.

And for the same period the total revenues of the Government were	$450,414,337.34

What will the expenses of the Government be for the ensuing year, for which this Congress is now making provision under Republican rule?

Regular estimates which have been presented to Congress for appropriation bills amount to	$466,843,315.04
To which should be added direct-tax bill	17,500,000.00
Public buildings, etc., private pensions, etc	10,000,000.00
Deficiencies, furnished by clerk of Appropriations Committee	30,000,000.00
Pensions for prisoners of war	7,500,000.00
Dependent pensions	36,000,000.00
Rivers and harbors	20,000,000.00
Grand total	527,843,315.04
Estimated revenues of Government for ensuing year	450,414,337.34
Deficiency unless taxes be increased	77,428,977.70

That this may appear the more impressive I desire to call attention to the monthly, daily, hourly, and expenses per minute based upon the foregoing calculation:

Expenditures per month	$43,986,943
Expenditures per day	1,466,231
Expenditures per hour	61,093
Expenditures per minute	1,098

Thus we see the Republican party has not reduced the surplus by reducing taxes, but before the term of President Harrison is half completed this party has forgotten its fair promises and has not only arranged to wipe out the surplus in the Treasury by reckless appropriations of money, but it has so legislated as to make a deficiency which will certainly compel an increase of taxation.

Mr. Chairman, how has the Republican party complied with its pledge to

CORRECT THE INEQUALITIES OF THE TARIFF?

They have furnished us the McKinley tariff bill, which is the result of various Republican caucuses, many committee consultations, and much combined wisdom, but, judging from the mutterings which come to us continually from dissatisfied and unhappy Republicans, it is not clear, to use the language of the old pioneer—

Whether the snake that made the track
Is going north or coming back.

In their bill they have increased the tax on wool and manufactures of wool $15,493,002; they have increased chemicals $249,168; earthen ware, $626,011; the metal schedule, $11,279,379; tobacco, $17,966,425; cotton goods, $1,553,324; agricultural products, $9,309,850; hemp, flax, and jute, $6,816,299. The increase not estimated in the committee's calculation amounts, according to the statement of one of the ablest and best informed members of the Committee on Ways and Means [Mr. McMILLIN], to $25,773,000. This, added to what the committee confess they have increased, makes the increase on the different schedules, outside of sugar, $66,049,000. In addition to this a bounty of 2 cents per pound is given on sugar, amounting annually for fifteen years to at least $7,500,000, and a bounty also is given on reeled silk produced in the United States, which the farmers, the merchants, the mechanics, the toiling masses, have to take out of their pockets in order that a small class of sugar-producers and silk-experimenters may be protected and enriched. This is the way the Republican party increases the burdens of the people when they promise to lighten them. This is the way they heed the demands of an indignant people who "asked for bread, but you have given them a stone."

My limited time will not permit me to discuss all the provisions of the McKinley bill, which is a monstrosity that I believe will raise a storm of

INDIGNATION AMONG FARMERS

in the North, West, and South such as has never been known before. I shall only refer now to certain important items of the bill that directly concern the farmer.

TIN-PLATE.

The most outrageous and indefensible provision of the bill is that which increases the tax on tin-plate from 1 cent to 2.15 cents a pound, an increase of 115 per cent. Tin-plates are not manufactured in the United States. All used in this country are imported. The importations of last year amounted in value to $21,002,209 and the duties or tax collected and paid into the Treasury from this source amounted to $7,279,459. It is estimated that the amount of duty collected next year will be over $15,000,000, and therefore every farmer or other person who buys tin buckets, cups, spoons, fruit cans, or has tin roofing put on his house will be required to pay about one-third more than ought to be paid in order that the National Tinned-Plate Association now being organized may be protected and encouraged and a home manufacture of tin-plate established in the United States.

The effect of increasing the tax is not only to injure the consumer of tin-plate, but the duty is so high that it will prohibit foreign competition and it will deprive the Treasury, soon as the National Tinned-Plate Association is in successful operation, of the $7,279,459 heretofore paid annually by importers and put a burden of over $15,000,000 on the consumers of the goods in order to encourage an unsteady industry and enrich a huge monopoly.

LINEN GOODS.

The present duty on manufactured linen goods is 35 per cent. ad valorem. The McKinley bill proposes to increase this duty, specific and ad valorem, from 62 to 114 per cent. A protest sent to each mem-

ber of this House states that this will increase the cost to American consumers of linen goods from eight to nine millions of dollars annually.

PEARL AND SHELL BUTTONS.

Another protest is against the duty or tax on pearl and shell buttons provided for in the bill which, according to the protest, makes an increase of 4 cents a line, which will amount to from 103 to 358 per cent. average on the great bulk of pearl buttons used or imported into this country.

TOMBSTONES.

Farmers are oppressed with taxes all their lives, and it seems that when "life's fitful fever is over" they should be allowed to rest untaxed, but the relentless, remorseless bill under consideration taxes their swaddling cloths when they are born and follows them after they are dead and imposes a duty or tax on tombstones, freestone and granite used for monumental purposes, at the rate of $1 per ton and 14 cents per cubic foot.

The total value of our exports of domestic products sent abroad from the United States in the year ending June 30, 1889, was $730,282,488, for the payment of which in a large measure the farmers and workingmen or their agents received goods of foreign manufacture, on which goods there was an average duty of 47 per cent.; or, to express it in a business way, on every $100 worth of goods imported a tax of $47 was added at the custom-house, which finally came out of the pockets of the farmers and workingmen.

BAGS AND BAGGING.

At the risk of being tedious I will refer to a few more articles used by farmers. The duty of 40 per cent. on bags and bagging imported in the year 1886 for grain and cotton amounted to $482,240, and the duty of 35 per cent. on cotton-ties imported into this country in the same year, $211,188. The duty on cotton ties is increased in the pending bill to 115 per cent. Every dollar of this money comes out of the farmers, because the importer has to pay it when he brings his goods into our country and he immediately adds it to the price charged the consumer.

SALT.

In the year 1886, $1,493,397 worth of salt was imported into the United States, on which there was a duty collected of $706,324. The home production that year was about $5,000,000, and doubtless this was enhanced at least one million by the duty of 85 per cent. on salt.

WINDOW-GLASS.

On window-glass there is an average duty of 86 per cent., though it runs as high as 114 per cent., and from the best data that can be obtained at least $4,000,000 annually are paid by the people of our country on account of this tariff duty, and the larger part of this comes out of the farmers.

LAMP-CHIMNEYS AND CHAMPAGNE GLASSES.

In this connection I call attention to lamp-chimneys, on which there is under existing law a protective duty of 45 per cent. The McKinley tariff bill increases the duty on lamp-chimneys to 450 per cent. On thin-shell glasses, used by the rich for drinking champagne and other wines, the pending bill increases the duty from 40 to 75 per cent., while on the heavier and coarser glasses, used by the poor for drinking milk or water, the duty has been raised to 115 per cent.

CROCKERY AND COTTON CLOTH.

The average duty on crockery is 57 per cent. On a reasonable calculation the people of our country paid in 1886 about $5,500,000 for the privilege of using crockery. The duty on cotton cloth is from 40 to 73 per cent., and there was collected in 1886 because of this tariff duty on cotton cloth, such as is used by farmers, the sum of $1,701,795.

REPUBLICAN TYRANNY AND REPUBLICAN BOUNTIES.

The Republican leaders seem to have thrown off the mask this session of Congress. It was not sufficient that the Speaker of the House of Representatives should ignore the rights of the minority, count a quorum when it became necessary, and have members of Congress noted as present whether they voted or not, in order to pass a Republican measure. It was not enough that six legally elected Democratic Representatives, one of whom (Mr. Turpin, of Alabama) had over 13,000 majority, should be turned out in order to bring in six Republican Representatives who were not elected by the people. The grasping greed of Republicans for power was not satiated when a bill was rushed through the House, with only one hour's debate on the Democratic side, which reorganized the Federal judiciary, took away from the United States circuit courts original jurisdiction, and authorized the President of the United States to appoint for life eighteen new Federal judges, who, according to bills now pending, are to superintend Federal elections and make certificates in Presidential and Congressional elections, and it did not fill the cup of happiness of Republicans to pass under a gag rule, without fair debate, the dependent and service pension bill, which added $50,000,000 annually to the regular appropriations for pensions, already increased to ninety-eight millions per annum, but now you seem to have followed the example of Cortez, and burned your ships behind you, and you are supporting a tariff bill that bristles with bounties and glitters with discriminations against the farmers and laboring men of our country. It is the boldest and the most unmasked measure of protection and partiality that has ever been introduced in the Congress of the United States.

In the early years of our Republic political parties asked that tariff bills be passed to protect our infant industries. For many years the primary and leading objects of tariff laws have been alleged to be for the purpose of raising revenue to support the Government. Now for the first time we are openly and boldly invited to enact a law, not for revenue with incidental protection, but for the primary purpose of protecting certain private interests against competition and thereby enriching American manufacturers, with increased taxation on consumers and incidental revenue to the Government.

The bounty feature of the bill is one of its worst features.

SUGAR BOUNTY.

All sugar, up to and including No. 16 Dutch standard, is to be admitted free of duty, and, in order to satisfy and placate the sugar-producers of Louisiana, and California, and Kansas, a bounty of 2 cents per pound on the sugar produced in this country is given each year until July 1, 1905.

According to the report of the Ways and Means Committee in 1888 the sugar product in this country was 375,855,877 pounds, and therefore the sum which the people of this country will be compelled to donate each year for the support of this industry will be $7,520,000, or $113,000,000 during the fifteen years; but it is claimed by the friends of this bill that the object of the bounty is to encourage the production of sugar in the United States, and that in a few years the domestic supply will equal the demand for home consumption. The total annual consumption of sugar in the United States last year, including domestic and imported, was 3,076,277,079 pounds; therefore, if the friends of the bill are correct, the annual payment out of the Treasury under the sugar-bounty clause will soon be $61,528,426.

SILK BOUNTY.

Raw silk and cocoons are now on the free-list, and last year 5,329,646 pounds of reeled silk and 101,647 pounds of cocoons were imported.

The bill compels the people to take from their pockets and give to the tax-gatherer an amount of money sufficient to enable the Secretary of the Treasury to pay a bounty of "$1 per pound or $2,240 per ton on all raw silk reeled from cocoons, and 7 cents on every pound or $156.80 per ton on fresh cocoons, including the worms produced in the United States."

Mr. Chairman, I desire to ask members of this House who represent agricultural districts how they dare go before the farmers in their respective districts, who toil unceasingly to produce wheat, corn, cotton, rye, oats, and other agricultural products, and tell them they voted to give a bounty to sugar producers that may aggregate $600,000,000, and not one dollar to the farmers they represent, and that they voted also to pay a bounty of thousands of dollars annually to the silk-producer, not for his work, but as a gift, in order that a select class might try an experiment and engage in the pleasing avocation of raising cocoons and reeling silk. My friends on the other side had better study carefully these bounty clauses. The bill was heavy enough without the bounties, but when the bounties are added they will find, like Sisyphus, that their burden is so heavy they can never reach the summit of success.

THE CONSTITUTION.

For the consideration of those who respect the Constitution of the United States I wish to place on record my protest against Congress levying and collecting taxes for any other purpose than that of maintaining the Government of the United States. The Supreme Court decided in the Topeka bond case "that Government aid to private industries was not warranted by the Constitution."

In this case Judge Miller, delivering the opinion of the court, said:

To lay with one hand the power of the Government on the property of the citizen and with the other bestow it upon favored individuals to aid private enterprises and build up private fortunes is none the less robbery because it is done under the forms of law and is called taxation. This is not legislation; it is a decree under legislative forms. Nor is it taxation. Beyond a cavil there can be no lawful taxation which is not laid for public purposes.

Judge Cooley, in discussing this question, declares that—

Constitutionally a tax can have no other basis than the raising of revenue for public purposes, and whatever governmental exaction has not this basis is tyrannical and unlawful. A tax on imports, therefore, the purpose of which is not to raise revenue, but to discourage and indirectly prohibit some particular import for the benefit of some home manufacturer, may well be questioned as being merely colorable, and therefore not warranted by constitutional principles.

No speech can do full justice to the tax-ridden, tariff-ruined farmer. I might continue my tale of the sorrows and burdens heaped on him by Republican rule until the heart would grow sick and the mind become mad. In these dismal and unsatisfactory times I recall with pride and pleasure that a Democratic House of Representatives passed the Mills bill two years ago which made

SALT, TIN-PLATE, AND COTTON-TIES FREE,

and many other things were then put on the free-list, or the tax on them materially reduced, which are indispensable in the daily duties of the farmer.

Without occupying the time of the House longer on this branch of my argument I present the following table furnished me by Mr. WIKE and taken from the official reports of the Treasury Department.

It shows more forcibly than anything I can say the unjust discrimination made against the farmer. Among the luxuries that are made free scarcely an article can be found that the farmer uses, but among the necessaries that are heavily taxed nearly every article is used daily by the farmer.

Table contrasting the tariff duties on articles in the nature of luxuries with those on the necessaries of life; compiled from the official reports of the Treasury Department for the year ending June 30, 1889, except as to last-named three comparisons, which are taken from a former report of the Treasury.

IN THE NATURE OF LUXURIES.	Per. cent.	NECESSARIES OF LIFE.	Per cent.
Diamonds (rough)	Free.	Sugar	70
Diamonds (cut)	10	Sugar (highest rate)	108
Attar of roses	Free.	Castor-oil	200
Straws for juleps	20	Salt (in bulk)	85
Bird's nest	20	Woolen cloth (cheap)	95
Alabaster and spar statuary and ornaments	10	Steel and iron beams, joists, and structural forms	115
Silk (raw)	Free.	Spool thread	61
Skeletons and crude bladders	Free.	Glass and glassware	58
Amber, ambergris and bergamot	Free.	Window glass	114
Chocolate	8	Chicory	62
Canes and walking sticks	20 to 35	Cotton cloth	40 to 73
Sachet powder	20	Burlaps and cotton bagging	30 to 54
Amber beads	Free.	Earthen and china ware	57
Feathers (for beds) and down	Free.	Rice	117
Sago and tapioca for the gentry	Free.	Coarse woolen shawls	88
Fashion plates	Free.	Blankets and flannels	70 to 82
Furs, fur-skins, and catgut	Free.	Woolen clothing	58
Plumb pudding	20	Nails, spikes, tacks, etc	52
Spices	5 to 10	Wool hats and yarn	70
Toothpicks	20	Galvanized wire, iron	72
Stuffed birds	Free.	Lumber, per 1,000 feet	200
Fossils and joss sticks	Free.	Highest rate on wool	125
Ivory coral (unmanufactured)	Free.	Sheet iron	81 to 90
Gold size	Free.	Starch	92
Meerschaum	Free.	Trace-chains	50
		Steel railway bars	72

For the rich:	Per cent.
Fine worsted trousering, costing at factory $3.36 per yard	58½
Beaver cloth, costing at factory $3.96 per yard	56½
Broadcloth, costing at factory $3.60 per yard	50½
For the poor:	
Cotton warp cloth, costing at factory 64 cents per yard	121½
Cotton warp melton, costing 24 cents per yard	153½
Cotton warp reversible cloth, costing at factory 45 cents per yard	180½

The McKinley tariff bill contains more glaring discriminations than the existing law; while it mitigates none of the hardships, it increases the burdens, as will be seen in the following table:

Articles.	Present duty.	Proposed duty.
	Per cent.	*Per cent.*
Worsteds, knit goods, under 30 cents	73.20	130
Worsteds, knit goods, 30 to 40 cents	66.73	147
Worsteds, knit goods, 40 to 60 cents	68.49	130
Worsteds, knit goods, 60 to 80 cents	68.24	112
Worsteds, knit goods, above 80 cents	52.96	90
Worsted shawls	61.82	93
Belts for presses (printing)	53.14	101
Blankets and flannels and hats	69.70	110
Women's and children's dress goods	68	103
Do	60	73
Do	85	110
Clothing, ready-made	54	84
Cloaks, dolmans, etc	60	82
Webbings and gorings, etc	64	99
Common window glass, 10 by 15	67.61	73.72
Common window glass, 16 by 24	115.41	123.10
Common window glass, 24 by 30	128.58	135.34
Common window glass above that	132.29	138.04
Freestone, granite	20.22	40
Freestone, granite, hewn or dressed	20	50
Cotton-ties	85	115
Tin-plate	34	74
Steel ingots, etc., above 16 cents per pound	26	45
Wire fence rods, No. 6	45	54
Penknives, etc	50	75
Table cutlery	35	50
Shotguns	35	60
Mica	Free.	35
Horses	20	70
Cattle	20	61.94
Hogs	20	45.68
Sheep	20	50
Eggs	Free.	32.91
Plants, trees, etc	Free.	20

INDIVIDUAL EVIDENCE AS TO THE WHOLESALE ROBBERY.

A number of importers from the principal cities of the United States and especially from New York came to Washington to protest against the passage of the McKinley bill. About sixty were present at one meeting of the committee, and they told some positive, palpable, and pointed truths. When each gentleman rose to speak he announced his business and his address, and as each showed that the McKinley bill increased the duties on goods used by poor people ten to twenty times their present amount, the iniquity and robbery of the bill became apparent. The testimony of these prominent importers was taken down and published, and here are the statements made by a few of them:

R. H. Ewart (linen). The McKinley bill would double the rate of duty on linen. I think the increase needless, as there are no linen manufactories in this country.

E. Stroebel (glassware). I had an invoice yesterday, on which the duty was $46. It would be just $483 under the McKinley bill.

M. Kirchberger (lamp goods, 137 Duane street). I received an invoice of small night-lamp chimneys on Monday and paid $642 duty on them. Under the McKinley bill they would have cost me $5,476. The invoice price of the chimneys was $1,800. They are sold now at 7 cents a dozen. Under the new rate they would have to be sold at 21 cents.

Alphonse D. Reisthal (lamp goods, 55 Murray street). On cheap goods used by poor people the specific duties amount to from 200 to 1,400 per cent. On staple goods the duty is practically prohibitory, and gives domestic manufacturers an opportunity to double and treble their prices if they complete their organization.

Gustav Blumenthal (buttons, No. 384 Broadway). A small invoice of pearl buttons and a few others which arrived to-day for me paid a duty of $400.20. The same invoice would have to pay a duty of $5,187.60 under the McKinley bill. The market value of these goods was $1,600.80.

E. F. Anderson (crockery, 49 Barclay street). The bill will increase the duty on white ware from 55 to 66½ per cent., and on decorative ware from 60 to 74 per cent.

P. B. Werrall (textile fabrics, 451 Broadway). The bill would increase the duty on our goods from 50 to 100 per cent., and the lower class of goods used by working people would be most affected.

Ernest Werner (worsteds, Franklin and Church streets). The bill would prohibit the importation of everything but the finest grade of worsteds.

John Bernheimer (woolens, Italian cloths, serges, and linings, 75 Leonard street). The new tariff would be prohibitory, especially on low grades of goods. The rate on them would be nearly double.

D. A. Van Horn (window glass, 131 Franklin street). The bill advances common window glass 14 per cent., and goes back to an obsolete method of collecting a duty which was set aside by the United States court six years ago. On common ground glass there is an advance of from 45 to 165 per cent., and on common enamel glass from 45 to 407 per cent.

L. Lehman (fancy glassware, 60 and 62 Murray street). The bill would increase the duty on ordinary beer and wine glasses from 45 to 200 per cent. It would shut out all imported goods, and manufacturers here could charge any price they wished to. It would not affect fancy glassware not used here at all. It would make small decorative articles, such as are now bought by poor people for 10 and 15 cents, cost $1.

Francis Spies (Portland cement, 36 Broadway). The present duty on cement is about 21 cents on the barrel. The administrative bill and the McKinley bill combined would produce an increase of about 125 per cent.

Charles P. McClelland (corsets, 40 and 42 Wall street). The bill increases the rate on corsets from 35 to 50 per cent. This is not protection, but prohibition. The domestic manufacture to-day exceeds the import in the ratio of 8 to 1, which is a good argument that the import does not hurt the domestic manufacturer.

Monopolists and manufacturers have extracted vast sums of money from the farmers of our country because of the present tariff laws. Colossal fortunes, millionaire palaces, Lucullus feasts, bedizened coaches, and campaign corruption funds are some of the results of the iniquitous system which under the name of protection allows the lords of the furnaces, the magnates of the manufactories, the bosses of the mills, and the barons of the trusts to keep the farmer prostrate in this "land of the free and home of the brave." But it seems they are not content with their power and success, but many of them are daily guilty of

INSULT AND INJUSTICE TO FARMERS

in the prices they charge them and in the sales they make them.

Almost every protected industry in the United States which a few weeks ago was beseeching the Committee on Ways and Means for more "protection" is now advertising to sell abroad at retail cheaper than it will sell at home at wholesale. This is the way the American consumer is made to pay a higher price than the foreign consumer. This is the way the sham and pretense of the tariff system is shown, for if the American manufacturer can sell his goods in Europe from 10 to 50 per cent. cheaper than in the United States, where is the necessity or the justification for the high rate of "protection" now allowed?

The export supplement of the Engineering and Mining Journal and also the Tariff Reform Journal, both published in New York, show that on plows of all kinds the discount to the foreign buyer is 30 per cent., and on other farm and garden implements the foreign buyer is allowed to purchase from 10 to 50 per cent. cheaper than home buyers. This outrage on the farmers of our country can not be condemned too severely. There are hundreds of articles named in these journals which I now hold in my hand, and they contain interesting reading to Republicans who have voted for a quarter of a century in favor of "protecting" these manufacturers who charge their countrymen from 10 to 50 per cent. more than they do foreigners.

I give below a few of the articles, with the rate of tariff duty and the price charged in home markets and in foreign markets.

In every case the "foreign price" is retail for a single article (or package), free on board in New York City, while the domestic price is for large wholesale lots at factory, freight or express to be paid by the buyer:

Articles.	In home market.	To foreigners.
CULTIVATORS—PROTECTED 45 PER CENT.		
Wheel hoe, cultivator-rake, and plow	$11.00	$8.40
All-steel horse hoe and cultivator, with wheel	8.00	6.75
All-steel plain cultivator, with wheel	7.20	4.50

Articles.	In home market.	To foreigners.
RAKES AND TEDDERS—PROTECTED 45 PER CENT.		
Lock-lever rakes	$15.00	$14.21
Self-dump rakes	18.00	17.12
Hay tedder	26.00	25.25
Potato-digger	8.00	6.75
PLOWS—PROTECTED 45 PER CENT.		
Two-horse—		
Chilled, 9-inch cut	5.60	5.04
All steel, 9-inch cut	8.40	7.56
Chilled, 10-inch	6.30	5.67
All steel, 10-inch	10.50	9.45
Three-horse—		
Chilled, sr	7.70	6.93
Chilled, jr	7.35	6.61
All steel, sr	14.00	12.60
All steel, jr	14.00	12.60
Four-horse—		
Two-gang plows, all steel	58.80	52.92

These are the prices that the foreign farmer has to pay for one plow, and the prices which the American dealer in plows has to pay in large lots at the factory. The foreigner pays no more freight than the American dealer; sea freights are cheap.

Articles.	In home market.	To foreigners.
SHOVELS—PROTECTED 45 PER CENT.		
Cast-steel, long handles, round point, No. 1, per dozen	$9.20	$7.86
No. 3 per dozen	9.80	8.37
Cast-steel, D handle, round point, No. 2 do	9.60	8.21
No. 3 do	10.00	8.55
Spades, cast-steel, D handles, No 2 do	9.20	7.86
No. 3, cast-steel, long handles do	9.80	8.37
KITCHEN HOLLOW-WARE—PROTECTED 1¼ CENTS PER POUND.		
Flat-bottom kettles	1.40	.85
Round-bottom kettles, 10¼ inches	1.82	1.10
Spider, 8 inches	.35	.27
Spider, 12 inches	.91	.55
Griddle, 10¼ inches	.56	.34

Similar favorable prices to the export trade are given on all other kinds of hollow-ware. The above are taken as samples only.

Articles.	In home market.	To foreigners.
Circular saw	$30.00	$25.55
Scroll saw	7.50	6.35

TYPE-WRITERS AND SEWING-MACHINES—PROTECTIVE DUTY 45 PER CENT.

A type-writer which costs in this country $100, or, if the buyer has already purchased three, $90 for each additional one he may buy, can be bought for export for $60.

Fine sewing-machine, which costs $27.50, can be bought for foreign market for $20.75.

DOES THE TARIFF PROTECT LABOR?

The last census shows that there are 17,392,099 of our people actually engaged in all kinds of industries. Seven million six hundred and seventy thousand four hundred and ninety-three are actively employed in agriculture, 1,139,362 in professional services, 2,934,876 are laborers and domestics, 1,810,256 are employed in trade and transportation, 1,214,023 are carpenters, masons, blacksmiths, builders, bakers, plasterers, tailors, agricultural-implement makers, shoemakers, railroad employés, milliners, dressmakers, and other miscellaneous occupations, leaving 2,623,089 persons employed in such manufacturing industries as are claimed to be benefited by a high tariff.

Thus it appears that 14,769,010 persons, who perform six-sevenths of the labor done in this country, are thoroughly taxed and fleeced for the benefit of 2,623,089, but only a few thousand of the last-named number receive the profits of the tariff. They are the owners of the factories, the nabobs of the "trusts," the "pools," and the "combines," who make often from 30 per cent. to 50 per cent. per annum on their investments.

The 2,000,000 laborers employed in manufacturing or mining are not protected by the tariff, because they must compete with 8,500,000 other laborers in this country and with all the laborers of the world (except the Chinese, who are prohibited from coming here), and in addition to this they are compelled to pay the increased price for clothing, shelter, food, and home conveniences caused by the tariff.

While there is a tariff on thousands of things, there is no tariff on labor. When we come to the poor laborer we find absolute free trade. The manufactures of Europe can not be shipped here without paying a high duty, but European labor and pauper labor come here without paying a cent of duty. The tariff does not protect American labor. It protects the article on which it is laid by shutting out or lessening foreign importations.

OUR CENTRAL AND SOUTH AMERICAN TRADE.

We have for years been endeavoring to increase our trade with fifty millions of people in Central and South America and in Mexico, and the International American Conference held under the authority of our Congress has been considering this subject and other important subjects, and, after a six-month session, with eighteen Republics represented, has but lately adjourned.

The people from all these countries expected that our Government was acting in good faith with them when we invited them to send their delegates here, and they had a right to suppose that nothing would be done to disturb their deliberations or prevent the success of their mission; but just at the time when closer commercial relations between the respective countries were being considered, and the outlook for favorable action was good, the pending bill was reported containing provisions which will not only retard reciprocal arrangements, but destroy a large part of the trade now existing between our country and the neighboring countries south of us.

The McKinley bill increases the rates of duty on all classes of wool imported into this country and thus will diminish the quantity of wool sent to our country from Central and South America, if it does not stop the supply.

In January, 1889, there were in this country 42,599,079 sheep, and they produced about 245,000,000 pounds of wool, while the imports for the last fiscal year in all forms, wool, carpet, and clothing, is estimated at 350,000,000 pounds. As the amount of wool annually consumed in the United States is in round numbers 600,000,000 of pounds, the increase of the duties on wool will be a hardship on the people, and it is clear that the passage of the McKinley bill will increase the cost of woolen goods and clothing.

The bill increases duties on carpet wools and takes silver ores containing lead from the free-list and subjects the lead contained in the silver ore to a duty of 1½ cents per pound, not for the purpose of raising revenue, but for the sole purpose of preventing these articles from being imported into this country. The report of the minority on the pending bill is very expressive on this subject, and is as follows:

Last year we imported direct from the states and republics of Central and South America and the Republic of Mexico many million pounds of this wool, and still more by way of London and other European ports, and from Mexico silver ores bearing lead to the value of $6,779,160. Our total importations of carpet wools from all countries amounted to 96,555,466 pounds, and our total importations of this kind of ore was $6,951,719. All this wool has been converted into carpets and other fabrics, and all these ores have been smelted in the United States by American workmen, and their importation has been of great benefit to our people, in addition to the profit realized from the trade between the different countries. The free admission of fluxing ores from Mexico has enabled our citizens to establish and maintain large smelting works at El Paso, Tex., Argentine, Kans., Newark, N. J., Kansas City, Mo., and a great many other places. If this bill passes the tax upon 66,000 tons of silver ore, the amount imported last year, will be over $672,000, which the Government does not need and which will benefit nobody in this country.

Although our Republic produces so much that our sister Republics in Central and South America need and they produce so much that we need, yet our existing tariff laws prevented the International American Conference from arriving at a satisfactory conclusion on the subject of reciprocity in trade. The committee appointed by the conference, with the distinguished minister from Mexico, M. Romero, acting as chairman, made an able and exhaustive report showing that while the protective policy of the United States is in the way there can be no free trade among the nations of this hemisphere. The committee, at the close of the report, say:

The manufacturing countries, as the United States of America, would have to abandon, at least partially, the protective policy which they have adopted to more or less extent, and they do not seem yet prepared to change that system.

* * * * * * *

Therefore, while these obstacles are in the way, it seems premature to propose free trade among the nations of this hemisphere.

EUROPEAN RETALIATION HEAVIEST ON FARMERS.

The injury to our commerce and trade produced by the tariff is not confined to the republics of the western hemisphere. Our country was for years the great commissary department of European nations. In those years they sent over large cargoes of machinery, wares, and merchandise, and took back immense quantities of our beef, pork, wheat, breadstuffs, etc. Our late minister to Denmark, Mr. Anderson, explained the situation when he reported the Danish minister as saying:

America has practically nothing but her cereals, breadstuffs, and provisions for export, and as her high tariff prevents European countries from selling their manufactures and products to her people we have arranged a system of retaliation in Europe, and we have to strike at your farmers and their products, as they furnish substantially all your nation has to sell abroad.

England's inspection laws, enacted expressly to discourage the importation of meat products, have diminished the use of one of our most important exports. In France, Germany, Denmark, and Belgium duties and inspections have been adopted solely in retaliation for the American tariff system, and beef from South America and Australia,

and wheat from India and the Argentine Republic, and breadstuffs from five or six different sources have depressed the trade and seriously impaired the business of American farmers in European markets.

Corn has become so cheap that many Western farmers have been burning it for fuel because it was cheaper than coal or wood. The price of wheat in the New York market in the beginning of the year was 85 cents per bushel. In the same market in the year 1873 it was $1.65 per bushel.

The entire yield of wheat in this country in 1879 was 448,756,630 bushels, and the average export price of wheat for that year was $1.33 per bushel. In 1888 our total yield of wheat was 415,868,000 bushels, and the average export price of wheat for that year was 85 cents per bushel. It will not do, therefore, to say that the price of wheat has been reduced by overproduction, for the above figures show that the yield of wheat in our country in 1888, when it sold at 85 cents per bushel, was 33,000,000 bushels less than it was in 1879, when it sold for $1.33 per bushel.

The principal cause of the reduction of the price of corn and wheat and other cereals is the bad legislation of the Congress of the United States on certain great questions that directly affect the interest of the farmer. During the time that the Republicans have controlled legislation since the civil war, for they have had one or both branches of Congress or the President for more than a quarter of a century, they have legislated continually in the interest of manufacturers, millionaires, and railroads, and not for the farmer or the laboring man.

I shall not stop now to show in detail how many millions of acres of the public lands were donated to railroad corporations by Republican Congresses or how Government bonds that were purchased at a reduced price with greenbacks were exempted from taxation and ordered by Congress to be redeemed in gold; neither will I attempt to tell of the millions of dollars made annually by protected manufacturers, but I will simply let the census reports give the facts to show that the farmers of our country have prospered far more under a low tariff than they have under a high tariff.

EFFECT OF LOW TARIFF AND HIGH TARIFF ON THE FARMERS.

From 1850 to 1860 the average tariff rate was from 18 per cent. to 27 per cent. By the census of 1850 the estimated value of farms in the United States was $3,271,575,426. In 1860 the value was estimated at $6,645,045,007, showing an increased value during this decade of $3,373,469,581, or more than 100 per cent. In 1862 the average tariff rate was raised to 40 per cent. In 1870 the value of the farms of the United States was estimated at $9,262,803,861, showing an increase during the decade of $2,617,758,861, or less than 40 per cent. In 1880 the value of farms was estimated at $10,197,096,776, being an increase during this decade of $939,292,915, or within a fraction of only 9 per cent.

The value of the live-stock in the United States in 1850 was estimated at $544,180,566. In 1860 it was valued at $1,089,329,915. The increase during the decade was $545,149,349, or over 100 per cent. In 1870 it was estimated at $1,525,276,547, being an increase during the decade of $435,946,542, or less than 40 per cent. In 1880 the live-stock was valued at $1,500,464,609, being a decrease during the decade of nearly $25,000,000, or more than 1½ per cent.

What the census of 1890, now being taken, will show for the farmers no mortal man can tell.

We know that they are filled with distress and discontent; that their homesteads are being mortgaged; that their indebtedness is increasing; that the value of their farms is decreasing; that hundreds of farms have been abandoned in the New England States and hundreds of others sold at ruinous prices, and that, according to the report of the statistician of the Department of Agriculture, the farm price of corn has shrunk from 63 cents per bushel in 1881 to 28 cents per bushel this year; the farm price of wheat has diminished from $1.19 that year to 69 cents per bushel this year; the farm price of oats from 46 cents that year to 23 cents this year; the farm price of hay from $11 per ton that year to $7 per ton this year, and that the market price of all kinds of live stock has been very much decreased.

TARIFF OFFSPRING.

Twenty-five years of high protective tariff have brought tramps and strikes and lockouts in a country where they were never known before. They have caused a mortgage indebtedness to be heaped on the farmers of Ohio amounting to $300,000,000 and a mortgage indebtedness on the real estate of Illinois amounting to $402,000,000. In Iowa, Kansas, Nebraska, and in most of the States of the Northwest from 20 to 50 per cent. of the improved farms are heavily mortgaged, and Bradstreet in his valuable and reliable journal declares that—

Recent investigation by the State authorities of Vermont, New Hampshire, and Massachusetts show that an alarming number of farms in fair condition and once owned by thrifty farmers are abandoned entirely and turned over to the bramble and the thistles, untenanted and unrentable.

With these appalling facts before us and with a knowledge that the tariff, like an iron wall, prevents proper trade and commerce between our country and the republics of Central and South America and is fast reducing our trade and business with European nations, every patriot should admit that the day for enlarging the American tariff system should end, and all lovers of "equal and exact justice to all men and exclusive privileges to none" should sincerely and earnestly do all that can be done to correct existing evils and to restore prosperity to our country, and confidence and hope and happiness to the people.

In the dark days of the French Revolution Madame Roland said, "O Liberty! Liberty! how many crimes are committed in thy name!" May we not say now with equal truth, O Tariff! Tariff! how many lies are told in thy name!

The logic of the pending bill is the logic of the highwayman

That they should take who have the power,
And they should keep who can.

The purpose of the bill is to redeem the pledges of the Republican party, pay its financial obligations and prepare for future emergencies.

The effect of the bill, if passed, will be to set up the classes over the masses and make the rich richer and the poor poorer.

REMEDIES.

I can not close my remarks without suggesting remedies for the trying ordeal through which the people are passing and for the crisis which now confronts our country. There should be an immediate reformation and reduction of tariff taxes and such revenue as is required in the honest and economical administration of the Government should be raised from internal-revenue taxes and duties on articles of luxury, exempting as far as possible and making cheaper all articles needed by the masses of the people.

There should be free coinage of silver, so as to make it more plentiful, and silver should be placed on an equality with gold as to coinage, bullion, and certificates, and every effort to demonetize silver or stop its coinage should be condemned and opposed.

Trusts and combines that control the price of live-stock or farm products should be prohibited by law or by a constitutional amendment, with heavy penalties to secure its enforcement. "Gambling in futures," by selling that which does not exist, thus interfering with farm products and establishing an injurious and fictitious price, should be prohibited by law, and the heaviest fines and imprisonment imposed for a violation of the law.

I know my remedies will not be heeded by a political party which now controls the Presidency and both branches of Congress, but I wish to remind you who sit on the other side of this House that under our system of Government, thank God, there is a power higher and stronger than you; it is the power of the people, the power of the sovereigns of this land who dressed you and me in a little brief authority, and when they command we must obey. Their wrath is fast gathering and soon it will burst upon you like a tornado, and when the sunshine succeeds the storm at the next November election you will realize the force of the sentiment, "Thou art weighed in the balance and found wanting."

The Tariff.

SPEECH

OF

HON. BINGER HERMANN.

OF OREGON,

Wednesday, May 21, 1890,

IN THE HOUSE OF REPRESENTATIVES,

The House being in Committee of the Whole and having under consideration the bill (H. R. 9416) to reduce the revenue and equalize duties on imports—

Mr. HERMANN said:

Mr. CHAIRMAN: The American people for two hundred years have been experimenting with every known fruit, plant, herbage, textile, and seed of any commercial value known to the temperate or tropical zones.

Not only this, but in American legislation the economic theory of protection has been applied to the various productions of our soil, and we possess a statistical record of the development and growth of each, as well as of their consumption and exportation. We know the extent of this production when tariffs were low and when tariffs were high and when our nation was at war and when it was in peace.

We have now demonstrated to a certainty which of these productions are susceptible of development and those which, under like physical conditions, are incapable of profitable development. The nation, during the last one hundred years, has been liberal and patient in its experimentation. Almost every production of our soil which for any length of time was stimulated and protected from its foreign competitor has attained a sturdy growth. From being articles upon which the duty was originally in effect a tax, many of them have reached such proportions in the market as not only to supply the demand and to compete at home, but to bear transportation across the oceans, and in the far-distant foreign market have overcome the competitive price of the like article of foreign production and driven it from a free and equal contest for the supremacy.

To this encouraging success there has been one notable exception, and

that is the sugar-cane production of the United States. With all the possible inducement and reward of a tariff protection for nearly one hundred years on the one hand and a close study of physical conditions on the other, and with the greatest and best market of the world for a customer, the cultivation of the cane at this late day in the century is still restricted to a very limited area. Outside of Louisiana, and there but a portion, and a very small production in Florida and Texas, no other success is recorded in the United States. There is an inherent difficulty. It exists in the unfavorable conditions of the climate. It is not warm enough. In Cuba, the West Indies, and other tropical and subtropical climates—where the sugar-cane grows in luxuriance and yields twice the result in sugar per acre as with us—the temperature varies from 75° to 79°, while in Louisiana it varies from 65° to 69°.

The sugar yield of Louisiana in 1889 was 350,000,000 pounds, while the demand, or, in other words, the actual consumption, in the United States equals 3,042,502,670 pounds. There was imported last year from foreign countries 2,692,502,670 pounds. Our home production—and this includes not only all the cane sugar, but all the sorghum and beet sugar product—amounted to barely one-eighth of the entire market demand! The product is growing less. In 1861 Louisiana produced 539,830,500 pounds, and in 1889, 350 000,000 pounds. Indeed the sugar acreage is also actually less than in former years. In 1880 there were 227,776 acres in cultivation, while in 1889 there were about 190,000 acres. This is not because there is an overproduction; it is not because the home market is unremunerative, for it is conceded that not only is all the home product consumed here, leaving a deficiency of 92 per cent. to be supplied from foreign fields and factories, but that the market price yields a satisfactory profit. Each year our importations increase, while the home supply diminishes. It is not because the protective duty has not been high enough to discourage the foreign import and encourage the home product, since it is found that the foreign producer can afford to pay the duty and transportation, too, for the privilege of entering our home market, and still he is able to compete with us.

Our producer receives 2 cents on each pound of his yield, which is paid by the foreign producer, but in the end by the consumers, and still he can not diminish the foreign import nor increase his own supply. In order that the American product may be protected, with a view to an enlarged development, every pound of the 2,692,502,670 pounds of foreign sugar coming to our shores is taxed 2 cents per pound. If protection should continue longer it is now seriously considered whether it would not be far more just to the sixty millions of American consumers that we pay the 2 cents per pound merely on the 350,000,000 pounds of sugar actually produced here. If our planters produce more they will receive more. They now receive 2 cents more than the foreign producer and they will still receive 2 cents more. Everything has been done that is possible to do to stimulate the home production, but it is now almost conclusively established that the industry, in Louisiana at least, is incapable of stimulation and further development. This being thought to be true no believer in protection as a principle can further support the continuance of a duty on sugar imports. To do so is to be inconsistent.

We declare that as a practical result of the principle protection begets production, since it fosters and stimulates any industry which is capable of development. It restricts the home market to the home product, by imposing a tax on the rival foreign product, and thus lessens competition with the former, upon the theory and with the hope that this policy will enable an infant home industry to develop and increase in productive power, and, as its productiveness increases, competition will follow as a result, and soon the consumer will enjoy in the home market, what alone the foreign market did supply, and upon terms as favorable, while at the same time he has aided in concentrating wealth in his own country and in creating industries for useful and profitable employment of our own people. We believe that by bringing the workshop to the farm we can diminish the distance between the farm and the market. The market follows the workshop. That country which has its fields farthest from its manufactories and furnaces is poor in proportion as the distance is great. The power and greatness and glory of our nation are due more to the observance of this principle than to all other causes combined.

Duties were once imposed for revenue purposes on coffee and tea importations. Such products could not be produced here by any amount of protection, and when the revenues were no longer required the tax was removed, and this additional cost upon the consumer reduced the price in the market to that extent. The removal of this duty was justified and demanded also on the ground that these two products had become substantially necessaries of life. Whenever, therefore, it becomes established that a duty is imposed upon such an article the like of which can not be successfully produced by our own people then we can no longer defend the duty, and it should be removed. It fails to be protective and remains simply "a tariff for revenue only." The reasoning as to coffee and tea will apply to sugar.

We have a population now of 65,000,000. These people all consume sugar. There is none so poor as not to use it. Once a luxury even in our own land, it now ranks as one of the every-day necessities of every American household. Examine the grocery supplies of the poorest family, and it will be found that sugar follows flour in order as to cost, and third in order if meat be included in the list. The duty or tax imposed and collected on sugar imports into the United States amounts to $65,000,000 in each year and is constantly increasing. This is $1 to every man, woman, and child in the nation! It is a pure revenue tax. We no longer require this money for governmental purposes. We have whisky, tobacco, and a variety of other products which are not necessaries which we tax, including many which are luxuries and chiefly consumed in the mansions of the rich.

There is no longer a necessity to impose a burden upon the food of the people. We say that the necessaries of life must be free.

If the $65,000,000 paid on foreign sugars are not needed why should they be collected from the people? Why should every poor family in the nation be compelled to pay 2 cents a pound on his sugar to sustain and benefit eleven hundred rich planters in the South? Why should nine-tenths of our consumption be taxed to support only one-tenth of like consumption? We exclaim against monopolies and the baneful influence of rings and trusts and combines, and we have pledged our constituents to tear them out root and branch and annihilate them wherever we can do so by legislative penalties. If we can not entirely extirpate them let us impose such restrictions upon their avarice and high-handed exactions that the American consumer may freely enter the market place and buy not only pure and wholesome and unadulterated food, but that he may pay an honest and fair price for the same, and not be throttled by the extortions of an infamous beef ring, sugar combine, or flour trust.

On the other hand we insist also that the honest producer shall have the same chance for a square deal in the market, and that he too shall be protected from the "boycott" of speculative dealers and rascally syndicates who corner the market, drive out and combine against the small farmer or stock raiser, and then dictate unconscionable prices to a helpless public, while they, a few, become rich at the expense of the many. How can we consistently with such pledges and in support of such just principles continue to foster and protect at so great a cost to the country the cane-sugar industry of one State of the Union any more than we can do the same for another product of a few at the expense of the many?

When it was proposed in the last Congress to abolish the protective duties on wool and lumber and hops, my constituents in Oregon, who are deeply concerned in these industries, which have grown marvelously under protection, confidently looked to the people of Louisiana and Texas and Florida for aid.

They naturally reasoned that as they were contributing their portion of the $65,000,000 to protect the sugar interests of the South in return these people would gratefully and magnanimously extend reciprocity to our people on the Pacific, Northwest, and elsewhere in the nation where required. We pleaded with them and submitted evidence conclusive that if British Columbia were permitted to invade our markets with its free lumber our magnificent industries would cease and our numerous highly improved and costly mills would be valueless, and the milling towns would be deserted, and the lumber fleets would be idle, and many thousands of our industrious, well paid, and contented laborers would be deprived of employment, and the rich forests would no longer contribute to the up-building of our own country.

We reminded them of another great industry with us which they proposed to jeopardize, our sheep husbandry. We explained to them that a large portion of our area as well as climate was peculiarly adapted to this industry and that great pastures now most profitably utilized for sheep-grazing are largely unfitted for other purposes. Figures were cited in exhibit of the annual exports of wool from every shipping point and warehouse in the State, and the amount of money which went into the pockets of every farmer and tradesman among us, and we called attention to the number of people who would suffer financially if free trade was permitted as to wool and the cheap wools of Australia and New Zealand could compete on equal terms in the American markets with American wool.

All these appeals, however, were in vain. They closed their eyes and their ears, and, while ruthlessly removing every protection to the industries of the North, placed a high protection wall around the sugar and rice of the South. This was not just. It was not even good party politics, for as it is with parties so it is with individuals, that "honesty is the best policy." Retribution did follow swift and terrible. The people administered the rebuke, and that party which was the majority is now the minority. We who constitute the majority, however, propose to be more considerate of the interests and appeals of other industries than our own. In regard to sugar, we offer a bounty to its producers in the hope that the failures of the past may be overcome by further trial.

It is said that the property of the Southern planters is valued at $100,000,000, and that if they are left to the mercy of free-trade competition—with no countervailing assistance for some period at least—they will be overwhelmed by disaster and bankruptcy. They insist in their own behalf that with the recent and more improved methods in cultivation and manufacture they will be able successfully to compete with the foreign grower of sugar, if encouraged by their own nation awhile longer. They are our own people and their wealth is a part of the national wealth. Their prosperity will be our prosperity. The bounty proposed on the present American sugar product will

amount to $7,000,000, and when we count the reduction by the removal of the present tariff on foreign imports and the decrease of the refinery prices we have a saving of more than $50,000,000 to the consumer.

The planters generally object to this legislation, and they resist and criticise a bounty, and yet we ask them to explain the difference between the specific sum to be paid directly to them from the Treasury on the amount of sugar actually produced by them at the rate of 2 cents per pound and the duty of 2 cents which the foreign producer must pay to compete with our planters, which adds that much of an increase on the selling price of the home product, and hence reaches the planter's pocket almost as direct and fully as protective as the bounty.

To the planter there is substantially no difference, while to the people of the country there is an aggregate saving far in excess of $50,000,000. Sugar to the consumer will be cheaper by more than 2 cents per pound, as a large profit now going to the refineries will also be saved. In encouraging the Southern industry we do not neglect the growing production of the sorghum of Kansas and Nebraska and Missouri, nor the sugar-beet of California.

It is claimed that these products are being manufactured into a superior grade of sugar, and that as improved methods are introduced larger yields and better qualities result to the grower and manufacturer. In Kansas the sorghum product owes its present success to the stimulating influence of a bounty paid by the State. In California the beet sugar owes its success thus far to the patronage of the great Hawaiian Island cane-sugar planter—Claus Spreckels. Our friends of the California beet-sugar industry favor the protective duty on foreign sugar imports, except as to the Hawaiian Islands, and earnestly oppose a bounty for the home sugar product. They say, "If the bounty principle is correct why not apply it to other things? Why not apply it to wool until that article is produced in this country to the extent of the people's wants?" This method of argument is begging the question. It proceeds upon a false premise.

Wool has been demonstrated to be capable of development in proportion as it is encouraged by a protective tariff. Sugar has not. Wool has increased in productiveness as a tariff was high and decreased as a tariff was low. Sugar (referring to cane sugar, which has been tried for nearly a century) is limited practically to a part only of one State, and even there the product is less now than it was twenty-five years ago. Wool, on the contrary, is limited only by the boundaries of the nation. It is a national industry. Taking the number of sheep by groups of States, we have the following in 1884:

New England States	2,384,888
Middle States	3,792,675
Southern States	12,950,761
Western States	15,636,760
Pacific coast	9,616,092
Territories	7,245,450
Total in United States	50,626,626

The extent of the wool industry throughout the United States may be seen from the following:

Wool clip last year	290,000,000
Pounds of wool	300,000,000
Value of sheep	$119,000,000
Number woolen mills	2,689
Capital in mills	$159,000,000
Wages paid annually	$47,000,000
Value of sheep	$116,000,000
Value of lands, barns, sheds, and equipment of sheep industry	$408,000,000
Value of product when manufactured	$267,000,000

While we only produced one-eighth of the sugar consumption, we produced more than one-half of the wool used by our people. We had $10,019,392 of increased valuation on sheep last year over the year before. In 1888 the sheep in the United States were valued at $90,640,369, and in 1889 they had increased to a valuation of $100,659,761. The owners of sugar plantations in the South number about eleven hundred persons, while the owners of flocks of sheep exceed one million persons. Had the reduction of 1883 not been made on wool its increased production would have been 100 per cent. in ten years.

We need not hesitate to adopt the policy of a sugar bounty. It will prove a great national blessing and will not be required beyond fifteen years. The history of the bounty on sugar production in Europe is an interesting one. France and Germany took the lead and now they are exporters of sugar instead of importers. As soon as a bounty system was put in force the sugar industry was at once advanced to the front and became successful from the beginning. Its great progress has all been secured during the past eighteen years. In 1879 the output of sugar in Germany amounted to 576,180,300 kilograms (2 pounds and 3 ounces) and the salable products of raw sugar and molasses to 559,806,600 kilograms. In 1889—ten years later—the output of sugar in mass was 1,165,346,900 kilograms, and the salable products of raw sugar and molasses amounted to 1,145,693,600 kilograms, showing an increase in ten years of more than 100 per cent.

It is also shown that as the industry advances and becomes better understood the farmers take the lead. In 1879 the factories raised two-thirds of all the sugar product, but in 1889 over one-half was raised by the farmers themselves, and these farms are usually small holdings from 1 to 10 acres in extent. As the domestic production increased the importation of foreign sugars diminished. In 1879 Germany imported 2,983,000 kilograms, while in 1889 it imported only 1,907,800 kilograms. It also followed that as the home supply increased the foreign exportation of sugars increased. In 1879 Germany sold to other nations rebate sugars, including raw sugar, candy-sugar, and other hard sugars, an amount equaling 134,224,500 kilograms, while in 1889, ten years later, her sales increased to 592,226,600 kilograms, an increase of more than 441 per cent.

The more sugars produced the more rebates on exportations increased and the less in the aggregate the bounty taxes amounted to, as is shown by the fact that the taxes and customs duties in 1879 per capita averaged 15 marks, or a little more than 27 cents in United States money, while in 1889 they had decreased so that they averaged 15 cents per capita, a decrease of 12 cents per head. The more the sugar increased the more commonly it was used among the people. Once it was a luxury; now it is an every-day article of food. In 1879 the domestic consumption of sugar per capita was about 14 pounds, while in 1889 it had increased to 17 pounds per head.

The sugar-growers of the South concede the favorable results of a bounty wherever tried, and they are convinced that the benefits to them will be equal to protection if a sufficient time can be guarantied. Governor Warmoth, an extensive planter of Louisiana, when before the Ways and Means Committee, in answer to questions, said:

> You give us a bounty of 2 cents a pound and give us a guaranty that the next Congress will not come here and repeal it. If you can do that I will take a bounty.

In answer to another question, he said:

> So far as I am concerned I would just as soon have a bounty as a tariff.

The present measure fixes a limitation for the duration of the bounty at fifteen years, and it is unreasonable to assume that when once adopted and great enterprises under it are inaugurated any Congress would likely enact unfriendly legislation to impair the public confidence or injure vested interests.

Nor is a bounty necessary for other products, for, unlike sugar, they are more easily capable of development. Protection accomplishes its mission with them. In 1889 we raised 125,000,000 bushels more corn than in 1888. We raised 74,692,000 bushels more wheat last year than the year before. We raised 48,780,000 bushels more oats last year than the year previous. In view of these facts why make a comparison between wool, and wheat, and corn, with sugar as to bounty protection?

No citizen of the Pacific coast, desirous of success there for the beet-sugar industry, can favor a continuance of the present revenue policy as to sugar imports, especially as it applies to the reciprocity treaty with the Sandwich Islands. So long as free importation of sugar from these islands is permitted, so long the farmers of our coast may as well abandon all hope for beet sugar there. In the first place island sugar is produced cheaper than our people can ever produce the home article. The labor on the plantation is Chinese and Kanaka principally. The wages are low and cost of living merely nominal. The soil is fertile and the temperature of the climate well adapted for the highest development of the sugar cane. The cost of transportation by sea is a small item per cargo. The industry there is in the hands of wealthy syndicates and firms who are exclusive monopolists of the entire sugar yield. They constitute an imperial trust, and are able to put prices up or put them down on the consumers of our coast until all competitors are vanquished or driven into bankruptcy. What possible hope, then, to build up the beet-sugar industry among our farmers with such hard conditions to contend against? The Government virtually pays this monopoly a bounty of 2 cents a pound for the sugar it exports to San Francisco. While all other foreign producers pay a duty of 2 cents to enter our market, these island people enter it free, and then tax on the consumers as an addition to their already large profits a sum equal to the duty.

It was the design of our Government when it negotiated the treaty of reciprocity to make sugar not only free to the Pacific coast people, but cheaper, in order to foster a profitable commerce between the islands and the Pacific. But the plantations soon went into the control of grasping monopolists, and they, like all monopolists and tyrants, proposed to make the best of the situation for themselves regardless of others' welfare. The Oregon farmer pays as much for his sugar imported free from the Sandwich Islands as does the New York or Iowa farmer on sugar which has paid to the Government an import tax of 2 cents per pound.

If free-trade sugar is good enough for California and Oregon, why not good enough for New York and Iowa? If reciprocity treaties can build up a commerce with the Hawaian Islands, why can not reciprocity treaties do the same with Cuba? So far as our consumers are concerned it has been a treaty to build monopolies, and not to favor the people.

These island sugar trusts are naturally opposed to any change in the present tariff on sugar. They want all other foreign sugar imports heavily taxed, as that keeps up a high price on the consumer and protects them in their extortionate figures. If foreign sugars, however, have free entry at all ports of the United States, we shall on the Pacific coast at once experience the advantage of competition, as then it will be a contest for trade on equal terms. Now the free sugar from the islands is master of the field west of the Rocky Mountains, and

even can afford to reach as far east as Kansas City and St. Louis, and there compete with duty-paid sugar.

Is it surprising, then, that this monopoly should be here at the Capital to oppose a change in the existing sugar schedule? But there is a second item for consideration in this beet-sugar subject which is of interest to the Pacific coast. We hear it said that already is beet sugar an established industry there, and that to remove the protective duty, and even substitute a bounty, will be the death-knell to further efforts on the part of enterprising men who have studied the subject carefully and have expended large sums of money among the farmers to encourage sugar-beet farming, and that as a result already hundreds of tons of sugar are manufactured. The tariff will continue to stimulate this development, until soon California can furnish the whole United States with a cheap sugar.

Who is it that makes these well worded and delusive promises? Who is it that is expending so much money to build up a beet-sugar trade on our coast? Who is it that expresses so much solicitude for the future success of beet-sugar in the event of the removal of the tariff on sugar?

It is the sugar-cane monopolists of the Sandwich Islands. It is the sugar trust of California, which above all things, temporal or spiritual, is supremely interested in maintaining a monopoly through which its members have been made millionaires and the consumers of sugar have derived no corresponding benefit.

The owner of the largest beet-sugar factory in California is himself jointly or severally the owner of one-fourth of the plantations on the Sandwich Islands. Why, it may be asked, should these island planters and monopolists of the cane-sugar trade, which already sends to the coast three times as much as is consumed there, be so extremely desirous of building up a rival industry on the coast? What motive can these men have to induce Pacific coast farmers to cultivate the sugar-beet? What inducement can capitalists have to invest in the building of sugar factories on our coast? With the powerful island sugar trust standing ready with its vast surplus of cheap sugar and some of its shrewdest copartners in possession of the largest beet-sugar factory in operation, what remote chance for existence could a rival competitor have under such circumstances?

The only factory which has so far successfully maintained itself is the Spreckels concern. Others have gone down which did not have the same paternal influence. And others will continue to go down which aspire to exist in the face of such an all-powerful and Government-aided monopoly. No wonder these people do not wish to exchange a protective tariff for a bounty on beet sugar! The beet sugar in which they are interested will thrive much better in friendly union with their own free island sugar and against all other tariff-taxed sugar; but the beet sugar of any one else will have a rough road to travel. With the tariff removed all sugars will come in free and then there will be a fair and an even race in the market for bounty-paid beet sugar. The present sugar trust will no longer possess the power to choke to death any rival industry which may attempt to compete. It will have other competitors to engage, and beet sugar, being aided by a bounty, as in Germany, will, as there, overtake all other sugars.

This explains why it is on the one hand that the beet-sugar factories of California so bitterly oppose a bounty for the displacement of the existing protective tariff and on the other hand why it is that the sugar monopoly of the Sandwich Islands advocates the taxing of sugar imports from other lands, while it is permitted to enter its own sugars free. This further explains why it is that there is no hope for beet sugar as a great industry on our coast so long as it must compete with free sugar from the islands and taxed sugar elsewhere. Our coast—California and Oregon and Washington—with its rich alluvial lands and equal temperature, has no superior on the globe for beet culture, not even Germany; and it is not an idle boast to assert, that with a bounty paid and the tariff removed, our people could ere long supply the demand of the entire nation with domestic sugar.

I voted a short time since for very stringent legislation in prevention and punishment of trusts, but when sugar is voted on the free-list that one act will destroy the most gigantic and merciless trust of the whole lot. The time has come when these leeches on the commercial body must die. Public condemnation is loud and earnest in their execration. There is a belief in the minds of the people that the few are defrauding the many. That monopolies are absorbing the business and life of every community is becoming more apparent. Public spirit, enterprise, and energy are everywhere commendable. They are the motive power to progress. When, however, they are throttled in the hands of the many and do pliant service for an avaricious and powerful few, they become engines of oppression to the poor and the weak; they become tyrants in all the avenues of trade, and soon stifle instead of stimulating the exertions of society.

The more we distribute the rewards of traffic the more we incite to increased effort. This country will be free and happy and great in proportion as the many are busy and prosperous and free. It behooves the honest law-maker to investigate the evils which so thickly underlie our progress, and when he concludes upon the remedy let him have the courage, the independence, and the moral conviction to hew straight to the line, until victory full and complete shall bring restored confidence to all trades, while richest blessings will be his own reward.

The Tariff

SPEECH
OF
HON. C. A. O. McCLELLAN,
OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 22, 1890.

The House being in Committee of the Whole and having under consideration the bill (H. R. 9416) to reduce the revenue and equalize duties on imports—

Mr. McCLELLAN said:

Mr. CHAIRMAN: The bill reported to us for consideration by the majority of the Ways and Means Committee presents questions of the most vital importance, that have engaged the consideration of our most thoughtful statesmen and students of political economy from the organization of our Government down to the present time.

For years enthusiasts and reformers have agitated and philanthropists have devoted their lives and fortunes to consider the question of how the relations between labor and capital could be adjusted upon a basis of strict justice and equality.

The great diversity of opinion among them regarding the causes of the many inequalities with which we are confronted, the great difficulty of getting a united and definite political purpose out of the masses of mankind, on account of their lack of knowledge, and prejudices, and the timidity and selfishness of the educated and thinking classes, make the acceptance of an equitable adjustment almost impossible.

Never before have these financial questions so occupied the attention of our people or been so much discussed as they are at the present time, and a man would be wise, indeed, who could put forward a new idea or suggest a new remedy.

All the suggestions so far adopted by the Government have failed to satisfy the people. Uneasiness, discontent, and unrest universally prevail. Is not our system of taxation defective, unsound, and unjust? Can it be so adjusted as to do justice to all? Is not the inevitable result of this protective system to make the rich richer and the poor poorer? Are not the many taxed for the benefit of the few?

If we increase duties the price of protected goods will be raised at the expense of the consumers; manufactures will be stimulated and this will naturally lead to overproduction; and when the home market is glutted and warehouses are packed with millions of articles that can not be sold, then factories will close their doors, discharge their employés, and general ruin and bankruptcy follow, as they did in 1873. Some of you, gentlemen, from personal experience, perhaps, with that terrible panic, can fully realize what its effect was.

Ingersoll, in a speech at Rockport, Ill., on the 28th of September, 1880, in speaking of the panic of 1873, said:

No man can imagine, all the language of the world can not express, what the people of the United States suffered from 1873 to 1879. Men who considered themselves millionaires found that they were beggars. Men living in palaces, supposing they had enough to give sunshine to the winter of their age, supposing they had enough to keep all they loved in affluence and comfort, suddenly found that they were mendicants, with bonds, stocks, mortgages, all turned to ashes in their trembling hands. The chimneys grew cold, the fires in furnaces went out, the poor families were turned adrift, and the highways of the United States were crowded with tramps.

I want to tell you that you can not conceive of what the American people suffered as they staggered over the desert of bankruptcy from 1873 to 1879. Shall we continue a system of taxation that leads to such results? It is clearly in violation of the Constitution, which says:

SEC. 8. The Congress shall have power to lay and collect taxes, duties, imposts, and excises, to pay the debts and provide for the common defense and general welfare of the United States; but all duties, imposts, and excises shall be uniform throughout the United States.

Nothing said there about laying taxes for protection; certainly not for the purpose of checking importations. The fathers never dreamed of such a perversion, such unjust discrimination, as is provided for in this bill. Under it the wealth of the country will pay no taxes, but will receive much more protection than those who pay them.

Is it any wonder that our highways are filled with tramps; that a million honest, industrious men are vainly seeking for employment; that a million more are employed only occasionally, living sparingly, economizing, and hoping for better times; that women and girls scantily clothed and half fed, veritable white slaves, are by the thousand in every large city of our land working in crowded rooms at starvation wages; that one-half the people in our large cities are living in crowded tenement houses in the midst of wretchedness and squalor? Nor is it a wonder that the Committee on Ways and Means, knowing all these things, was compelled to report that there was a widespread depression in our land.

Think, gentleman, what a result of this glorious system of protection. By it these people are driven into the streets, become "floaters," their necessities making them easy victims to be influenced by the

"fat" fried out of the trusts and monopolies, and they are marched up to the polls in "blocks of five" to vote the Republican ticket and perpetuate the system that ruined them.

When will the bread-winners open their eyes to the injustice imposed upon them, lay aside their political prejudices, assert their manhood and independence, and demand an equal opportunity under the law? While this system of oppression produces widespread poverty and want on the one hand, it is the instrument by which the grandest fortunes ever known in the world are accumulated, fortunes that make the potentates of Europe turn green with envy and outshine the fabled fortunes of Crœsus and King Solomon and make them seem no larger than the widow's mite. While no man will deny that the wealth of this country has greatly increased, until now we can justly say that we are the richest nation on earth, neither will it be denied that said wealth is so unequally distributed that we might with equal truth say we are doing all we can towards making it a nation of paupers.

An equal distribution of the products of labor would bring sunshine and happiness to thousands of firesides that are now desolate. But how can that result be brought about? Certainly not by increasing the tariff. An increase of the tariff so as to protect manufactures must necessarily increase the price of the articles protected; that increased price must be paid by the consumers, not into the Treasury, but to the manufacturer, and the result of thirty years' practice of that system is that five-twenty-five-thousandths of the people of the United States own three-fourths of nearly all the wealth of the country.

Why should this condition of things exist in this glorious country of ours? We were told two years ago that the depressed condition of affairs was brought about by the Democratic party discussing free trade; that the people were frightened by the proposition, and that it depressed business; and you elevated your party into power by crying "British free trade." You now have omnipotent power. You have the legislative, executive, and judicial branches of the Government, and almost a certainty of higher protection, and yet the condition is worse than it was then, more discontent, more complaining. The chairman of the committee, on reporting this bill, says:

> The committee have given months of investigation to the existing conditions of agriculture. That there is widespread depression in this industry to-day can not be doubted.

Yet in his speech in presenting this bill to the House Mr. MCKINLEY says:

> We find ourselves at this time in a condition of independence and prosperity the like of which has never been witnessed at any other period in the history of our country and the like of which has no parallel in the recorded history of the world.

He very guardedly says "We find ourselves" (meaning those he is serving, the protected class) "in a condition of independence and prosperity the like of which has never been witnessed," and this condition, he tells us, is the result of protection.

Never did he more truly speak. It has indeed been a marvelous era of prosperity for the protected class; but to the other class, the agriculturists and laborers, as he says in his report, it has been a period of depression unknown before in the annals of our history.

At almost the same time he was speaking, the representative of fifteen hundred thousand farmers was before the Committee on Agriculture pleading in suffering and distress for relief from the widespread and alarming depression that has paralyzed the great agricultural interests of the country, appealing to facts shown by statistics and the truth of history to substantiate his statements. He certainly did not wish to be understood as referring to them when he said "We are independent and prosperous."

Mr. Chairman, it is not only the farmers who are here asking relief. Organized labor is also here in such numbers as to command respect, boldly declaring that they do not receive justice under laws you claim were passed especially for their protection. They are here appealing from lockouts, and strikes which they were compelled to resort to to compel their "independent" masters to pay them a price for their labor which will afford them a living.

The gentleman, Mr. MCKINLEY, by way of comparison between the times under Democratic rule, says:

> In 1860, after fourteen years of revenue tariff, just the kind of tariff the Democrats are advocating to-day, the business of the country was prostrated, agriculture was deplorably depressed, manufacturing was on the decline, and the poverty of the Government itself made this nation a by-word in the financial centers of the world. We had neither money nor credit. We had neither as the legacy of the Democratic revenue tariff.

What a slander upon the history of those times and upon Democratic rule. That period, as compared with the present, was a Paradise to the people generally. It is true we did not have so many millionaires, but the people were happy, the middle classes were prosperous, and never in the history of the world were the farmers so prosperous.

Why, Mr. Chairman, under Democratic rule was laid the foundation for all our future greatness. Under that rule we acquired the vast territory of Louisiana, out of which were carved the great States of Louisiana, Arkansas, Missouri, Iowa, Minnesota, Kansas, Nebraska, Oregon, Montana, Washington, North Dakota, South Dakota, Idaho, and the Indian Territory. Under Democratic rule we also acquired Florida, annexed Texas, an empire itself, and the war with Mexico, under Democratic rule, gave us California, Nevada, Colorado, and the Territories of Utah, New Mexico, and Arizona, while all the Republican party has to show for its thirty years' rule is the frozen, uncultivable regions of Alaska.

What have those Democratic acquisitions done for our country? Have we not reaped billions of wealth from them? Will we not reap hundreds of billions from them in the future? Was not this foundation of our future greatness laid by the wisdom and statesmanship of the fathers of the Democratic party? Two million two hundred thousand square miles of valuable arable lands, enough to support one hundred million people, all acquired and paid for under Democratic rule and turned over to the rule of the Republican party in 1860 with a national debt of only $58,496,837. Since that time Republican Administrations have had the benefits of the sale of those lands and they have received from sales $89,213,629, or $30,716,192 more than enough to pay the national debt when they assumed control of the Government. They received this as the direct good management of the Democratic party, and after they gave away millions of acres to corporations we have millions of acres left.

That was the financial condition of the Government at the time the Republican party went into power. Under this long period of Democratic rule our taxes were adjusted upon a revenue basis, affording such incidental protection as necessarily followed. That protection was sufficient, however, to foster all the necessary industries, and agriculture prospered. From 1846 to 1860, there was no year that wheat did not reach $1.22 per bushel, and during the whole time it averaged $1.49 per bushel. Oats averaged 52 cents per bushel, and there was no year that it did not reach 47 cents.

There was no year that wool did not bring 30 cents per pound, and during the whole period it averaged 33 cents. There was no year during that time that corn did not sell for 70 cents per bushel, and the average price was 76 cents. These prices are taken from the last census reports and can be verified if disputed. At present prices wheat is worth 94 cents, corn 34 cents, oats 25 cents, and wool from 25 to 30 cents.

The gentleman from Texas [Mr. MILLS] the other day on this floor, in describing the condition of the country during that period, said:

> In that halcyon period of our history we touched a higher prosperity than this country has ever seen at any period before or since, from the time of the Declaration of Independence down to the present moment. Our national wealth increased at the rate of 126 per cent., a ratio twice as great as that at which it has increased during any corresponding period under protective tariff. Your farms increased more than 100 per cent. between 1850 and 1860, and they were not covered with mortgages. You have now had possession of the Government for thirty years, and your agriculture is depressed, prices have gone down until to-day they are lower than at any time since 1860. Agricultural products last year, if we had had the prices of 1881, would have been worth more than $1,500,000,000 more than they were. That is what you have done for agriculture.

I will now introduce the statements of some other great statesmen. The late lamented Mr. Cox, in his Three Decades, says:

> Under the long sway of the Democratic party there was a minimum of restraint by taxation, which left the people free to avail themselves of the rich resources of the domain that their fathers had won and bequeathed to them as an heritage forever. They waxed great in numbers and prosperous beyond comparison. Their fame spread abroad among the nations. Immigration poured in upon them its waves of industrious millions to partake of their freedom and to develop the fatness of the land. Peace smiled upon them and plenty abounded.

Mr. CARLISLE, conceded by all the members on this floor to be one of the most intelligent and fair-minded men in the nation, in a speech delivered May 19, 1888, said:

> Instead of paralyzing the industries and pauperizing labor in New England, or any other part of the country, for that matter the tariff act of 1846 infused new life and vigor into our languishing manufactures and secured more constant employment and higher wages to our laboring people; and the consequence was that even the strong prejudices of New England were removed by actual experience, and in 1857 every Representative from that part of the country who voted at all voted for a bill making an almost uniform reduction of 20 per cent. from the rates imposed by the act of 1846, and placing many additional articles on the free-list.
>
> Two-thirds of the men chosen by the people of New England to represent their interests in Congress declared by this vote that a further reduction would be beneficial to their industries, and thus the tariff act of 1857, which we have so often heard denounced on the other side of the House, became the law of the land by the votes of Republicans and New England Representatives. These Representatives of the greatest manufacturing sections of the country had seen their industries grow and prosper as they had never grown before, they had seen capital realizing adequate returns upon its investment, they had seen the number of laborers employed constantly increasing and the rate of wages continually rising, they had seen at the same time the agricultural and commercial interests of the people in all parts of the country flourishing to an extent which the wildest enthusiast had scarcely dreamed of before.

It may be said, Mr. Chairman, that these witnesses are prejudiced by their political views; therefore I will introduce the statements of some of the great Republican leaders. Statements made before the "fat frying" process was inaugurated, and then you can judge whether that system had any influence upon the gentleman from Ohio to induce him to distort and slander the history of his country.

Mr. Garfield, in a speech in 1878, said:

> The fact is, Mr. Chairman, the decade from 1859 to 1860 was one of peace and general prosperity. The aggregate volume of real and personal property in the United States in 1850 was, in round numbers, $7,135,000,000; in 1860 it was $16,159,000,000, an increase of 126 per cent., while the population increased but 35

per cent. Yet to suit a theory of finance we are told that 1860 was a year of great distress and depression of business equaled only by the distress of the present year. I hold that the facts I have recited establish, in so far as anything can be established by statistics, that the year 1860 was a year not only of general peace, but of very general prosperity in the United States.

Mr. ALLISON, the distinguished Senator from Iowa, in a speech made by him in 1870, said:

The tariff of 1846, although confessedly and professedly a tariff for revenue, was, so far as regards all the great interests of the country, as perfect as any that we have ever had.

And Mr. Blaine, as a historian, not as a politician, said in volume 1, page 196, of his book, Twenty Years in Congress, in reference to the same tariff law and the effect of it upon the country during the period for which it was in force, that—

The tariff of 1846 was yielding abundant revenue and the business of the country was in a flourishing condition at the time his (General Taylor's) administration was inaugurated. Money became very abundant after the year 1849. Large enterprises were undertaken, speculation was prevalent, and for a considerable period the prosperity of the country was general and apparently genuine. The principles embodied in the tariff of 1846 seemed for a time to be so entirely vindicated and approved that resistance to it ceased, not only among the people, but among the protective economists, and even among manufacturers, to a large extent. So general was the acquiescence that in 1856 a protective tariff was not suggested or even hinted by any of the three parties which presented Presidential candidates.

What more could be asked or expected of any government? At peace with all the world; vast domains of rich agricultural and mining lands unincumbered with private or public debts; taxation so mild that it was hardly felt; the Government economically administered under just laws, bearing equally upon all the people; manufactures flourishing; labor receiving just compensation; no tramps, no strikes, no lockouts, and the products of agriculture bringing better prices than at any other period of our existence, either before or after that time. And yet we hear blatant demagogues crying out that during that period under Democratic rule our country was reduced to such a degree of poverty that we became a by-word in the financial centers of the world, and also declaring that a reduction of tariff duties would ruin the country, when the present rate is more than 200 per cent. higher than it was under Democratic rule. Yet they demand an increase of 50 per cent. over what it was during the war.

Mr. Chairman, the Republican doctrine of protection, as I understand it, is that the taxing power vested in the Government may and ought to be exercised for the purpose of protecting certain kinds of American industries, so as to give them an advantage over foreign competition, without regard to the effect it may have upon the price to the consumer of the articles they produce; also for the further purpose of creating new industries in this country that can not profitably be maintained on account of local advantages existing in other countries. It is admitted by the committee that this would increase the prices of goods manufactured in this country to the consumer. In their report they say:

We have not been so much concerned about the prices of the articles we consume as we have been to encourage a system of home production.

The theory is that such a policy will stimulate such industries, drive out foreign competition, and some time in the future create such an increased production of such goods as would cause great competition between home manufacturers and induce them to sell their products at as low a price as they could be sold for by foreign manufacturers; that it would also hold the American market for American manufacturers, increase the demand for American labor, and produce a home market for the products of agriculture.

This is a plausible theory and would do credit to a professional confidence man and produce the same result. The confidence man will say anything, promise everything, show an undue interest in your welfare until he gains your confidence and your money, then suddenly vanish and leave you to your own resources to get it back.

We are asked to pay these increased expenses in advance, in hard cash, and in our wills devise to our children the opportunity to get it back. And Republican orators, purely for the good and future welfare of their country, with oily tongues, greased with the "fat" fried out of these infant industries, will argue these propositions to the grangers and laboring men with such grace and effect that, like the poor victim of the confidence man, they contribute their votes and their money towards building up mammoth corporations and palatial residences for their millionaire bosses, furnished with all the luxuries that wealth can purchase and accept their theory of future prosperity.

It is the old game, "Heads I win; tails you lose." They ask us to pay cash in advance and offer us a theory by which to get it back. When will the people of this country learn that "a bird in the hand is worth two in the bush." That the theory of protection is fallacious, I think I have clearly shown by our experience from 1846 to 1860, under Democratic rule.

In 1862, when the tariff was increased from about 18 per cent. to 36 per cent., protection was not thought of; the constitutional power to tax one class for the benefit of another class was not discussed. It was the pressing necessity of the times that made it necessary, it was enacted as a temporary measure. When the war of the rebellion was forced upon us we needed more money than the revenue of 18 per cent. would produce, with which to provide provisions, clothing, and ammunitions of war to support the boys at the front in that terrible conflict, in protecting the honor of our flag and saving the Union. No sacrifices were too great under such circumstances, and they were submitted to without protest.

It was soon apparent that 36 per cent. was not sufficient to produce the amount of revenue required, and it was increased from time to time, until at the close of the war it was 47½ per cent. That was not sufficient, and as it was believed that it could not be increased further without its having the effect of reducing the revenue and the revenue was what was wanted we were compelled to seek other sources of taxation, and the internal-revenue system was adopted.

Under this system we taxed all trades, professions, and occupations. We taxed the gross receipts of transportation, express, insurance, and telegraph companies. We taxed toll roads, bridges, lotteries, theaters, and other places of amusement. We taxed the sales of auctioneers, brokers, and merchants. We taxed gold and silver bullion, coins, stocks, and bonds. We taxed the income of corporations and individuals. We taxed the dividends of canal, turnpike, and railroad companies. We taxed the surplus of insurance companies and banks and the salaries of officers, both State and national. We taxed billiard-tables, piano-fortes, gold and silver watches, yachts, and gold and silver plate. We taxed the capital, deposits, circulation, and dividends of banks, both State and national. Expensive stamps were required upon all business transactions put in writing. We taxed everything on the earth, in the air, and under the sea.

From these two sources of revenue we were receiving at the end of the war $488,273,464 per annum, increasing the revenue from customs from $39,582,126 in 1861, to $179,046,652 in 1866, an increase of $139,454,526 per annum, and these taxes were paid without a murmur; but enough money to meet the enormous expenses of the war could not be collected from the people, the expense of which was, in 1865 alone, $1,295,099,289, and so we were compelled to create an enormous debt, which in 1866 was $2,773,236,173.

This was the debt of all the people, both rich and poor, made necessary for their protection, and should have been honestly paid by them in equal proportions. Taxes should have been collected from the wealth of the rich and the necessities of the poor; of that no man would have reason to complain. The Government being unable to collect from the people a sufficient amount of money to pay that debt were compelled to issue interest-bearing bonds. After being thus relieved from the immediate necessity of paying the debt and expenses of the war, it was apparent that the Government was in a condition to fulfil its promises to reduce taxation. How was it done? Up to this time nothing had been said about protection.

The Government had recovered from its financial embarrassments and established its credit among the nations of the world and all that was necessary to be done to preserve its honor was to keep its promises made to her people. All had been taxed alike, the rich and the poor; all should have been treated fairly when the burden was to be removed.

In 1867 our annual expense amounted to $519,022,356, a decrease of $776,079,933 per annum over the expenses of 1865, yet the expenses at that time were more than the receipts, and good management would have suggested the continuance of the taxes some time longer, but the manufacturer, railroad, insurance, and other companies commenced at once to petition Congress for relief.

The first class to appear at the door of Congress was the manufacturers. They were near the seat of power, small in number, powerful in influence, and their demands were acceded to; and in 1866–'67 their burdens were reduced, and in 1868 the law taxing them was repealed, relieving them from the payment of $127,230,609 per annum.

The next demand was made by the railroad, steam-boat, express, and insurance companies. The taxes assessed against them were reduced in 1867, and repealed in 1870, by which they were relieved from the payment of $11,262,460 per annum. Then the stock and bond brokers and merchants were relieved from the payment of $8,837,395 per annum in 1870.

In 1871 the specific tax on the lawyers, doctors, auctioneers, etc., and on dealers in spirits, beer, and tobacco was reduced $14,144,418 per annum. Then the same year the tax on the incomes of individuals and corporations was repealed and that class relieved from the payment of $72,982,159 per annum. Then the tax on legacies, articles of luxury, passports, etc., was repealed to the amount of $13,246,441 per annum, making a total annual reduction of $247,703,452, all from the internal-revenue tax. These taxes were paid largely, if not entirely, by the wealthy people of the country, and by this action of Congress they were relieved from bearing any of the burdens of the Government. During all this time no action had been taken by Congress to relieve the agriculturists, the laboring class, of the burdens of taxation, which were increasing as the population increased, and at that time had increased from $84,928,261 per annum at the end of the war to $206,270,408 in 1871, while our expense had decreased from $1,295,099,289 in 1865 to $293,657,005 in 1871, a decrease of $1,002,442,284. Our national debt was yet $2,353,211,332.32, which of itself was an annual burden of $129,235,495, all left to be collected from custom duties and paid by the consumers.

If the internal-revenue tax had not been abolished and had been collected and paid upon the national debt, it would have been extinguished in 1880 without imposing any additional burdens upon the consumers. That should have been done, or else taxes should have been reduced upon each class in equal proportions. By not doing so Congress perpetrated the greatest outrage and wrong that was ever imposed upon any people by releasing the taxes imposed upon the rich and imposing the burden of paying the national debt and supporting the Government upon the shoulders of the poor. In addition to that, they left unpensioned a million veteran soldiers, who, at the sacrifice of health and risk of life, defended the homes and property of the rich as well as the poor.

Twenty-five years have passed since the close of the war and little reduction has been made on custom duties during that time. Under that system the Government has collected $4,415,588,335 from the consumers, principally paid by the poor. The rich may pay a little more per capita than the poor, because they are able to get more to eat and wear, but the poor outnumber the rich five hundred to one, and hence pay almost five hundred times as much tax as they.

Has the Republican party, dominant now for thirty years, dealt fairly with and kept the promises made by them to the people?

Suppose Congress had reversed their legislation and collected that $4,400,000,000 from the wealth of the country and nothing from the farmers and laborers, and thereby left that money in their hands to be loaned and compounded at interest, it would have amounted to enough to make ten thousand millionaires amongst them.

It is no wonder, under such legislation, that the protected class should grow rich in such proportions as to astonish the world and that the unprotected, tax-paying class should grow poorer and poorer. These conditions were imposed upon the people without a thought of the protection theory. They were first inaugurated through necessity, continued with moderation, extended through selfishness, and at last the condition of affairs enables it to be established with uncontrolled sway.

Such has been our experience since the war. The complications growing out of that terrible calamity were the necessity for the tariff of 1862, which was accepted by all as a temporary measure. It was not expected to be made permanent. It was so stated by its authors. Taken in connection with the internal-revenue tax, it was the greatest measure of taxation the world ever knew. Under the protection it afforded, the protected industries increased in number, wealth, and power, and their influence became great. As the condition continued unchanged, capital was invested in industries that could not be maintained without it, and they used their influence to create a sentiment towards its permanent establishment.

Under these conditions it was easy to justify the necessity of continuing the system. Business men, capitalists, and merchants had become involved in it; their stores and warehouses were filled with high-priced goods and they were induced to join with the manufacturers. It was declared that a reduction would ruin them as well as the manufacturers. Thus a powerful organization was formed possessing intelligence, money, and influence. Under this influence silver was demonetized and the currency contracted, which greatly weakened their adversaries and increased their own wealth and strength. They were few in number as compared with the agricultural and consuming class, and could more easily form combinations.

Their wealth enabled them to maintain lobbies at the seat of power and by these means prevent legislation against their interests. They joined with their natural allies, the Republican party, and have succeeded so far in sustaining their advantage, and they now have that party in their power. Their demands can not be refused. They are now able to dictate legislation; they hold the sinews of power—wealth—and as long as money can control the elections they will control legislation. They come here now under no mask; their ideas of protection have grown in proportion to their wealth; they do not ask, but command, not protection, but such laws as will exclude all foreign importations; they say to that party, "We placed you in power with our money and you must reimburse us," and the party responded through this bill, which will be fastened upon the country with little discussion or amendment.

It is true that an effort is being made by those engaged in agriculture, unprotected industries, and others to prevent this great outrage, and they think they have friends enough on the other side of this House who will join with the Democrats to defeat it, but they are mistaken. Some of the members on the other side may offer amendments and speak against some of the wrongs proposed for the purpose of satisfying their constituents, but no relief will be given them; they expect none, and I now predict, and I wish you to remember it, that when the yeas and nays are called upon this bill every member on the other side of this House will vote for it; the fiat has gone forth and they must obey.

What a lamentable spectacle, indeed! the combined wealth of the country demanding protection against the poor! It was not so, Mr. Chairman, under Democratic rule. Then we had equality, but few millionaires were in the land; they could be counted upon your fingers' ends. How is it now? I will give you the most reliable statistics I can find, which show that there are now in the United States—

200 persons each worth $20,000,000	$4,000,000,000
400 persons each worth $10,000,000	4,000,000,000
400 persons each worth $7,000,000	2,800,000,000
1,000 persons each worth $5,000,000	5,000,000,000
2,000 persons each worth $2,500,000	5,000,000,000
6,000 persons each worth $1,000,000	6,000,000,000
15,000 persons each worth $500,000	7,500,000,000
Making a grand total of	35,300,000,000

Here we have 25,000 persons out of a total population of 65,000,000 who under Republican protective theory have acquired the bulk of all the wealth of the country.

In 1850 the farmers of the United States owned 70 per cent. of the total wealth of the country. In 1860 they owned about one-half the wealth of the country. In 1880 they owned about one-third of the wealth of the country. In 1889 they owned a fraction less than one-fourth of the wealth of the country. The position of the farmer has been reversed under Republican rule, and at the present rate of concentration of wealth it will be but a short time until all the property of the country will be in the hands of a few. The interest on that $35,300,000,000 at 6 per cent. amounts to $2,118,000,000 per annum. Who pays it? I will ask the farmers of this country, how long can you continue to pay it? The time is coming when your mortgages will be so large that you can not increase them to cover the interest you can not pay from profits upon your farm. Then foreclosure must follow, and the bondholder will become the landlord and the farmer the tenant. It was not so under Democratic rule. Farms increased in value 101 per cent. between 1850 and 1860. Under the protective system the increased price upon protected goods is paid by the consumer to the manufacturer, not to the Government. During the last ten years these net profits have been as follows:

Manufacturing establishments	$10,274,080,060
Railroad companies	2,955,958,000
Insurance companies	943,500,000
National banks	552,154,000
Telegraph companies	56,000,000
Total profits	14,780,692,060
Wealth of the millionaires	35,300,000,000
Taxes paid by the manufacturers to the General Government on all that wealth and income	0
Amount paid by the consumers, collected from customs duties during that period	3,313,510,252

What do the capitalists of the country care for taxes, public debt, or expense as long as they are not taxed and the consumers pay them the interest upon their bonds?

Why, Mr. Chairman, the manufacturers themselves furnish evidence, which is tabulated and shown in the second volume of the Compendium of the Census of 1880, on page 928, which conclusively shows that they need no protection and that the claims presented here by them are entirely without foundation.

Do not be discouraged at the array of figures, but study them carefully and be convinced:

Number of manufacturing establishments	253,852
Capital invested	$2,790,223,506
Average number of hands employed	2,738,950
Total amount of wages paid	$947,919,674
Value of materials used	$3,394,340,026
Value of products produced	$5,369,667,706

By adding wages paid and cost of material used together, we find that they sum up $4,342,259,700. This is their entire expense. Deduct this from the value of their product and a balance of $1,027,408,006 remains as profits for a single year.

This shows that they make on an average 37 per cent. per annum upon the entire capital invested, after deducting cost of labor and material. Some of them must have made much more than that, for the large companies are driving the smaller concerns out of business and into bankruptcy every year, and that would tend to increase the per cent. of their average earnings. Twenty-three States had less manufacturing establishments in 1880 than in 1870. Indiana had 649 less, Ohio 2,074 less, Pennsylvania 5,968 less, and so on. From this showing do they need further protection? Can not they survive upon 37 per cent. profit, without the additional aid offered by the McKinley bill?

But it is said this additional tax is not so much for the benefit of the manufacturers as it is to protect American labor. That policy assists to keep them in power; it is the bait thrown out with which to catch the laborers' vote. It is a well known fact that laborers engaged in the unprotected industries receive better wages than any other class. Let us examine these figures again and see if the laborers in these factories received any benefits of protection. By dividing the amount of wages paid by the number of hands employed, we find the average wages paid that year, per capita, was $346, or $1.10 per day, but as that includes the salaries of officers and superintendents, the average wages paid to operatives was probably less than a dollar a day.

It is charged that the leader of your party declared in Indiana that "a dollar a day was enough for a laboring man." Whether he said it or not I do not pretend to say, but by the figures given it appears that is all the protected manufacturers pay their men.

Almost all the industries are prospering beyond our most sanguine ex-

pectations excepting agriculture. I quote the price of some of the leading stocks on the market to show how they have increased in price:

Name and kind of stock.	Par value per share.	Selling price.	Asked for.
Iron stock:			
Champion Company	$25	$100	....
Pittsburgh Company	25	160	$170
Life insurance:			
Manhattan Company	100	600	.....
Equitable Company	100	1,000	.....
Fire insurance:			
German American	100	310	320
Williamsburgh City	100	315	325
Telephone:			
Speaking Company	100	150	160
Bell Company	100	224	225
Trust companies:			
United States	100	830	.....
Central	100	1,445	....

All of these corporations were organized within the last thirty years; the stock was purchased at par, and in many instances paid for in greenbacks worth less than 50 cents on the dollar in gold. The corporations have been paying large dividends yearly, from 10 to 300 per cent., and some of said stocks are worth fifteen times as much in gold as they paid for them in greenbacks. If farm property had increased in the same ratio a farm worth $5,000 then would be worth $75,000 now; but the fact is that farms are not worth nearly as much now as they were twenty years ago. These are cold facts, and if you lay aside your political prejudices you must admit that it would be more just to tax the manufacturer and capitalist for the benefit of the farmers of the country than to tax agricultural interests for the benefit of capital.

Mr. Chairman, with all these facts before us, is not this bill the most unjust, unequal, and iniquitous proposition ever offered for approval to any legislative body? Can any person who is not party-blind or personally interested indorse it? Will you lend your support towards perpetuating this system of legalized robbery by forced contribution from those least able to pay for the benefit of those who do not need it? A system which takes the hard earnings of American labor and bestows it upon the wealthy manufacturers of this country, to enable them to sell their products to the people of Europe for a less price than they will sell them to their home customers. A system which prevents the exportation of our surplus agricultural products to other countries where they can not be produced, and where, if it were not for these protective taxes, they would be received in exchange for products which other countries can produce at a less cost than this country, thereby destroying to a certain extent the market for our agricultural products. A system of burdensome taxation upon raw materials which increases the cost of goods manufactured in this country where many of them could, if it were not for these taxes, be produced at such cost as would enable our manufactures to compete with foreign manufactures in the markets of the world. In this way the exportation of the products of American labor is decreased and our commerce destroyed. A system which attempts to create new and experimental industries in this country by taxing the people for their support when it is well known that many similar industries so established almost one hundred years ago can not be profitably maintained now without additional aid, so as to place them upon an equality with the natural advantages existing in other countries. A system by which the farmers of the North and West are taxed upon their products for the purpose of paying the farmers of the South a bounty of 2 cents a pound upon all the sugar raised by them. A system which taxes the poor laborers working in the mines, shops, and fields for the purpose of paying a bounty of a dollar a pound upon the silk which is produced in this country, which they do not use, for the purpose of making that luxury cheaper to those who are able to afford it. In fact, a system of legalized piracy by which the combines and trusts are enriched at the expense of the poor.

I can not conceive of an excuse or reason for any disinterested member on this floor supporting this iniquitous bill unless it is that suggested in an article I noticed in a Washington paper of to-day, which I will read:

There is an apparently well founded rumor at the Capitol to-day that certain big manufacturers who are protected by the McKinley bill were compelled in advance of the framing of the bill to "put up" an immense fund for use in the campaign of 1892. It is said that members of the Republican national committee gave the protected manufacturers referred to to understand that unless they would agree to submit to the fat-frying process in advance their interests would be lost in the shuffle.

Mr. Chairman, we have just appropriated $1,500,000 of the people's money for the purpose of encouraging the holding of a world's fair, to which are to be invited the nations of the world.

Mr. Chairman, do you think they will accept such an invitation to exhibit their arts, wares, and merchandise from a nation that places upon its statutes a law which prohibits them from trading with it? Do you think they are different from our own people, that they would go upon dress parade for the purpose of amusing our people without the expectation of deriving any benefit therefrom? Will not such legislation engender a spirit of retaliation? Will they not exclude our pork and beef?

Will they not purchase their wheat from India, and, if that country does not produce enough now, will they not take steps to see that it does? Do you think they will send their ships to us empty for the purpose of hauling away our wheat, and pay us in gold for it, when they can carry their products to some other country and exchange them for such products?

Why, Mr. Chairman, we are proceeding upon the theory that no other country can produce such articles as we have to spare and that foreign countries are compelled to buy them of us. I take it that humanity is about the same all over the world. Nations are governed by men, and we all feel a spirit of resentment against a man who without reason refuses to patronize us.

Mr. Chairman, the gentleman from Ohio [Mr. McKINLEY], under the title of "What protection had done," says:

With a debt of over $2,050,000,000 when the war terminated, holding on to the protective laws, against Democratic opposition, we have reduced that debt at an average rate of more than $62,000,000 each year, $174,000 every twenty-four hours, for the last twenty-five years, and what looked to be a burden almost impossible to bear has been removed under the Republican fiscal system until now it is $1,020,000,000.

It is true the national debt has been decreased in the number of dollars we owe, but has it been decreased as compared with the value of the products in which it must be paid? If a farmer owed $100 which could be paid with 50 bushels of wheat you could hardly convince him that to reduce the debt to $50 would benefit him if it required 100 bushels of wheat to pay the debt. In 1885 we raised 421,086,160 bushels of wheat, worth at that time $463,194,776. In 1889 we produced 490,560,000, which was worth only $421,881,600. It will be seen that the crop of 1889 was 69,473,840 bushels more than the crop of 1885, yet it brought at the point of export $41,313,186 less than the crop of 1885.

The crop of 1880, although 41,090,595 bushels less than the crop of 1889, would have brought at the point of export $280,036,551 more money, so that the wheat farmer pays two and one-third times as much of the products of his labor to-day on the dollar as he did from 1860 to 1870. Why, Mr. Chairman, it would require more bushels of wheat, corn, or oats to pay the national debt of $1,020,000,000 to-day than it would have taken to pay the debt of $2,050,000,000 in 1870 at the prices that then prevailed.

Now, Mr. Chairman, it was not my purpose to discuss the details of this bill. I will leave that to gentleman who have given it more study, but I wish to point out a few of the unjust discriminations contained in it, all of which are in favor of the rich and against the poor. It taxes the most costly grades of yarns 72 per cent. and the lowest grades 112 per cent. The finest grade of blankets is taxed 72 per cent. and the lowest grade 106 per cent. Fine wool hats are taxed 66 per cent and coarse ones 111 per cent. Finest quality of women's and children's dress goods 73 per cent. and the cheapest cotton-wrap dress goods 106 per cent. The highest grade of woolen cloths 68 per cent. and the lowest grade 125 per cent. The best quality of wool knit-goods 78 per cent. and the lowest grade 138 per cent. The highest grade of woolen shawls 90 per cent. and the lowest grade 135 per cent. The finest grade of worsted goods 90 per cent. and the coarse lowest grade 130 per cent.

The rich purchase the better quality of goods, the poor the cheaper quality.

It is useless to discuss the matter further, the discrimination is apparent. This bill is entitled "A bill to reduce the revenue and to equalize duties on imports." I have pointed out how they have been equalized; I will now append a table showing how it proposes to reduce the custom duties.

This table will show the present duty and the duty proposed by the pending bill on the articles named:

Articles.	Present duty.	Proposed duty.
	Per cent.	*Per cent.*
Worsteds, knit goods, under 30 cents	73.20	130
Worsteds, knit goods, 30 to 40 cents	66.73	147
Worsteds, knit goods, 40 to 60 cents	68.49	130
Worsteds, knit goods, 60 to 80 cents	68.24	112
Worsteds, knit goods, above 80 cents	52.96	90
Worsted shawls	61.82	93
Belts for presses (printing)	53.14	101
Blankets and flannels and hats	69.70	110
Women's and children's dress goods	68	103
Women's and children's dress goods	85	110
Clothing, ready-made	54	84
Cloaks, dolmans, etc	60	82
Webbings, gorings, etc	64	99
Common window-glass, 10 by 15	67.61	73.72
Common window-glass, 16 by 24	115.41	123.10
Common window-glass, 24 by 30	128.58	135.34
Common window-glass, above that	132.29	138.04
Freestone, granite	20.22	40
Freestone, granite, hewn or dressed	20	50
Tin-plate	34	74
Wire fence rods, No. 6	45	54
Penknives, etc	50	75

Articles.	Present duty.	Proposed duty.
	Per cent.	*Per cent.*
Table cutlery	35	50
Shotguns	35	60
Mica	Free.	35
Plants, trees, etc	Free.	20
Fish, fresh	Free.	52.10
Tobacco	81	200
Plushes	40	100
Hosiery	40	60
Shirts and drawers	40	65
Burlaps	30	50
Brown and bleached linens	35	50
Brown and bleached linens	35	60
Yarns	35	100

The tax on almost everything is raised excepting upon sugar. The repeal of that tax is the boast of the friends of this bill. That was a revenue tax; eight-tenths of it went into the Treasury. This the committee could not endure; it was not a tariff for protection. It was therefore placed upon the free-list, and the revenue sacrificed, not for the purpose of relieving the people, but that the duty might be raised upon other articles, and thereby enabling the infant industries to put a sum equal in amount to that raised upon sugar into their pockets by adding it to the price of their products. But it is claimed, Mr. Chairman, that these increases were made necessary for the purpose of securing higher wages for the workingman.

I do not object, Mr. Chairman, to the imposition of such a duty as will fully compensate our manufacturers for the difference in the cost of labor between this and other countries. But when that difference is only 10 per cent. why should they get a hundred? The duty on many articles is from ten to twenty times the cost of the entire labor of production even in this country, saying nothing about the difference between producing them in this or a foreign country.

Now, Mr. Chairman, I have a table here prepared by the Superintendent of the Census, showing a list of manufactures of different kinds, which shows the whole cost, the labor cost and the per cent. which the labor cost bears to the whole cost, with the present rate of duty on such articles, to which is added the proposed duty. You can from it judge whether the proposed increased duties are intended for the laboring man or to be put into the pockets of the manufacturers. Here is the table:

Table showing value of various manufactured products, per cent. of labor cost, and rate of duty existing and proposed.

[Compiled from the Tenth Census by Mr. Seaton, Superintendent.]

Industries.	Value of product.	Labor.	Percentage of labor.	Present tariff.	Proposed rate.
Carpets	$31,792,802	$6,835,218	21.5	46.31	60.88
Cotton goods	210,950,383	45,614,419	21.6	35.64	*28.00
Bolts, nuts, etc	10,073,330	1,981,300	19.7	32.00	30.00
Nails and spikes	5,629,240	1,255,171	22.3	52.00	41.00
Iron pipe, wrought	13,292,162	1,788,258	13.5	74.00	62.00
Oil, castor	653,900	44,714	6.8	220.00	125.00
Oil, linseed	15,393,812	681,677	4.4	44.00	53.00
Screws (smallest)	2,184,532	456,342	20.9	72.00	84.00
Wool hats (cheap)	8,516,569	1,893,215	22.2	68.00	111.00
Woolen goods	160,606,721	25,836,302	16.1	71.00	90.00
Worsted goods	33,549,942	5,683,027	16.9	67.00	†103.00

*Clothing made, 50 per cent. †Some worsteds increased to 130.

Now, we will take the article of linseed oil, controlled exclusively by a trust. They produce $15,393,812 worth of oil per annum. It is proposed to give them 53 per cent. protection; 53 per cent. of $15,393,812 is $8,168,720. We will now deduct the entire amount they paid for labor, $681,677, and they have left $7,487,043 per annum to put in their pockets. Under the present tariff they would receive $6,091,600 per annum over the labor cost of production. This bill puts into their pockets $1,385,443 per annum more than they received under existing law, and $3,037,449 per annum more than they would have received under the Mills bill. They certainly could afford to have the fat fried out of them to defeat the Mills bill and pass this one.

It is all nonsense, Mr. Chairman, to talk about protecting American labor by putting money in the pockets of the bosses. There is no way of compelling them to pay it to the laborer. They go into the market and get their laborers where they can get them the cheapest. If there is only one laborer in the market and two bosses need him, he can almost set his own price; but if there are two men in the market and only one is needed, he must take what he can get or starve.

If increasing the duty did have the effect of increasing the demand for labor, so as to give work at good prices to all the laborers now in this country, what is to prevent the laborers from other countries from coming here? If we manufacture all the goods we now import, it would necessarily throw out of employment the men who manufactured them in other countries; and do you think they would stay there and starve when it would cost them only $15 to come here, where there was a demand for labor at good prices? Why, Mr. Chairman, British ships would be employed in bringing their pauper laborers here, instead of bringing the results of their labor. There is no restraint upon people immigrating to this country, and over ten millions have landed here since the war, enough to make ten cities the size of Chicago.

Mr. Chairman, some remedy should be provided for these existing wrongs; but I see no immediate prospect of relief. We must trust to the future and the education of the masses of the people, where the power finally rests. They are making every effort by discussion to solve the problem, and I have confidence in their ability and good judgment, when they understand these questions, to work out its proper solution. You may suppress discussion here, but not among the people. Discussion brings out the truth, and truth is mighty and it will prevail. No sudden or radical change should be made. That might ruin many industries that have grown up under these false theories.

There should be a gradual reduction of the excise duties, say upon the basis of the Mills bill first, which not only reduces the duties, but equalizes them; then a reduction of about 5 per cent. each two years until we reach a revenue basis which will furnish sufficient revenue for the ordinary expenses of the Government economically administered. But we need more revenue than such a system would produce.

Both parties on this floor stand pledged to give the soldiers a service pension. It can not be done without money. The only excuse you gentlemen on the other side of this House gave for not passing the service-pension bill at this session was that our financial condition would not warrant it. That was a flimsy excuse when we have twenty five thousand millionaires who own in the aggregate $35,000,000,000, which is untaxed. One-half per cent. tax per annum upon that sum would produce $175,000,000, more than enough to pay a pension to every man who ever served in and was honorably discharged from the Army. If it had not been for the gallant services these soldiers rendered we would have no Government, no millionaires; and, as their services saved the property as well as the lives of our people, some plan should be devised by which property can be taxed and thereby compelled to bear its proportion of the burdens of the Government. With that idea in view I introduced into this House, March 25, 1890, a bill to impose a graduated income tax. It was referred to the Committee on Ways and Means, but that committee refuse to report it back to the House, and it will sleep with hundreds of similar bills until resurrected by the people.

It is said an income tax is unpopular and odious to those who are compelled to pay it. That is true; all taxes are odious. They are like sorrow, sickness, and death, odious and certain, but they must be endured. It is further said to be odious because it reveals the secrets of a man's wealth and business. Well, so do all taxes. In my State—and I suppose all other States pursue the same course—a man is compelled to swear to how much personal property he owns, what it consists of, how much he owes and whom he owes it to, and if fraud is suspected he may be brought before an officer and catechised under oath. As long as a man is honest in these matters there is nothing odious about it. It is only when he wishes to deceive that it becomes odious; odious to tell the truth. No law will compel a man to return his income at a greater sum than it is.

Now, Mr. Chairman, it was in the interest of capital that the income tax was repealed. By the repeal of that tax capital has been relieved from taxation by the Federal Government for twenty years, and I now think, in the interest of the people, it ought to be re-enacted. Twenty years ago it produced a revenue of $73,000,000 per annum; the same law would produce now one hundred and fifty millions per annum, just what is needed to pension the soldiers. The argument could not then be made against pensions, that all the tax was collected from the poor people, many of whom were just as deserving as the soldiers themselves. But, strange as it may appear, many of the soldiers have been educated up to the belief that to advocate an income tax was against their interest and would militate against their cause.

The soldiers ought to be more willing to collect their just claims from those who are able to pay it without embarrassment than from those who can ill afford to spare their mite, be it ever so small, especially when the rich, in equity, should pay their share. Is not the proposition just and right? Is it not right that the property of the country should bear its due proportion of taxation? Is it not true that the property of the country is that which is supported and defended by the Government; that it generally expends its revenues for the protection of property and remuneration of capitalists?

The principle that property or the income therefrom should support the Government is recognized in every state and in every government excepting this. It is admitted by everybody that it is right that the taxes should be levied upon those who have the property. Upon the policy of the thing, in fairness and justice, is it not right, proper, and expedient for any government to lay its taxes upon those who will least feel the burden? Can not men who have a net annual income of over $4,000 pay 2 per cent. easier than a poor man can pay taxes out of the means which are below the necessities of the support of his family? It strikes me there is nothing more clear than that.

Now, Mr. Chairman, I represent a people who are willing to pay and

willing to suffer, when need be, for the interest and the welfare of the country, and they have proved it upon all occasions; and I say here as their Representative that they are ready and willing to pay their due proportion of taxation, but no more, and in their name I protest against increasing taxation upon the farmer, the laboring man, and laboring women of the country at the expense of a few capitalists who own most of the wealth.

I believe that taxation should be reduced upon those who are not able to pay and whose necessities compel them to consume, and should be placed upon those who are able to pay and should pay.

As a further means of relief towards restoring a sound financial condition we should remonetize silver, provide for its unlimited coinage with full legal-tender quality, thereby largely increasing the amount of our so-much-needed circulating medium. Long before the christian era silver was used as money, and one thousand millions of the population of the globe use it now. Even the Bank of England has authority to hold silver to an amount equal to one-fourth of its reserve. Why not use it here?

The national-banking law needs revision. The effect of the present law, under present circumstances, is to contract the amount of money in circulation, which is one of the causes of our depressed condition. If the law is not changed, I fear contraction will go on with increased rapidity until the entire issue of national-bank notes has disappeared. In 1881 we had $325,000,000 in circulation; in 1883, $305,000,000; in 1886, $202,000,000; in 1888, $143,000,000, and in 1889 only $128,000,000, showing a reduction since 1881 of $197,000,000.

The reason for the rapid retirement of these notes is that it is unprofitable for the banks to maintain them, and upon the Western banks it is a burden. If it was not that the law compels these banks to purchase bonds, upon which their circulation is based, a further reduction would have taken place.

It is useless to endeavor to maintain a sufficient amount of circulation through these banks when it must be done at a loss to them. Prejudice has always existed against national banks by reason of this power conferred upon them to issue notes for circulation. No good reason can be shown why they should be authorized to do so. The notes they issue are not a legal tender. They are redeemable in "greenbacks." Why should not legal-tender money be issued direct by the Government?

Legal-tender money is more popular with the people. It serves them better, and this plan would enable the Government to retire an amount of its interest-bearing bonds equal to the entire circulation of the banks without increasing the circulation of the currency. It is a burden forced upon the banks. It is made an excuse for slandering the national-banking system and all those connected with it. Those engaged in the business do not desire it. It is odious to many of the people. Then, why continue it? I believe its repeal would be satisfactory to those engaged in the business. I know it would be beneficial to the people and the Government, and I think it ought to be done.

We now have 3,290 national banks, with an aggregate capital of $612,584,095. They have only $128,450,600 circulation. Ninety per cent. of their capital would produce a circulation of $551,325,685, or $422,875,088 more than they now have. The loss of that circulation is paralyzing the business of the country. We need it. We need it badly. We have the power to issue it. Why not do so? The Government should be authorized to issue legal-tender notes in an amount equal to 90 per cent. of the capital of said banks. That would increase our circulation $422,875,075, over $6.50 per capita, and would do what the national-banking system was expected to do when it was inaugurated, that was, to furnish a sufficient amount of money for its people to do business with. It would stimulate all kinds of business and enable the Government to redeem $541,325,686 of its interest-bearing bonds, thereby decreasing our interest $21,653,027 per annum. It would also place the national-banking business in an independent position, upon an equality with all other private business, receiving no favors, asking none. It would release the business from that odium, always attached to it, of being assisted, protected, and fostered by the Government.

The $47,000,000 now deposited by the Government in two hundred and ninety-six of these banks should be withdrawn, and the bonds deposited to secure the same redeemed. This practice creates a most unjustifiable favoritism. It involves the exercise of a dangerous power. It is unjust to the people to grant the use of their money for nothing, to be loaned back to them at from 6 to 8 per cent. interest. Like many bad practices it was inaugurated through necessity and should be abandoned at once.

All unprejudiced people agree that the present national-banking system is excellent and should be preserved if the power to issue money is repealed. The law gives no other privileges, but contains many wise restrictions; publicity is one, by compelling the publication under oath of the condition of each bank four or five times a year. All can ascertain how the business is conducted. As banks of discount and deposit they have served the people well. Out of 4,148 banks organized under this system only 130 have become insolvent; of those 30 have paid in full principal and interest, 6 paid principal in full and interest in part, 13 paid principal in full, 45 paid in part, and 36 are not yet settled.

No system has furnished better security to its depositors and patrons, nor given better satisfaction to the people. They should be required to deposit only a nominal amount of bonds with the Government, say $1,000 for each $100,000 of capital, upon which no circulation should be issued. That would be sufficient to give the Government control over them and would obviate another objection to the system, that is, it would not necessitate the perpetuation of the public debt for the purpose of continuing these corporations. It would also decrease the demands for Government bonds, which would have a tendency to decrease, if it did not entirely obliterate, the premium now on bonds, which cost the Government in the year 1889 $8,775,222.35.

Mr. Chairman, in conclusion let me say that I do not expect that any suggestion that I may make will be adopted by this House, nor do I expect the defeat of a single measure proposed in this bill. The command has been given and King Caucus must be obeyed; it will be passed without dicussion or amendment.

The only source from which we can look for relief is from the other end of the Capitol. The Senate of the United States is a deliberative body. Bills are read there before they are acted upon. Amendments can be offered in that body, discussed, and voted upon; it is not so here. There are two hundred amendments printed in the RECORD that will not be read to the House, discussed, or voted upon. The Senate is composed of men of mature age, one-half of them averaging sixty-six years old and the entire body averaging sixty years. They are men of intelligence, great information, and experience, and I can not be made to believe, until it is proven, that they will vote to perpetuate and fasten these iniquitous and unjust measures of taxation and bounties upon the backs of the people. They have reached that time in life when their political prejudices ought to be softened, when there is not much in the future for them personally, excepting the history they make, and I believe they will look to the welfare of their country and the people they represent, rather than to the perpetuation of their party in power at the expense of fastening this great wrong upon the people.

I believe there are many members on this floor whose mouths have been closed by party necessity, who are looking for relief in the same direction, and my prayer is that it may be given them. But I may be mistaken; it may be that their political prejudices and love of power have grown with their years and that the success of their party is deemed of more importance to them than the welfare of the people, and that, at the command of wealth and dictation of party caucus, they may pass this bill. If they do and it becomes the law of the land, I warn you gentlemen who voted for it that when its practical workings have been shown and you are called upon by your constituents, especially the farmers and laboring men, to give a reason for your action here today, you will exclaim, Oh, who shall deliver me from this great embarrassment? And now let me close in the language used the other day by the distinguished gentleman from Tennessee [Mr. MCMILLIN]:

"Oh! who shall deliver me from the body of this death?" This had reference to an ancient practice. When a certain crime was committed they did not put the criminal in the penitentiary, as we sometimes do; nor hang him, as we occasionally do; but, worse than these, they took the body of the victim and lashed it to him. Wherever he went he was forced to bear it till decaying muscle fell from muscle and joint from joint. If he walked forth by day the flies of the air infested him. If he lay down at night the creeping things of earth made his sleep more horrible than a dream of hell. But by day and by night he was forced to bear his load of guilt till the stench stifled him, and dying he exclaimed, "Oh! who shall deliver me from the body of this death?"

Sir, when this bill is passed and its enormous increase of taxation, its inconsistencies, its iniquities, and corrupting bounties are known, the people will lash it to the backs of those who so far forgot their country as to vote for it. And when the ides of November come, when November's sky is bright and clear for Democracy, when November's clouds are bleak and drear for Republicanism, a sad wail will go up from Republican candidates all over the country, the wail of remorse and defeat, "Oh! who shall deliver me from the body of this death?"

Vinegar.

SPEECH

OF

HON. WALTER I. HAYES,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 20, 1890,

On the bill (H. R. 9416) to reduce the revenue and equalize duties on imports, Mr. HAYES having offered an amendment to strike out section 32 of said bill, relating to vinegar.

Mr. HAYES said:

Mr. CHAIRMAN: I am not an expert in vinegar manufacture, possibly for the reason that from the language of the bill I find that alcoholic vapor has something to do with it. Still, I am advised that the effect of the passage of this bill, including section 32 thereof, will have the effect of ruining, driving out of business, no less than ten vinegar factories in Iowa. This arises from the fact

that this section 32 in effect prohibits the use of alcoholic vapor in its manufacture and limits the distillation of fermented liquids except in an authorized distillery.

Now, so far as Iowa is concerned, this prohibits its manufacture as it is now there manufactured, for the use of our people and as an article of commerce, and destroys the business of no less than ten factories that are doing a prosperous, legitimate business, without offering any relief or any way to avoid the difficulty or avert the ruin, from the fact that one of the beauties of Iowa fanaticism, as evidenced in its prohibitory liquor law, prohibits the establishment or maintenance of a distillery. However, it is in exact accord with the ideas of protection, increases the price to the consumers, the poor men of the country included, and increases the profits of the manufacturers, and in doing this, as usual, does it alone to the benefit of those of the Eastern portion of the country to the neglect, abandonment, and ruin of those of the great and growing West and Northwest. This is not only true, but, with unparalleled doughfaceism, those that ought to represent Western interests, their own local interests in fact, vie with the gentlemen whose interests are being subserved, and who must laugh in their sleeves at their gullibility, to fasten the yoke upon their own people.

The fact is the people of Iowa are interested in grain which is used in the manufacture of vinegar, and which is thus supplied to our people as a wholesome food product at about one-half the price that it formerly was, and will be, if this business is stricken down; and this amendment is entirely in the interest of the apple-growers of the East, who by reason of it, through the doctrine of protection, which ought to be called legalized robbery, will be able to realize an enhanced price on their crop and product from it, and build up that panacea for all our ills, a home market, and force the people to use what they neither desire, want, nor need, and at a cost twice as great as they would have to pay for an article answering the same purpose and more to their taste. But the down-trodden apple-grower of the East has got to be protected with the balance of that pampered pap-sucking locality, and the grain-growers of the West and the people there who use vinegar upon their tables have got to be mulcted to enrich these people.

Outside of these considerations, however, and without regard to any economic questions involved, it is a rank injustice to a considerable and legitimate business industry in Iowa, and strikes this business and industry down simply to enhance the profits of another class who have no claim or right to it. But, as I said before, it is in exact harmony with the principle of so-called protection, which, under one specious plea and another, and, when they fail, by practical brute force, takes from one class, and the one least able to bear it, to build up another that has no occasion for it from the standpoint of need, but who desire it as a road to luxury and who have got to the point of believing that they are a favored class and entitled to it, and who will soon, under the fostering care of the Republican party, if this party is not relegated to the rear, begin to claim it as a divine right, akin to that kings claim to rule by.

In the interest of my constituents and that of the people, against those who have no concern for them, except to divide their scanty earnings with them, I hope this amendment will be adopted; but, if not, I hope, trust, and believe that it will help, as it is where they can see it, to open their eyes to the iniquity, injustice, and general cussedness of the whole protective system, and that they will hereafter make themselves heard in their own interests, and cease to follow a party whose tenets are against all their interests, and which lead to the building up of others without claim at their expense.

I have a letter, not from a free-trade or any other kind of Democrat, but from one of my constituents, who is one of the most active of our business men, a man of honor, repute, and standing, and who is not only a Republican, but by far its most active member in my district, and who is, if I am not mistaken, now the chairman of its Congressional committee, that is so full of meat upon this question, and from the practical standpoint, that I will read it in full. There will be no suspicion of him by my friends on the other side from a political standpoint, and I especially call the attention of my colleagues to his statement of the action in this regard of our own General Assembly and to his correct and sensible statement as to the proper policy of legislation regarding food products.

The letter is as follows:

DAVENPORT, IOWA, *April* 29, 1890.

Hon. WALTER I. HAYES,
Washington, D. C.

DEAR SIR: Section 32 of the McKinley bill ruins the 10 vinegar factories in Iowa, and we want to respectfully beg your help in overthrowing the said section, because by distilling vinegar from corn, by the vaporizing process, we have brought down the price to the consumer one-half. Second. If the law passes as per section 32, while all factories in Illinois, Minnesota, New York, or almost any other State could become distilleries, and still make the vinegar, but charging the consumer over twice as much as now, we in fact could not run a distillery under the prohibition law. And after putting all the money we have in the world into a vinegar factory, the United States practically says, "You must become a legal distillery and make full-strength goods first, and pay tax as other distilleries, or all the money you put into a business we passed a special law to get you to go into must be lost." And the State says, "And if you do run a distillery of any kind you are a criminal and must go to jail." You see, Iowa factories are ruined, and all our business is thrown to parties out of the State.

Again, this thing is a fight of the Eastern cider men against the Western corn-vinegar men. We can beat them on price unless they can get this law passed to stop us.

Lastly, there is no sense in raising prices on any kind of food and this section 32 would about double the cost of all vinegars, for cider vinegar would go up the minute the competition ceased.

Moreover, four years ago, when they tried this same bill in Congress. Our senate and house passed a joint resolution asking the Representatives and instructing the Senators at Washington to work and vote against it.

William O. Schmidt introduced the resolution and Senator Sutton seconded it. The same would have been done this time if we had known; for corn is our product and apples are theirs. Please do all you can for us.

I have just been advised that the committee will offer a substitute, but, as I am not informed as to its details, will reserve what I may desire to say about it.

The Tariff.

SPEECH
OF
HON. THOMAS H. PAYNTER,
OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 20, 1890,

On the bill (H. R. 9416) to reduce the revenues and equalize duties on imports, etc.

Mr. PAYNTER said:

Mr. CHAIRMAN: This subject has been most thoroughly discussed in and out of Congress.

During the first session of the Fiftieth Congress it was presented in all of its phases. The inequalities and iniquities of the present rates of duties were most satisfactorily exposed. The then majority in this House sought to correct them. They were unable to do so because of an adverse majority at the other end of the Capitol.

The agitation and discussion has resulted in the enlightenment of the people of the country upon the question which above all others so vitally concerns their prosperity and happiness.

It has resulted in convincing the people of the country that the tariff is a tax. Politicians can no longer appear before them and argue, with any hope of deceiving them, that the consumer is not the tax-payer.

It would seem to me that the boldest and most blatant demagogue would shrink from an effort to prove that the people could be enriched by being compelled to pay enormous taxes, or that excessive taxation is a blessing to the people, or that "unnecessary taxation" is not "unjust taxation." I congratulate the country that no longer can the politician flourish whose chief claim to statesmanship consists in his ability to appeal to the prejudices of a section of the country to array it against another section. In the future I trust the economic questions will divide the great political parties of the country. I welcome the day in this country which brings perfect confidence, peace, and good-will between all sections of our common country. This condition will enable patriotic sentiment to control the country, resulting in untold blessings to it.

From the beginning of our Government to the present time the expenses of it have been chiefly paid by the collection of revenue from duties on imports. This will continue to be the principal mode of taxation by which the Government will be supported. There is another manner under the Constitution by which revenue could be raised for the purpose, and that is by direct taxation, being apportioned among the several States according to population; but this plan would not be acceptable to the people for many reasons, among others that the most wealth is not found in the States where the population is greatest. I fully subscribe to the doctrines of my party upon the questions of taxation. The expenses of the Government should be paid chiefly by the collection of revenue from duties on imported goods.

The Government should be economically administered. These duties should be laid and collected on imports in a way that will give the necessary protection to the industries of this country.

Where the expenses of the Government are chiefly paid by levying and collecting, in the manner indicated, the duties on goods of foreign importation the like of which are manufactured in this country, all the protection needed is secured to our various industries. When you take from the citizens, under the guise of a necessity or otherwise, more than is needed to defray the necessary expenses of their government you unjustly deprive them of that which their brawn or brain has earned. I am in favor of a policy which will promote and encourage American industries and promote the interests of American laborers, but I am opposed to that policy the effect of which is to impose unjust and unequal taxation on the people for the benefit of the few. On the other hand it is the policy of the Republican party, as shown by the report of the Committee on Ways and Means, not to advocate merely a protective policy, but to inaugurate in part a prohibitory one, practically removing the question of competition as a factor in the productive problem in the United States. The tendency of such a doctrine is to destroy our commerce with other countries, confine our trading within our own borders, and place our people at the mercy of trusts and combinations. These state-

ments substantially show the position of the two great political parties of the country on this economic question.

When the Democratic party seeks the relief of the people of the country from their burdens, by securing to them just and equal taxation, the leaders of the Republican party endeavor to mislead the people by holding up their hands in holy horror and proclaiming that the would-be benefactors are free-traders, seeking the destruction of the business interests of the country. In the vehemence of their exclamations one would conclude that the hands of the Democratic party were contaminated; that their touch would blight and put in decay every business interest of the country. But their fervid eloquence in the advocacy of the robbery of the many for the benefit of the few is required by the exigencies of the cause of those whom they serve.

The politician who does not know this charge is false is as ignorant as the Fiji Islander; if he is not in this wofnl condition, then he willfully misrepresents the Democratic party. These charges occur on the eve of and during every campaign. It is done to serve a purpose.

To illustrate the purpose of it I quote from a speech delivered by Representative PETERS (Republican), from the State of Kansas before the Ways and Means Committee. He said:

> Both the Democrats and the Republicans recognize the essential necessity of a tariff. We hear, of course, sometimes in our political arguments, about free trade. There is no such thing as free trade in this country, and can not be. The most ardent Democrat is not a free-trader.

I trust that no longer will the tax-ridden people of the country be fooled by such a false charge.

Another of the favorite arguments of the advocates of the system which so unjustly distributes the burdens of taxation is in calling attention to the wonderful growth of the country under the tariff. They paint beautiful pictures of the progress we have made in wealth, the industrial arts, and the sciences. Granted. It is a country of boundless resources. Its lands are more fertile than those of any country in the world. Its mechanics are most skillful; its inventive genius has flashed its scintillations from hemisphere to hemisphere with results that have made the nations of the earth do us homage. Victory to our arms and statesmanship unsurpassed in wisdom have given us a vast domain for free settlement. We have a climate temperate, unsurpassed in variety. We have free institutions. These advantages invited men and money from the world.

While this wealth has been accumulated, nevertheless a sad fact stares us in the face, that it has been unequally distributed, vast sums have accumulated in the hands of a few. You find more poverty according to population than thirty years ago; while you find thousands upon thousands who revel in wealth like Crœsus, you find the honest laborer begging for the privilege of earning bread for himself and his family; while you find a millionaire owning a palace, living in luxury and ease, endowing a great library, giving his hundreds of thousands to a music hall in a distant city, writing a book to prove the wonderful growth of the country, giving "Belshazzar feasts," yet a spectacle has been presented to you of his workingmen being kept out of his great manufacturing establishment with Winchester rifles because they demanded living wages. This manufacturer's products are protected in the American markets from foreign competition by tariff duties ranging from 40 to over 100 per cent.

This is a condition of things that should arrest the attention of every American citizen who loves his country and his kind. From our earliest infancy we have been taught that our Government was founded upon the principles of liberty and justice; that the patriots from whose brains our system was coined bequeathed to us and coming generations a government that secured equal privileges and opportunities, and denied exclusive privileges to any; but when I read the so-called McKinley bill I am struck with wonder and amazement. The questions come unbidden to my mind, Did our patriotic forefathers labor to no purpose in endeavoring to transmit to us a priceless heritage? Did they err in proclaiming the natural rights of man when they said "all men are created free and equal?"

To show some of the duties which are imposed by it I herewith submit a table:

Present and proposed rate on many articles in common use.

Articles.	Present duty.	Proposed duty.
116. Common window-glass, 10 by 15.....per pound..	67.61	73.72
116. Common window-glass, 16 by 24.....do....	115.41	123.10
116. Common window-glass, 24 by 30.....do....	128.58	135.34
116. Common window-glass, above that.....do....	132.29	138.04
131. Freestone, granite.....	20.22	40.00
131. Freestone, granite, hewn or dressed.....	20.00	50.00
144. Cotton-ties.....per pound..	55.00	115.00
147. Tin-plate.....	34.00	74.00
150. Steel ingots, etc., above 16 cents per pound.....	11.89	45.00
151. Wire-fence rods, No. 6.....	45.00	54.00
169. Penknives, etc.....	50.00	75.00
171. Table cutlery.....	35.00	50.00
174. Shotguns.....	35.00	60.00
206. Mica.....	Free.	35.00
244. Horses.....	20.00	70.00
245. Cattle.....	20.00	61.94

Present and proposed rate on many articles in common use—Continued.

Articles.	Present duty.	Proposed duty.
246. Hogs.....	20.00	45.68
247. Sheep.....	20.00	50.00
272. Eggs.....	Free.	32.91
279. Plants, trees, etc.....	Free.	20.00
290. Fish, fresh.....	Free.	52.10
Schedule F, tobacco.....	81.00	200.00
348. Plushes.....	40.00	100.00
350. Hosiery.....	40.00	60.00
350. Shirts and drawers.....	40.00	65.00
368. Brown and bleached linens.....	35.00	50.00
369. Brown and bleached linens.....	25.00	60.00
390. Yarns.....	69.00	100.00
391. Woolens and worsteds knit goods, etc.....	94.59	125.00
Do.....	88.43	135.00
Do.....	93.81	124.00
Do.....	68.41	147.00
Do.....	67.60	130.00
391. Worsteds, knit goods, under 30 cents.....	73.20	130.00
391. Worsteds, knit goods, 30 to 40 cents.....	68.41	147.00
391. Worsteds, knit goods, 40 to 60 cents.....	67.60	130.00
391. Worsteds, knit goods, 60 to 80 cents.....	68.98	112.00
391. Worsteds, knit goods, above 80 cents.....	71.22	90.00
391. Worsted shawls.....	61.82	93.00
391. Belts for presses (printing).....	53.14	101.00
392. Blankets and flannels and hats.....	69.70	110.00
393. Women's and children's dress goods.....	68.00	103.00
Do.....	60.00	73.00
394. Women's and children's dress goods.....	85.00	110.00
395. Clothing, ready-made.....	54.00	84.00
396. Cloaks, dolmans, etc.....	60.00	82.00
397. Webbings, gorings, etc.....	64.00	99.00

I shall not be able to point out in detail the rates of duty upon all the articles in common use, nor the many items of inequality in placing duties upon imports; but that you may see something of the character of the bill I shall point out a few which illustrate the enormous burdens placed upon the people. It makes a very great increase in the rates on woolen, linen, and cotton goods, which the people are compelled to purchase and use and which are essential to their health and comfort.

The increase on woolen and worsted goods including carpets amounts to about $15,500,000 per annum, estimated by importations of the last fiscal year. This increase will compel the people to pay vast sums for the domestic goods in excess of what they have heretofore paid for them. Not a cent of the latter will go to defray the expenses of the Government. A duty of 112 per cent. is proposed on the lowest grade of woolen yarn worth not over 30 cents per pound; 70 per cent. on the most costly yarn; cheap blankets will be required to pay 106 per cent.; 72 per cent. is fixed as the rate of duty on the finest blankets. The cheapest and coarsest woolen hats will be taxed 111 per cent., while the finest hats will be taxed 66 per cent. Women's and children's cheapest dress goods, with cotton warp, are to be taxed 106 per cent., and the finest dress goods, 73 per cent.

The highest grade of woolen cloth will pay 86 per cent., while the lowest grade will be required to pay 125 per cent. The finest and most expensive knit goods for underwear will pay a tax of 78 per cent., while the cheapest qualities will pay from 112 per cent. to 138 per cent. The woolen shawl of the coarsest and lowest grade will pay 135 per cent. duty, and worsted goods of the lowest grade will pay 130 per cent., while the highest grade of woolen goods will pay only 90 per cent. tax. The circumstances of the "poor" will require them to buy the coarsest and cheapest goods, upon which the duty is highest, while the rich who use the most expensive qualities of these goods will pay the least rate of duty.

It is claimed that this bill is framed in the interest of the poor laborer. All the wrongs that have ever been inflicted upon a people in past ages have been done in the name of liberty. That plea seems to have gone out of fashion. They are now perpetrated in the name of the "poor laborers" of the country. Knowing that every one should respect the honest toilers of the country who produce its wealth, they think thus they can better disguise the purpose to inflict the wrong. I should think the laborers of the country would be nauseated at the unhallowed use that is being made of their supposed misfortunes. The duty on common window-glass, not exceeding 16 by 24 inches, is increased to 123 per cent.; when not exceeding 24 by 30 inches square it is raised to 135 per cent. All sizes above these are raised to 138 per cent.

There were 5,329,646 pounds of raw silk and 101,647 pounds of cocoons imported into this country during the last fiscal year. It being suggested that they could be produced here, this bill proposes to compel all the people to pay out of the Treasury of the United States a bounty of $1 per pound, or $2,240 per ton, on all the raw silk reeled from cocoons, and 7 cents on every pound, or $156.80 per ton, on fresh cocoons, including the worms produced in the United States.

Although a person may not use silk, yet he is compelled to pay his share of this bounty.

It more than doubles the duty on tin-plate, yet there is not a pound of it produced in this country.

It proposes to reduce on copper only one-half of the present rate, which is 2½ cents per pound. This is a bonus extorted from the people. Copper needs no protection.

Mr. BUTTERWORTH stated the case aptly and truthfully when he said:

I insert here a table showing the product of the mines of the world and a statement also which shows how the tariff on copper, which amounted to 66⅔ per cent. of the cost of its production, enabled them to organize a trust and raise the price 200 per cent., thus extorting millions upon millions more from the people. The same has been true in regard to nickel, and the same is now true in large measure in regard to T-rails and lumber, and a vast number of other articles which are clamoring loudly for the maintenance of present rates or an increase of them. It is astonishing how many specious pleas are urged to enable certain individuals to secure, not equality of opportunity, but advantages which the protective tariff instead of creating was intended to remove.

Upon this question Mr. CANNON (Republican), from the State of Illinois, used this language:

I said to a man who has great copper interests, but yesterday, when he said that he himself had suggested the cut on copper one-half from the present law, and this bill carried it, "But why not cut it further and cut it all?" He said frankly, "I think that it could be done, but conditions might arise in the future where it would be embarrassing to the industry."

So we see from this that a man who has great copper interests, who claimed the honor of suggesting the rate of duty fixed in the bill, admits "frankly" that it could all be taken off, except "conditions might arise in the *future* when it would be embarrassing to the industry."

I quote these expressions that it may be seen who suggested the rate of duty and the character of reasons given therefor. It is easily seen why it is the prices of copper goods are high.

SUGAR BOUNTY.

The bill proposes to pay the sugar producers in this country a bounty of 2 cents per pound each year until July 1, 1905, on their product.

We have an estimated population of 66,000,000 people. From official sources we learn that in 1888 we consumed 3,076,277,079 pounds of sugar and produced in this country in that year only 375,855,877 pounds.

The majority of the Committee on Ways and Means in their report with reference to sugar say:

Even on the assumption that with proper encouragement we shall eventually be able to produce all, or nearly all, the sugar required for the consumption of our people—an assumption which your committee believe to be sustained by many facts, notwithstanding the slow progress thus far made in sugar culture in this country—this encouragement can be given much more economically and effectively by a bounty of two cents per pound.

This statement is made as one of the reasons for granting the bounty.

To show the effect of the provision of the bill I will assume that their assumption is correct, that we shall eventually be able to produce all the sugar required for the consumption of our people. I will assume that the committee has fixed the proper limit in which it can be done, July 1, 1905. I will further assume that the present amount consumed shall be consumed annually until that date.

To supply the present consumption we would have to produce annually 2,700,422,202 pounds more than we now produce to meet the demand.

I assume that we will have an equivalent annual growth of the industry. As I calculate it upon the basis of the amounts given, we would be compelled to increase the amounts now produced in the ratio of 180,028,147 pounds annually.

I have prepared a table. Here it is:

Year.	Annual product.	Bounty, 2 cents per pound.
1891	555, 884, 024	$11, 117, 680. 48
1892	735, 912, 171	14, 718, 243. 42
1893	915, 940, 318	18, 318, 806. 36
1894	1, 095, 968, 465	21, 919, 369. 30
1895	1, 275, 996, 612	25, 519, 932. 24
1896	1, 456, 024, 759	29, 120, 495. 18
1897	1, 636, 052, 906	32, 721, 058. 12
1898	1, 816, 081, 053	36, 321, 621. 06
1899	1, 996, 109, 200	39, 922, 184. 00
1900	2, 176, 137, 347	43, 522. 746. 94
1901	2, 356, 164, 494	47, 123, 309. 88
1902	2, 536, 193, 641	50, 723, 872. 82
1903	2, 716, 221, 788	54, 324, 435. 76
1604	2, 896, 249, 935	57, 924, 998. 70
1905	3, 076, 277, 079	61, 525, 561. 64
Total		544, 824, 315. 90

The table was made upon the idea that the committee had arrived at a proper conclusion as to the growth of the industry, and without any reference to the increase of population and the consequent increase of the consumption.

If the bounty will stimulate the growth of the sugar industry then large sums in consequence thereof will be invested in its production.

Let us further assume that the increase of the production at the end of the bounty period will not supply our people with the sugar they consume. Say they can supply 50 per cent. of the amount consumed.

What is then to be done? Will you still continue to pay the bounty on the annual production?

If the producers can supply one-half of the amount consumed, estimating the increase in population, then in 1905 to pay the bounty it would cost the tax-payers per annum from $40,000,000 to $50,000,000. Will you continue to pay out this vast sum or will you then remove the bounty and let the industry which you have paid so much to foster languish and die?

The men who are engaged in the industry will demand that they shall continue to receive the bounty.

To take either view, the situation will be serious.

If you are going into this system of bounties, why not pay a bounty to the farmer who produces the corn, wheat, potatoes, etc.? They claim they can not afford to produce these at the present prices, yet you make them pay to support another industry.

The pretended purpose of having very high duties on articles of foreign importation is to give higher wages to the workingmen. The claim is not made that the wages are to be paid directly to the workingman, but to the manufacturer, and that he will pay it to him. The manufacturer is to be the middle-man. In justification of the proposed high rates of the duty the majority of the Committee on Ways and Means say in their report that no duty was fixed above the point of difference between the nominal cost of production here, including labor, and the cost of like production in the countries which seek our markets, nor have we hesitated to give this measure of duty.

I do not desire to enter into any lengthy discussion of this question, as it involves so many figures and facts. But that it may be seen how inaccurate this statement is and as a complete refutation thereof, I quote a compilation from the Tenth Census.

Table compiled from the Tenth Census by Mr. Seaton, Superintendent, showing value of various manufactured products, per cent. of labor cost, rate of duty existing and proposed.

Industries.	Value of product.	Labor.	Percentage of labor.	Present tariff.	Proposed rate.
Carpets	$31, 792, 892	$6, 835, 218	21. 5	46. 31	60. 88
Cotton goods	210, 950, 383	45, 614, 419	21. 6	35. 64	38. 00
Bolts, nuts, etc	10, 073, 330	1, 981, 500	19. 7	32. 00	30 00
Nails and spikes	5, 629, 240	1, 255, 171	22. 3	52. 00	41. 00
Iron pipe, wrought	13, 292, 162	1, 788, 258	12. 5	74. 00	62. 00
Oil, castor	653, 900	44, 714	6. 8	220. 00	125. 00
Oil, linseed	15, 393, 812	681, 677	4. 4	44. 00	53. 00
Screws (smallest)	2, 184, 532	456, 342	20. 9	72. 00	84. 00
Wool hats (cheap)	8, 516, 569	1, 893, 215	22. 2	68. 00	111. 00
Woolen goods	160, 606, 721	25, 836, 392	16. 1	71. 00	90. 00
Worsted goods	33, 549, 942	5, 683, 027	16. 9	67. 00	103. 00

It will be seen by this that the rate of duty fixed far exceeds the labor cost of many articles. It is a fact that some of the manufacturers of this country sell goods cheaper to the export trade than to our own people. Notwithstanding they claim that they can not compete in the "home market" with imported goods, yet they can afford to compete in foreign markets with goods manufactured in foreign countries.

What do the American purchasers think of this fact? What do they think of this especially favored class who are so anxious to prevent a fair competition in the home market, yet are engaged in selling to foreigners the products of their mills cheaper than to them?

It has been charged upon this floor, and substantiated by the most satisfactory evidence, that American manufacturers have been selling machinery and other goods from 10 to 30 per cent. cheaper for exportation than to the home trade. The manufactured articles thus sold consisted in agricultural machinery, implements, and tools, such as cultivators, rakes, potato-diggers, plows, harrows, seed drills, corn-planters, road-scrapers, rollers, mowing machines, corn-shellers, feed mills, cider presses, root-graters, hay and feed cutters, grain separators, fanning mills, horse-powers, farm engines, churns, wheelbarrows, shovels, and spades.

Hardware specialties, such as hammers, wrenches, bits, axes, hatchets, sledges, blacksmiths' tools, anvils, vises, sad-irons, hollow-ware, meat-choppers, wringers, knives, forks, spoons, lanterns, scales, shears, locks, nails, tacks, screws, rivets, &c.

Machinery, such as saws, forges, milling machinery, brick machinery, sewing-machines, type-writers, &c.

If the manufacturers can manufacture goods in this country and compete with foreign manufactured goods, does not that prove that they are getting more protection than they need?

When you give them more protection than is needed to enable them to compete with like goods of foreign manufacture in our home market then we are robbing another class of our citizens to enrich such manufacturers.

The bill imposes burdens upon the farmers in every way that skillful hands and artful brains could devise; yet it was found that their credulity could no longer be relied upon to save its authors from their censure. The majority of the Committee on Ways and Means could hear in the distance the roar that precedes the storm. The cloud in the West appeared larger than a "man's hand." They knew

that the farmer fancied that there was something "rotten in the state of Denmark." They knew that there was no longer a fear in the mind of any one which would prevent a discussion of the bill in and out of Congress. They realized that the people were getting to understand that the tariff is a tax; so to prove to the farmer that his interests were being protected the duties on farm products were increased.

The following table shows the present duty, proposed duty, value of importations of certain farm products during the fiscal year 1889, the revenue and proposed revenue on certain articles produced by the farmer:

Articles.	Present duty.	Proposed duty.	Value of importation.	Revenue.	Proposed revenue.
Bacon and hams	2 c. per lb...	5 c. per lb...	$45,809	$5,442	$13,006
Beef, mutton, and pork	1 c. per lb...	2 c. per lb...	12,397	2,155	4,311
Straw	Free	$2 per ton...	28,921	.....	8,676
Teasels	Free	30 per cent..	2,309	.....	692
Hogs	20 per cent..	$1.50 each ..	4,770	954	2,179
Corn	10 c. per bu .	15 c. per bu.	1,212	238	358
Corn meal	10 c. per bu.	20 c. per bu.	332	39	78
Oats	10 c. per bu.	15 c. per bu.	10,178	2,232	3,348
Wheat	20 c. per bu.	25 c. per bu.	3,097	389	486
Wheat flour	20 per cent..	25 per cent..	5,804	1,160	4,451
Milk	10 per cent..	5 c. per gal..	5,684	568	.....

It will be seen that the duty on bacon and hams is increased from 2 cents per pound to 5 cents per pound; on beef, mutton, and pork, from 1 cent per pound to 2 cents per pound; on straw, which is now free, a duty of $2 per ton is proposed. The duty on corn is increased from 10 cents to 25 cents per bushel; on hogs from 20 per cent. to $1.50 each; on corn meal from 10 cents a bushel to 15 cents a bushel; on wheat from 20 cents a bushel to 25 cents a bushel, and on wheat flour from 20 per cent. to 25 per cent. It is known to every one that these products are seeking a market in foreign countries.

It will be seen by the foregoing table that the total duty collected on corn meal imported into this country last year was the munificent sum of 39 cents, and as you will observe the estimate of the duty to be collected during the ensuing fiscal year will be the sum of 78 cents. It will excite the risibles of the most phlegmatical man in the universe.

You will observe from the table that it is proposed to place a duty of $2 per ton on straw. I never knew before that it was an article that needed the fostering care of the Government. Hereafter when I shall rest my weary body upon a straw bed, I shall never fail to be thankful that mine is a *paternal* Government, which is even giving protection to the *straws* while they are aiding, in restoring tired nature to freshness and vigor.

I am proud of the honest, intelligent, and patriotic constituency which I have the honor to represent on this floor. I congratulate myself that not one of them will fail to see through the transparency of this attempt to deceive the farmers of the country.

Merchandise was imported into the United States during the last fiscal year amounting to the sum of $745,631,652. The surplus agricultural products of this country were shipped to other countries, which chiefly paid that sum. Our exports during the same time amounted to $503,349,648. It consisted in breadstuffs worth $123,876,061; provisions worth $104,144,444; in manufactured tobacco worth $18,901,068; live animals worth $18,374,805, and raw cotton worth $237,775,270. It was all the product of the farms. These being part of our surplus products, we were compelled to find a market for them elsewhere. The prices these articles commanded in foreign countries fixed the price of like articles in the American market. The importer of foreign goods pays the tariff duties on the goods brought into the country. When the consumer buys them, he is compelled to pay the foreign cost with the duty, expenses of transportation, and the profits of the middlemen added. The duty collected goes into the public Treasury. The goods thus imported constitute a small per cent. of the goods consumed by the people. The domestic products consumed by our people are many times larger than the quantity imported.

One of the effects and offices of the tariff duties is to enable the domestic manufacturer in our market to have *an advantage equal to the duty*. When the consumer buys the goods of the domestic manufacturer the manufacturer certainly must receive the amount of this advantage "*equal to the duty.*" Thus it is seen that the consumers are paying vast sums of money, not to support the Government, but to the "domestic manufacturer."

I do not make any war on the manufacturers as individuals, but against the system that gives them the advantage over the rest of the people.

Such laws should be enacted as will give to agriculture, commerce, manufacturing, and mining equal advantages in the race of progress. One should not unnecessarily bear the burdens of the others.

When there is a demand in this country that excessive taxation shall no longer exist; that the necessaries of life shall be cheapened; that the consumers of the country shall no longer be robbed for a favored few, among other fallacies comes the answer that protection cheapens the article to the consumer, and an appeal to history to show how much cheaper certain articles are than they were years ago. The owners of the mills who are receiving rich returns from their investments in industries which are so favored by the laws of the country, appeal to Congress for the retention of the high duties on articles the like of which they manufacture, and in many cases ask for its increase. They and their advocates, presuming that the people are densely ignorant, contend that duty levied upon the article of foreign importation cheapens it and at the same time cheapens that of domestic manufacture. Inventions, and not tariff duties, have cheapened manufactured articles in this country.

There has been such an advancement in the arts and sciences as was never known to civilization; such developments of the hidden mysteries of earth and air as have startled mankind; an inventive genius that has fashioned implements and builded machinery to lighten the burdens of toil; builded the swift messengers of commerce and communication that have annihilated space and as has been said "torn the lightning from the skies and harnessed it to the wheels of progress." With such inventive genius as found in this country it would be a strange phenomenon had not the country developed. In this country we have seen the great steam-ships taking the place of sailing vessels; the reaping-machines, the scythe; the threshing-machine, the flail. We see the railroad train speeding through the country where the wagons moved slowly over the dirt road.

We can hear the noise of the mighty engines that in obedience to man's desire exert a power greater than that of all men combined.

With the improved machinery now in use one man can make as many pairs of shoes in one day as it took the old cobbler many days to make. One girl in the factories can convert cotton into cloth faster than scores of skillful weavers could have turned it out with their hand looms. We can see on every hand thousands of labor-saving contrivances, the result of American inventive genius which has combined to lighten the toil of man and to minister to his wants and comfort.

Do not try to rob American inventive genius, which has led the world in every field of industrial art, of the imperishable glory and renown which it has given to our beloved country and countless blessings to our countrymen and the peoples of the world. You do this when you claim our progress has resulted from excessive taxation and bounties to the favored few.

Upon this question I invite your attention to what a distinguished Republican Representative from Ohio [Mr. BUTTERWORTH] said on the floor of the House May 10, 1890:

> It would cost as much in 1890 to remove cotton from the burs by the old hand-card method as it did a hundred years before Whitney invented the cotton-gin. It was the invention of the cotton-gin that reduced the cost of ginning cotton. It was the introduction of the power-loom that reduced the cost of producing goods and caused the reduction in the price. It was the introduction of the power-press that reduced the cost of printing. It was the introduction of the various devices used in the manufacture of glass, and of T-rails, and bar-iron, and cotton goods that reduced the market price of these several articles.
>
> The general reduction of prices all along the line of supply is due to the production of a machine which enables one man not only to do the work of ten or fifty, but enables him to produce better results. And here we have the reduction of cost, but it is due to the genius of our countrymen in the production of new and useful methods in obtaining results.

I disclaim any histrionic talent and admit that that which follows, critically speaking, is not entitled to the name given it; but to illustrate in a measure the situation at the national Capital and to show the process of reasoning that is employed to continue and increase the burdens of the people, and the character of explanations that are made to cajole and silence them, I have written, and now present you with what I choose to call

A DRAMA OF ONE ACT WITH TWO SCENES.

SCENE 1.—*Capitol.*

Enter a monopolist before the Committee on Ways and Means.

"Mr. MCKINLEY. You are a manufacturer?"

"MONOPOLIST. Yes, sir. I am engaged in various industries, the products of which supply many of the comforts of life to mankind."

"Mr. MCKINLEY. You are an extensive manufacturer?"

"MONOPOLIST. Oh, yes."

"Mr. MCKINLEY. What is the average rate of duty on the kind of articles you manufacture?"

"MONOPOLIST. Fifty per cent."

"Mr. MCKINLEY. In what kind of industries are you engaged?"

"MONOPOLIST. 'Infant' industries."

"Mr. MCKINLEY. How old are they?"

"MONOPOLIST. About one hundred years."

"Mr. MCKINLEY. What do you think the average rate of duty should be on the kind of articles you manufacture?"

"MONOPOLIST. Times have been very hard the past year; my customers have been unable to buy the customary amount from me. The agriculturists have been unable to find sales for their surplus products; corn has been selling from 15 to 20 cents per bushel in the West (much of it has been used in Kansas for fuel); mortgage debts and interest are accumulating on them, and they are on the verge of ruin and bankruptcy. The laborers of the country, who are among my best customers, have had a hard time, having had work only part of the year at

poor wages; under the present rate of duty I am only allowed to charge 50 per cent. in excess of what they could buy them for in a market where there was fair competition. The business no longer is profitable to me. I am running it at a constant loss. I only run it for humanity's sake, to give the poor workingmen employment. The average duty should be 75 per cent."

"Mr. McKINLEY. Let the duty be fixed at 75 per cent. We are not 'so much concerned about the prices of the articles we consume as we have been to encourage a system of home protection,' etc. Mr. BUTTERWORTH is certainly mistaken when he says 'we must listen with caution to certain producers in America who are clamoring for more ample protection, for in point of fact the output of their shops, mills, etc., costs them less than the same articles under the same circumstances would cost the producers of any country upon earth.'"

[Exit Monopolist.

SCENE 2.—*In the corridor of the Capitol.*

"CONSUMER. How do you do? I have been a hard-working man all my life; have never seen the Capitol of my country. I learned that all the rich manufacturers of the country visited the rooms of the Committee on Ways and Means; I thought I would drop in and hear what they had to say about the tariff, a subject about which my neighbors have been talking so much lately. I heard you talking upon that subject."

"MONOPOLIST. I am glad to see you. I was here looking after the interests of the laboring and agricultural people of the country."

"CONSUMER. Yes, sir; the agricultural and laboring classes in my section of the country are faring very badly."

"MONOPOLIST. I am very much concerned about their condition."

"CONSUMER. Who are all these people in the committee-rooms wearing fine clothes, with diamonds glistening in their shirt fronts and carrying gold-headed canes?"

"MONOPOLIST. They were the manufacturers, the friends of the laboring and agricultural people of the country."

"CONSUMER. Do they go there often?"

"MONOPOLIST. Oh, yes; every session of Congress."

"CONSUMER. They must be very kind to give our interests so much attention. I heard you say that your products are only protected to the extent of 50 per cent. against foreign importations. For what purpose is this protection given you?"

"MONOPOLIST. To cheapen my goods to you and other consumers."

"CONSUMER. When you sell your goods for a price equal to the price of the foreign product and duty added, does the Government get that 50 per cent. for revenue?"

"MONOPOLIST. No—let—me—see. That cheapens the article to the consumers."

"CONSUMER. The Government gets nothing from this transaction by way of revenue, yet you want the duty increased. How is this?"

"MONOPOLIST. You see it is to cheapen all the articles I manufacture to the consumers, because just as soon as we can shut out all foreign competition the American manufacturers will at once get into a rivalry as to who will sell the cheapest, and goods will be sold cheaper than ever before. This is what the manufacturers want to see done. They are humanitarians."

"CONSUMER. Will the increase of the duty on farm products increase their value?"

"MONOPOLIST. It certainly will, as Mr. McKinley is looking out for the interest of the farmer especially. He says: 'That there is widespread depression in this industry to-day can not be doubted. Every remedy within the scope of practical legislation known to your (his) committee has been recommended in the proposed measure to meet the urgent requirements of the situation.'"

"CONSUMER. If the tariff will cheapen the goods you manufacture, how is it that to levy tariff duties on farm products will increase their market value?"

"MONOPOLIST. You ask me a difficult question to answer, and as the poor laboring men, for whose sole benefit I am operating my mills need my presence, I beg you to excuse me."

"CONSUMER. My disinterested friend, I see through it all. The consumers are paying you large sums, not a cent of which reaches the Treasury of the United States. You claim to me that you want to sell your product to the consumer as cheaply as possible, notwithstanding I heard you asking the committee to enable you to increase your *price*. Not a farmer or laboring man was to be seen about that committee-room. You claim the farmers are being cared for by the Committee on Ways and Means. I can now see what Mr. BUTTERWORTH meant when he said, 'Can it be posible that florid rhetoric can conceal from the farmer the utter want of bait on that * * * hook? I shall return to my home and tell my neighbors that tariff is a tax and to beware of their professed friends. I shall advise them never to vote for a party which always legislates in our interest at the request of *such friends*.'"

Should one who had never heard of a protective tariff and its effects be transplanted to the presence of the zealous advocates in their appeals for the system as now proposed, he would think except for it that spring-time in all her loveliness would never smile again; that the flowers would never bloom in their beauty and fragrance; that the trees would never put forth their foliage; that the rivulets that trickle down the mountain side would cease to flow; that the great rivers would not continue to pour their freshness into the salt seas; that seed-time and harvest would be no more, and that Egyptian darkness, ruin, and despair would take possession of the uttermost parts of the earth.

Who is it that appears before committees of Congress, saying that high duties be retained or increased? Is it the man who, from early dawn to setting sun, labors on the farm? Is it the man who pushes the plane from morn till night? Is it the brawny smith? Is it the daily laborer in the unprotected avocations of life? Is it that class of laborers who are employed by some of the favored few in their mining and manufacturing establishments, and who live in their little cabins in penury and want, engaged in ceaseless and unremitting toil, never able to better their condition, whose lives are begun and ended that the riches of their employers might be increased?

No, it is none of these laborers who appear before that committee. It is the lordly nabob who lives in a magnificent palace, built by the skilled architect on the most approved plan, the interior decorated and upholstered in the richest velvets, the walls adorned by the paintings of the masters, exciting the admiration and envy of the potentates of the Old World, and only rivaled in beauty and grandeur by Oriental magnificence or the Alhambra in the days of the Moor. It is the men who have grown rich under and by virtue of the laws of our country which favor the few at the expense of the many. They crowd the committee room. They urge in and out of season that Congress grant their demands. They contend that they are running their establishments at a loss; that ruin stares them in the face; that their great concern is for them to be enabled to operate their establishments for the benefit of the "poor laborers" of this country. They say they want their duties to remain as they are or increased, so that they can compete in the markets of their country with the manufacturers of other countries who bring their goods here for sale.

If their statements be true, then their evident purpose is to be enabled to charge more for their goods than they would if they were brought in competition with the foreign article. In other words the domestic article costs the consumer the amount of the foreign article with the duty added.

How is it that with any degree of honesty and fairness it can be claimed by these same gentlemen, when the consumer complains at the excessive price, that they sell it to the consumer cheaper by reason of the duty; in other words, claim that the tariff duty cheapens the article?

If it did cheapen the articles to the consumer, not a mother's son of them would ever ask that duty be imposed. Were this true, they would with one accord ask that the duty be removed.

The annual report of the Comptroller of the Currency to the Fifty-first Congress furnishes some very interesting information on the distribution of money in the country. It contains a table showing the amount of capital surplus, undivided profits, and individual deposits in banks of all kinds for all the States and Territories of the United States.

I give a compendium of the table in the following statement. Capital, deposits, etc., in the nine manufacturing States:

Maine	$71,516,000
New Hampshire	79,281,000
Vermont	36,000,000
Massachusetts	691,000,000
Rhode Island	113,448,000
Connecticut	$188,316,000
New York	1,585,800,000
New Jersey	104,367,000
Pennsylvania	508,567,000
Total	3,378,295,000
All other States and Territories	1,823,376,000
Population of the nine manufacturing States	17,000,000
Population of all other States and Territories	47,000,000
Per capita in the manufacturing States	$198
Per capita in other States and Territories	$40

You will observe that protected manufacturing has given the nine States named control of the banks, banking power, and money of the country. These States have about one-fourth of the population of the country, but they own more than three-fifths of the banking capital and deposits. The per capita is $198 for them, while the other States and Territories have only $40.

Massachusetts (having $691,154,000 in capital, surplus, undivided profits, and individual deposits in banks) has more than the eight States of Indiana, Michigan, Wisconsin, Iowa, Minnesota, Kansas, Nebraska, Missouri, and Colorado put together; New Hampshire, with a population of only 381,000, has as much ($79,281,762) as the two States of Indiana ($63,852,000) and North Carolina ($12,160,000), with an aggregate population of 4,000,000; and Rhode Island, with a population of only 343,000, has ($113,448,036) more than Georgia ($27,299,000), South Carolina ($12,000,000), Alabama ($15,600,000), Mississippi ($10,000,000), Louisiana ($29,000,000), and West Virginia ($8,831,000), with an aggregate population of 8,000,000.

This is not all. The capitalists of these nine States of the Northeast have vast sums loaned to the agriculturists of the West and South. The railroad bonds and mortgages in the West are owned principally by these capitalists. In traveling in the West you can seldom find a town where there are not several loan agents advertising that they

represent Eastern capitalists, with any sums desired to loan on farms. While much of the wealth of the people of the West is in their lands, yet 40 per cent. of them are under mortgages to the people of the manufacturing States. It requires a constant drain of money from the people of the West to pay the interest on the mortgage claims.

We forget the sacred interests of all the people which are intrusted to our care when we bestow our bounties upon a few of them at the expense of the others. These few can afford to have the "fat fried out of them" occasionally, if the laws of the country are so enacted that the "fat" with compound interest is restored. About 50 per cent. of the people of this country make their living by agricultural pursuits. It is far greater than all other industries combined. The farmers and the laborers of the country should by their votes say they are tired of paying unnecessary taxation to the Government and tribute to the favored few.

I am glad to note that such a sentiment is growing in the country. That side of the House in effect proclaims that, if an industry can not be profitably carried on, the rest of the people shall contribute money out of their pockets to make it so. It is further proposed to make the people contribute to the increase of wealth of certain manufacturers by giving them much more protection than is needed. Many of the Republicans are opposed to such a policy and are declaring their opposition to it.

In speaking of the effect of the tariff and the burdens on the necessaries of life, both imported and domestic, Joseph Medill, editor of the Chicago Tribune, the Republican organ of the Northwest, said:

Where, then, is the remedy from *the heavy burden of a 50 per cent. tax on the necessaries of life, both imported and domestic?* There is only one element or class able to remove it, and that Samson is sleeping in the lap of Delilah and will not awaken. I, of course, mean the farmers, *the plundered, unprotected, twenty-five million of goose-like farmers who permit themselves to be plucked of almost every feather by a hundred thousand "protected" monopolists.* So long as the simple-minded bucolic class do not "kick" off the burdens laid upon them Congress will not disturb the war taxes and the manufacturers' corresponding bounties. *While the plowmen act like Issachar's ass, and crouch between two burdens, both will be kept on their backs.* The fabricants live focalized in the cities, and plot and scheme for the promotion of their selfish interests and bring their united lobby influence to bear on members of Congress, whereas the farmers live isolated and scattered, and can't or don't combine in defense of their interests. Hence *they are unprotected, unrepresented, and unconscious of what keeps them poor.* They are captivated by the specious cry of "protection to American industry," *though they get none of it,* and of the value of the "protected" home markets to them, *as if protected monopolists eat any more than other men. Not until the verdant, imposed-upon agriculturists wake up to a realization of the confidence game being played upon them* will the war tariff be reduced or reformed; but when will they get their eyes open and act? In your life-time? Samson (the farmers) is under the spell of Delilah (the manufacturers), and his locks are shorn and he feels no strength to resist. Until the protected manufacturers themselves ask Congress to reduce their protection bounties in order to enable them to cheapen the processes of fabrication with a view to finding foreign markets for their surplus wares there will be no reduction of the high tariff and no relief from *the heavy burden it imposes on the fool farmers and oppressed consumers. But when will that be?*"

The voters of the country are constantly being humbugged by having it persistently sung in their ears that protection gives them a "home market."

This song continues to be sung in the face of the fact that there is not the slightest prospect that for generations to come, under any conceivable tariff, it would be possible to consume in this country the agricultural products which, if the farmer were to continue fairly prosperous, we must produce.

Under the highest tariff duties ever imposed by our laws, farm products have been depreciating in price. If for the past years these exorbitant duties have failed to give the farmers a market for the surplus products, when will it be done under such a system?

As I have heretofore stated, the prices of farm products in this country are regulated by the prices the surplus farm products command in foreign markets.

On this question I quote from Col. Donn Piatt:

OVERPRODUCTION MEANS UNDERCONSUMPTION.

If for overproduction we read underconsumption we shall be nearer the fact. However, for half a century we have been waiting for two things: one is the time when the infant industries will come of age and be able to stand alone; the other for that home market. We are no nearer either than when we began.

THE SWALLOW OF A HOME MARKET.

Way back in 1848 the writer of this was driven to a little calculation, since widely used, but which is ludicrously unanswerable. A home market means, of course, a consumption of what the farmer and planter have to sell. Very good. Now take from the census the class really protected. From this exclude farmers, merchants, mechanics, laborers, other than of mines and manufactures, and professional people—for they are not protected, nor are they dependent directly or indirectly on mines or manufactures.

Come down strictly to the people in whose behalf the Government interferes. Now select five leading States from the North and South and put to paper their surplus. It will be found that for the protected class to consume that surplus each man, woman, and child will have to eat each day twenty barrels of flour, masticate three hundred bushels of corn, get down twenty hogs, ten beef cattle, chew a hogshead of tobacco, and wear forty suits of woolen and cotton goods. The swallowing capacity of a protectionist is vast, but I hardly think it would accomplish this.

The demand for relief by the present condition of agriculture is most urgent. Continued progress in this country depends upon the prosperity of the farmer. At this point I quote with approval from Senator VOORHEES's great speech in the Senate of the United States, April 19, 1890. He said:

The ordinary traveler speeds on and on thousands of miles through farm lands, gazing listlessly at farm-houses and farm productions, thinking nothing of the vast fundamental lessons they teach, but looking eagerly forward to the problems, mysteries, and wealth contrivances of the crowded, speculating, stock-gambling city which he is rapidly approaching; and yet that city would wither and perish, shrivel back to a barren, naked beach; its wharves would rot, and its swollen corporations and haughty millionaires would dwindle into poverty-stric kenskeletons, no better fed than Pharaoh's lean kine, were it not that the fountains of all its wealth, support, and grandeur are kept open and running day and night by the cultivation of the soil in the great domain of agriculture.

Sir, I charge that the legislation of the Republican party on the question of taxation has been in the interest of the rich and opulent against the poorer classes. They swept away the tax on incomes, railroads, express and insurance companies, banks, bankers, manufacturers, etc., while they retained the tax on nearly all the necessaries of life. They repealed the tax on bankers, etc., and increased the amounts on farming and mechanical appliances. They took the tax from legacies, successions, etc., and in place of it taxed coffins, shrouds, and tombstones. In vindication of the truth of my charge and to show the amount of tax of which the wealth of the country was released, I read you a table.

Amounts of tax paid on incomes, banks, etc., and from which they have been released.

Year.	Character of tax.	Amount.
1866.....	Income tax	$72, 982, 150. 03
1868.....	On gross receipts express companies	671, 949. 62
1866.....	On gross receipts	.....
1867.....	On gross receipts of premiums or assessments made by insurance companies	1, 326, 014. 38
1866.....	On gross receipts on other than express companies, railroad, and insurance companies	1, 832, 490. 00
1882.....	On deposits of State and private banks and bankers	4, 096, 102. 45
1882.....	On capital of State banks and private banks and bankers	1, 136, 340. 87
1882.....	On deposits in national banks	5, 521, 927. 47
1877.....	On capital of national banks	660, 784. 00
1870.....	On legacies and successions	3, 091, 825. 00
1867.....	On articles of luxury	2, 115, 674. 00
1870.....	Stamp taxes	16, 544, 043. 00
1866.....	Special taxes, other than those relating to spirits, beer, and tobacco	14, 144, 418. 00
1870.....	Sales other than those of spirits, tobacco, wines, etc	8, 837, 396. 00
1866.....	Passports	81, 149. 00
1866.....	Tax on manufacturers, which was paid by capital	64, 827, 165. 70
	Total	205, 436, 886. 55

This tax was removed at a time when the Government was indebted billions of dollars.

My plea for a reduction of the tariff is not alone for the benefit of the farmer, but for the wage-worker, whatever may be his employment. Those who extract from earth her riches; those who convert it into implements which lighten the burdens of toil; those who delve into the earth for the fuel that saves us from suffering in winter; those who build our houses and the great cities; those who are engaged in building and operating the railroads and steam-ships, the messengers of commerce and communication; those who are engaged in any occupation of life which enables them to earn their living "in the sweat of their face" are as much entitled to our respect as those who occupy the high places of earth, the palaces, or the highest office in the gift of the people. This class of our fellow-citizens should not be robbed by excessive taxation; nor should the Government require them to contribute to the wealth of another class of our citizens.

Ours is a country of free institutions, where, however obscure and lowly may have been his birth, a man may obtain the highest place in the gift of the people. This is the grandest principle recognized by our institutions. All can not obtain the great places which are to be bestowed. They are limited in number. When a man seeks happiness and comfort as a wage-worker in any of the gainful occupations of life, why should the laws of his country burden him with the excessive taxation and at the same time compel him to contribute from his scanty wages to the wealthy that their riches may be increased?

The present measure is, in my opinion, the most radically wrong of any that have imposed burdens upon the people. It will make an increased necessity for the war, for tariff reform. It must be waged with vigor and with a determination that there shall be no peace until the removal of the injustice and inequality of the system. It may take time to accomplish this, as the party which favors it is intrenching itself in power with its utmost ability; it is disregarding the election of Representatives by their constituents and making the *election* by the House.

While the war may be long and a weary one, yet the hope that the right must prevail, that our efforts will result in the triumph of the people's cause over all the forces that can be arrayed against it, should cheer and sustain us. Victory will not only bring blessings to the present, but to coming generations, and enable our country to surpass all others in the race of progress.

The victory will be a glorious prize, worthy of every patriotic effort that shall be made to achieve it.

Men of action, men of might,
Are you ready for the fight?
Have you marked and trenched the ground
Where the din of arms must sound
Ere the victory can be crowned?

The Rivers and Harbors of California Neglected by Congress.

SPEECH

OF

HON. THOMAS J. CLUNIE,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 29, 1890.

The House being in Committee of the Whole and having under consideration the bill (H. R. 9486) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes—

Mr. CLUNIE said:

Mr. CHAIRMAN: I see by examining this bill that the words "deepening and improving Alviso Creek" have been omitted. I desire to offer an amendment which will cover this omission. In my remarks before the River and Harbor Committee I asked for an appropriation for a survey for a breakwater and harbor of refuge at Santa Cruz; also for surveys for Redwood and Alviso Creeks, with a view to straightening, deepening, and improving them in the interest of commerce. With the amendment herein proposed adopted these just demands in behalf of the Fifth district will have all been granted, for which my people will be forever grateful.

I also reminded the committee that while I represented the Fifth district, in common with my colleagues from California I desired to see every portion of my State, north, south, east, and west, recognized and receive the consideration to which our great and grand Commonwealth was justly entitled. I showed how insignificant had been the expenditure of money in our State as compared with a like area on the Atlantic seaboard. I read from statistics furnished by Hon. W. D. English, president of the California State board of harbor commissioners, the vast amount expended in improving the magnificent harbor of San Francisco, not one dollar of which was furnished by the General Government.

I recounted the paltry amounts that had been given us in the past, including the money appropriated for San Diego, San Pedro, Oakland, and Eureka Harbors. I showed the committee how unmindful Congress had been in the restoration and preservation of the great rivers of California, and instanced the Sacramento, San Joaquin, and Feather Rivers and their navigable tributaries. I showed them that the statements that hydraulic mining was still conducted in such a manner as to longer interfere with the navigation of these rivers were urged simply as a mere pretext to deny our just claims for appropriations to restore the navigation of these great highways of commerce.

I said then, and I repeat it now, it is not only the duty of the Government to restore the navigation of the rivers, but also to devise some plan whereby the great mining industries can be conducted without injury to navigation and ruin to the farmers. I showed how millions of dollars' worth of property had been destroyed and navigation ruined by mining débris filling the beds of our rivers, causing disastrous overflows, threatening the inundation of large and populous cities situated on the river banks, and even menacing the capital itself, the beautiful city of Sacramento, where my wife was born and where I grew to manhood.

By the indomitable will and untiring energy of the people of Sacramento and the expenditure of millions of money that city has been placed far above the angry and threatening waves of the Sacramento River, whose bed having been filled to a depth of 20 feet or more by mining débris, leaving no channel or bed, forms an inland sea, ruining hundreds of thousands of acres of the richest soil upon which the sun has ever shown. The same may be said of the city of Marysville, one of the most thriving cities in California; so it is with smaller towns along the rivers.

The commerce of the city of Stockton, the leading city of the great San Joaquin Valley, would be greatly improved, and millions of dollars' worth of property saved by a liberal expenditure of money in improving the navigation of the San Joaquin River. You can not begin these expenditures any too soon; every year's delay but increases the cost to the Government, whose plain duty it is to inaugurate the work of restoration at once. The miners have been reluctantly informed they could no longer work their mines purchased by them in good faith from the Government and in which $60,000,000 was invested.

The peaceful abandonment of this vast amount of property, which for years unmolested they have been permitted to enjoy and operate, is the grandest tribute that could be paid to the California miner. In the struggle in our State between the two conflicting interests, the mining and the farming, not a life was sacrificed, although at its conclusion $60,000,000 of property was practically destroyed.

Having worked these mines for years without let or hinderance on the part of the General Government, whose sole duty it was to protect navigable streams, and having made large investments on the strength of their supposed right to so continue, I ask you, in all fairness, have they not strong claims upon the Government? By your dereliction of duty you have permitted and, I might say, sanctioned the ruin of our navigable streams and the destruction of millions of dollars' worth of property belonging to our farmers and miners, and added to the people of the great Sacramento and San Joaquin Valleys an extra burden in the way of an increased cost for transportation for all their products by depriving them of the use of the rivers for the purposes of navigation.

You have put us off on one pretext or another until patience ceases to be a virtue. The farmers of my State are making no claim for the millions you have already caused them to lose. Now that hydraulic mining has ceased, they simply ask you to restore to them the navigation of the rivers over which you alone have jurisdiction, which by your negligence has been destroyed, and they will then take care of themselves. The miners' work, the gold they produced, added hundreds of millions of dollars to the material wealth of the country and saved the credit of the nation. You sold them the mines for the purpose of mining. They ask you to devise a plan whereby that industry may be carried on without injury to our rivers and without ruining the farmers of the Sacramento Valley, richer by far than the valley of the Nile.

They attempted to secure State legislation to that end. As a State senator in the senate of California I opposed it, because I felt it was the duty of the General Government to undertake the project. The work would then be done properly. Mining would be re-established under the careful scrutiny of the Government, our navigation restored, and the farmers made absolutely safe. If you are sincere in your desire to help the farmers, do something for them to cheapen transportation in the valleys of the Sacramento and San Joaquin, stop unnecessary taxation, and they will feel thankful. I have heard on this floor lots of talk about the poor farmers; that is about all they have received thus far. Action is what they want, not words. While you are assisting the industries of the country a few millions expended in behalf of our miners (who have added hundreds of millions of dollars to the country), to enable them to conduct their business without injury to others, would not be amiss. I shall vote for this bill because you have dealt fairly with my district. I am free to say I am not pleased with the way the committee has treated other portions of my State.

The amount for Oakland Harbor, if properly expended, will prove beneficial.

The appropriation for Humbolt Harbor should be at least $150,000; you have allowed but $80,000. The harbor at Wilmington gets the paltry sum of $34,000; $75,000 would not be too much. The appropriation for San Luis Obispo should have been double; $100,000 at least should have been set apart towards the construction of jetty on Zuñinga shoal. You should also have come to the relief of San Francisco in the construction of the sea-wall, an improvement made in the interest of the commerce of the world.

At least a million of dollars should have been appropriated for the restoration of the navigation of our rivers, work to be commenced as soon as the report of the engineers was made. Instead of doing this you have compelled us to wait a period of two years longer; in the mean time the work of destruction goes steadily on, increasing the cost of final restoration. Five distinguished citizens of our State, sent as a committee to ask you for $3,000,000 for our rivers, showing its absolute necessity, presenting as clear a case as ever was called to the attention of any committee of Congress, after weeks of work and waiting, were informed that a new survey would have to be made of the Sacramento River, which meant another indefinite postponement.

We will never cease our appeals in these matters until the Government does its plain duty to our State. California should have had a member on this committee. Our neighboring State, through the influence of the distinguished gentleman from Oregon [Mr. HERMANN], has received about $1,500,000, while California, with her long line of seacoast, her magnificent harbors, and her beautiful rivers, so justly entitled to liberal appropriations, gets scarcely enough to preserve, much less carry on, necessary projected improvements. You are but postponing the day of settlement. We will present these just demands at every session of Congress until you do your duty by our great Commonwealth.

I speak, Mr. Chairman, for a mighty State. Our representation should be double its present number. The southern portion of our State has but one Representative on this floor, when it should have two. They have south of the Tehichipa Range territory and population enough for a State. My colleague [Mr. VANDEVER], the distinguished gentleman representing Southern California, is desirous of seceding from Northern and Central California, and introduced a bill for that purpose. I am more than anxious to see Southern California recognized to secure appropriations for her harbors, to see magnificent public buildings erected in the southern metropolis of California, the city of Los Angeles, and the rapidly growing commercial city of San Diego, and other cities in Southern California.

When it comes to dividing the Golden State, the pride of our glorious Union, to see that grand Commonwealth broken in twain, the mere possibility of losing one acre of that great and mighty State fills my heart with sadness. I love California and I love every inch of it. I feel as

much at home in Los Angeles, San Diego, San Bernadino, or Fresno as I do in Northern or Central California.

Having secured all we asked for in the Fifth district, which includes a portion of San Francisco and the three counties of San Mateo, Santa Clara, and Santa Cruz, through which stretch the beautiful Santa Clara Valley, the paradise of California, and the Pájaro Valley, one of the most fertile in our State, in which is situated the thriving city of Watsonville, where is located the large sugar-beet factory of Col. Claus Spreckels—the land surrounding the city produces the finest sugar beets grown in the United States—I have taken the liberty of calling your attention to other portions of my State, sadly neglected and justly entitled to liberal expenditures on the part of the General Government. In answer to the assertion that I have no rivers in my district and that it is a foolish expenditure of public money to attempt to make navigable rivers out of creeks, I desire to say that Redwood Creek, so called, is an arm of the bay extending to Redwood City, which is a thriving town and the county seat of San Mateo County. Notwithstanding the difficulties of navigation caused by the neglect of the Government to cut off the bends in Redwood Creek, the commerce has been steadily increasing.

When the work contemplated by my bill, which you have kindly incorporated in the river and harbor bill, is completed, it will afford the people of Redwood City and the surrounding country water communication with the outside world, which will prove a great benefit to them. The same can be said of Alviso Harbor, which is another arm of the bay extending to Alviso, in Santa Clara County.

The Board of Trade of the enterprising city of San José, headed by its distinguished president, Hon. D. B. Moody, weary of the inaction of Congress and despairing of Government aid to which they are justly entitled, have organized a stock company to do the work of Congress. The improvement of this arm of the bay will afford an outlet to San Francisco and elsewhere for the products of this richest of all valleys, the Santa Clara Valley. By the end of this century I expect to see at least 100,000 people in and around the garden city of San José, the commercial center of the valley. Five acres of land in this valley will afford a man and his family a good living.

In relation to the breakwater at Santa Cruz, I will say it is the only harbor between San Francisco and the southern portion of our State. A reasonable amount expended will make it a place of safety for vessels in case of a storm. Again, the business of Santa Cruz is rapidly increasing. The country is rich in a variety of resources; the land is fertile. Within the last few years important industries have sprung into existence, which have greatly increased the trade and commerce of the beautiful city of Santa Cruz and the surrounding county. A breakwater and harbor of refuge will make this city, now famous the world over as a delightful watering-place, an important commercial city and increase the already rapid growth of country tributary to the prospective harbor. I thank you for what you have very properly done for my district. My people justly deserved it.

The old pioneers of California endured all the hardships, privations, and misery, I might say, of our Revolutionary sires in order that the Golden State might be added to the sisterhood of the Republic. It now forms the western boundary of your finished continent. For forty years we have patiently waited. We willingly contributed to the money of the country $1,200,000,000 in gold, and pay to the Government a revenue of sixteen millions annually. We feel grateful for what you have done for us this session in the way of appropriations for fortifications and public buildings. We invite your attention to the neglected condition of our rivers and harbors, and earnestly appeal to you for justice.

The Mississippi River.

The constitutional power of Congress to make appropriations to restrain its flood waters, as well as to improve its navigation. The obligation of the Federal Government to do both.

SPEECH

OF

HON. NEWTON C. BLANCHARD.

OF LOUISIANA.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 22, 1890.

The House being in Committee of the Whole on the state of the Union and having under consideration the bill (H. R. 9486) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes—

Mr. BLANCHARD said:

Mr. CHAIRMAN: If any gentleman desires to speak in opposition to the bill under consideration or to the Mississippi River appropriation in it, I would be glad to yield the floor to such gentleman now, with the understanding that I am to follow after he concludes. If no gentleman desires to speak, then I would ask the indulgence of the House to submit some observations on the Mississippi River and the constitutional power and duty of Congress in reference to it.

Mr. MCADOO. Mr. Chairman, I would like to ask the gentleman from Louisiana a question with reference to a charge that was made in a newspaper published in Jersey City, in my district, with reference to this river and harbor bill. I think there must be some misapprehension about the facts, and I desire to ask the gentleman about it.

Mr. BLANCHARD. I yield to the gentleman from New Jersey for a question.

Mr. MCADOO. I will read an extract from the statement contained in the newspaper referred to:

The bill, unlike previous river and harbor appropriation bills, contains no provision whatever for the work being done by contract, no provision for advertising for bids, no provision for any competition for the work, no limitation of the discretionary power of the War Department in the expenditure of more than $20,000,000. The various jobs which are to consume this vast sum of money may be given by the Secretary of War to any person, no matter whether competent or incompetent, responsible or irresponsible, and without any opportunity afforded to competent and responsible parties to undertake the Government work. As a matter of fact and as everybody knows who is at all familiar with the way in which these things are done, the distribution of this work, the actual administration and control of it all, falls into the hands of the subordinates of the Secretary of War, who are regular-army officers, and they do whatever they please with the work and the money.

The same statement has been sent to several other members of the House, and I had my attention called to it at the time it appeared in this newspaper. I procured a copy of the existing law and compared it with this bill, and I could see no material difference between them in these respects; but I would like to have from the gentleman from Louisiana, the former chairman of the Committee on Rivers and Harbors, a somewhat official avowal as to whether the statement is true or not.

Mr. BLANCHARD. As I caught the averments of the statement read by the gentleman from New Jersey [Mr. MCADOO] I would state unhesitatingly that there is not a particle of truth in any of them.

The money appropriated for river and harbor improvements by this bill, as well as by former bills, is directly under the control in specific terms of the Secretary of War, to be expended under his direction, and all the usual safeguards are thrown around its expenditure. As regards the letting out of the works under contract, there is no inhibition of this in the bill. The work contemplated by these appropriations can be done under contract or under the immediate supervision of the army engineers, as the War Department and the Chief of Engineers may deem most advisable for the interests of the Government.

As to there being jobs in the river and harbor bill, that allegation is made every time a river and harbor bill is presented to Congress for consideration. It is an "old chestnut," which should not disturb the mind of any gentleman, no matter if charged, as it sometimes is, by reputable newspapers.

I am here to state, after an experience of some years of service upon the River and Harbor Committee of the House, that in my opinion no money is expended from which the people derive greater benefit than the money expended in the improvement of the rivers and harbors of the country. You may talk about interstate-commerce laws to regulate the freight charges of railroads, but I believe a judicious river and harbor bill, improving the navigation of our water ways, will do more to solve that problem than a dozen interstate-commerce laws.

Another charge in the newspaper statement referred to by my friend from New Jersey is that this bill differs from previous river and harbor bills in certain material respects. There is nothing in this bill dissimilar from previous river and harbor bills. The bill has been constructed upon the same lines with former bills of a similar character.

But, Mr. Chairman, I rose more particularly to address the House in respect to the Mississippi River.

Mr. ROGERS. Mr. Chairman, I would like to put a question to the gentleman from Louisiana [Mr. BLANCHARD].

Mr. BUCHANAN, of New Jersey. Will it interrupt the gentleman from Louisiana if I ask him now a question on the line he has been discussing?

Mr. BLANCHARD. I yield to the gentleman from New Jersey.

The CHAIRMAN. The gentleman from Arkansas [Mr. ROGERS] addressed the Chair.

Mr. BLANCHARD. Then I yield first to the gentleman from Arkansas, stating to the gentleman from New Jersey that I will yield to him next.

Mr. ROGERS. I simply wished at this time to inquire of the gentleman from Louisiana whether it would be inconvenient for him to divert his attention a moment from the Mississippi River to some other matters of a more local nature before making his remarks on that river. But if he prefers I will desist at this time and address him later.

Mr. BLANCHARD. I would prefer, if it suits the gentleman from Arkansas, to go on for awhile in the submission of such observations as I may care to submit in reference to the Mississippi River appropriation.

I now yield for a moment to the gentleman from New Jersey [Mr. BUCHANAN].

Mr. BUCHANAN, of New Jersey. I wish to ask the gentleman this

question: In the absence of any provision in this bill as to advertising for contracts, etc., would not the provisions of the general statute apply?

Mr. BLANCHARD. They would undoubtedly.

Mr. Chairman, the fact that a great and disastrous flood has recently occurred in the lower valley of the Mississippi River is a sufficient excuse, if excuse were needed, for taking a little time in calling the attention of the House and the country to the Mississippi River. That great river has a way periodically of overflowing its banks, to the great destruction of the property of our citizens and in many instances the destruction of human lives. It is time that the country, time that the Congress of the United States should wake up to the idea that something must be done to harness that great river in order that it may afford not only a safe highway to the commerce and trade of the country, but that there may be a safe and easy passage of its waters to the Gulf. The time has come for the popular sentiment of the country to make itself heard and felt in support of the proposition that the Government of the United States ought to lend its helping hand, not only in the line of the improvement of the channel navigation of the river, but also to control the river with respect to preventing its floods.

Mr. Chairman, the Mississippi River is the great sewer of our country. It drains the waters that fall upon more than twenty-five States of this Union. Even the rain that falls upon the southern portion of the great Empire State of New York finds its way to the Gulf of Mexico through the soil of the State of Louisiana. Steam-boats have penetrated as far as the town of Olean, in the State of New York, away up on the Alleghany River; and beyond it a portion of the rainfall in the northeastern section of the Union pours into the Alleghany River, which in turn pours into the Ohio, which in turn empties into the Mississippi, and then into the Gulf. And from that point, away to the westward, far beyond Fort Benton in Montana—ay, to the tops of the Rocky Mountains—this great drainage basin extends. From the Canadian line on the north to the sun-kissed waves of the Mexican Gulf on the south, the rainfall of nearly one-half the entire northern portion of the American continent finds its way through the State of Louisiana to the sea. We wish you gentlemen who represent the mountain and hill districts of the Northeast, the prairie districts of the North and Northwest, to lend us your helping hand in order that the Mississippi River may safely discharge your surplus waters through the soil of the devoted State of Louisiana.

The Mississippi River, Mr. Chairman, is too great a national feature of our country to be handled by any State or aggregation of States. No other power than that of the National Government is potential enough to take it in hand and make it perform its twofold function of affording a national highway for the commerce of the Republic and of discharging its flood-waters safely into the Gulf of Mexico. If this river drained any one of the great nations of Europe it would long since have had dikes or levees erected along its banks of sufficient height and strength to restrain its floods.

The river is the property of the Federal Government. It is its property in the sense that its jurisdiction over it is paramount to that of the States which border upon it. The States can not say what shall be done with the river or to it, nor how it shall be treated. They are not permitted to divert it or change its course, nor to injure or interfere with its navigation.

I will dwell briefly, Mr. Chairman, on that idea. Suppose Congress should withhold its hand and its money and do nothing towards restraining the flood waters of the river and preventing inundations. In default of such action by the General Government the right of self-preservation arises, and the States and individuals in the valley are themselves entitled to take the matter in hand and resort to such means as they may devise to control the flood discharge of the river for their own protection and for the protection of their property. Suppose, then, that the dwellers in the lower valley of the river, despairing of Congressional action, should resort to the plan of opening innumerable outlets all along the line of the river in every direction available, on the idea advanced by some, but denied by me, that outlets might contribute to preventing disastrous floods. They might so dissipate and scatter the waters of the river by means of these outlets that the navigable character of the great stream might be seriously impaired, if not entirely lost or destroyed. Suppose they were attempting such a thing, would not the strong arm of the Federal Government be extended to prevent it? Would not Congress say "You shall not construct works or so treat the Mississippi River as to destroy its navigable character?" Undoubtedly. When Mr. Jefferson acquired the territory known as Louisiana from France the great and controlling idea actuating that acquisition was that the American Union should control the territory through which flows the Mississippi River, in order that the river might be forever open as a great highway for the commerce of the world.

The United States, then, is interested in preserving the navigable character of the river, and must necessarily check, by legislation or other means, the construction of works that may be designed to destroy or which might have the effect of destroying its navigation. But could the Government do this without, in justice and fairness, assuming the obligation itself of so curbing and restraining the river as to give a safe and easy discharge of its flood waters? The question admits of but one answer. It could not.

Mr. Chairman, what the Federal Government has heretofore done in respect to appropriations for the Mississippi River has been based entirely upon the idea that the money must be used exclusively for the channel improvement of the river. The Government has not expended a dollar except upon the idea that the improvement of the navigation of the river was the direct object. It is true that some $3,000,000 have been expended in ten years by the Mississippi River Commission in co-operation with the States and levee boards in levee-building, but it has been upon the idea, held by a majority of the river commission, that levee-building, which means artificial walls to trail down the flood waters of the river between, is a necessary adjunct to channel improvement. It is time for Congress to go a step further: not only to appropriate money for the purpose of improving the navigation of the river, but also directly for the purpose of preventing its floods; and it is to advocate that idea that I have taken the floor to-day.

Appropriations made by Congress, Mr. Chairman, for this river should not be limited and restricted to works essential alone for the channel navigation of the river. Congress ought to be generous and liberal enough to go further and make appropriations for the lower river, from Cairo to the Gulf, for the object of preventing floods as well as of improving navigation. It has been doubted, sir, in many quarters that there is constitutional authority in Congress to do this. The constitutional authority to appropriate money for purposes of the channel improvement of the river to benefit navigation is not denied under the power in the Constitution to regulate commerce; but it is denied by some that there is any warrant in the Constitution for Congress to go further and appropriate money for the direct purpose of restraining the flood waters of the river.

Mr. OATES. Mr. Chairman, will the gentleman permit an interruption?

Mr. BLANCHARD. Certainly.

Mr. OATES. What would be the difference between appropriating money to improve the channel of the river by other means than that of levees, and appropriating it to improve the river by building levees, if that was, in part, the plan adopted for the improvement of the river?

Mr. BLANCHARD. There would be no difference. The money heretofore expended on the river for the purpose of levee-building to restrain the floods has been based entirely upon the idea, as I have said, that levee-building is a necessary adjunct to channel improvement. But, Mr. Chairman, the restrictive clauses, always attached to the appropriation for the Lower Mississippi River, have fettered the operations of the Mississippi River Commission and prevented them from going as far as they otherwise would go in levee-building, especially at points along the river where levee-construction might have no bearing upon channel improvement, but which was necessary and desirable to prevent inundation.

Mr. Chairman, while somewhat of a strict constructionist of the Constitution, I have no trouble in deducing authority from that instrument justifying Congress in appropriating money for the twofold purpose of improving the navigation of the river and of restraining its flood waters.

Mr. HILL. Will the gentleman yield for a question, as I want to clearly understand the matter?

Mr. BLANCHARD. Certainly.

Mr. HILL. As I understand the argument of the gentleman, it is to this effect, that there are stretches or portions of the navigable part of the river that do not need these embankments or levees for the purpose of navigation.

Mr. BLANCHARD. There may be such stretches in the river.

Mr. HILL. But they do need them for the purpose of protecting the settlers on either side on the land?

Mr. BLANCHARD. Need them to prevent destructive floods. Under the language which is embodied in this bill, and which has always obtained, in respect to the appropriation for the Mississippi River, levees can not be erected except as aids to navigation.

Now, I think it is time for Congress to omit this restrictive clause from appropriations intended for the Mississippi River. That language is this:

> Improving Mississippi River from Head of the Passes to the mouth of the Ohio River, including salaries and traveling expenses of the Mississippi River Commission: Continuing improvement, $2,000,000, which sum shall be expended, under direction of the Secretary of War, in accordance with the plans, specifications, and recommendations of the Mississippi River Commission: *Provided*, That no portion of this appropriation shall be expended to repair or build levees for the purpose of reclaiming lands or preventing injury to lands or private property by overflows: *Provided, however*, That the commission is authorized to repair and build levees, if in their judgment it should be done, as part of their plans to afford ease and safety to the navigation and commerce of the river and to deepen the channel.

This language prohibits the expenditure of money for levee construction except as part of the plan of the river commission to afford ease and safety to the navigation and commerce of the river and to deepen the channel. It will be seen that it does not authorize the expenditure of money to prevent the disastrous floods which periodically occur upon the river. I am appealing to Congress to go beyond that. The very

act creating the Mississippi River Commission contemplates that Congress shall go beyond it. The fourth section of that act is as follows:

That it shall be the duty of said commission to take into consideration and mature such plan or plans and estimates as will correct, permanently locate, and deepen the channel and protect the banks of the Mississippi River, improve and give ease and safety to the navigation thereof, prevent disastrous floods, and promote and facilitate commerce, trade, and the postal service.

Heretofore, Congress has only carried out in part the letter and spirit of that act. I am pleading that it be now carried out in full. The recent overflow and past overflows have demonstrated that the piecemeal system of levees, which the impoverished States of the South have been enabled only to construct, is not sufficient to prevent the inundations of the great river. A complete levee system is the only means of restraining the flood waters of the river. The trouble with the present levees on the river is that they have not been constructed under any general and continuous system. The Federal Government alone has the power and means to do this. The present levees have been built by piecemeal by the States, local levee boards, and individuals, as best they could.

The people of the State of Louisiana tax themselves in two ways to build levees: one is by a direct State tax, the money raised from which is disbursed under the authority of the State government; the other by a levee district tax. Under the constitution of Louisiana the Legislature of the State is authorized to subdivide the alluvial parts of the State into levee districts with taxing power, and that has been done. Each of these districts levies a tax upon all the taxable property within its limits, and the money thus raised is expended in constructing or repairing levees by the district levee boards. But the State and levee district boards are confined to the territorial limits of the State. They can not go beyond the limits of the State, into the States north of us, and continue the system of levees, even if they had the means to do so. The State of Arkansas has no levee districts, and no tax is levied in that State generally for the construction and repair of levees. In the State of Mississippi they have levee-taxing districts. But the moneys raised by Louisiana and Mississippi and their levee-district boards are not expended on a continuous and connected system of levees constructed on scientific principles, and no power can undertake the construction of such a connected systematic line of levees except the Government of the United States. Hence the necessity and advisability of the Government of the United States undertaking the work.

I said awhile ago, Mr. Chairman, that there was ample constitutional authority for Congress to do this. Let us now examine a little into that question.

INVASION OF AN ENEMY.

An enemy invades us. Our people fly to arms. Points of defense are strengthened. The eye of strategy selects other points to be fortified and defended. Congress votes the money, and immediately long lines of breastworks guard our frontier where attack is apprehended.

But, sir, here is an enemy which comes in the form of raging waters, sweeping down in resistless might from the North upon the sunny valleys of the West and South, bringing devastation, destruction, death. He raids through the country, rioting in ruin, and millions, panic-stricken, flee at his approach, leaving their all to be swallowed up in the wild vortex of destruction. The wasting presence lasts but a couple of months, but in that time there has been a destruction of property, present and prospective, equal in value to many millions of dollars.

Mr. Chairman, it is the duty of Congress to say to these people who have so recently experienced the disasters of inundation that, even as we would erect breastworks on our frontier to repel the threatened invasion of a warlike foe, so will we build levees along the great river to beat back its surging waters, threatening destruction well-nigh equal to what a human enemy could inflict.

But, it may be argued, the delegation of power to Congress to "repel invasions," "to protect the States against invasion," has reference to a human foe. I grant that that is the usual and ordinary meaning or significance given to the term, and it is likely that the framers of the Constitution had in contemplation a human foe when they inserted that clause. The connection, too, in which it is used gives additional weight to that argument. But still the power conferred by the words "repel invasions," by the clause "The United States * * * shall protect each of them (the States) against invasion," is a general one, and might well and reasonably include defending the country against danger or harm of any kind.

Suppose, sir, some monster, like the fabled dragon of ancient times, were to rise up out of the deep and invade the land, spreading devastation, destruction, pestilence, and death around him. Does any one doubt the constitutional power and duty of Congress to "repel" his invasion, to bring the strong arm of the Government to bear against him, to make war upon, and kill and destroy him? I think not. And yet, sir, there are gentlemen on this floor who deny to Congress the power to "repel" the invasion of waters, to throttle this monster of inundation whose periodical visitation of the fairest portion of our country is but the recurring occasion for a perfect carnival of waste, ruin, and rapine.

It is the duty of Congress to protect the States or any one of them against invasion. By "invasion" is meant harm or danger to the Government, the people, the country, threatened by an enemy. An enemy is only to be dreaded because of the suffering, destruction, and death he may inflict. Judged by that standard, was not the recent great overflow in the alluvial basin of the Mississippi "an enemy?" None will deny its potency as an engine of suffering, destruction, and death. Why, then, can not Congress under this clause of the Constitution protect the Valley States against a recurrence of this "invasion" of waters?

Again, it is made the constitutional duty of Congress to protect each of the States, under certain conditions, against "domestic violence." Why not against the violence of domestic waters? I say "domestic waters" for the reason that it is a fact that all the water which seeks an outlet to the sea through the Mississippi is the drainage of the territory of the United States, and in that sense is domestic, as pertaining to home; not foreign.

REGULATING THE PROPERTY OF THE UNITED STATES.

The Constitution (Article IV, section 3) provides—

That Congress shall have power to dispose of and make all needful rules and regulations respecting the territory or other property belonging to the United States.

In the Gratiot case (14 Peters, 537) the Supreme Court of the United States, construing the above clause, said:

The term "territory" as here used is merely descriptive of one kind of property and is equivalent to the word "lands." And Congress has the same power over it as over any other property belonging to the United States; and this power is vested in Congress without limitation.

In the case of McCulloch *vs.* Maryland (4 Wheaton, 422) the Chief-Justice, as the organ of the court, speaking of this clause of the Constitution and the powers of Congress growing out of it, applies it to Territorial governments and says all admit their constitutionality.

Story says (volume 2, page 228):

No one has ever doubted the authority of Congress to erect Territorial governments within the territory of the United States, under the general language of the clause "to make all needful rules and regulations."

He continues:

The power is not confined to the territory of the United States, but extends to "other property belonging to the United States;" so that it may be applied to the due regulation of all other personal and real property rightfully belonging to the United States. And so it has been constantly understood and acted on.

Now, then, if the Mississippi is the property of the General Government, it is as much subject to "regulation" as the landed property or territory of the United States. And this power to regulate includes curbing, controlling, restraining the river within its own proper metes and bounds by means of levees, dikes, or other works, as Congress may, in its discretion, see proper to adopt; for, in the language of the Gratiot case, "this power is vested in Congress without limitation."

But it may be denied that the Mississippi River is the property of the United States in the sense that Congress may, under the power to regulate, direct the construction of works to restrain its waters within their proper channel. Mr. Chairman, the Mississippi River is a great

NATIONAL HIGHWAY.

It belongs as much to the United States as would a great trunk-line of railroad that had been constructed, stocked, and was being operated by the Government. In the act of Congress enabling the people of Louisiana to form a constitution there is a provision that the State convention shall "pass an ordinance providing that the River Mississippi and the navigable rivers and waters leading into the same or into the Gulf of Mexico shall be common highways and forever free, as well to the inhabitants of the said State as to other citizens of the United States." And in the act for the admission of Louisiana the above provision as to the navigation of the Mississippi is made one of the fundamental conditions of the admission. Similar conditions were likewise imposed upon the admission of the States of Mississippi, Missouri, and Arkansas.

In the case of The United States *vs.* The New Bedford Bridge (Woodbury & Minot's Reports, 421), Mr. Justice Woodbury used the following language:

For purposes of foreign commerce and of that from State to State, the navigable rivers of the whole country seem to me to be within the jurisdiction of the General Government, with all the powers over them for such purposes (whenever they choose to exercise them) which existed previously in the States or now exist with Parliament in England.

In the case of Corfield *vs.* Coryell (4 Washington Circuit Court Reports, 379), Mr. Justice Washington said:

The grant to Congress to regulate commerce on the navigable waters belonging to the several States renders those waters the public property of the United States for all purposes of navigation and commercial intercourse, subject only to Congressional regulation.

And in the case of Gilman *vs.* Philadephia (3 Wallace, 724), it was said:

The power to regulate commerce comprehends the control for that purpose, and to the extent necessary, of all the navigable waters of the United States which are accessible from a State other than those in which they lie. For this purpose they are the public property of the nation and subject to all the requisite legislation of Congress. This necessarily includes the power to keep them open and free from any obstruction to their navigation, interposed by the States or otherwise to remove such obstructions when they exist, and to provide by such sanctions as they may deem proper against the recurrence of the evil and for the punishment of offenders. For these purposes Congress possesses all the powers which existed in the States before the adoption of the national Constitution, and which have always existed in the Parliament in England. It is for Congress to determine when its full power shall be brought into activity and as to the regulations and sanctions which shall be provided.

It can not, therefore, be doubted that the river, for all practical purposes, is the property of the General Government and subject to its "regulation," whether as respects prescribing rules for governing the commerce and traffic which make use of it as a highway, or as respects controlling it in the sense of denying the dominion and jurisdiction of the States or other powers, or as respects preventing the river from rising up out of its customary channel and spreading over the country. It is true the banks of the river and soil under the river belong respectively to the owners of the soil adjacent to the river, but no one will deny to the General Government the right to make use of the banks and soil in the erection of the works requisite to the proper "regulation" of the river for all useful purposes. Should, however, this right be questioned there can be no doubt of the power of the Government in the exercise of the prerogative of eminent domain, to expropriate whatever may be needed for the proper "regulation" of the river.

The law on this subject is universally recognized, as laid down by Bynkershoek, that "this eminent domain may be lawfully exercised whenever public necessity or public utility requires it."

It may be objected by some, Mr. Chairman, that should the Federal Government provide the ways and means for the construction of a levee system for the protection of the alluvial valley of the river, and as an adjunct to the improvement of its navigation, inasmuch as these levees will have to be constructed on the banks over which the jurisdiction of the States respectively extends, contention may arise between the State government and the National Government on this point; that the State government might deny the right of the National Government to control the levees, to protect them after constructing them, and that the question thus raised may become a fruitful source of trouble between the sovereignty vested in the State and that reposing in the Federal Government.

I am not one of those who apprehend that any trouble on this score would ever arise, but as a precautionary measure Congress might, if it sees fit, after having determined upon a levee system, enact that there should be no expenditure of money for such purpose within the territorial limits of a State until the State shall have ceded to the National Government the right to control and protect the public works to be constructed.

The State, Mr. Chairman, which I have the honor to represent in part on the floor of this House has already led off in that direction. In the constitutional convention of Louisiana which convened in 1879, and which framed the organic law under which that State is now governed, I, as a member of the convention and as chairman of its committee on Federal relations, acting on the suggestion of Hon. E. W. Robertson, then a Representative in Congress from the Sixth district of Louisiana and chairman of the House Committee on Levees and Improvements of the Mississippi, reported to the convention the following ordinance, which was adopted and now stands as part of article 215 of the constitution of 1879 of Louisiana, to wit:

> The Federal Government is authorized to make such geological, topographical, hydrographical, and hydrometrical surveys and investigations within the State as may be necessary to carry into effect the act of Congress to provide for the appointment of a Mississippi River Commission for the improvement of said river from the Head of the Passes near its mouth to the headwaters, and to construct and protect such public works and improvements as may be ordered by Congress under the provisions of said act.

Under this article full authority is given the National Government to construct such public works along the Mississippi as Congress may see fit to order, and the control of the same after their construction is ceded to the National Government.

Sir, the State of Louisiana, in incorporating this grant of authority in her organic law, recognized what is now generally conceded, namely, that there is no power competent to handle the questions presented by this great river except that of the Federal Government. No State can do it.

First. Because the work is too vast, too costly for any State through which the river runs to undertake it.

Second. Because any State attempting it would be circumscribed by its own territorial limits.

Third. Because, the river being the property of the United States, Congress alone has power, under the grant to "make all needful rules and regulations respecting the territory or other property belonging to the United States," to say what works shall be done or plans adopted for its regulation.

POST-OFFICES AND POST-ROADS.

Under the authority "to establish post-offices and post-roads" the Government of the United States has established thousands of the former in the alluvial valleys of the Mississippi and its tributaries and provided a perfect network of the latter. Daily over thousands of miles of roadway and railway and waterway in the great valley is the United States mail carried, supplying innumerable post-offices and affording facilities indispensable for the dissemination of intelligence, for the diffusion of the market reports, the crop and commercial reports, and the news generally so absolutely needed for the welfare, the happiness, and the prosperity of the people and the country.

Millions of money, besides great labor and much valuable time, have been expended in building up and perfecting this system, which in the normal state of the country moves with the precision, ease, and regularity of well ordered machinery. But periodically the great river swells up out of its banks and becomes a great inland sea, producing an abnormal condition of affairs and disarranging, stopping, destroying for the time being the postal service, the transportation and delivery of the mails.

On our statute-books, as the enactments of Congress, stand stringent penal laws denouncing penalties against any and all who shall willfully impede, interfere with, or stop the mails, and the courts of the United States hold sittings all over the valley to enforce these laws. But here is a great convulsion of nature, as it were, that stops not one mail, but a thousand, that breaks up not one post-office, but hundreds, and against which the courts and the criminal laws for the protection and security of the mails avail nothing. But to prevent a recurrence of this is the strong arm of the Government powerless? No. Scientific, wise, experienced men, who have made a study of the river and its phenomena, of the laws of its currents, and of the conditions that affect it, say no! They have pointed out how these destructive floods can be avoided, and thus how the mails of the United States, their carriage and delivery, can be protected.

Now, then, does any one doubt that from the authority "to establish post-offices and post-roads" flows not only the power, but the duty to protect them? No reasonable man can doubt it. No lawyer will hesitate for an instant to declare that the power to protect is incidental to the power to establish. The constitutionality of the laws denouncing penalties against the stoppage of or interference with the mails has never been doubted. Yet they were enacted for the protection of the mails and depend for their validity upon the power to protect being incidental to the power to establish. Says the Supreme Court of the United States, in 4 Wheaton, 417:

TO ESTABLISH POST-OFFICES AND POST-ROADS.

> This power is executed by the single act of making the establishment. But from this has been inferred the power and duty of carrying the mail along the post-road from one post-office to another. And from this implied power has again been inferred the right to punish those who steal letters from the post-office or rob the mail. It may be said with some plausibility that the right to carry the mail and to punish those who rob it is not indispensably necessary to the establishment of a post-office and post-road. This right is indeed essential to the beneficial exercise of the power, but not indispensably necessary to its existence.

Yet no one doubts or denies the right or power of the Government to punish the robber of the mails. Now, then, is it not just as legitimate, just as constitutional, to protect against the ravages of the water as against the knavery of the robber?

TO REGULATE COMMERCE.

The power of Congress to regulate commerce includes the regulation of intercourse and navigation. (18 Howard, 421.)

Says Story, volume 2, page 4:

> Commerce undoubtedly is traffic; but it is something more. It is intercourse. It describes the commercial intercourse between nations and parts of nations in all its branches and is regulated by prescribing rules for carrying on that intercourse.

This power to regulate commerce is a very general one, and a wide latitude of construction has been given it.

If a levee system tends, in any appreciable degree, to afford ease and safety to commerce, to intercourse, which is essential to the carrying on of commerce, then an appropriation of money by Congress to construct such a system finds abundant justification in this grant of power.

The Mississippi River Commission, in their report of February 17, 1880, say regarding levees:

> There is no doubt that the levees exert a direct action in deepening the channel and enlarging the bed of the river during those periods of "rise" and "flood," when, by preventing the dispersion of the flood-waters over the adjacent lowlands, either over the river banks or through bayous and other openings, they actually cause the river to rise to a higher level within the river-bed than it would attain if not thus restrained.
>
> * * * * * * *
>
> They give safety and ease to navigation and promote and facilitate commerce and trade by establishing banks or landing places above the reach of floods, upon which produce can be placed while awaiting shipment and where steamboats and other craft can land in time of high water. * * * In a larger sense, as embracing not only beneficial effects upon the channel, but a protection against destructive floods, a levee system is essential, and such a system also promotes and facilitates commerce, trade, and the postal service.

To the same effect are the subsequent reports of the commission and the statements of the individual members thereof before the committees of this House.

Prior to the act creating this commission a board of engineers was appointed on the improvement of the low-water navigation of the river below Cairo, Ill. In their report to the Chief of Engineers, dated January 25, 1879, on the "effect of a permanent levee system on the Mississippi below the mouth of the Ohio River," they say:

> To deal with the question whether there is any connection between levees and facilities for shipping, commerce, and navigation at high stages, we refer to the actual condition of things. We find that throughout all the extension of the Mississippi along which the levee system is practically efficient, and where the marginal lands are generally cleared and cultivated, the levees have been an important aid to commerce. * * * Below the mouth of the Arkansas, as far down as the forts below New Orleans, the levees have been long enough in existence to give evidence of their effect, direct and indirect. Immediately behind them are the cultivated lands, the plantations whence come sugar, cotton, and other valuable staples. To each one of these plantations not only is the levee the protecting agent which renders their cultivation practicable, but

it is during floods the landing-place of the steam-boats, barges, or flat-boats which bring their supplies and carry their productions away.

* * * * * * *

In the lower river, through the regions where the margins are under cultivation, the levees are generally laid close to these margins and afford, as has already been stated, useful facilities for commerce in making practicable the coming alongside of steamers and the receiving of the products of the plantations and discharging freights for the use of the same or for the back country. In ordinary rises the natural banks are not overflowed, but when that happens in "flood" years they (the levees) serve a purpose in still defining the channel.

From testimony like this it can not be doubted that levees aid not only in improving the navigation of the river, but are themselves factors in the giving of ease and safety to commercial intercourse.

If the Federal Government can legitimately spend millions in affording facilities to commerce by improving the low-water navigation of rivers, by parity of reasoning it may just as legitimately spend millions in improving the high-water navigation of rivers like the Mississippi, liable to overflow their banks. And the weight of evidence ten times over is that for the Mississippi and its tributaries a levee system is the most efficient method of improving their high-water navigation.

By the navigation of rivers is meant not alone the passage of steamers and other craft up and down, but in a larger sense it includes likewise facilities for landing along the rivers for the loading and unloading of cargoes, the taking on and putting off of passengers, etc. In other words, it embraces the affording of all needful facilities for intercourse, trade, traffic, and commerce, besides the width, depth, and extent of water requisite for the safe passage of boats.

Again, navigation is only one of the elements of commerce. It is an element of commerce because it affords the means of transporting merchandise and the products of the country, the interchange of which is commerce itself. The river is but an instrument of commerce.

The power to regulate commerce is a power to regulate the instruments of commerce. (Gray vs. Clinton Bridge, 16 American Law Register, 152.)

It extends to the persons who conduct it, as well as to the instruments used. (Cooley vs. Board of Wardens, 12 Howard, 316.)

The commerce of the river and the commerce across the river are both commerce among the States, and may be regulated by Congress, and should be regulated by that body when any regulation is necessary. (16 American Law Register, 154.)

It is now conceded that Congress, under the commercial clause, may regulate railroads. May it not also regulate the Mississippi, a national highway and an instrument which commerce makes use of, so as to prevent it from disturbing the commerce and intercourse going on by rail and by land in its valley?

The term "to regulate commerce" gives the power to restrain the destructive force of the thing used by commerce in its transactions. It is an incongruity to say that Congress, in the exercise of that power, may deepen or enlarge a river, but can not curb its force or exercise restraint over it.

The power "to regulate commerce" necessarily includes protection to commerce. This idea has been acted on from the commencement of the Government. The construction and maintenance all along our coasts of light-houses, beacon-lights, fog-signals, sea-walls, and breakwaters attest this. All are for the protection and convenience of commerce.

The laws of the United States require steam-vessels to pay for the license or privilege to navigate, and the officers manning such vessels are required to pay for the license or privilege of pursuing their respective calling or vocation, such as master, pilot, mate, etc. These vessels engage in the coasting trade as well as in the carrying trade, and Congress is as much under obligations to afford the needful facilities for the transaction of this coasting trade as it is for the transportation of through freights. One of the facilities needed along the Mississippi for the coasting trade is convenient landing-places at all times.

In seasons of flood, these landing-places are supplied by the levees, and, in this sense, levees are but continuing piers or quays. A quay is defined to be a space of ground appropriated to the public use, such use as the convenience of commerce requires. Now, while the levees perform this service, while they furnish these needed conveniences to commerce, should it be objected that, at the same time, they protect the country behind them from overflow? Suppose they do protect private property while performing a public service, should they not be commended all the more for that? Should not that circumstance really be an additional inducement or argument for their construction?

Should not broad and liberal statesmanship, in considering a question of this sort, rather approve of a system which, while subserving the public interests, at the same time affords needed protection to the life and property of the individual? *Salus populi suprema lex.* Sir, protection to private property in some way results from nearly every work of public import. If a street in a town or city be graded, paved, macadamized, the property belonging to individuals on that street experiences an enhancement of value as the result of such improvement.

Every railroad constructed through a country increases the value of the lands adjacent thereto. Every grand, imposing public building erected in this city (Washington) and every park laid out, beautified, adorned, add something to the worth of neighboring private estates.

POLICE POWER OF THE GOVERNMENT.

This question of regulating the Mississippi certainly comes within the general police power of the Government, under which power "persons and property are subjected to all kinds of restraint and burdens in order to secure the general comfort, health, and prosperity of the state." (27 Vt., 149; quoted approvingly in 5 Otto, 471.) In the latter case the Supreme Court, speaking of the deposit in Congress of the power to regulate commerce, say:

What that power is it is difficult to define with sharp precision. It is generally said to extend to making regulations promotive of domestic order, morals, health, and safety. As was said in Thorp vs. The Rutland and Burlington Railroad Company, 27 Vt., 149, it extends to the protection of the lives, limbs, health, comfort, and quiet of all persons, and the protection of all property within the state, according to the maxim, *Sic utere tuo ut alienum non lædas*, which, being of universal application, it must of course be within the range of legislative action to define the mode and manner in which every one may so use his own as not to injure others.

If the Government fails to exercise its police powers to control its property, and this property, like a great river, rises and inundates the country, and great damage to individuals results, the Government is, or ought to be, responsible.

Take the case of an Indian tribe placed by the Government upon a reservation, and over which it exercises jurisdiction and surveillance. From some cause an outbreak occurs. The Indians throw off the restraint they are under, band themselves together, commence hostilities, and raid the surrounding country. For the damage and loss occasioned individuals by such an outbreak the Government has repeatedly acknowledged its liability, and Congress has over and over again appropriated money to make good such losses.

Now, why should it not be equally responsible for losses occasioned by the Mississippi when it in time of flood raids the adjacent country? The Government not only assumes paramount jurisdiction over the river, but asserts a proprietary interest in and to it.

Why, then, should it not be under obligation to restrain and control it, equal to the restraint and control it admits it should exercise over an Indian tribe placed by it upon a reservation?

If a railroad train kills the stock of a man a suit lies to enforce payment of the value of the stock from the company. But the great Mississippi rises, and, by the neglect of the Government to protect its banks by dikes, overflows, causing the destruction of millions in value of property. No suit against the Government can be filed, for this great and free Republic does not permit what the veriest despotisms of foreign lands allow, namely, the general right to its citizens to sue the Government in any court of competent jurisdiction for injuries sustained by the act of commission or omission of the Government.

GENERAL WELFARE.

The first clause of section 8, Article I, of the Constitution prescribed that "Congress shall have power to lay and collect taxes, duties, imposts, and excises, to pay the debts and provide for the common defense and general welfare of the United States."

I agree with the interpretation that the above clause was not intended to invest Congress with the independent and general power "to provide for the general welfare," and that the latter part of the clause, to wit, "to pay the debts and provide for the common defense and general welfare," is but a modification or qualification of the preceding part, namely, "Congress shall have power to lay and collect taxes," etc.

Nothing more was granted by that part ("to pay the debts and provide for the common defense and general welfare") than a power to appropriate the public money raised under the other part ("to lay taxes," etc.).

Said Thomas Jefferson:

To lay taxes to provide for the general welfare of the United States is to lay taxes for the purpose of providing for the general welfare, for the laying of taxes is the power and the general welfare the purpose for which the power is to be exercised. Congress are not to lay taxes *ad libitum* for any purpose they please, but only to pay debts or provide for the welfare of the Union.

Under this interpretation, while a general power to legislate for the "general welfare" is excluded, Congress is still authorized to provide money for the common defense and general welfare, and this is quite broad enough for the practical purpose we have in view. Indeed, the power to lay taxes is in express terms given to provide for the common defense and general welfare. And, as laid down by Story:

It is not pretended that when the tax is laid the specific objects for which it is laid are to be specified or that it is to be solely applied to those objects.

It suffices that all taxes must generally be laid for one or all of three purposes, namely, to pay the debts, to provide for the common defense or the general welfare. And when the money has accumulated in the Treasury from taxes laid for any or all of these purposes, as said by President Monroe in his message of May 4, 1822:

The power of appropriation of the money [by Congress] is coextensive; that is, it may be appropriated to any purpose of the common defense and general welfare.

In other words, if operating under the latter clause, the taxes laid must be applied to some particular measure conducive to the general welfare. Or, as laid down by Story, volume 2, page 162:

The only limitations upon the power [to appropriate money in aid of internal improvements] are those prescribed by the terms of the Constitution, that the objects shall be for the common defense or the general welfare of the Union. The true test—

He continues—

is whether the object be of a local character and local use or whether it be of general benefit to the States. If it be purely local Congress can not constitutionally appropriate money for the object. But if the benefit be general, it matters not whether in point of locality it be in one State or several, whether it be

of large or of small extent, its nature and character determine the right, and Congress may appropriate money in aid of it, for it is then in a just sense for the general welfare.

It is not only right, but the bounden and solemn duty of Congress to advance the safety, happiness, and prosperity of the people and to provide for the general welfare by any and every act of legislation, within constitutional limits, which it may deem to be conducive to those ends. No one, Mr. Chairman, will have the temerity to question the proposition that the protection of the extensive alluvial valley of the Mississippi from destructive floods will be, in the national sense of that term, conducive to the general welfare. Not one State, but a dozen; not a few thousand people, but millions are directly interested and affected for weal or woe according as this protection is extended or withheld. One overflow, as hereinbefore stated, has caused the destruction of many million dollars' worth of property, without taking into consideration the human and animal suffering and death inflicted by it. Does any sane man doubt that providing against the recurrence of such a public calamity is promoting the general welfare?

But it is unnecessary, Mr. Chairman, to dwell upon this. The point is conceded. No man of reflection will gainsay that if it were to the general welfare that we should acquire this territory, as we did, from France, it is equally conducive to the general welfare to preserve it as a habitable, cultivable country. to protect it against relegation to its primeval condition of jungles and swamps. The words of Chief-Justice Bigelow, of Massachusetts, in the case of Talbot vs. Hudson, 24 Law Reports, 228, are here singularly appropriate:

In a broad and comprehensive view * * * everything which tends to enlarge the resources, increase the industrial energies, and promote the productive power of any considerable number of the inhabitants of a section of the state [Union], or which leads to the growth of towns and the creation of new sources for the employment of private capital and labor, indirectly contributes to the general welfare and to the prosperity of the whole community.

Congress has exercised, not without question, it is true, but long enough for acquiescence to take place, the power to lay taxes to protect and encourage domestic manufactures.

This has been and is being done on the ground that it is conducive to the general welfare to protect and encourage domestic manufactures. But it is not one whit more conducive to the general welfare, if as much so, than protecting the finest portion of our country for cultivable purposes is.

Indeed, sir, there are millions of our people who believe that it is not to the general welfare to continue longer the tariff laws for the protection of domestic manufactures. But there are few, if any, who do not admit that it is directly in the line of the public welfare to protect from inundation the magnificent sugar, cotton, corn, rice, and wheat lands of the great Mississippi Basin.

All must admit, Mr. Chairman, that the powers of the Government are limited and that its limits are not to be transcended. But, as was observed by the Supreme Court of the United States in 4 Wheaton, 421, the sound construction of the Constitution must allow the National Legislature that discretion, with respect to the means by which the powers it confers are to be carried into execution, which will enable that body to perform the high duties assigned to it in the manner most beneficial to the people.

Let the end be legitimate, let it be within the scope of the Constitution, and all means which are appropriate, which are plainly adapted to that end, which are not prohibited, but consist with the letter and spirit of the Constitution, are constitutional.—*Ib.*

In McCulloch vs. Maryland (4 Wheaton, 415) Chief-Justice Marshall aptly referred to the Constitution as "intended to endure for ages to come, and consequently to be adapted to the various crises of human affairs."

And in Hunter vs. Martin (1 Wheaton, 304) it was said:

The instrument [Constitution] was not intended to provide merely for the exigencies of a few years, but was to endure through a long lapse of ages, the events of which were locked up in the inscrutable purposes of Providence. It could not be foreseen what new changes and modifications of power might be indispensable to effectuate the general objects of the charter. * * * Hence its powers are expressed in general terms, leaving the Legislature, from time to time, to adopt its own means to effectuate legitimate objects, and to mold and model the exercise of its powers as its own wisdom and the public interests should require.

Mr. Chairman, when the great Father of Waters, unhindered by an adequate levee system, rises out of its banks and sweeps with resistless might over the valley, a more than crisis, a sad realization of the worst, is upon the people of that unhappy section, and this grievous affliction of one of the members of the body politic in more or less degree disastrously affects the whole. Sir, against the recurrence of the like calamity, national in its effect, we ask the aid of the National Government. We hold that the powers delegated in general terms in the Constitution are broad and comprehensive enough to justify it, that the granting of national aid for such purpose is directly in the line of the effectuation of the legitimate objects of the charter.

Constitutions of government—

Says Story (volume 1, page 655)—

are not to be framed upon a calculation of existing exigencies, but upon a combination of these with the probable exigencies of ages, according to the natural and tried course of human affairs. There ought to be a capacity to provide for future contingencies as they may happen.

That this capacity exists in the Federal Constitution no one will deny. The trials it has undergone, the tests it has been put to and triumphantly emerged from, in the hundred years of its existence, abundantly attest it. Let this Congress, Mr. Chairman, give another evidence of this capacity by providing against the contingency of another great overflow; let this provision be ample and unrestricted; let it meet the case.

Mr. WILLIAMS, of Ohio. Before the gentleman from Louisiana sits down I would like to hear his views upon the question of the possibility of controlling the Mississippi River.

Mr. BLANCHARD. Mr. Chairman, the Mississippi River Commission unanimously declare that so far as preventing floods on the river is concerned a complete and perfect system of levees is the only method that will serve that end. They unhesitatingly condemn what is called the outlet system. This is the conclusion they have reached after years of study of the river. Recently in the Senate of the United States an impromptu discussion of the plan of improvement of the Mississippi River adopted by the river commission sprang up, and it was stated by a distinguished Senator from a Southwestern State that the levee system had proven a failure, not only upon the Mississippi River, but also upon rivers in the Old World, and he named the river Po in Europe and the Yellow River in China. He stated that levee construction upon the banks of those rivers, maintained for long periods of time, had had the effect of causing the bed or bottom of the river to rise, and consequently producing more disastrous floods than before.

As regards the Po, this statement rests upon the declaration of De Prony, a European engineer of note. But his theory was completely demolished by the investigations made by Lombardini, the great Italian hydraulic engineer, who proved conclusively that the bed of the Po had not been raised at all through two centuries of levee construction and maintenance on its banks.

As respects the Yellow River, I have been unable to find any sufficient authority upon which this statement rests. A writer on China, by the name of Williams, makes mention of something of this kind, but does not support it by sufficient facts or reasoning.

The CHAIRMAN. The gentleman's hour has expired.

Mr. BLANCHARD. I ask unanimous consent to proceed further.

The CHAIRMAN. The gentleman from Louisiana asks unanimous consent to proceed, for how much longer time?

Mr. BLANCHARD. To finish my remarks.

The CHAIRMAN. The gentleman asks unanimous consent for an indefinite extension of his time.

Mr. KERR, of Iowa. Before consent is given I would like to know how much time is to be allowed for the discussion of this bill.

Several MEMBERS (to Mr. KERR, of Iowa). Oh, let him go on.

Mr. BLANCHARD. I will not occupy much longer time.

The CHAIRMAN. The Chair hears no objection.

Mr. BLANCHARD. Mr. Chairman, levee construction as a means of preventing floods upon rivers is of very ancient origin. Semiramis, Queen of Assyria, erected dikes along the Euphrates to prevent the lowlands from being inundated, and Nitocris faced the banks of that great river with burned bricks in order to protect the sides of the channel from abrasion.

Most of the rivers of Europe have been diked or leveed as a preventive against floods. The Po, the Rhine, the Vistula, the Arno, the Scheldt, the Meuse, and others are thus leveed, and in consequence a disastrous inundation in Europe is now a thing of rare occurrence. Some of the works on these rivers are of great magnitude. Upon the Vistula, for instance, the levees are 20 feet high and as many broad at the top. The outlet system is not resorted to in Europe as a means of preventing floods. Outlets have been tried in the silt-bearing streams of that continent and discarded. The division formerly made of the Po at Buondeno was abandoned in the year 1839.

Robinson in his Theory of Rivers states that in the year 1600 the waters of the Panaro, a river of nearly equal size with the Po, were joined with those of the latter, and that in 1720 another river, almost as large, the Rheno, was diverted from its former course and made to flow into the Po. In both instances much alarm was felt by the dwellers in the valley of the Po that this cumulation of waters would result in disastrous overflows. But the reverse was true. The increased volume of water and consequent increased velocity of current caused the Po to deepen and widen its channel, the liability to overflow was greatly diminished, and several extensive marshes, which, prior to that time, could not be reclaimed, were drained and rendered susceptible of habitation and cultivation.

If this be true as to the rivers of Europe, why should it not be true as to the Mississippi River? All the engineers whose sphere of duty brings them in contact with the river say it is true of it.

We hear much of the proposed Lake Borgne outlet from the Mississippi River. This plan is not new. It was examined carefully by Humphreys and Abbot, two United States engineers of long experience and great capacity, who studied the physics and hydraulics of the Mississippi River in 1858 and wrote most intelligently upon it. They rejected the Lake Borgne outlet proposition as altogether inadvisable.

Mr. BUTTERWORTH. Do I understand my friend to say that Humphreys and Abbot in their report condemn the outlet system?

Mr. BLANCHARD. I unhesitatingly say that Humphreys and Abbot in their report condemn the Lake Borgne outlet plan as unadvisable and without merit.

Mr. BUTTERWORTH. But without reference to any particular outlet, will my friend say that in the Humphreys and Abbot report they have decided that the outlet system was not efficacious and desirable? It is fair to say that I was one of the subcommittee appointed in 1883 to investigate this subject, as the gentleman will remember, and I think an examination of the report made by Humphreys and Abbot will not bear out what I understand to be the gentleman's statement with reference to outlets.

Mr. BLANCHARD. Well, Mr. Chairman, the best answer to make to my friend from Ohio is to quote the language of Humphreys and Abbot themselves. Replying to Ellet, who was the earliest writer on the Mississippi River and who advocated outlets as a means of preventing floods, they say:

The task of criticism is always ungrateful, and if this formula had been prepared by an obscure writer it would have remained unnoticed. Coming, however, from an engineer so well known as Mr. Ellet, and furnishing, as it does, the basis upon which rest practical conclusions believed to be most erroneous and most mischievous, it can not be passed by in silence.

Then, after discussing at length the outlet theory, they say:

No further comments are necessary to prepare one to learn that the practical conclusions of Mr. Ellet in reference to protection against the inundations of the Mississippi have been proved to be erroneous by the measurements of this survey.—*Humphreys and Abbot*, edition 1876, pages 227, 228.

The same authors, while acknowledging that, theoretically, outlets of a certain kind might do a certain amount of good, declare absolutely against the practicability of outlets on the Mississippi below Cairo, in the following terms:

Enough has been said to demonstrate with all the certainty of which the subject is capable, the disastrous consequences that must follow the resort to this means of protection [outlets].—*Humphreys and Abbot*, edition 1876, page 428.

And in reference to the treatment which should be applied to the river to prevent floods they use the following language:

RECOMMENDATIONS.

"*An organized levee system must be depended upon for protection against floods in the Mississippi Valley.*—The preceding discussion of the different plans of protection has been so elaborate and the conclusions adopted have been so well established that little remains to be said under the head of recommendations.

It has been demonstrated that no advantage can be derived either from diverting tributaries or constructing reservoirs, and that the plans of cut-offs and of new or enlarged outlets to the Gulf are too costly and too dangerous to be attempted. The plan of levees, on the contrary, which has always recommended itself by its simplicity and its direct repayment of investments, may be relied upon for protecting all the alluvial bottom lands liable to inundation below Cape Girardeau. The work, it is true, will be extensive and costly, and will exact much more unity of action than has thus far been attained.

It will be thus seen, Mr. Chairman, that Humphreys and Abbot declare against diverting tributaries, against constructing reservoirs, against cut-offs, and against outlets, but give to the levee system, as the means of protecting the alluvial valley from inundation, the sanction of their judgment and approval.

General Barnard, Bayley, Forshey, Albert Stein, and others who have written on the river take the same view. Those mentioned were all accomplished engineers, with large opportunities of observation. Without exception they declared against outlets, both theoretically and practically.

Subsequently Mr. Eads added the results of his labors and great ability to the same side of the question.

Finally, the Mississippi River Commission, after most careful experiments and large experience, find themselves opposed unanimously to outlets and in favor of controlling and confining the flood discharge to the main river or channel.

It is a hydrostatical paradox, uniformly confirmed by experience, that you do not diminish the height of the waters in great floods by lessening the quantity of water.

This is particularly true of our alluvial rivers of the South. It is, of course, acknowledged that the first effect of the withdrawal from the river, with a fall into an open basin, of a considerable part of its volume, will be to produce a lowering of its surface in the vicinity of the outlet. But the systematic improvement of the river and its treatment to prevent floods must be conducted with an intelligent knowledge of and reference to ultimate results. The ultimate result of diverting a considerable portion of the volume of water from the river is to increase its surface level.

At best the relief that an outlet would give would be only local and temporary; local, as certainly not exceeding anywhere 2 or 3 feet, and not extending over a hundred miles of river above the outlet; and temporary, since the inexorable laws of the river would surely in a very few years re-establish the adjustment between discharge, resistance, and slope.

Every break of the river from the main channel causes a lessening of the velocity of the current at and below the outlet, and this decrease of velocity causes a precipitation of sediment or silt in the bottom of the river. No greater uniformity and certainty has marked the results of any of the observations of the Mississippi River Commission than in the decrease of river section below an outlet, and, *vice versa*, its enlargement when the outlet is closed and the former regimen of the river restored.

Humphreys and Abbot, it is true, disputed the proposition that, as the result of an outlet, a bar was formed immediately below the break in the bed of the river; but fuller observations since their time have established its truth. And it stands to reason that, if any considerable portion of the volume of water of a silt-bearing stream is diverted from the main channel, the force of the remainder is diminished, the normal condition of the river at that point is disturbed, and the weakened current is no longer capable of bearing along the load of sand and sediment. A part of it is cast down into the bed, the section of the river is decreased, and a bar or obstruction formed.

Now, Mr. Chairman, relative to this question of the duty of Congress to go further than they have gone in the past and make appropriations not only to improve the navigation of the river, but to prevent its disastrous floods, I wish to call the attention of the House, and especially the attention of my Republican friends, to some utterances on this subject by gentlemen who have occupied very exalted positions in our country at the hands of their party.

Mr. Garfield, in his letter of acceptance of the Presidential nomination of his party, July 10, 1880, made use of this language:

The wisdom of Congress should be invoked to devise some plan by which that great river shall cease to be a terror to those who dwell upon its banks, and by which its shipping may safely carry the industrial products of 25,000,000 of people.

At that time there were 25,000,000 of people in the valley of the Mississippi. To-day 35,000,000 are there.

In a speech on this floor he styled the Mississippi—

The most gigantic, single, natural feature of our continent, far transcending the glory of the ancient Nile or of any other river on the earth.

He further declared that he believed that—

one of the grandest of our material interests—one that is national in the largest material sense—is this great river and its tributaries.

And that—

the statesmanship of America must grapple with the problem of this mighty stream; that it is too vast for any State to handle; too much for any authority less than that of the nation itself to manage.

In his day Mr. Garfield urged upon Congress to do what to-day I am urging it to do: to make a liberal and generous appropriation for the twofold purpose of aiding the navigation of the river and preventing its floods.

President Hayes, in his message of December, 1880, speaking of the Mississippi River and its tributaries, said:

These channels of communication and interchange are the property of the nation. Its jurisdiction is paramount over their waters, and the plainest principles of public interest require their intelligent and careful supervision with a view to their protection, improvement, and the enhancement of their usefulness.

Mr. Arthur, when he was President, sent a message to Congress on April 17, 1882, in which he made use of this language:

The immense loss and widespread suffering of the people dwelling near the river—

Occasioned by the great overflow of that year—

induce me to urge upon Congress the propriety of not only making an appropriation to close the gaps in the levees occasioned by the recent floods, as recommended by the commission, but that Congress should inaugurate measures for the permanent improvement of the navigation of the river and security of the valley.

Mr. Chairman, may not this Congress, Republican in both branches, venture to go as far as was recommended by the last three Republican Presidents preceding the present Executive? I hope so.

On this question of the protection of the magnificent alluvial valley of the Mississippi River from the inundations of that stream, I invoke the considerate judgment of this House and of the country. I have felt it my duty to present this matter at length to Congress in view of the great flood which has recently occurred on the river. I thank the House for its attention. [Loud applause.]

Chickamauga Park.

REMARKS

OF

HON. H. CLAY EVANS,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 28, 1890,

On the bill (H. R. 4617) to establish a national military park.

Mr. EVANS said:

Mr. SPEAKER: The proposed park, beginning at or about what is known as McFarland's Gap, extending due east to Chickamauga River at a point say one-half mile north of Reid's bridge, thence southwardly along the Chickamauga to a point near Lee & Gordon's mills, thence

west to the main road, known as the Dry Valley road, thence northwestwardly to McFarland's Gap, would contain, in my estimation, from 6,000 to 7,000 acres, and would embrace all the territory that was so valiantly and heroically contested for by both armies on the 19th and 20th of September, 1863.

I have been familiar with this territory since 1864; in a general way the property remains in very much the condition it was at that date; the small farms that were under cultivation then have remained so since; some few additional patches have been cleared and added. No improvements of great value have since been put upon the property.

A number on each side of this House were engaged in that great battle, and no doubt many of you have since visited this historic field.

I desire more especially to address my remarks to the subject of the approaches or roads leading to the proposed park.

The county of Hamilton has built a very good road extending from Sherman's Heights—formerly, or in the Army, known as the tunnel of the East Tennessee Railway, being the extreme right of the Confederate army in the battle of Missionary Ridge on the 24th and 25th of November, 1863—nearly the whole distance (about 7 miles) to Rossville Gap—the right of way being 40 feet. I have seen many of the parties living along this roadway, and every one without an exception is willing and desirous of having this roadway widened to 50 feet by donation and transferring the supervision or control of it to the United States. The road now is in first class condition, is one of the favorite drives about Chattanooga, and it being located on or very near the summit of the ridge, and the formation being gravel or chert rock, it is an exceedingly easy roadway to keep in repair. It is easy of drainage, and not subject to washouts by the heavy rains, by reason of its being on the crest of the ridge.

From any point on this roadway one can take in the whole of the valley, from Chickamauga River as it empties into the Tennessee at the point where General Sherman's army crossed the Tennessee on pontoons the night of November 23, 1863, to Lookout Mountain, which was captured by the gallant General Jo Hooker on the morning of November 24, 1863, presenting as it does one of the grandest panoramas, I believe, in the world, overlooking Chattanooga and Lookout Valleys for a distance of 15 miles; taking in at one sweep of the eye the battlefield occupied by the Confederate forces under General Bragg, from the extreme right occupied by Howell's battery of General Pat Cleberne's division of Hardie's scorps, along the ridge passing Dea's Alabama brigade to the Forty-third Tennessee, commanded by General Cheatham; thence to General Bragg's headquarters and on to the extreme left of the Confederates at Rossville Gap; and in the valley immediately in front looking westwardly was the Army of the Cumberland, commanded by General George H. Thomas, occupying the center of theF ederal army, while on his left was the Army of the Tennessee, under the command of General William T. Sherman, and on the right of General Thomas was General Jo Hooker's corps of the Army of the Potomac.

While the view from this splendid roadway now is exceedingly grand and interesting to all, it is intended to make it of far greater interest by erecting tablets or monuments showing the exact locality of each command, brigade, regiment, battery, or organization on the memorable 25th of November, 1863; giving to the Confederate forces the eastern or upper side of the roadway (being the position they occupied) and the Federal army the western or lower side, that being their position as they charged up the hill.

Any part of this roadway is of easy access from Chattanooga by good turnpikes, one leading to Sherman Heights (the right of Bragg's army); the McCallie avenue turnpike reaches the center of the line, about the place occupied by Dea's Alabama brigade, while the Montgomery avenue pike crosses the ridge just south of General Bragg's headquarters, and the fourth leads to Rossville Gap. All these are kept in splendid condition and are free from tolls.

The Union Line Railway runs trains to all points along the base of the ridge from Sherman Heights to Rossville Gap (fare only 5 cents), while the Chattanooga Electric Railway covers much of the territory also along the base of the ridge (same fare), and have a line crossing the ridge about the center of the Confederate battle-line and immediately in front of Orchard Knob. The East Tennessee, Virginia and Georgia Railway runs under Missionary Ridge at Sherman Heights. The Chattanooga, Rome and Columbus Railway runs immediately west of the proposed park from McFarland's Gap to Crawfish Springs, and has established a station west of Snodgrass Hill, called Chickamauga Station. Assurances have also been made by the authorities of the Western and Atlantic Railway that they will build across from a point on their road north of Graysville to the proposed park.

I have occasion to mention these facts to show how easy of access will be the park and its approaches.

I also desire to mention that an historical society has been organized in Chattanooga for the purpose of gathering all facts and information concerning the battles of Chattanooga, Chickamauga, Lookout Mountain, and Missionary Ridge, and this society will, I can assure you, cooperate actively with the officers of the Chickamauga Park Association in all matters of interest to the association.

Trusts.

SPEECH

OF

HON. THOMAS R. STOCKDALE,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 1, 1890.

The House having under consideration the bill (S. 1) to protect trade and commerce against unlawful restraints and monopolies—

Mr. STOCKDALE said:

Mr. SPEAKER: I wish to say a few words upon one of the features of this amendment and on the argument that was made by the gentleman from Massachusetts [Mr. MORSE] strongly against any restraint of, or interference with, the manufacturing interests or manufacturers when they undertake to combine and form pools to prevent competition. Now, I have always understood, and I have the very best authority for the conclusion, if our friends on the other side of the Hall have been in earnest, that one of the great interests the country has had and has in having a high protective tariff is that by competition we would get a reduction in the price of goods. There have been more brains employed in arguing that one proposition in this country probably than upon any other that the Republican party has put forth. We have been told over and over again, all the Republican side concurring, if you will protect the manufacturing interests competition will reduce prices. To day we have a very high authority from the great State of Massachusetts (which claims to be in advance in everything) that you must not throw anything in the way of these manufacturing interests, as well as the railroad interests, when they want to destroy competition. If you do so, says the gentleman from Massachusetts, the manufacturers will make the stove-plate thinner, the iron inferior, and the cloth lighter. To quote him literally, he said:

Now, I want to be sure that this bill means what it says, and that it is not a bill to injure the people. I desire here to call attention to an important business method adopted by many large manufacturers and merchants in this country, an interference with which would work injury to large business interests and the people. There is a practice among manufacturers of proprietary articles known as the "contract system" of selling goods, the intention of which is to fix a fair and living profit to the merchant handling their goods and to prevent cut-throat competition, and so far it may be said to be in restraint of trade. Such restraint, I claim, is in the interests of the consumer. It means 16 ounces in a pound of soap; it means 24 sheets in a quire; it means a high grade and uniform quality of goods, so that a purchaser can know what he is buying and what to depend upon. Very many large manufactories in this country have adopted this method of controlling the price at which their goods shall be sold.

Deny manufacturers this right to control the selling price of their goods and compel them to enter into ruinous competition, and the effect i a constantly deteriorating quality of goods to meet such ruinous competition; deny manufacturers this right, it means adulterated food, adulterated spice; it means short weight and short count to meet the constant demand for cheaper goods that will still afford a profit; deny the stove manufacturers the right to regulate the selling price of their goods, as is the custom of many stove manufacturers now, and it means thinner castings and poorer quality of iron to meet the demand for a cheaper stove that will still afford a profit, and no one will suffer so much as the people who buy the goods. So far as I know, the manufacturers of this country who have adopted this system of selling their goods have fixed a fair living profit only on their products, and require the merchant, in order to secure the bottom price, to sign an agreement that he will sell at such living profit; and this arrangement, I claim for the reasons I have stated, is for the interest of the manufacturer, the merchant, and the consumer.

So far as this bill does what its friends claim for it, namely, so far as it suppresses unlawful combinations concerning the necessities of life, so far as it will suppress great combinations that oppress the people, like the Standard Oil Company, like the beef trust in Chicago, like the sugar trust in New York, I believe in so much of this bill, but if it proposes to deny to manufacturers and merchants the right to control the price at which their goods shall be sold, the right to say they shall not enter into ruinous competition, the right to exact a fair and living profit on the sale of their goods by the merchant who handles them, it will be unwise legislation and injurious to the manufacturer, to the merchant, to the consumer, and the whole people, and strike a blow at the business interests of the country, because it will violate a sound business principle, "to live and let live."

That is, by this amendment, you undertake to say we shall have this great blessing, and the Republican party has for many years proclaimed it an inestimable blessing, that protection will make competition and competition will make low prices, and thereby throw anything in the way of the manufacturers in their attempts to destroy that competition from which we are to receive these great blessings, they will beat us in the end, and swindle you by making the stove-plates thinner, the iron inferior, and the cloth lighter. [Laughter on the Democratic side.]

I do insist, Mr. Speaker, that if this great blessing, so much talked about by the gentlemen who surround and support the great apostle of protection from the State of Ohio, Mr. MCKINLEY, as well as himself, is about to burst upon us, let it come and come now, for if it be a blessing, and they say it is a great blessing to the nation, if not to all the nations, for it has been in disguise for a hundred years, and is to those not manufacturers only a matter of faith, I say then we should have nothing to interfere with this boon. I charge it upon my friend from Missouri, Mr. BLAND, to see that its coming be not interfered

with. We must have competition, for God knows that is the only thing in the protective-tariff bill from which we can expect anything.

Now, then, the same thing applies to railroads. If they want to compete why not let them? Why not prevent any party or combination of people destroying this competition that I can prove by one hundred and sixty gentlemen on that side to be the greatest blessing this country ever had. They will not dispute that authority. Now, that competition has come, to some extent at least, and a glimmer of danger to them and of hope to the consumer, that the long-promised result of cheaper goods might be in some measure accomplished in the future. The quick eye of New England descried a menace to her interests in her own offspring, and her alert intellect soon invented a remedy. She never has been found lacking in inventions, either in mechanics or schemes.

For three-quarters of a century Eastern manufacturers have made use of the patriotism of the American people as a lullaby to complaints of extortion with marvelous success. They have treated it as a commodity, to be dealt in as other elements of trade.

The siren sung in dulcet notes into the ears of the patriotic, unsuspecting, and sometimes unlettered people that the interests, yea, the very safety, of the Republic required that manufactories should be built up and sustained and mines developed, so that in case of war with European powers America could make her own goods and implements and arms, and that as soon as that great end should be attained, as soon as our infant industries should be fostered into strength, these admittedly unjust burdens should be lifted from the shoulders of the people and they allowed to straighten up and inhale a free breath of untaxed air. The burdened people with heroic patience submitted to the load and continued to view with pride and hope the marvelous growth of the manufacturing industries and the tremendous output of our mines.

The people themselves with bounding ambition and dauntless energy subdued the wild earth and grew strong and rich; so that what was in the beginning a grievous burden was light on the sturdy shoulders of the now stalwart nation, and contentment prevailed, when the war between the States unfortunately intervened. Then the wildest protection schemes dwindled into insignificance in presence of the colossal proportions of the taxing schemes then deemed necessary for revenue only.

The patriotism of the people was again appealed to and promptly responded. Plans of taxation were then indorsed that all admitted would not be tolerated in times of peace.

While public attention was absorbed the cool-headed, calculating manufacturer advanced his goods to fabulous prices. The crafty money speculator manipulated the necessities of the Government. Manufactories increased many-fold; the pauper laborers of Europe flocked in groups of thousands to our shores to engage in them.

After awhile that war ceased leaving all these immense appliances for which peace had no need, in full operation, and those feverish laws upon the statute-books.

The banking-houses of the manufacturers, the coffers of the money-changers, and the depositories of the speculators were crammed with the money and bonds of the Government obtained as depreciated currency at from 20 to 60 per cent. below a coin basis, and largely paid for in goods at from 50 to 200 per cent. above their real value, making these immense possessions in many instances cost their owners about 20 to 25 cents on the dollar.

It was confidently expected by the masses of the people that with the return of peace the rigid revenue laws would be relaxed, but these great financiers had laid the net while the unwary were intent upon triumph in the great struggle to prevent the division of the Union, and it was now being drawn with skillful hands.

The statutes levying taxes to meet the demands of war, remaining in time of peace, enabled the manufacturer to add millions to the colossal fortunes already accumulated under the cover of war, and that was enough to commend it, and they set their sharp wits to work to prevent any remedial legislation. They and the other holders of Government money put their combined skill to work to compel the Government to pay the currency (which the then owners had aided to depreciate in order to buy it) in coin. In that scheme they were successful by a skillful manipulation of the inflamed condition of the public mind, which they also regarded as a commodity.

This unexampled success gave them unbounded confidence in their power to handle the Government, as well it might, and they undertook and accomplished stealthily, it is charged, the feat of demonetizing silver, thereby increasing the value of those ill-gotten fortunes by destroying half the means the people had to pay their claims and by the same act increased the value of gold, which they also held, so that they, at the same time, held immense claims against the Government, which means against the people, and had in their possession the only means of paying their claims, and had their business interests environed by laws that prevented the people from purchasing goods anywhere except from them—laws, in the execution of which the Government, for every dollar of revenue it collects for its own use, compels the people to pay to the manufacturer at least $6 in excess of the real value of his goods, for the same goods can be purchased a few miles out at sea on board any vessel, or a few feet across the Canada line, for more than $6 less.

I will insert in my remarks a short table to illustrate this. It is shown by the statistics that the American people purchase eight times more American-made goods than they do of foreign-made goods.

Let us take, for example, a laboring man who desires to purchase his family supplies that will cost him in the present market	$135.00
One-ninth of which, perhaps, would be foreign-made and imported goods and the balance would be American-made goods. If there were no tariff laws, so that he could buy where he pleased, that portion of his purchase made abroad would cost him	10.00
And that portion of American-made goods would cost him	80.00
In all	90.00
Forty-five dollars less than it does now—and that is a very moderate estimate—and the manufacturers would make money then; but the Government imposes a duty of 50 per cent. on the imported goods, which makes the imported part of his purchase cost	15.00
The man would say, "I can afford that; the Government must have revenue." But the American manufacturer immediately raises the price of his goods 50 per cent., and that raises the American-made portion of the purchase $40, and makes it cost	120.00
In all	135.00

In that purchase he pays to the Government $5 and to the manufacturer $40. For every one to the Government eight to the manufacturer. But, say the manufacturer, to insure the sale of his goods, only raises his price 40 per cent., leaving them 10 per cent. below what the importer can sell at after paying the duty. Then the purchaser would pay the manufacturer in excess of the real value of his goods $32, and to the Government $5, or $6.40 to the manufacturer for every dollar the Government gets. This laboring man would save many a drop of sweat and often tired limbs, and yet have something with which to purchase a book, if the Government would but take the $5 and let the citizen keep the $32. This the Government could do and still factories and mines make money.

How do I know that? I know it because these same manufacturers do sell their goods in foreign markets where there is no protection and make money on them. They will ship these same goods to England and France, and pay the freight, and sell them there to an Englishman or Frenchman for $32 less than they will sell them to the American laboring man I have described.

These manufacturers are enabled to commit that fraud by means of the laws enacted by Congress, and only by that means. I say the government that does it commits an act of oppression and despotism that should shame a Republic, as such an act ought and I believe would shame the most despotic government in Europe.

By this vicious system of legislation, made up warp and woof of dishonest schemes woven and wielded by that mailed hand that never relents at human suffering and never hesitates at injustice when gain is in the balance, these associations of aggregated wealth were enabled to say to the American people, who imagine themselves free, "We hold your bonds, good and valid mortgages on all your lands; they cost us 20 to 50 cents on the dollar, thanks to our keener wits in manipulating the necessities of the Government while its fate hung in the balance. We will make you pay us 100 cents on the dollar in coin, thanks to our own wits again in manipulating legislation.

"In your simplicity you suppose you have the right to pay this great debt in silver, and hope that the great mines of the country will furnish enough to accomplish that great feat; but we now inform you that by our magic touch that silver has become as Dead Sea fruit in your hands. No matter. And yet we demand the bond. You shall pay every ducat in gold. That gold we have, and you can get it only at our price; and we will compel you to get it or become our tenants." So spoke the money-changers.

When the people, alarmed at their condition, undertook to economize in order to be able to meet these exorbitant demands, and undertook to do what nearly all free people except Americans can do, purchase supplies in the markets of the world for reasonable prices, cheap clothes in which to toil for these new and hard taskmasters, they found the way blockaded by another branch of the combination, the manufacturers. They laughed in derision in the faces of the people who were and are enmeshed in a network of unjust and discriminating laws, maintained purely in the interest of a privileged and preferred class.

True, the people of the West and South, feeling outraged at the clandestine demonetization of silver, clamored to such an extent as to compel a reluctant consent to partial restoration of silver to the coinage, but by that time those same fellows had the silver to a great extent. In that condition there was but one course for the land-owner to pur-

sue, to wit: mortgage his land to secure a debt he was not able to pay. The owners of the money fixed the rate of interest, a condition from which a farmer seldom escapes. Mortgaged farms are increasing in numbers. The system is stealthily spreading. Extravagant and cruel taxation piled millions into the Treasury, not needed and therefore dishonestly there.

Schemes of extravagant expenditure were invented to put that surplus out of the way so that more might be collected under the plan that puts $6 into the pockets of the manufacturer whenever it puts one in the Treasury. It is not wonderful that these men want the Government to collect a surplus of forty millions and then waste it and collect forty more the next year, when by that operation they put two hundred and forty millions in their own pockets annually over and above what an honest administration of even the present unjust laws would give them.

And it is not even strange that, amid the financial depression caused by the legislation brought about and created and maintained by the moneyed men of the country, capital accumulated in their hands should run away from investment that would be subject to extortionate taxation and seek investment in the untaxed bonds so eagerly as to put them to 28½ cents premium.

What a spectacle of imbecility this Government does present before its own people and the world. It is paying 28½ per cent. premium on its own bonds, purely to get the surplus revenues that it wrung from its own people out of the Treasury, and in twelve months from this time the Government will have to borrow money to pay the 4½ per cent. bonds, for by the time they mature this Republican Administration will have increased the expenses of the Government beyond its income even at its present exorbitant rates of taxation.

There is method in the madness, however. It is greatly to the interest of the creditor and moneyed class that the bonds of 1891 be not paid, but renewed and extended. Government bonds afford the safest investment and the grandest opportunities for speculation known to the country. It is important, also, to have as little coin as possible in the country when those bonds mature. There is very little gold in circulation among the people. What is not in the United States Treasury is in the hands of the money speculators. If silver coin is driven from circulation the price of gold will increase. The men who own the money want to make money dear, as the manufacturers want dear goods. The property-owners want cheap money and cheap goods.

The whole tariff system is purely to prevent competition, competition between Americans and English or French or Germans. Our manufacturers acknowledge themselves inferior in business capacity to all of them. The McKinley bill seeks to raise the tariff, so that our manufacturers may raise their goods still higher and exclude imports altogether in some instances.

The cry has been rung in the ears of the American people for a hundred years that Americans can not compete with other people and the Government must keep other people out. Our manufacturers who demand protection to the exclusion of foreign goods by that act acknowledge that they have not the capacity to cope with other people or that they are dishonest enough to extort from the poor, and that admits that the tariff law that excludes from our ports altogether foreign goods is either a nurse for imbeciles or a guard for rogues.

It was an ingenious argument that members of Congress resorted to when they announced the doctrine of protection for the sake of protection, that competition among our manufacturers would reduce prices. It was specious, because the enormous profits that high tariffs yielded manufacturing attracted investment and caused other factories to be built. But the ludicrous part of it was to see gentlemen on this floor proclaiming it with rigid muscles, bulging eyes, and swelling veins, as if they believed, and perhaps they did believe, that the manufacturers who had dominated the country for many years with tariff laws framed solely to prevent competition would acquiesce in that idea. And I have no doubt those lordly manufacturers had many a good laugh over their wine and snails at the performances here and at the people whom they deceived.

When competition did begin to have the effect predicted by these Sir Knights, it was no difficult task for gentlemen who had lived long and grown rich on schemes to circumvent that result. So the railroads formed pools, the manufacturers and miners combines and trusts, and the thing was accomplished. The people demanded supervision of railroads, and Congress was driven to pass the law, and that problem is being worked out. And Congress has been again driven to take some steps against trusts and combines. But when my friend from Missouri [Mr. BLAND], the ever alert champion of the people's rights, presents this amendment to guard against combines and trusts, intended to destroy competition, we are confronted with the manufacturers themselves who have come here to see to their own business, to see to it that this competition, which makes prices reasonable, and which they hate for that reason, and denounce as ruinous, shall not be allowed.

A thing they regard as their enemy they have a right to destroy. So we have this day had our eyes opened by the gentleman from Massachusetts, that all these earnest promises of gentlemen on this floor about competition were unauthorized. They are here themselves to brush aside this masquerading before the country and to announce that competition is ruinous, and if we do not allow them to throttle it and destroy it they would accomplish the same thing by a system of deception and fraud, even to the adulteration of food.

It is an appeal to Congress to save their morals by allowing them to destroy competition, because if you do not they will be compelled to adopt a regular system of swindling the people, and the people have great confidence in their ability to do what they undertake.

Hennepin Canal.

REMARKS

OF

HON. BYRON M. CUTCHEON,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 24, 1890.

The House being in Committee of the Whole and having under consideration the river and harbor appropriation bill—

Mr. CUTCHEON said:

Mr. CHAIRMAN: I hope the amendment will not prevail. I look upon the construction of this water way to connect Lake Michigan with the Mississippi as a great national work. Not only so, but one of the greatest and most important national works that this Government has ever entered upon.

This discussion divides itself naturally into two branches: First, have we the power to do it and, second, is it expedient, if we have the power?

First, as to the question of power under the Constitution.

I suggest that there are three different provisions of the Constitution, at least, under which that power may be determined to exist in Congress, and I call your attention first to the power conferred under section 8 of Article I, which provides that—

> Congress shall have power to lay and collect taxes, duties, imposts, and excises, to pay the debts and provide for the common defense and general welfare of the United States, * * * and to regulate commerce with foreign nations and among the several States and with the Indian tribes.

First, Mr. Chairman, we have power to provide for the common defense. It is well known that under the treaty of 1817 with Great Britain we bound ourselves not to maintain a navy on the Great Lakes. We are keeping now one gunboat on Lake Ontario, and a single gunboat, carrying an 18-pounder, for the whole of the Upper Lakes. From the standpoint of the common defense, then, we have the power to construct this water way in order that naval vessels by passing up the Mississippi River may find entrance into the Upper Lakes to protect our frontier there and our commerce on the lakes.

Mr. POST. I would like to inquire how they could get into the lakes from the Mississippi.

Mr. CUTCHEON. We will find a way. There are various methods. The natural way would be through the Illinois River.

Mr. POST. The House on yesterday refused to survey the Illinois River for an improvement——

Mr. CUTCHEON. I must decline to be further interrupted. I have but a brief time.

Mr. Chairman, the lines of commerce on this continent run east and west. They do not to any great extent run north and south. The grain fields of the West seek the East upon parallel lines. They do not run north and south.

Mr. BLANCHARD. I beg the gentleman's pardon; a considerable portion of them do go south.

Mr. CUTCHEON. Some do, of course, where they have water ways, but the general rule is that they seek east and west lines, and, on the other hand, the manufactures of the East find their way on the same lines to the West. That is the law which governs our commerce.

Second, under the clause of the Constitution to regulate commerce adequate power is conferred on Congress to construct this great work, and I apprehend that, while there is nothing in the Constitution specifically about canals, yet this power exists. But, Mr. Chairman, neither is there anything in the Constitution about railways. When the Constitution was framed there were no railways. They had not yet been conceived in the mind of man, neither were there canals. But the Constitution gives all the powers necessary to carry out its manifest purpose to foster and regulate commerce. There is nothing about light-houses in the Constitution, and yet we have lined the shores of our country with light-houses; nothing about life-saving stations, and yet we have life-saving stations all along the coast; nor is there anything about harbors, and yet we have expended millions and hundreds of millions for the construction of our great harbors on all our coasts.

Third, the power exists under the "general welfare" clause. If the fostering and increasing of the means of communication between the several States tend to the general welfare of the Union, then that gives

the jurisdiction to Congress to make this connection between these great water ways. We have the power. The second question is, is it expedient to exercise the power?

Can any one doubt the expediency of opening this outlet from the great chain of lakes to the valley of the Mississippi?

As a matter of national defense it should be done. Our naval power would be doubled. Niagara Falls would be abolished. A fleet of gunboats could pass from the Gulf to the Lakes or from the Lakes to the Gulf. The farmer west of the Mississippi would find an outlet either to the Gulf or to the Lakes. His products would be worth more because he would have a choice of markets and cheaper transportation.

Of the power there can be no question, of the expediency there can be no doubt.

The interests of peace and the requirements of war alike demand it, and this work should be undertaken, prosecuted, and completed.

McDuffie vs. Turpin.

SPEECH

OF

HON. ROBERT P. C. WILSON,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, June 4, 1890.

The House having under consideration the contested-election case of McDuffie vs. Turpin, from the Fourth Congressional district of Alabama—

Mr. WILSON, of Missouri, said:

Mr. SPEAKER: I very much fear it will be out of my power to add anything to this discussion which will tend to impress upon my friends on the other side of the Chamber the gravity of the issues involved and to persuade them for once at least, in an election case, to give it a patient and attentive hearing and be controlled by the law and the evidence in making up their judgment. This case is now being heard on the theory that Alabama is equally sovereign with Massachusetts or Illinois and has the same right to prescribe the mode and manner of elections as any of the States of the Union.

In determining the rights of the parties the laws of the States should govern as to the mode and manner of elections, and the ordinary rules of evidence should be observed. Under these rules the burden of proof rests upon McDuffie, the contestant, to show a better title to the office of Congressman from the Fourth District of Alabama than he who now occupies his seat as the Representative from that district by the authority of a certificate, bearing upon it the broad seal of that State, declaring him the choice of a majority of more than 13,000 people of the Fourth district. Amazing, however, as it may appear, the majority of the Committee on Elections come here with a report not only overturning that majority, but actually figuring out a majority of nearly 5,000 on the other side. Now is this to be believed? If so, it presents one of the most remarkable cases known to the history of contests in this House. I assert that the law and the facts developed in this case do not bear the committee out in its conclusions. Although I grant that at first blush the majority of Mr. Turpin seems unusually large, yet it is easily accounted for if gentlemen will give the evidence in the case that scrutiny its importance demands at their hands, as judges or jurors called to consider a matter of this importance.

The minority of the committee in their investigations were very careful to give the benefit of every doubt to the contestant; in every instance in going through the various beats in the five counties of the district they have endeavored to disregard every technicality and give to the contestant the full measure of every claim having a color of merit. The result was Mr. Turpin's majority has been reduced 4,000 votes, though strictly and technically speaking he might well assert a claim to the whole majority returned for him by the legally qualified election officers in that district. How does the committee sweep away this majority? What modes and methods control them in transforming 13,000 majority for Turpin into 5,000 majority for McDuffie? It would seem that this wonderful transformation could not be brought about otherwise than by magic. Were they controlled by the laws of the sovereign State of Alabama? No, sir! Were they governed in their judgment in this matter by the ordinary rules of law and evidence as laid down by McCrary and Payne and in the various decisions of the courts bearing upon contested elections in weighing the evidence taken in this case? No, sir! Had they done so the judgment of the committee would have been unanimous in favor of the legally elected Representative of the Fourth district of Alabama, who now so ably and worthily occupies the contested seat.

Casting aside all the restraints of the rules of evidence, they proceeded to try this case upon the census of ten years ago, and, discovering from that census that the blacks largely predominated in that district and assuming that the Republicans, having freed the negroes and given them the elective franchise, really owned them, and of course their votes, it proceeded accordingly to make every black skin cover a Republican vote in the count. They generously conceded the right, however, of a few, very few of the black men to be Democrats. The argument and action predicated upon it, and the employment of the census, in the determination of the right of a member to a seat, as seems to have been done here, is simply monstrous. According to that doctrine, in a district having a majority of whites, though a colored man claiming to be a Republican should be returned according to law as elected, he is not entitled to his seat; and, on the other hand, in a district where the majority is colored, no white man claiming to be a Democrat can hold a seat, though he may have received a large majority according to the laws of the State in which the election might be held, as in this case.

I say this is simply outrageous, and should not, in this body, be tolerated, but meet the sternest condemnation. If this doctrine is to prevail, what is the use of holding elections, especially in the Southern States? Why not avoid all the trouble, excitement, expense, and bad blood attendant upon the elections in those States, and candidly say in a formal way to the white people of the South Your business is to pay taxes, to build school-houses for and educate our political slaves, and bear your proportion of the enormous taxes laid upon the people by the Republican Congress, but those of you whose lots are cast in districts where there are majorities of black men need not trouble yourselves about who shall represent you in Congress; we will appoint them at the proper time to suit ourselves, according to the census returns. I submit, Mr. Speaker, this would be the manlier course.

But I am here to deny that the color line is still intact in the old slave States. I denounce as untrue the claim that the black men of the South and the old slave States are the property of the Republican party and the assumption that the colored men are the abject and willing political slaves of the old carpet-bagger and the scallawag, roaming around on the hunt for office, with commissions from the Republican party in their pockets. The blight of slavery was removed from the old slave States more than a quarter of a century ago. With infinite sacrifice and wonderful energy the white people of those States have not only repaired, in a great measure, their incalculable losses, but have made generous provision for the free education of the black as well as for the white, and to-day the former stand upon a different and higher plane than they did when the Republican party beguiled them with the idea that it had alone fought the war which resulted in their enfranchisement and sought to take a political mortgage on their votes for ninety-nine years. Thousands of them in every Congressional district in the South resent the impudent claims of ownership advanced by that party and range themselves, as they did in this case, with their old neighbors and only true friends, those with whom they were born and raised.

The undisputed rule of law is, that in the trial of all cases, including those of contested elections, each party should be compelled to produce the highest and best evidence attainable. The character of evidence just indicated is the returns of the elections made up by the election officers appointed by virtue of the statutes of Alabama. Unless fraud is clearly shown in the conduct of those officers, there is no warranty for the report of the majority. The highest authority we have on contested elections, Judge McCrary, says in section 440:

> But of course the parol evidence offered to set aside a return on the ground of fraud must be such as to establish the fraud or mistake in the reception and deposit or in the count or return of the votes. The official acts of sworn officers are presumed to be honest and correct until the contrary is made to appear. It has accordingly been held that a return can not be set aside upon proof that a recount made by unauthorized persons some time after the official count had been made showed a different result from official count. This was upon the ground that the count made by sworn officers immediately on the closing of the polls was better evidence of the true result than a count made by interested parties not sworn at a subsequent period after the result of the official count had been made known. Such evidence comes far short of establishing either fraud or mistake in official count. Cites Gooding *vs.* Wilson, 42d Cong.

In section 303 he lays down the doctrine that in order to reject a poll or return "it must appear that the conduct of the election officers has been such as to destroy the integrity of their returns and avoid the *prima facies* which they ought to bear as evidence before they can be set aside and other proof demanded of true state of vote."

I assert nothing has been proven against the officers of the election in this case; that there is nothing in their official conduct to justify the conclusion that the officers were guilty of such fraudulent practices as would authorize the resort to outside evidence for the purpose of setting aside the returns of the election. But how do our friends proceed to justify their extraordinary action in ignoring the lawful returns? How do they overrule and set aside the *prima facie* case in carrying out the census plan; by what character of evidence? It is by stationing one or two colored men from fifty to one hundred and fifty yards away from the polls to give out contestant's tickets; another takes a list of the voters; the ticket-peddlers say they gave out 500 tickets, for instance; the man with the list says he got the names of all who got tickets; all then join in saying the faithful 500 went up and voted them, when in many instances they could not see the polling places from where they were standing, and in no case could they see the ballots in the hands of the judges or inspectors of election. By such miserable methods do

they seek to nullify the laws of a State and disfranchise the people comprising the fourth district of Alabama. I declare, Mr. Speaker, there is not a court of record in the United States that would tolerate for a moment the idea of such testimony being received in the trial of the most trivial case; there is not a respectable justice of the peace in Illinois or Missouri, in Iowa or Michigan, or elsewhere, who would not hoot out of his court the offer of such evidence. I am amazed at my friends of the majority, able lawyers as they are.

One of the main grounds of complaint, and which in the opinion of the committee bristles with badges of fraud, is in the appointment of judges of election, inspectors of election, as they are termed by the laws of Alabama. It is intimated that Mr. Turpin was instrumental in bringing about a change of judges in Lowndes County, for a fraudulent purpose, and to prove this, Judge A. E. Coffee is put upon the stand and in this connection testifies as follows:

Q. At what time or about what time did you make said appointment of said inspectors?

A. About the 25th or 26th of September, 1888.

Q. If there was any other appointments made of the inspectors by your board or any change made in said appointments, state about when that was done, to the best of your recollection.

A. The board of supervisors met again about ten days after the appointment of the inspectors and revised the list, making a number of changes.

Q. At whose instance or request was this second meeting of the board and at whose instance or for what reason were those changes made? Please state fully and particularly.

A. The sheriff and one of the Republican inspectors and other gentlemen, whose names I can not remember now, informed me that a number of the Republican inspectors who had been appointed declined to serve as such inspectors, on the grounds that they were school teachers and did not want to mix up in politics, and the board of supervisors was called together to remedy this defect in the list of inspectors.

Q. Was there no other reason or excuse made by those persons who communicated those facts to you why those changes should be made? If so, what reason or excuse was given by them? Please state fully.

A. No other motive prompted me to make the changes except as above stated.

Q. State whether or not Mr. L. W. Turpin was here just before or during the time of this session of the board at which the changes were made of the inspectors. Please state when it was relative to the meeting of the board, and how long he remained here. State fully.

(Contestee objects to this question on the grounds that it is illegal and irrelevant.)

A. Mr. Turpin was here on the 28th and 29th of September, 1888, which was two or three days after the appointment of inspectors and seven or eight days before the list of inspectors was revised and changed.

Q. Did you have any knowledge of the fact that Mr. Turpin made complaint to any of the board as to the inspectors that had been appointed at your first meeting and that he requested or solicited any member of the board to make any changes of the appointment of inspectors? If he did, please state all you know on the subject.

A. Mr. Turpin stated to me on his arrival here, on the 28th or 29th of September, 1888, that he was perfectly satisfied with the list of inspectors that had been appointed and that he desired that there should be a school-teacher or other intelligent Republican representative on the board of inspectors in every beat in the district and he did not solicit any changes through me or to my knowledge.

Here is contestant's own witness, who is unimpeached and unimpeachable, certainly so by contestant, utterly overthrowing the imputation, and yet strange as it may appear the charge is persisted in by the majority. Now let us contrast these gentlemen, contestant and contestee, and examine for a few moments their claims to the suffrage of the people of that district, both white and black, with the view of determining whether there is anything strange or unnatural in the reported majority for Mr. Turpin; whether it is to be wondered at that large numbers of the colored people voted for him in preference to McDuffie. Mr. McDuffie has written his own history in this case. He seems to be his own best biographer and is largely quoted by all hands on the other side. He testified, among other things, as follows:

Q. State what is your name, your age, and where do you reside, and have you been a resident of Lowndes Co.?—A. My name is John V. McDuffie; my age is 47 years old, and I live in Hayneville, Lowndes Co., Ala., and have lived in said county 23 years.

Q. How have you been engaged in Lowndes Co. during the time you have resided here? If you have held any office in this county, when were you elected to such office, and how long did you hold it?—A. I first engaged in planting when I first came into this county, in Feb., 1868; I was elected judge of the probate court of this said county and held the office for twelve years, having been re-elected in 1874; in 1875 I was elected from this county as a member of the constitutional convention; I was renominated in 1880 by the Republicans for said office of judge of probate, receiving a large majority of the legal votes cast, but was counted out.

Q. With what political party have you acted since you first came to Lowndes County?—A. With the Republican party, and have been a Republican all my life.

Q. If you have been a candidate for another position other than above stated while a resident of Lowndes Co., state what it was, and political career during that time in detail.—A. I was nominated and ran as the Republican candidate to the 50th Congress of the United States for the 4th district of Ala., this county being one of those composing one of said district. I have been chairman of the Republican executive committee of said county almost continuously since 1868; chairman of the Congressional committee of the district for several years, and chairman of the State executive committee for two years, and a member of it for several years. I was renominated by the Republicans of said district in 1888 for the 51st Congress, receiving the vote of every delegate in the convention; have been a delegate to the national convention twice and to every State convention held in the State since 1868.

It appears from his own testimony that he is one of the old carpet-baggers who descended upon the South soon after the war in search of "loaves and fishes;" that he was twenty-three or twenty-four years of age when he got there in 1868, and the same year we find that this patriotic gentleman becomes the chairman of the Republican executive committee of the county, then chairman of other committees, then probate judge, and he has been in office of some kind, or running for office, it seems, from the time he struck the county until the present time, which, of course, he had a right to do if he so desired. The colored statesmen were getting tired of carrying him about, and there seems to have been a general revolt against him; some of the colored leaders were opposed to him because he had supported the "Bourbon Democrats" in the county. W. H. Merritt, whose testimony is before me, says he had heard the leaders say "McDuffie was too close-fisted and they were tired of working for him for nothing." Cornelius Cracheron and other prominent colored men charge that he was not the nominee of the party; that he got his nomination from the district executive committee, who were his partisans; that there was a call to meet in the hall of the Daughters of Conference in Selma, to nominate delegates to the national Republican convention, and that after getting there the doors were locked and McDuffie was named as the candidate for Congress.

The evidence discloses that the action of McDuffie and his friends very much enraged many of the colored leaders, and it appears from the evidence that several of them took the field against him and stumped the district in opposition to his candidacy. It also appears from the evidence that there was a newspaper published in the district—The Cyclone—which was the organ of the colored people in that part of the State and had a large circulation. The columns of this paper indicated the greatest indignation, as will be seen by reference to numerous extracts to be found printed in the record, boldly denouncing the action of the contestant and threatening him with defeat unless he submitted his aspirations to a convention called for the purpose of nominating a candidate for Congress. It seems, however, no such convention was ever held, and the result was the paper bitterly opposed the election of contestant; consequently there were two independent candidates, both of whom withdrew, however, one in favor of Mr. Turpin and actively canvassed for him. Is not their opposition perfectly natural? More than twenty years of political sunlight and personal freedom has illumined many a dark place in the mind of the black man and wonderfully increased his intelligence, and to-day there are numbers of such in that district equally as competent as the contestant to fill a seat in Congress. How is it they are not preferred by their own color to white men? Is there anything strange in their manifestations of dislike to and their opposition to McDuffie under the circumstances?

Mr. Speaker, I do not believe there is a member upon this floor who is better acquainted with the character of the black man in this country than myself. I was born among this people and my whole life has been passed in their midst. He was the playmate of my boyhood and my trustful and trusted companion in early manhood and the close and devoted friend of my maturer years. I know every quality of his heart; I know him to be kind and sympathetic, confiding, and faithful to early attachments, never forgetting a favor and rarely an injury; I have often noted his gratitude and fidelity in peace and in war, under the most trying circumstances, and in the strife incident at times to public life; I have often been the recipient of his enthusiastic devotion and affectionate regard, and have never failed to acknowledge it when occasion demanded. Densely ignorant at the close of the war, his mind has wonderfully expanded and brightened under the warm sunlight of twenty-five years of personal liberty and the advantages of education given to him by the people of the old slave States, by such men as Mr. Turpin and other white men so uncharitably spoken of in the report of the committee.

Mr. Turpin bears similar relations with myself to these people. A native of the South, nearly his whole life has been spent among the colored people of his district; they have known him since childhood and have often experienced the most generous treatment at his hands when most they needed it, and consequently, I say, it would not be in keeping with the natural instincts of this open-hearted and grateful people to do otherwise than aid Mr. Turpin, their life-long neighbor and friend, when opposed by a white stranger, who is known to them only as an office-seeker. Under what obligations are they to the contestant that they should fall down in the dust and continually worship and struggle to exalt him even above his own equals of their own color, to say nothing of their life long friend, neighbor, and benefactor, Mr. Turpin. I repeat that the contestant has a right of course to go to Alabama with carpet-bag in hand and run for office as soon as he arrived there and as often as he please, but in so doing he had no right to aid and abet others in nullifying the laws of his adopted State in his fierce hunt for place. I say this investigation, on the part of contestant, has been a huge farce. The evidence upon which his hopes are based for Mr. Turpin's seat would not have been deemed competent in the court of any respectable justice of the peace.

Mr. COMSTOCK. I would like to ask the gentleman on what evidence the minority of the committee cut down Mr. Turpin's majority some 4,000 upon the same character of proof.

Mr. WILSON, of Missouri. His majority was cut down, as I have before stated, because the minority gave the benefit of the doubt, in every instance, to the contestant, in order that there might be no excuse for unseating Mr. Turpin. I think, Mr. Speaker, I am justified by the evidence in this case in charging this whole plan of election as adopted in that district to be the result of a conspiracy to override the laws of the State of Alabama, under a certain contin-

gency, and that contingency happened when a republican majority appeared upon this floor. If this was not the case, why is it that the outside polls were opened, simultaneously, over the district and large numbers of colored people induced not to vote at the legal polls, and in some instances Republicans refused to act as officers of election?

Am I not justified, in view of the facts, in charging that it was determined, long before the election of 1888, by the supreme Republican council that all over the South, in a certain event, contests should be inaugurated and tried here by the rule of the old census of ten years ago? Am I wrong in saying that this whole farcical trial, which results in overturning a majority of more than 13,000 votes and declaring the contestant entitled to the seat by 5,000 votes and the very excellent election law of Alabama with its registrar provided at the polls for the benefit of the ignorant, notwithstanding is merely intended to blaze the way for the passage of a Federal election law plainly designed to curtail the rights of the people under their State laws, consolidate additional power in the Federal Government, and thus with a Republican administration to administer the law, do so in such a way as to perpetuate power in the hands of that party, especially in the Southern States? If this be not the case, why is it that a member of this House, of that party, standing upon its highest plane points to this case, and another case yet to be tried here, to add force to an article he writes for one of the leading magazines of this country, advocating a Federal election law? When it is considered that that article appeared before this trial and when we are all supposed to sit here in the capacity of judges, I say it is significant and it would seem a prejudgment of the case.

Mr. KERR, of Iowa. I wish to ask the gentleman a question, with his permission.

Mr. WILSON, of Missouri. Certainly.

Mr. KERR, of Iowa. I understand you to state that it had been decided by a high official of this House that this man should go out in order to lay the foundation for legislation that is to follow.

Mr. WILSON, of Missouri. That is the inference I draw from it, and that this case is cited, and another which is to follow, as evidence of the necessity for the passage of such a bill.

You may, and doubtless will, deprive Mr. Turpin of his seat; if so, you will but add another stain to the already blemished record of the Fifty-first Congress, there to remain forever, a monument of the greatest injustice.

[Here the hammer fell.]

Treasury Notes and Silver Bullion.

SPEECH

OF

HON. PRESTON B. PLUMB,

OF KANSAS,

IN THE SENATE OF THE UNITED STATES,

Friday, June 6, 1890.

The Senate, as in Committee of the Whole, having under consideration the bill (S. 2350) authorizing the issue of Treasury notes on deposits of silver bullion—

Mr. PLUMB said:

Mr. PRESIDENT: If my speaking would retard the vote of the Senate upon the silver question or any phase of it, I would not delay action for a single moment on any consideration. But there is an evident feeling that either the opinion of the Senate is not fully crystallized so that a vote can now be taken or there is perhaps some disposition to put the question over for a time, and I feel that in view of these facts I shall not by taking up a small portion of the time of the Senate be in any way impeding final action. I may also say that my hope that a bill would finally be passed at this session of Congress which would fairly come up to public expectation has not grown during the last two or three weeks.

There are two questions which it seems to me may be regarded in this matter of silver legislation as fundamental. One is as to the volume of the currency and the other is as to what the currency shall consist of. There is, or seems to be at any rate, a general consensus of opinion that the volume of currency ought to be increased. How much of this is sincere I may have occasion to remark upon before I conclude. The Secretary of the Treasury in his report recommends a measure which he says should be passed because of the necessity that there should be an increase of currency, which would, if enacted, effect an increase probably at the rate of $25,000,000 per annum. The Finance Committee have reported a measure which would accomplish about the same result.

The Senator from Ohio [Mr. SHERMAN] who spoke yesterday, recognized as the very highest authority among a certain school of financiers, also said that the increasing business and population of the country required an increase in the volume of the circulating medium. Occasionally some one is heard to say that no increase is necessary, but I believe that it is to-day the all but unanimous opinion of the people of the United States, certainly of those living west of the Alleghany Mountains, that a very considerable addition to the volume of the currency is necessary.

In this connection it is worth while recalling the action taken by Congress in 1878. In that year, the year preceding resumption, Congress, after long debate, determined upon a partial remonetization of silver. It restored to full money functions the silver dollar of 412½ grains, but limited its coinage by providing that thereafter there should not be less than $2,000,000 per month of silver coined, giving to the Secretary of the Treasury the discretion to increase that coinage up to $4,000,000 per month, a discretion designed to meet such contingency as might arise calling for an increase in the circulating medium which could not otherwise be promptly met.

At that time there were in circulation $346,000,000 of legal-tender notes—I speak now in round numbers—and $337,000,000 of national-bank notes. There were also outstanding at that time over $1,700,000,000 interest-bearing obligations of the Government, on which national-bank circulation might be based. It was not then anticipated that the circulating notes of the national banks would diminish; on the contrary, it was believed they would increase in volume. Any one who had suggested that during the succeeding twelve years the national-bank circulation would have nearly disappeared would have been regarded as visionary. At that time Congress, after long debate and by a measure which passed over the veto of the President, said that the currency of the country should thereafter consist of the $346,000,000 legal-tender notes outstanding, and not less than $337,000,000 of national-bank notes, to which should be added at least two millions of silver per month, to be coined thereafter indefinitely; and, of course, all that would result from the free coinage of gold.

At that time the volume of the business of this country, as measured by bank deposits and bank debts, by railroad debts, by private and municipal debts, by the sum of commercial transactions, and by all the other things which can be made use of in determining volume, was not over one-half of what it is to-day. In other words, the business of this country has at least doubled during the last twelve years. This increase in business necessitates a great increase in the volume of currency supply. Let us see how that need has been met.

The legal-tender currency has not increased, but remains as twelve years ago, except as it may have been diminished by loss or destruction, and the national-bank circulation, which shortly after the silver act of 1878 increased to $356,000,000, at which sum it remained only a short period of time, has receded until, on the first day of the present month, it was only $128,000,000. To cover increasing needs and fill the gap made by the disappearing national-bank notes, there has been only the coinage of $2,000,000 worth per month of silver and what has resulted from the free coinage of gold. There has, therefore, been a contraction of the currency, beyond the possibility of what was contemplated by those who legislated upon this subject in 1878, of nearly $240,000,000 since that date, and their expectations and those of the country have been defeated to that extent.

This is stating the case mildly, for it was confidently believed that, by reason of the organization of new banks and the enlargement of the circulation of the old ones from time to time, the national-bank currency would increase, and in addition the discretion vested in the Secretary of the Treasury to coin $2,000,000 worth of silver additional per month might be expected to result in something.

As I said, these anticipations have been defeated, and the circulation of the country is $240,000,000 less than the least which the framers of the act of 1878 and those who participated in creating that financial policy which put the country on a bimetallic basis supposed it would be; and no Secretary of the Treasury has purchased and had coined a dollar of silver beyond the minimum, notwithstanding the steady decrease of national-bank notes and the enormous increase in the business of the country. The Treasury Department has always contributed to the policy of contraction.

In 1878 the debts due banks were about $2,000,000,000, divided nearly equally between the national banks on the one hand, State and private banks and trust companies on the other. The deposits were about the same amount and similarly divided. To-day the debts due the banks of the country are four thousand millions and the bank deposits substantially the same in amount. The railroad mileage of the country has doubled and the railroad indebtedness has increased more than the mileage.

There is to-day more than $6,000,000,000 of railroad bonds outstanding, and the volume of private indebtedness not represented by these demand obligations due to banks is not less than an equal amount. To this is to be added State and municipal indebtedness, which can not be greatly less, or a total indebtedness of over $20,000,000,000.

It is one of the chief features of the national-banking system that the banks organized under it are required to keep on hand for the protection of their customers a certain proportion of their deposits. In redemption cities it is 25 per cent.; in all other places, 15 per cent. It may be more, but can not be less without bringing upon the bank the risk of the loss of its charter. The banks undoubtedly comply with the law, except in

rare cases. In the redemption cities more than the required reserve is usually kept. The excess kept by the national banks of the city of New York will be at least $6,000,000 on the average, and the average of all the national banks is undoubtedly over rather than under the requirement of the law. The example set by the national banks is of necessity followed by State and private banks as a rule. They must compete as to measures involving safe methods of business in order to hold their customers. The national-banking system has become the pattern in essentials which all banks are compelled to substantially follow.

It is safe, therefore, to say that private and State banks and trust companies keep in reserve as large a proportion of their deposits as the national banks do. The average per cent. of reserve to deposits, taking the country through, is probably not less than 20 per cent.; but suppose we call it for entire safety 17½ per cent., leaving out of account also the surplus reserve which, as a matter of extra prudence is retained in the reserve cities. The total deposits being $4,000,000,000, it follows that not less than $700,000,000 are constantly kept on hand in the shape of reserve funds, not to be used except in the greatest emergency, if at all, and then only temporarily. A national bank which gets out of line in the way of reserve would receive a sharp admonition from the Comptroller, and this would be followed by an order to go out of business if the deficiency was not immediately made good. It thus happens that the national-banking system, as one of the elements of safety which have commended it to the public, effects a very great contraction of the volume of the circulating medium.

And this brings me to the question of the total volume of money in existence in the United States. Upon this point there is great confusion. No one of the authorities in the Treasury Department agrees as to what this amount is. The Coinage Committee of the House states one sum, the Secretary of the Treasury states another, and the Treasurer of the United States another. The Senator from Ohio makes it entirely different from any of them, and the differences range from twenty-five million to one hundred and twenty-five million dollars.

My own estimate, which I venture to say in view of this contrariety of opinion is as good as anybody's, is that there is outstanding—that is to say, absolutely and only qualified as to the amount of gold coin in the country, about which I shall speak in a moment—$1,560,000,000, and in this computation I allow $14,000,000 for lost and destroyed notes, which is about the Treasury estimate, but far too low in my judgment. This sum total is made up as follows: Gold coin, $680,000,000; silver, including subsidiary coin, $420,000,000; Treasury notes, $346,000,000; national-bank notes, $128,000,000; total, $1,574,000,000. Deduct $14,000,000 for notes lost and destroyed and the total remaining is as stated, $1,560,000,000.

It will be observed that for the purpose of this total I accept the Treasury statement of $680,000,000 as amount of gold on hand. In point of fact there is not so much gold in the United States by at least one hundred millions, and the shortage is likely as much as $150,000,000.

I have in my hand the report of the Director of the Mint for 1888, which I use because of an article which was incorporated in it without comment. In that report it was stated that there was $227,854,000 of gold coin in the United States Treasury, $78,224,000 in the national banks, and $301,527,000 in other banks and in circulation among the people—that is, in "other banks and in general circulation," as the Director of the Mint phrases it. The amount has since increased. I only use the statement of 1888 for the purpose above indicated. Now, as is shown by the reports of the Comptroller of the Currency, the national banks do only about one-half of the banking business of the country; only one-half of the deposits are found in their vaults; they discount only one-half the commercial paper. It is not reasonable to suppose that they hold more than one-half the gold coin that is on deposit in banks in the United States.

The national banks are required by law to keep either legal-tender notes or gold or silver coin as reserve. The State banks and trust companies, being under no legal necessity to compose their reserve of these kinds of money, can, as they probably do, keep a considerable portion of it in the shape of national-bank notes. The probability is very strong, therefore, that the national banks have more gold than is kept by private and State banks and trust companies. But accepting that there is as much gold in the latter class of banks as in the former, that left on the 1st of December, 1888, $223,000,000 of gold coin to be accounted for as in circulation among the people.

Does anybody believe that? Does anybody believe that there is $223,000,000 of gold coin in circulation among the people of the United States as distinguished from that which is found in the banks of the country? That would be nearly $4 for every man, woman, and child in the country; nearly as much gold coin as of national-bank notes, of legal-tender notes, and of silver certificates afloat in the channels of trade and in use among the people. The statement is incredible. Gold coin is not used as currency to any extent. The suggestion that it is being hoarded in private safes and elsewhere is absurd. It is not in the country. There is a deficiency which causes, partly, the present monetary stringency. If any one doubts that there is a serious error, let him take account during the next month of all the gold coin he sees in circulation among his friends and the shopkeepers whom he trades with. The gold is not in circulation. The Treasury is, consciously or unconsciously, deceiving the people. It is most probable that when compilations came to be made they were based on a condition of things supposed to exist, but which had no foundation. It is significant that in the very report from which I quote the Director of the Mint publishes an article from The Commercial and Financial Chronicle, in which his own statement as to the amount of gold in circulation among the people is attacked and in which it is stated that no such sum is or possibly can be in circulation as is estimated by the Director. That article is published at length in this report and not challenged. If "silence gives consent," then the Director of the Mint was at least consenting that his estimate was subject to very grave exceptions.

It is impossible to say definitely how much gold is actually in circulation among the people. But I should say that there could not be over $75,000,000 in any event. Adding as much more as the amount in banks other than national, and about $150,000,000 will have to be subtracted from the total amount of gold in the country as estimated by the Treasury Department.

Let us see, therefore, how much money is available for actual use among the people. From the total of $1,560,000,000 arrived at as above must be first deducted an average of $260,000,000 which the Treasury always keeps on hand, and about which something has heretofore been said in the debate on this bill, and that leaves, as the maximum which can by any possibility be used, $1,300,000,000.

There ought, in fairness, to be deducted from this $150,000,000, error in estimate of gold in the country, which would reduce the money outside the Treasury to $1,150,000,000. From this is to be subtracted the $700,000,000 kept as reserve, as before computed, leaving a balance of but $550,000,000 which is available for delivery or other use in the transaction of the business of all the people, or a trifle over $8 per capita. But the force of my argument is not materially weakened by conceding the gold coin to be as estimated by the Treasury Department, which would leave in actual circulation $700,000,000. In order to make up this amount all doubt must be resolved in favor of the Treasury and against the people, both the doubt as to the amount of lost and destroyed notes and that as to the gold supply. If I were deciding this case upon what I considered the best evidence, I would be bound to say that I believed the money in actual circulation did not much, if at all, exceed $500,000,000.

Upon this narrow foundation has been built the enormous structure of credit of which I have spoken. It is the greatest of the kind that was ever built, because it was built by the best people who ever built anything. Over twenty thousand million of debts, the enormous and widely extended business of sixty-five million of people, all rest upon and must be served by a volume of currency which must seem to the most veteran financier as absolutely and dangerously small.

As I have before said, the business of this country has doubled during the past twelve years. All the business which requires the use of money has doubled. In other words, while the population of the country has increased 2½ per cent. per annum, the business of the country has increased 8 per cent. per annum. I am not going to say whether 2½ per cent. or 8 per cent. or a mean between the two would be the proper measure of the increase of the circulating medium. It would make little difference as to future transactions what the increase if only that fact could be foreknown by all who are doing business. They could not complain if the volume were insufficient, because they had due notice and should have governed themselves accordingly. But under present conditions instead of certainty there is uncertainty. The value of the national-bank currency is constantly shrinking, but the amount of this can not be foretold, and the capricious but nearly always contracting action of the Treasury is a constant menace to all legitimate business. But the currency volume does not alone or chiefly relate to future transactions. It measures time contracts executed in the past, absorbing profits and capital, taking away from the struggling debtor and giving to the idle creditor.

If there were but $1 in the world and nobody wanted it, that would be enough. If a dollar could be set up as a measure of value, as a scale or a yard-stick is set up in the county clerk's office in order that every man could go there and compare it with his own scale or yard-stick, and that was the only use it was needed for, one would be enough, and what it was worth to-day it would be worth during all time. But for dollars there is a constant demand; and, as the Senator from Nevada [Mr. JONES] said far better than I can say, the value of the dollar is in proportion to the demand for it. It will not do to say that the volume of the currency is a matter of indifference, that the amount of dollars outstanding which can be had for daily use and in an emergency cuts no figure because we make such great use of credit. If that were so, one dollar would be as good as a million, and a million as good as ten millions, and ten millions as good as one hundred millions, and so on. Nothing is better settled than that an adequate, a large supply of money advances prices, gives ease and volume to business, and especially benefits those of small means and consequently limited credit. It also prevents the "unearned increment" which contraction brings from overwhelming the debtor for the benefit of the creditor. In this connection consider what the present state of affairs is tending to, what it has brought about. The four thousand million of debts due banks are practically demand obligations; so also are the debts due by

the banks to their depositors of equal amount. Of course the men who owe the banks are in a considerable sense the depositors to whom the banks are in debt, but not wholly. The demand obligations growing out of banking operations can not be less than four thousand millions; they may be five thousand or six thousand million dollars.

Now, Mr. President, this structure of credit, built upon the narrow base of about $600,000,000 actual cash, must necessarily be insecure. Its continuance must depend upon the careful management of somebody, and to whosesoever management it is intrusted there is given an equivalent in the shape of power. The only human ambition worth mentioning in any arena where men contend is that of power, and the secret, in my judgment, of the opposition which great bankers in this country make to the increase of the circulating medium, as a rule, is because they do not want to be shorn of this enormous power which they have over the business of the people of the country and which they desire to keep. I do not say that it is an unworthy ambition. I do not mean to say that they will discharge their duty in such an event unworthily, but it is an enormous power for them to have. But the best of management sometimes fails, and the most elaborate structures are the ones which show the greatest weakness under strain.

A defaulting cashier, a faithless trustee, even the failure of an obscure brokerage firm, is often sufficient to precipitate a panic, as a consequence of which the most solvent and prudent, wholly disconnected except in a general way from the causes which led to the untoward results, may lose all. These are the most liable to occur in New York, and when they do occur the shock is felt throughout the entire country. Business may be good elsewhere, the banks all sound, but so long as there is disturbance and fear in New York there is a comparative suspension of business throughout the country, so far as relates to exchange and the making of loans. It may take weeks to ascertain whether the trouble is local and temporary or general and permanent. The structure is so vast, the foundation so slight, that the slightest trouble brings suggestions of a collapse which all know can not long be postponed. Crops may be good, mines, forges, and furnaces may be yielding as never before, and yet so overtopped and delicate is the structure of credit that the misdoings or misfortune of the most insignificant dealer in New York may destroy it all, and those who suffer most are those who are wholly innocent and oftentimes farthest away.

The moment there is fear the banks stop loaning. The amount of currency is so small that when loaning stops business dependent upon money stops also. Then commences the collection of debts, which means distress, and the end is at hand; margins disappear, property which was before valuable loses its value by comparison with that of money, which has enormously increased in value, and the man who is in debt is wholly sacrificed, while the man who is not in debt loses his earnings and anticipated profits. The wreck of thousands is complete.

The Senator from New York [Mr. HISCOCK] made a great exhibit on yesterday of the wealth of this country. It was no doubt a correct one. But he did not tell us whether the Finance Committee were debating whether they could not make it a great deal better by piling up the duties on imported merchandise from 10 to 300 per cent. in the tariff bill which is before them. If it is so good, if there is no complaint, no cloud in the future, if there is financial health, soundness, prosperity, and if it is all evenly and fairly distributed, why not let well enough alone in matters relating to the tariff as well as the volume of the currency?

The Senator thinks we do not need legislation increasing the currency, because of our great prosperity under the present system. If this is all true, why revise the tariff and especially impose new and increased duties? Or are we too prosperous, whereby the necessity arises for placing new burdens on the people?

I have a letter here from the president of one of the leading national banks in New York, whose name has not been mentioned in connection with this legislation and who has not written for publication, which throws some light on the present situation. It is dated May 16, 1890, and says:

> The pressure for credit continues very great, and you had better get together and do something that is fair and equitable for all interests; if not, somebody will get hurt the way things are going now.

A letter from a member of one of the leading private banking houses of New York bearing date perhaps a month earlier states that a panic was only averted last fall by what might be called "kiting" the drawing of time bills upon London by the larger houses, bills not drawn against money on hand or against merchandise in transit, but bills representing only the credit of the drawer.

Mr. President, there ought to be an increase of circulating medium in order to relieve from this great strain and also in order that the people who can not make satisfactory use of the device of credit may have a fair chance. In the great world of credit the laborer and the farmer have no place and little or no opportunity. It is money they want, money for manual delivery. The competition is now so keen for the few dollars there are in circulation that they do not get them; they go to the merchant and the banker and those who already have the better opportunity because they can make use of credit.

The money goes into the till of the merchant only to be deposited in the bank, whence it goes out in the shape of loans. But these do the farmer little good because he can not make quick returns in his business. He is therefore remitted to heavy loans upon mortgage, the money drawing interest when not in use as well as when it is, eating out the substance of the borrower, tempting to extravagance, and often the means of destruction.

So keen is competition for money for manual delivery, so constant and always is this demand, that no sooner does a dollar get out than every agency of the banks is set at work to bring it back, and so it happens that not only is this money not found in the outer periphery of things among the farmers and poorer people, but it concentrates itself in the great cities and hides in the vaults of the banks.

Mr. President, we ought to have more money. I am not certain now how much more. I know how inevitably some compromise on this subject will result; but if I were to express what I think ought to be done I should say that not only the vacancy in the national-bank circulation which has occurred during the last twelve years should be made up, and that, too, as speedily as can be, but there ought to be in addition at least as much as would result from the free coinage of silver. How shall we get it? For years there has been in this country a very powerful and growing sentiment in favor of paper money, paper money the value of which should be fixed by a limitation upon its amount, a legal tender for all debts, public and private, and redeemable only as it passes from hand to hand in the transaction of necessary business, divorced from both gold and silver, by reason of which the volume of it could be always steadily maintained, for it could never be made the subject of export, and which would, therefore, leave the people of the United States, with reference to their internal business based upon currency supply, free from the danger to which they are now subject by reason of the liability of the gold and silver currency to leave the country. This is called fiat money.

I know how some men grow pale and others furious at the suggestion of fiat money, how Senators and Representatives whose constituents are chiefly the owners of the fixed capital of this country call a proposition of this kind one of repudiation, and all that sort of thing, upon the assumption that Congress would keep increasing the volume of paper money until credit and property would be of little or no value and confusion and ruin would result. In thus prophesying they overlook the recent experience of this country and in fact lose sight of the fact that the Constitution as recently defined by the Supreme Court gives Congress full authority to do all I have named and even what is feared. And yet it has not been seriously proposed to exercise this authority, which shows that Congress is not disposed to enter upon the exercise of powers of doubtful utility or those not called for by the permanent public opinion of the country. If this public opinion existed, formed after full discussion, I should hope that Congress would provide just such a currency as I have outlined, believing that it would be for the best interests of all the people and one which would forever separate the question of the volume of money in circulation from the control of banks and other monetary institutions and from the accidents of our foreign trade.

No Congress representing the American people would ever enact a law which would scale debts or otherwise effect repudiation. There are no such debt-payers in the world as the people of the United States. Their treatment of the war debt shows this, as does the restraint which they imposed upon Congress during the war in relation to the promise made at the time of the first issue of the Treasury notes as to the maximum amount to be issued, and which was never exceeded. They have paid all but a fraction of the debt, much of it before maturity, at a large premium, and the terms of a considerable portion of which was so changed by law as to be more burdensome than when created. The American people will repudiate no obligation, nor perform any act not consistent with the highest financial honor. But it is fair to make such provisions that the holders of the contracts shall not have more than their contracts call for. The law should hold an even balance.

The Senator from Vermont [Mr. MORRILL] affects to see in the proposition to enlarge the volume of the currency to meet increasing population and business an element of repudiation, and, appealing against it, brings forward the New England widow, who did duty in opposition to the silver legislation of 1878 which has been attended with such valuable results for the whole country, as well as against all propositions for an increase of the circulating medium.

There is a story afloat, and it may have got into print, about some man who went to Tophet and succeeded in getting back, probably the only instance on record; and, when he was asked what he saw down there, replied that he saw a certain individual, or perhaps it was a party, holding the darkies between himself or itself and the fire; and so this New England widow, the holder of mortgages or bonds or of railroad stock, is brought in here and held before the fire, but behind her ample skirts are the holders of six thousand millions of dollars of railroad bonds, and a thousand millions of dollars of the funded debt of the United States, and other added millions of credits, who, by reason of the demonetization of silver and a constantly contracting volume of the currency, have had their securities made far more valuable than they would otherwise have been, and to the corresponding disadvantage of the debtor.

It remains to be seen whether this frugal widow with the cloud of rich

witnesses behind her, whose sole interest is to have their holdings increased in value by a contraction of the currency and the maintenance of the single gold standard, will prevail, or whether Congress will take into account the men who have put all they have got into the sea of venture rather than those who represent capital which has been taken out of the current of ordinary risk and put into the safe and permanent shape of bond and mortgage.

The feeling in favor of paper money instead of gold and silver has had the greatest hold in the West. It has been a part of a widely prevalent feeling in favor of such an increase of currency as should meet the needs of all current business, a feeling widespread and enduring. Lately this feeling has taken the form of a demand for the free coinage of silver. This is partly the sentiment aroused by the demonetization enacted in 1873 and partly the result of a conviction that the required increase in the currency volume can be more readily accomplished by that means now than in any other way, and more in common with the feeling upon the subject prevalent in the East. It is designed to be and is a thoroughly conservative movement. It aims at no scaling of debts, no repudiation, but does mean in the most emphatic way that the policy which is now being pursued, whereby the fixed capital of the country has unconscionable advantage over labor and capital, which is taking the risks of ordinary venture, shall cease.

When, however, it is proposed to accomplish this very proper object it is opposed on the ground that if more silver is used as money it will drive gold out of the country.

I agree that the subtraction of $680,000,000, the alleged amount of gold in the United States, from the currency of this country would be a misfortune, especially as in the absence of special provision for replacing it with some other form of currency it would mean a great contraction of the currency. But, Mr. President, can it not be seen by even a man who is blind that, if you make the $680,000,000 of gold in the country merchandise instead of currency, what is left of the currency will be enormously enhanced in value, so that it would at once close the gap by means of which the gold was driven out and gold would resume its old place? None of the currency of the country will be driven out unless there is too much for the proper service of the people. Being less than $600,000,000 in money actually in circulation among the people now, the subtraction of this entire amount, which would occur if all the gold should leave the country, there would be, as can well be imagined, a great demand for what remained! The strain would be greater than it ever has in any event been upon gold.

But, Mr. President, who can give a guaranty that we shall not lose of our gold? We apparently only keep it by the greatest effort. If the monometallists are to be believed, even the Treasury Department is in danger of losing the great stock of yellow metal there stored; that it will disappear in some occult way. The Cleveland Administration was affected by a mania on this subject, and at one time arranged with some New York bankers, anxious no doubt to keep up the delusion, for the exchange of several millions of gold for an equivalent amount of fractional silver, in order that the Treasury supply of gold might be in no danger.

The humor of the transaction escaped the consciousness of the frightened Secretary. He could not see the point of the joke of which he was the victim: the exchange of precious gold, dollar for dollar, for despised and depreciated silver! The present Secretary is in a similar condition. He hoards gold and deprives the people of at least one hundred millions of the money created by law for their use beyond any practical requirement of necessity, apparently fearing that the people of this country who are possessed of Treasury notes will drop the plow in the furrow and the yard-stick on the counter and rush down to Washington in order to present them for redemption in gold. It would be farcical if it did not involve a tragedy in which the people were the sufferers.

This fear ignores all facts and all common sense. The man who has paper money which is a legal tender for all debts and receivable for custom dues only wants that redemption which comes as he exchanges for that which to him for the moment is the more desirable, for the rent which is due, for the food which is to sustain life, for the property on which he hopes to make a profit. Gold redemption is not desired and has not been demanded.

The gold of the world is not in sufficient supply. There is a consuming demand for it. Nations which are upon the gold basis must keep up a continual and ample supply of the metal or suffer in consequence. It is like the struggle of two strong men in a cold night for a blanket too small to cover both. If we are to make sure at all times of a supply of gold which, added to our other currency supply, will be adequate to our needs, we must be prepared to struggle and perhaps even to fight for it. Circumstances may occur which will make our gold supply essential to foreign nations. They have the means of getting it, for they hold our stocks and bonds in large quantities which, if they return and dump on the New York market, we must buy. If war should threaten Germany or England the first step to be taken would be to increase their gold supply in order that the financial part of the preparation might not be inadequate. Suppose the balance of trade should, for a series of years, be against us; we should lose more or less gold, and neither of these contingencies would be affected by the presence or absence of silver. But if as is contended we should adopt the gold standard every dollar of gold we lost would still further narrow the base on which must rest, not only all our currency, but all our business.

The loss of even $100,000,000 of gold under present conditions would have a serious effect. How necessary, then, that we shall increase our currency supply, and especially that we shall widen the base of it by the free coinage of silver.

The Senator from Ohio said, in a brief speech which he made the other day on a minor clause of this bill, in a spirit of candor that did not characterize his speech of yesterday, that gold and silver had been created by the Almighty as money and had been such from the beginning of time. "What God hath joined let no man put asunder." If gold is money, then silver is money; if either is money by the designation of the Almighty, both are money; and if gold to-day is any more money than silver it is because the law has made it so, giving to gold the exclusive money function and degrading silver.

The American people are logical. Whenever it is settled that it is the law and not the designation of the Almighty, the fiat of legislation and not intrinsic value or a long course of business or a consensus of public opinion which constitutes money, they will not long halt on gold, or silver either for that matter, but go at once to paper as the only logical and proper representative of value, as the medium of exchange.

It will not take long to create a public opinion in this country in favor of discarding gold as well as silver if once we get away from the sentiment that these metals are precious and designed for money and better calculated than anything else for money, irrespective of legislation. The greenback is an encouraging example in this direction, which is dearer to the hearts of the people than any other form of currency. No party could live during a campaign that proposed to retire the greenback. It will stay where it is, undiminished in volume and a permanent part of the country's currency.

It is for these reasons that I say the proposition for the free coinage of silver is a conservative one and one which ought to be acceded to at once and without cavil.

The Senator from Ohio on yesterday had a good deal to say about the act of 1873 demonetizing silver and how practically nothing came of it because there was no silver in the country to be demonetized; that we never had had silver money, and consequently its final elimination produced no result.

Mr. Chase, who presided over the Treasury Department during the war and who is entitled to rank with the ablest men who ever occupied that great office, in his report of 1862 commending to Congress the adoption of the national-banking system, said:

> The Secretary recommends, therefore, no mere paper-money scheme, but, on the contrary, a series of measures, looking to a safe and gradual return to gold and silver as the only permanent basis, standard, and measure of values recognized by the Constitution.

Mr. Chase evidently thought the country was on a bimetallic basis when specie payments were suspended during the war and looked forward to a return to that basis. It had not occurred to him that silver was not a proper material from which to make money, nor that it was not a fit instrument of modern commerce. Ten years later the Senator from Ohio, according to his own statement, helped to enact a measure which he says he knew demonetized silver, which thereby increased the value of credits, added to the burden of the debtor, and perpetrated a fraud upon him, the effect of which has not yet disappeared. I do not care whether that act was passed by fraud or by mistake, it can only be characterized as the economic crime of the century, and it does not cut any figure in the case to say that there was then no silver or little silver in circulation. It destroyed one medium for the transaction of business and the payment of debts, and put all the burden upon a single metal which has steadily and rapidly ever since increased in value by reason thereof.

I am thoroughly persuaded that the demonetization of silver was brought about with full design and intention to produce the precise result which was accomplished, that of oppressing the producing and debtor classes for the benefit of creditors. It was a part of a scheme which had for its theater the world. Germany followed the lead of the United States, and the bondholders were put completely in the saddle.

In my judgment the people of the United States will never be satisfied until that act is undone. I know Mr. Lincoln said that the people would be satisfied when slavery was in process of extinction, and it may be that something short of the complete restoration of silver at this time might meet with a reasonable degree of acceptance, but the free coinage of silver, putting it on a complete equality with gold, is the goal which must shortly be reached if public opinion is to be satisfied and a fair equilibrium between the capitalist and the people be restored.

Economists differ somewhat as to the amount of gold produced each year throughout the world. They differ widely as to the amount which from this annual supply goes into the arts. But the outside estimate of the amount which is or can be spared for coinage is $30,000,000. Many maintain, and I think on the better basis of fact, that practically the entire yield is absorbed in the arts. But suppose that

$30,000,000 of the annual supply becomes money, what a beggarly amount to be added to the world's supply of money! And yet if we are to go to the gold standard, as the Secretary of the Treasury and those who act with him have determined, to be followed, as would probably be the case, by the nations which now have either silver alone as money or silver and gold conjoined, 1,500,000,000 of people must prepare for such terms as the possession of the gold of the world may impose.

Civilization is expanding. Regions of country that have heretofore known nothing about dollars or measures or standards of value are coming under the beneficent influences of christianity and civilization with the effect of creating a greater demand for money. Are new conditions to be harnessed to old ones? Is the world to be circumscribed in its development by the amount of gold which after the consuming demand of the arts is left for currency purposes? If not, with what is it to be supplemented? Those who advocate a gold standard must answer this. Those who propose the single standard must be prepared either to say only such growth can occur and such business be transacted as may with safety be based upon a comparatively decreasing medium of exchange, or else they must make perfect some plan for the enlargement of such medium of exchange.

I risk nothing in saying that things can not go on as they are. If the demand for a bimetallic standard is not granted, then either gold must be wholly discarded for paper whose value will be determined by volume and legal-tender quality or the amount of gold which constitutes a dollar must be from time to time reduced. The world can not do business upon the basis of extended credit if the measure of value is to constantly grow more valuable in proportion to property.

But we are told that silver money does not comport with modern ideas and modern civilization. The Secretary of the Treasury says that the gold dollar is the dollar of commerce and that he will indulge in no idea or plan which disputes its supremacy. It is the dollar of the money-changers, and they, not those whose labor creates value, are to be taken into account. The man who exchanges the fruits of labor is to determine what the measure of that value shall be, and not the farmer who raises the grain which is the subject of exchange. The producer is not to inquire as to the volume or character of the currency which fixes the value of his product, but is to leave that alone to the banker who lends the money and the commission merchants who act as agents in the matter of sale and exchange. The middle-man is the vital factor in modern business, so highly civilized that silver will not answer for money for its use, and the producer is a mere incident!

If he can not keep up with that civilization which demands gold alone as money, and which has contraction and falling prices for everything except the investment of fixed capital as an inevitable result, that is his lookout. He is simply crushed with the logic of the situation and must not complain. If it is pointed out that a crash will come when the financial pyramid of more than twenty thousand millions of public and private credit, all payable in gold and built upon a basis of less than $600,000,000 of available currency, shall become a little more top-heavy, the answer is in substance that this will not hurt the owners of bonds and mortgages, or of cash money, or of the middle-man, but its effects will fall upon the broad and willing backs of the patient multitude of producers, East and West, who must accept what comes as the verdict of a civilization so advanced that they are withdrawn from its purview.

Mr. President, I shall be surprised if the producers of this country are much longer content with this condition of affairs. They have a right to feel, as they do, that they and their interests should be taken into account. The functions which they exercise are superior to those of the money-changer or the commission man. They have a right to the fruits of their labor, and if the civilization of the period denies it to them they will pray to be remanded to a less civilized condition.

What is the proposition which so excites the ire of those who represent the fixed capital of the country and which if adopted is to bring ruin to the country and to civilization? According to the best data less than $55,000,000 worth of silver is mined in this country each year, and of this something over $30,000,000 is coined under the present law. More than $6,000,000 is the amount used in the arts, and only about $17,000,000 is left to become the subject of free coinage unless the stock of silver abroad comes to re-enforce our own supply.

Mr. COCKRELL. I call the attention of the Senator from Kansas to the fact that the Director of the Mint says that in 1888 $8,000,000 of silver was used in the arts.

Mr. PLUMB. I am taking outside figures as to the possibilities under free coinage. Not to exceed $17,000,000 could in any event be added as the result. It must be borne in mind also that about $15,000,000 of national-bank circulation will be retired this year. Practically there is no escape from it. We shall lose during the fiscal year 1890-'91, beginning on the 1st day of July next, $15,000,000 of national-bank circulation beyond peradventure.

Mr. FARWELL. More than double that.

Mr. PLUMB. The Senator from Illinois says more than double that. We lost $41,000,000 last year. The reason why we shall not lose so much this year is because, as I understand it—and yet I may be mistaken, but I think not, however—that the banks can not retire their circulation beyond the amount I have stated without losing their charters. Of course, if the banks should take a notion to quit the system, losing their charters, there would be a loss of $3,000,000 a month, the maximum permitted by law.

Now, Mr. President, supposing that the banks retain their charters and only reduce their circulation to the amount which they can without surrendering them, we should lose $15,000,000, or practically all we gained by free coinage. If we took everything that the American mines furnish we should only be making good the shortage created by the banks and a couple of millions over. Would that be an inflation of the currency such as would bring serious consequences? It would be the addition of the enormous sum of 3 cents per capita!

Take the next year, and supposing the banks did not retire any more currency and supposing also that the silver supply should increase 10 per cent., as it probably would not, and the extreme amount added to the currency for that year would be $25,000,000, which, for a population of 70,000,000, would be about 33 cents per capita.

It is additions like these which, according to those who oppose the free coinage of silver, are to make financial disturbance, upsetting values, destroying commerce, and turning back the dials of progress. Mr. President, the American people have made good use of every instrumentality of progress which they have been able to lay hold upon. They are the most enterprising and progressive people in the world. The more money they have the greater the number of their new enterprises, the greater their progress, and, above all, the more even and equitable will be the distribution of the results of labor and enterprise.

The American people would take five times 33 cents per capita of additional currency, yea, ten times that much, every year, absorb it, make use of it, extend their enterprise in consequence, distributing more evenly amongst the people the rewards of labor and enterprise than can by the existing volume be done, giving to labor better reward, to business better facilities, helping everybody, and hurting nobody except those who are indulging in the anticipation of the increase of the value of the bonds and mortgages they hold, and which the Senator from Nevada felicitously calls "money futures."

Everybody agrees that we can not have too much gold. If we were suddenly to acquire one hundred millions of the yellow metal we should be that much richer. It is said we shall have sent to us from abroad large amounts of silver, which will seek our mints for coinage, but no one knows where this silver is at present. The United States has constantly exported its surplus silver to London. That surplus would disappear from the market under the operation of free coinage, and why should Europe suddenly have silver to sell us after having readily for an indefinite period bought all we had to sell, many millions each year? But suppose Europe suddenly has silver to dispose of instead of buying, as heretofore, why should we fear for the result? We could only get it in the processes of trade. We should give something for it which was for the time being less valuable to us. It will not be given to us, though we could stand it, I think, even to take the $25,000,000 which the Senator from New York [Mr. HISCOCK] said on yesterday the Dutch were ready to give us. It seems to me we should be $25,000,000 better off without effort.

The average Yankee can be trusted to make a good bargain in trade, whether it be of silver or other commodity. There would be some active business going on as the result of the movement of silver this way.

But, Mr. President, I venture the opinion that when silver shall be coined free in this country Europe will not only keep all it has, but will strive assiduously to get all of ours it can, as heretofore. We overlook that silver has been degraded first by legislation and second by a powerful public opinion created by the banks of the great cities and by the newspaper press of the same localities. They have employed threats and villification to carry their point. But despite all this the sentiment for the restoration of silver has power stronger and stronger all the time, until now it is demonstrated that public sentiment demands action. The question now is, how little can be done and not run too far counter to this public sentiment?

We hear all the lugubrious prophecies which were uttered in 1873 as the result of a depreciated currency. But if silver be given free coinage it will appreciate in value and, what is more and better, gold will go down. Perhaps the two metals will not entirely come together, but a moderate difference in their respective value as commodities will do no more harm than it did in 1873, when silver was worth 3 per cent. more than gold.

And this brings me to the proposition which I was very sorry to hear my friend from Illinois [Mr. FARWELL] make, that the proper silver dollar was one which had silver enough in it to make it equal in value as a commodity to gold. This would of course make gold the standard. As that metal is constantly appreciating in value and as under this plan silver would fluctuate widely and probably further depreciate, becoming the prey of speculation, the silver dollar would have to be recoined every day in order to be kept at a parity with the gold dollar. The Senator from Illinois is too sensible a man to take up that absurd idea after the author of it, the Senator from Ohio [Mr. SHERMAN], and everybody else have abandoned it.

Mr. President, a return to the gold standard is precisely what we

most desire to avoid. I would rather to-day stop on the basis where we are of actual money in circulation if thereby we could maintain the double standard than to increase the currency ever so much upon the basis of a return to the gold standard. The burden of public and private credits is already as great as can be borne. To further increase it as would be the result of a return to the gold standard would be a greater crime than that of 1873. Pay-day is bound to come, and if the strain of additional credits be put upon gold the day is not far distant when the ruin of the debtors of the country, the most enterprising and deserving portion of its population, will be complete.

I want to widen the base in order that every man under the flag may feel that he has his feet on a solid foundation on which he can build with safety, whether his ventures be such as to call for credit or not, and whether they be large or small, and all the better if they be small, because the interest of the country is a great deal more with those whose business is small than with those whose business is large. Better less accumulation of wealth and a more even distribution; better more comfort on the farm and in the homes of those of small means than greater luxury in the palaces of the rich.

Mr. President, the sacred name of protection was invoked yesterday by the Senator from New York [Mr. HISCOCK] against the free coinage of silver. I was not surprised, because I had noticed with more concern than I care to express that for many weeks past the leading protection newspapers of the country have been denouncing the proposed free coinage of silver, and, in fact, all plans for adding to the volume of silver money as conspiracies, and impugning the motives of their advocates. According to them, only dishonest persons favor silver, and all the country needs in order to be prosperous is to increase the duties on articles of general consumption.

We have had rehashed the old talk about the 75-cent dollar, about repudiation, about the awful impropriety of increasing the value of silver because it would give profit to miners and mine-owners. What does protection do if it does not make profit for the manufacturers? And what about the demonetization of silver in 1873, by which the miners and owners of gold have been enriched, by which, according to the best authority, gold has been increased more than 30 per cent. in value in the last fifteen years? Anything which helps gold and adds to the fortunes of those interested in it is moral and God-fearing; that which would help silver is dishonest.

Mr. William H. Lyon, the oldest dry-goods merchant in the city of New York, has often told me that he had taken careful account of the purchases which his firm had made from time to time during the past twenty years in China, in Japan, in India, in Germany, in Russia, and in all the countries of the world, and he said to me that silver as merchandise would now buy more of all kinds of other merchandise than ever before; that the purchasing power of this degraded silver had increased by comparison with the prices of all other products of labor except gold. Enormous fortunes have been made out of the rise of gold and without effort or risk. Look at the premium on Government and railroad bonds and other similar investments. And yet those who merely say that they mean to so legislate as to prevent a repetition of this are accused of being repudiators.

The virtue which now cries out at the proposed remonetization of silver is very like that of a person who, having stolen all the horses of a neighborhood, should then become devout and announce that stealing must cease. Those who have got a 30 per cent. profit on the rise of gold now behold with alarm and indignation the proposition not to take away what they have improperly acquired, but simply to stop further accumulation of the same kind.

Can it be said that this is repudiation? Are we so bound in bonds to these our lending brethren that we are required to do that which will every day make them worth more than the day before without effort on their part and at the expense of the producers of the country? Is that the standard of commercial morality which we are to have here enacted into legislation or which is to be interposed to prevent legislation designed for the benefit of the great mass of the people?

Mr. President, I am a protectionist, and up to within a few days I have believed that protection meant the giving of value to any product the result of American labor on American soil. But now, in the sacred name of this—I will not call it a fetich, although I do not know what I may call it before I get through—but in the sacred name of this system we are asked to depreciate silver, notwithstanding it is an American product of much larger value than many which will figure in the new tariff bill with an increase of 200 or 300 per cent. of duties beyond those now provided by law. When my friend from New York [Mr. HISCOCK] got into the pathos and patriotism of his plea not to do anything which would deprive the country of gold wherewith to make settlement of our foreign balance, I wanted to ask him what he proposed to do about this same tariff bill, which, if enacted in its present shape, will cut off the greater part of our foreign commerce for the present, at least, and thus obviate the necessity or even the opportunity of our paying out gold in payment for imported goods. I hope I may interpret what the Senator said as a hopeful augury of his action upon that bill in such amendment as will prevent the proposed increase of duties upon articles of nearly universal consumption, whereby new burdens will be put upon the consumer.

Mr. President, I have occupied more time than I expected, but I have scarcely entered upon the threshold of this great question. I have gathered from time to time while this debate was going on data of different kinds which I thought would throw some light upon it. But the speech of the senior Senator from Nevada [Mr. JONES] covered the whole ground so thoroughly that nothing which I could say would be more than to add the flicker of a tallow candle to a subject illuminated by the brightest of electric lights.

I have spoken more to represent the convictions which will govern me in the vote which I shall give than to attempt to instruct any one else. I can not regard without fear the present condition of things, confronted by the danger of a great financial collapse on account of the great volume of credit built on a narrow base of money and the increasing burdens which are put upon the producing classes. But my chief fear grows out of the plans which have been proposed to meet these vicious conditions. The accord in certain quarters to the effect that more currency is needed is in itself suspicious. But when the means of providing this currency are inspected suspicion becomes alarm. The intention is quite apparent to concede an increase in the circulating medium on the sole basis that the double standard shall hereafter prevail and silver cease to be money.

I can not look upon the bill which came from the Treasury Department with the sanction of the Administration as calculated for anything else so much as to restore the single gold standard—no more silver coinage, no more silver dollars, $360,000,000 of them added to whatever gold we may accidentally possess to be the basis upon which 65,000,000 of people, increasing at the rate of 2,000,000 per annum, must hereafter do their business; silver to be used only as a commodity, as a basis for the issue of warehouse certificates. Mr. President, rather than to have that bill become a law I would willingly see this Congress adjourn without one line of legislation upon the subject and carry this question to the people and get their final verdict upon it. A return to the gold standard would be a far greater calamity than the continuance for a year or two longer of the present disastrous contraction of the currency.

I do not mean to say that in matters of this kind, where great interests are at stake and where there is perhaps room for difference of opinion, or, at all events, for difference of interest, there may not properly be some compromise between conflicting views in order that legislation may be had; but I want to say that whatever compromise I may consent to will never be one which limits the basis of the business of the country to the silver now coined, plus gold, such as we have and may get. Any legislation which I consent to must permanently widen the base, must either recognize both metals as money or must discard both and put in their place paper money, the value of which can be expanded so as to meet the increasing needs of increasing business. Archimedes said that if he had a place to put his fulcrum he could lift the world. Give the American people the base on which to plant their feet, with increasing breadth to meet increasing needs; give them the financial instrumentalities which they need for the development of their resources, room for the exercise of their intelligence, their enterprise, their courage, and they will not only move the world, but they will lead it. If, instead of being content to echo the opinions which emanate from bank parlors in London and Berlin, we take into account its real truth, the needs of our own people and that which concerns their well-being and happiness, put silver back to its rightful place, enthrone our American product, give to our people the opportunity which a fairly reasonable money supply would furnish, and put ourselves in accord with this hemisphere, inside of two years the United States would have primacy in the financial world and the money center of that world would be not London, but New York. I also believe that if we do not adopt free coinage of silver now Great Britain will shortly do that or its equivalent and we shall meekly follow as heretofore, not daring to do anything unless the mother country first sets the example. We seem to enjoy this kind of humiliation.

We are sixty-five millions of people, soon to be a hundred million, possessing a continent of immense resources, with more intelligence and enterprise than any other people in the world. The Anglo-Saxon race is bound to lead and the American people ought to have primacy in the councils of that race. We do not need to ask what London or Germany wants. Our opportunity and career is before us, and may consist in defying the policies of the older nations. Leadership is more the result of courage than of finesse. We need the courage now to take first place and mark out a policy which all the nations will be under constraint presently to follow. We need for our own use all the silver we have and all Europe dare to send us, and the more they give us the richer we shall be. The good sense no less than the patriotism of the Senate is appealed to to create the broad foundations on which we can safely build and which will make the opportunity which our people will gladly embrace.

Let us break whatever bands bind us to the body of death represented by that fixed capital which produces nothing, which shuns the sea of venture, which discourages enterprise, and which oppresses labor! It is joined to its idols; let it alone. Instead let us legislate for the majority, the people whom Lincoln called the common people, whom he trusted and upon whom the Republic rested during the fateful

period of the war, and who brought the country and liberty through triumphant. [Applause in the galleries.]

Mr. President, I wish to put in the RECORD a report by Mr. William P. St. John, who has considerable prominence in this matter, to the Chamber of Commerce in New York on the silver question, and also a supplementary report which he made, which I will ask to have appended to my remarks.

The PRESIDENT *pro tempore*. The Chair hears no objection.

The papers referred to are as follows:

To the New York Chamber of Commerce:

First report of a minority of one of the committee on finance and currency, submitted to the chamber May 1, 1890, on "pending silver legislation."

The silver legislation now pending in Congress, and entirely likely to be adopted, is best designated as the Republican caucus silver bill.

Details omitted, that enactment would require the United States to purchase monthly so much of four and a half million ounces of fine silver as can be obtained at $1 for the amount of silver in our standard silver coin, namely, $1 for 371¼ grains fine, or 412½ grains nine-tenths fine; *i. e.*, $1.2929 per ounce fine. Inasmuch, however, as the world's record of annual supplies and needs of silver in the past, to and including the year 1889, furnish me no warrant of facts for the suspicion that even with considerable increase of production the United States will be able to procure, as against the world's actual and prospective requirements, 54,000,000 ounces of fine silver annually at this fixed limit of our mint price, I deem it a fair conclusion that the proposition is fully the equivalent of reopening our mints to the free and unlimited coinage of our present standard silver dollars, and with even a little better convenience to the silver producer, who will receive Treasury notes in prompt payment instead of waiting for his silver to be coined.

Assuming that this bill, because hailing from the caucus of the ruling party in compliance with an overwhelmingly influential demand for an increased output of money, is reasonably certain of adoption, I now fulfill my duty to this chamber as I conceive it, although alone perhaps in my conclusions, to report, as from the minority of your committee on finance and currency, that I deem the proposition worthy of your approval, and therefore heartily commend its enactment as a wise and timely law. In support of this opinion I trespass as little as possible upon your patience, not attempting a complete argument, but respectfully submit in brief the following statement of facts for such influence as they may have with you.

THE IMPENDING AVALANCHE OF EUROPE'S SILVER IS A MYTH.

First, because Europe's only silver, other than an annual production of a little more than half her annual consumption in the arts, is Europe's silver money. The unsold remnant of Germany's accumulated silver, for sale after France had paid her indemnity in gold, has long since been put into circulation and is now afloat and in bank as a portion of Germany's current moneys. For continental Europe to ship us her silver money at our proposed mint price in exchange for gold or for our reminting into standard silver dollars for her account, she will need first to procure 3 per cent. additional silver bullion, and for that to tax her people about $28,000,000, and additionally for transit charges, for this seemingly purposeless exchange.

France I assume to be a fair criterion as to Europe's course with silver, she being possessed of six times as much silver money as any one other European nation, Germany excepted, and three times as much as Germany, at the same time that she possesses $300,000,000 worth more of gold than her only rival outside the United States, Great Britain; and France will not flood us with her silver:

First. Because in December, 1889, or January of this year, the opportunity was afforded her (as subsequent attempted explanations fully confirms) to procure gold for her silver to the amount of 300,000,000 francs at par, that offer being 60½*d.* per ounce in gold for $59,000,000 worth of her silver money, *i. e.*, in equivalence, 103 cents apiece in gold for our so-called "72-cent discs," our present standard dollars; and that offer was declined.

Second. Because under the Latin Union treaty, France might now, as during several years past, but does not, exact of Italy, Belgium, Switzerland, and Greece the redemption of their silver coins in France, for which at last estimates her claim on them in that exchange for silver at par, would exceed the sum of $80,000,000 gold.

Finally, as to France being every year indebted to India for supplies of wheat, cotton, indigo, etc., France might profitably rid herself of silver in the average sum of more than $40,000,000 annually, and elects instead practically to pay in gold, purchasing in London India council bills to remit in settlements. France, the criterion of criteria as to Europe's silver, neglecting thus to rid herself of $40,000,000 of silver annually by recoining it in India, as she might do, and seemingly with profit, is not to be feared as likely to choose to flood our mints in the constant certainty of a loss of 3 per cent. and transit costs additional.

THE ENACTMENT WILL NOT SERVE TO BANISH GOLD.

In the last analysis nations trade with commodities; and only in a balance of trade is title acquired to gold, or silver, esteemed as money. If Europe in any season shall establish a balance of trade against the United States, which others of our commodities will not acceptably make good to her, she may exercise her right to command our gold, uninfluenced by this proposed enactment or any other act of ours respecting silver. On the other hand, as from time to time the foreigner shall establish a title to a portion of our gold, it will be of prime concern to us that we have provided a sufficiency of money acceptable as legal tender here and abundant for our wants in our vast domestic trade. Twelve millions increase of population and the creation of four new States indicate domestic trade expansion in the last ten years.

THE ENACTMENT WILL TEND TO STIMULATE OUR IMPORTATION OF FOREIGN GOLD.

The act proposed, being in result the same as though we opened our mints to free coinage of the present standard dollar, will enhance the price of silver and maintain it at parity with our mint fixed price in all the markets of the world. British India's mints are open to her legal-tender rupees upon the payment of her seigniorage charge of 2 per cent. Therefore, to enhance the price of silver in all markets is by so much to increase the cost in gold to Europe of the commodities which, in the balance of trade, India's money buys. Thus to add about 30 per cent. to the gold cost in Europe of India's legal-tender rupees is, to some portion of that 30 per cent., to enhance the price at which Europe can profitably receive and pay for United States supplies of products now supplied by India. What this may mean may be surmised from the fact that India last year exported $32,000,000 worth of wheat as against our export of $44,000,000 worth of the same. Therefore the proposed enhancement of the price of silver will tend to increase our exports and establish for us a credit balance in trade with Europe; and therefore tend to establish for us a title to Europe's gold.

THE ENACTMENT WILL NOT IN ITSELF OVERFLOOD US WITH DOMESTIC MONEY.

The perilous inadequacy of new gold supplies, if gold alone is to be relied upon as the world's single full tender money, ought to be evident from the fact that all nations have supplemented their total volume of both gold and silver money with paper issues additional. The world's annual production of gold averages $101,000,000, and the annual coining and recoining of gold averages $140,000,000. Yet the world's art use of gold, absorbing over $70,000,000, leaves less than $30,000,000 annually as the sum of new gold from the mines applicable to the world's increase of money.

France, conspicuous among nations for her shrewdness in finance, has a total sum of money exceeding $2,030,000,000, or $500,000,000 more than our total sum of money afloat in bank and in the Treasury of the United States, and this for use of 27,000,000 fewer people than we count, and all embraced in a territory less than one-sixteenth the area of the territory of the United States. France has $270,000,000 more gold than we have, $100,000,000 more paper money, and $230,000,000 more of silver. Yet France is the natural accumulator of the dear gold of other nations, she importing last year (to February, 1890) a total net sum of gold exceeding $50,000,000.

In this connection note that in January, 1887—since when we have coined 100,000,000 additional silver dollars—the receipts at all United States custom-houses were then 69 per cent. gold, 15 per cent. greenbacks, and 16 per cent. silver. For the three months past to April 19, 1890, after a total silver coinage of $360,250,000 silver, all but eleven millions afloat in coin or by certificate, these customs receipts show about 3 per cent. greenbacks, 2 per cent. silver, and 95 per cent. in gold. This actual experience, opposed to all predictions of this chamber, and for some of which I am partly answerable, is not explained by the shrinkage of $150,000,000 of bank-notes in the period of an output, in coin and certificate, of $350,000,000 of silver money.

THERE IS NO ANNUAL SURPLUS PRODUCTION OF SILVER.

With China absorbing about half of Mexico's silver almost as rapidly as coined; with India still greedy to increase her hoard of treasure "gold and silver" upon an accumulation during the last forty-six years already exceeding in value $2,070,000,000, made up in part by silver imports in 1887, $26,000,000; 1888, $29,000,000; 1889, $40,000,000; with South America also frequently a buyer last year; with the United States last year consuming for coining about one-half the silver proposed in this enactment, it may astonish some to learn that after the year's production (calendar 1889), the greatest of any single year in the world's whole history, the great distributing silver markets, London, New York, and San Francisco, being asked in February last to state their supplies of silver, quoted "stocks of silver nominal."

It would appear fair to direct attention to a marked change in the public thought of this section on this and other features of the "silver question."

FREE COINAGE FOR OUR STANDARD SILVER DOLLAR WOULD NOT BE A FRAUD UPON THE PEOPLE.

Congress has the same moral right to thus reopen our mints to silver or to appoint Treasury purchases of silver as money that is deemed so commendable in the British statute which requires the Bank of England to purchase everybody's gold at 3*l.* 17*s.* 9*d.* per standard ounce, and her mints to pay 3 half-pence more per ounce for gold to any who will await its coining. Similar statutes as to gold are those of continental Europe and the United States.

The weight of pure silver contained in our present standard coin is the same as that prescribed for our dollar of 1792, the free coinage of which continued to be allowed until 1873. That this old privilege of free coinage was much neglected was due to Europe's overvaluing of silver, compared with gold, by which Europe's mints were a better market for our silver than our own. The closing of our own and Europe's mints to silver, and subsequent only partial reopening of ours, while all the time all mints have been open to gold, has increased the purchasing power of gold unquestionably. And the inference is fair that if, without any better treatment of silver by the world than now, the world's mints were closed to gold, the annual excess of about $28,000,000 of gold production more than the arts consume would soon depress the price of gold, measured in silver, to a point where gold would be cheap enough for a greatly extended use in industries.

CONTINENTAL EUROPE WILL BE LIKELY TO REOPEN HER MINTS TO SILVER.

Certain members of your committee are still urgent that our wisest course to enforce that act upon Europe would be to suspend our coining of silver altogether, and so let the ill results of that depression of the price of silver hurt Europe to the amending of her coinage laws. Inasmuch, however, as the United States is producer of almost one-half the entire world's annual production of silver, that result must be assured if we adopt the remedy. Argument already hereinbefore submitted points my expectation in the diametrically opposite direction. If to enhance the price of silver be indeed, as I conceive it, to increase the export of our products, particularly food products and cotton, that tendency at least, of all things, ought to be preserved; and out of it, if the facts prove to be more than tendency, they may by and by threaten, in our behalf, even to denude Great Britain of her gold.

One caution in closing I submit, namely: that we post a sentry to alarm us upon the reopening of Europe's mints to her legal-tender silver. Because thereupon, immediately, our sometimes denounced as "fraudulent" and "a 72-cent-discount," but I think full-value standard silver dollar becomes at once in European equivalence a 103-cent coin. Therefore, upon the reopening of Europe's mints to her silver, our Congress must offer to redeem our standard silver dollars at our own mints by the substitute issue of a 3 per cent. lighter weight silver dollar and the payment of 3 per cent. in cash to present holders in that exchange, or our 360,000,000 of silver dollars already coined and afloat principally by certificate, with more to follow, will be accumulated as a merchandise salable to bullion-dealers at a premium for reminting in Europe; and in their ceasing to circulate as money the contraction of our currency will assure us results beyond prediction in disaster.

Respectfully submitted,

WM. P. ST. JOHN.

MAY 1, 1890.

Supplement (May 29, 1890) to a report of a minority of one of the committee on finance and currency, submitted to the chamber May 1, instant, on "pending silver legislation."

To the New York Chamber of Commerce:

Silver legislation is still pending in Congress; and now, because my attention has been inquiringly directed to an attempt to explain away two minor statements of my recent minority report, although without attacking the main fact stated by me in that same connection, but especially because an eminent foreign statistician has lately proclaimed conclusions adverse to the inferences which I asked this chamber to gather from my still undisputed and indisputable facts, and the said adverse conclusions are used with effect in the Senate of the United States, therefore I respectfully submit the following, in rebuttal and as supplement to my said minority report:

My said report assumed it likely that Congress is about to enact a law practically the equivalent of unlimited free coinage for our present standard silver dollar. With this in view, statements of facts were thereupon submitted for warrant of inferences as to the result, which I now restate as follows:

The world's monetary conditions reasonably assure us that Continental Europe will follow our lead and reopen her mints to silver.

Free coinage for our present standard silver dollar would not be a fraud upon the people.

There is no annual surplus production of silver.

The enactment would not overflood us with domestic money.

It would not serve to banish gold. It would tend, instead, to stimulate our importation of foreign gold.

It would not serve to flood us with Europe's silver.

I reported that in order to conclude that nations of Continental Europe would flood our reopened mints with their silver money we must first assume that they will elect to make a sacrifice of over 3 per cent., due to our differing coinage valuations of silver and all transportation costs additional; and I now mention a further likely loss for light-weight coin.

My critic has replied: "They would not send the coin here to be put into dollars. * * * Those having it to sell would feed the London market with it. * * * We might subsequently receive it in the shape of bullion from London."

To rebut, I need only remind a merchant that all costs of circumlocution would be a charge upon present owners, as being taken into the account in the price obtainable for silver, in any market, governed—as is proposed—by our mint price. Hence if, as my critic avers, "they would not send the coin here to be put into dollars" directly, it can not be supposed that they will choose to send it indirectly at their own additional expense.

I instanced France as fair criterion for Europe's likely course with silver, because possessed of six times as much of silver money as any other European nation, Germany excepted, three times as much as Germany, and possessed of gold to the amount of $300,000,000 more than her only European rival, England. I thereupon reported that France had refused an offer of gold at par for about $9,000,000 of her silver money, and that "subsequent attempted explanations confirm the fact." Also, that France is careless of her right to exact from other Latin Union states the redemption of their silver coins in France, for which she has a present claim upon them for over $80,000,000 gold.

My critic, in reply, assumes the accuracy of one rumored explanation of the first of these two statements, namely, that the refused offer was for light-weight coin of other Latin Union states which is lying in the Bank of France, thus: "The offer was to pay 60½d. per ounce for this coin, and, as the coin is light weight, to just that extent it would have been a good operation for any government which is obligated to redeem it in gold at its full coinage value." He explains my second statement thus: "France forbears pressing the claim and embarrassing those nations * * * because Italy, Belgium, Switzerland, and Greece can not at present afford to redeem their silver coins in France."

To rebut, I need only ask you to demand the name of the obligated nation entitled to and enjoying the forbearance of France upon a supposition that she can not afford to redeem her light-weight coin at par, after the evident attempt at sharp practice assumed by my critic's explanation as the act of a nation able to present $59,000,000 of gold with which to redeem her silver money at a discount, that nation being assumed to be in law and equity obligated to redeem the same at par.

Again, a half per cent. being an ordinary limit of tolerance for light-weight coin, and therefore 1 per cent. an extraordinary estimate, assume this coin to be, say, 1 per cent. light weight and the entire resulting gain from the success of that assumed attempt at sharp practice would have been, at most, a saving of $590,000 only in a cash gold redemption of $59,000,000 worth of silver.

My main point at issue for any conclusion that France would flood our reopened mints with silver does not appear to be disputed, namely: France being annually a debtor in trade with India, at whose open mints she might rid herself of silver annually by recoining it into rupees at a margin of actual profit, less only transportation charges, India's coinage ratio valuing silver at about 15 to 1, the Latin Union at 15½ to 1, and the United States at about 16 to 1; and France, neglecting thus to rid herself of silver at a profit, need not be feared as likely to choose, instead, to flood our mints at actual loss of over 3 per cent. in addition to all transportation costs and loss on light-weight coin additional.

And now, as to proclaimed adverse conclusions of the aforesaid foreign statistician, I respectfully submit them and follow with rebuttal:

1. He announced that the Roumanian Government has advertised for sale about $6,000,000 of her silver money. But he does not say that this sum is all Roumania has of silver and that she possesses less than $1,000,000 gold. For just inference, therefore, I mention it with reminder that annually a debtor in foreign trade, for excess of imports over exports, her experience in the thirteen years of her existence warrants the assumption for this little nation of five million souls, Roumania, that "her poverty, not her will, consents" if she must sell the only specie basis for her state bank notes which are now outstanding to the amount of about $17,000,000, and which, if she does sell her silver, are hereafter to be kept afloat, if possible, as an irredeemable paper currency.

He threatens us with "millions and millions of dollars [of silver] this very day on the point of being sold," and "hundreds of millions to follow, should the United States be foolish enough to drive the price of the metal up to * * * a ratio of 1 to 16 or silver at 59*d.* per ounce." He intimates that Holland threatens us with $10,250,000 of her silver; Italy, with $9,250,000 of hers; and Belgium, with a fabulous sum of her silver five-franc pieces, "already counted, packed, ready for delivery to-morrow if you like, * * * to be received at the end of this year from the Bank of France."

To rebut, it must be said of these, as said of France, that for any of their silver money attracted to our reopened mints they must suffer a loss of over 3 per cent. and transportation charges, and with additional loss for any light-weight coin. That they, like France with her $40,000,000 for one year's dues to India, are likewise debtor annually to India, where they might recoin their silver at a profit, less only transportation charges, but do not, and for such annual settlements as for Holland $2,250,000, Belgium $13,000,000, Italy $18,000,000, each, for the last reported year.

2. But, urges this eminent foreign statistician, "Let America beware of India at the very outset." Next, he instances a recent date upon which a profit would have resulted from an operation directing silver from India to New York. Inasmuch, however, as the gentleman is not more eminent as a statistician than excellent as a bullion-dealer, he might more wisely have availed of that opportunity to profit than proclaim it in the press.

To rebut, and seriously, we ask: For what shall "America beware of India at the very outset?" India will not bestow her silver gratis. She owes us nothing. On the contrary, we owe her continually, being actually her debtor annually to the average amount of $15,000,000. With our mints reopened and her mints open, our coined money could be recoined in India at a profit, while her coined money recoined here would no less constantly result in loss.

But if we are to assume that our proposed enhancement of the price of silver is to turn the tide of it in our direction, away from India, I rely upon statistics, which he of all men will not carelessly dispute, to assert that the very largest annual net import of silver into India during any one of the last twenty years was in the year ending March, 1878, and while the average price of silver was $1.20 per ounce, the net sum of silver absorbed by India that year having exceeded in value $70,000,000.

But in further instance as to India and the silly dread of any foreign silver as threatening to flood our own reopened mints, let me report of India, with her $1,200,000,000 of silver money already, that for the ten months ending with December, 1889, while absorbing $35,000,000 net of the world's spare silver at her wide-open mints, India at the same time accumulated $20,300,000 of the world's so precious gold. This, then, is my text for denouncing all fears of banishing our gold as the result of the reopening of our mints to unlimited free coinage for our present silver dollar.

3. The said foreign statistician would have us next assume that Germany is to threaten us with silver, and that because of certain seeming incongruities of her coinage laws as to her legal-tender moneys, and because to reorganize those laws he thinks will necessitate Germany's selling off her silver money.

To rebut, I instance parallel incongruities in the money statutes of the United States, whose silver money is not for sale nor will it be, and where we have afloat at par six differingly potential moneys in addition to our subsidiary silver and minor coins. Our gold and silver coin are alike full tender money here, but are not esteemed alike to-day in all the world.

Our gold certificates and silver certificates are government warehouse receipts for these respective coins; but neither gold certificate nor silver certificate is a legal tender for money in a contract between individuals, although accepted for customs and other public dues. Our national-bank note is a legal tender between these banks and for certain dues to Government, but is not a legal tender between individuals; and an individual need not accept it in any payment, although he can compel its acceptance by any national bank. The United States note, "the greenback," is a full legal tender between individuals and banks and for public dues, excepting customs. And, if honorable intent should be held as of no account, the collector of our port might be successfully impeached, if then in office, if the result of his now daily accepting greenbacks for customs dues should leave the Treasury by and by unable to pay its principal and interest of the Government bonds in coin.

With all this in view at home for incongruities of law, an instance of the like in Germany will not occasion us a fear that Germany will flood us with her silver money. And let it be further observed that any safe prediction of "millions and millions of dollars" of Europe's money as about to flood us here will at the same time threaten Europe with an overwhelmingly disastrous contraction of her circulating medium, which she, as we, perhaps, has learned to dread much more than too abundant money.

(4) Finally as to this eminent foreigner, he questions all assertions of insufficiency of gold upon which to base the whole world's money by presenting figures of certain prominent banks' accumulations of gold reserves during three recent years.

To rebut the inference which he would have us thus adopt, I submit that bank accumulations are meaningless in this connection, except as we are intelligent upon associate conditions; and confirming his next unconsciously presented evidence of a scarcity of gold, namely, his figures of annual excess of gold coinage over gold production, I seize upon his statement of these bank accumulations as additional evidence of a scarcity of gold, because they indicate the suffering under which these nations labor in such a struggle to obtain and keep a share of the less than $30,000,000 of gold annually retainable from the arts, for money, out of the year's new product of the whole world's mines.

One fact, *in finis*, should influence opinion, namely: Germany's closing of her mints and sale of her silver were not effectual to disturb the long-established commercial parity of gold and silver. The closing of the Latin Union mints effected that disturbance. The closing of the Latin Union mints did not follow as a consequence of these acts of Germany. The chronological order and *interim* of these experiences, and consequent conditions severally, will altogether make this truth clear.

It was the closing of the mints of the United States, which served to close the Latin Union mints, which thus indirectly effected the disturbance of the commercial parity of gold and silver, now so much deplored.

Inasmuch then, as the United States thus (intentionally or unconsciously) dictated Europe's course to that disturbance, my conviction is that present conditions in the world at large warrant the assertion now of our ability to dictate Europe's immediate future policy for the restoration of that parity. Under this conviction, I therefore without the slightest hesitation commend as wise and timely and eminently patriotic the immediate adoption by our present Congress of unlimited free coinage for our present standard silver dollar.

Nevertheless I concede the right of every man to his own, if different, opinion, and therefore I am for compromise which shall lead, with evident safety, to exactly like results: Say, require a Treasury purchase of 4,500,000 ounces of fine silver monthly at not exceeding $1 for 371¼ fine grains; the notes to issue for the same to be lawful money and receivable for customs and other public dues; the amount of said notes at any time outstanding not to exceed the cost of the silver coin and bullion reserved on hand for which the notes were issued; the notes to be redeemable in coin; and of the purchased silver not less than 2,000,000 standard silver dollars monthly to be coined; but the remainder of the silver to be hoarded as bullion, at the discretion of the Secretary. Minor points of Treasury convenience are not necessary here to state.

A fair remark as to this proposition is this, namely: If, upon the proposed reserve of silver and possessing a hundred millions of gold, the United States can not maintain at par her own notes issued as lawful money, and redeemable in gold or silver coin at Government option, then and in that case the United States can not be assumed to be able to maintain its notes at par under any other promise, be that promise their redemption in bullion at market price or something more attractive.

Respectfully submitted.

WM. P. ST. JOHN.

May 29, 1890.

To the PRESIDENT OF THE
NEW YORK CHAMBER OF COMMERCE.

McDuffie vs. Turpin.

SPEECH
OF
HON. LOUIS W TURPIN.
OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, June 4, 1890,

The House having under consideration the contested-election case of McDuffie *vs.* Turpin, from the Fourth Congressional district of Alabama—

Mr. TURPIN said:

Mr. SPEAKER: By profession, occupation, and choice, I belong to that class little accustomed to speaking in public. I am and have always been a tiller of the soil, and have never attempted to argue a case. But I have thought, sir, that I ought not to sit idly by and see my people maligned, abused, and villified, and myself even placed in a false attitude, and say nothing whatever. Not that I expect to change a single vote on the other side; oh no, I have no such arrogant expectations, but I want the RECORD to show the facts, as many of them as can be stated in the short time allotted me, that the people may know the great wrong that is about to be perpetrated upon them.

Therefore, I simply desire, briefly and plainly, to state to the House what I know about this case, and I am perfectly familiar with it. This most unholy and unrighteous persecution is waged upon me by a man accustomed by long usage to conduct such partisan schemes. Years ago he assisted Judge Smith when he contested General Shelly's seat in the Forty-seventh Congress; he was attorney for George H. Craig, in a contest in the Forty-eighth Congress, and this is the second contest he has made himself—why, Mr. Speaker, he is a professional in this business, a real Tichborne contestant. He never expected to be elected, and made no effort to get votes, but being familiar with the details of contested-election cases he prepared, long before the election, to contest my right to a seat in the Fifty-first Congress, and the record shows all the way through a deep-laid conspiracy for this purpose.

But it seems from the majority report this case is to be tried by the history of the district and upon the census, and it is claimed that the Fourth district of Alabama was set apart as a Republican district. No one, sir, denies that; but does it follow as a matter of fact because it was Republican sixteen years ago it is so now? History is full of cases where a Congressional district has been made for the purpose of electing a candidate of certain politics which almost from the start has disappointed the expectations of its makers. People change their politics, and change the political condition of districts, States, and this great Government itself.

This is true not of the white man alone, but of the negro also, and in this district we find that in 1874 the Republican majority was 14,946; in 1876 it was 9,446, but in 1880 it was Democratic by 2,651 majority. Or, being a Republican district, does it follow that the Republicans would vote for a man to represent them in Congress who was not considered true to the party, one that had betrayed their confidence only two years before, and at a time when there was a serious breach in the ranks of the Democratic party in his own county, the most serious that we have had in our State since it was redeemed from the possession of the scallawags and carpet-baggers in 1874?

When opposition to the regular Democratic nominees was so bitter as to array father against son, and brother against brother, then where was this contestant? Do we find him on the side of the bolters from the Democratic county convention trying to aid in electing the independent ticket, or heading a Republican movement to defeat them both? Not at all. Why, we find him espousing the cause of the regular Democratic ticket, stumping the county in its interest. I mention this because the majority of the Committee on Elections seems to lay great stress upon his popularity with the Republicans in the district.

He attempts to prove that he is popular with his party, but with the most signal failure, as the record shows. Why, who ever heard of an honest man going around proclaiming his honesty in order to prove the same? "By their fruits ye shall know them." He was nominated in the dead of night with bolted doors by a convention called, not for the purpose of nominating a candidate for Congress, but for the purpose of nominating two delegates to the national convention at Chicago, and which was long before the assembling of the Republican State convention in Alabama, an unusual and heretofore unheard-of transaction.

This transaction occasioned bitter and widespread dissatisfaction all over the district, and Republicans, white and black, refused to support McDuffie. There were two Republican newspapers published in the district, both owned and edited by colored men, one of which never supported McDuffie, but opposed him throughout the whole campaign. The leading colored men in the Republican party in the district opposed his election, and although they canvassed the district for Harrison and Morton, they denounced the contestant as a trimmer and a trickster unworthy the support of Republicans, and urged their people wherever they went to vote for me.

James K. Green, a colored man and a Republican, was an Independent candidate, and the testimony shows he withdrew about a week before the election, and withdrew in my favor; that he wrote all over the district beseeching his friends to vote for me. This man is an ex-member of the Alabama State senate, and, as my colleague, Mr. OATES, has said, one of the brightest men of the negro race in the State.

J. J. Carmichael (colored Republican), a school-teacher and an intelligent man, canvassed the district for me; went all over it, except one county, which he was prevented from canvassing by sickness. He, like many other Republicans, voted for the Harrison electors, but voted for me for the Fifty-first Congress. He was one of the witnesses in this case, and I read part of his testimony:

Q. What is your occupation, and what is your politics?
A. I am a school-teacher, and I am a Republican.
Q. Did not the majority of the negroes in Richmond beat vote for Turpin at the last election?
A. They did.
Q. Upon what do you base your last answer?
A. For the reason that Alfred Hatcher, M. E. Edwards, W. C. Coleman, and myself canvassed that beat and voted and supported the Turpin ticket, and the men mentioned are the leading colored men in that beat, Coleman being the chairman of the Republican party in the beat, and I am secretary.
Q. Why did Coleman and yourself, being Republicans, work for Turpin and vote for him instead of McDuffie?
A. The first reason is that Mr. Turpin was favoring free schools for colored people; second, because he was a high-tariff man; and third, because we didn't consider that McDuffie was nominated at all; and fourth, he, McDuffie, supported the regular Democratic ticket in Lowndes County two years ago, and the Republicans thought that he ought to have supported the Independent ticket.
Q. Did you canvass the Fourth district before and up to the time of the last election and mingle largely with the colored voters all over the district, and have an opportunity to find out how they felt as between Turpin and McDuffie, and how they expressed themselves as intending to vote?
A. I did in all the counties in the district except Lowndes County.
Q. Was there not a general dissatisfaction throughout the entire district with McDuffie, and did the colored people express themselves as intending to vote for Turpin?
A. I found it this way in all of the counties that I went to.
Q. What reasons did they give for this?
A. The reasons that I have given above.
Q. You have stated that Mr. Turpin was a high-tariff man, and it was so understood among the colored people. Where did you get that information?
A. For the reason that he was a candidate for the nomination for Congress in this district in 1882, and it was so announced in the Selma Times paper, and I have never seen it contradicted, and Hon. James K. Green, a prominent Republican who lives near Mr. Turpin, told me so, and it was told by us to the voters wherever we canvassed.
Q. How many Republican newspapers are there published in the Fourth Congressional district at Alabama; give their names; and are they published by white or colored men?
A. There are two; their names are The Selma Cyclone and The Independent, and they are both published by colored men.
Q. Does the Cyclone circulate all over the Fourth district among the colored people, and does it have a large influence throughout the district?
A. It does; it is a popular paper; circulates extensively.
Q. Did the columns of this paper throughout the campaign show that there was widespread dissatisfaction with McDuffie among the colored people of the district?
A. It did, clear up to the election.
Q. If you have any of these copies of the Cyclone, please attach them as exhibits to your answer.
(The witness now puts in 17 copies of the Cyclone, dated as follows.)

* * * * * * *

Q. State whether there was any Republican ticket in the field on the said 6th day of November, 1888, except that with J. V. McDuffie's name on it for Congress from this district. If there was any such ticket, state whose name was on it and how many were voted at your precinct?
A. All the ticket that I used was headed with the Harrison electors for President, and for Representative, L. W. Turpin. I only saw about five or ten tickets with J. V. McDuffie's name on them. I issued seventy-five or eighty tickets.

* * * * * * *

Cross-questioned:

Q. During the said canvass did you not write a letter to J. V. McDuffie, and sign your brother Daniel's name to it, in which you offered to go to Wilcox County and canvass in his behalf, stating that you had everything solid in Richmond beat for him?
A. I did not. My brother Daniel and Peter Palmer came to my house at Richmond and presented to me a letter written by J. V. McDuffie, saying, please see J. J. Carmichael, at Richmond, and tell him to hold Richmond down for him. My reply to them was, "I am not a J. V. McDuffie man; there was nothing in Richmond I could hold down for him." Daniel said to me that J. V. McDuffie said to tell you that he would "give you $50 to canvass Allenton beat and Bonham beat," and I refused.
Q. Who did write the letter, that to which I have called your attention, and who was present at the conversation that you have related besides your brother?
A. I don't know who wrote the letter, and W. C. Coleman was present at the conversation you ask about.

J. H. Hawkins, another intelligent colored man and a Republican, testifies to the dissatisfaction with McDuffie, as follows:

Q. What is your name, age, color, politics, and residence?
A. J. H. Hawkins is my name; I am about 30 years old; am a black man; I am a Republican, and I live in Selma.

* * * * * * *

Q. Did you have any connection with the Republican party organization in 1888; if so, what?
A. I did; I was a delegate to the county convention.
Q. Were you a member of the executive committee?
A. Yes, sir; until the 9th of May, when my time expired.

* * * * * * *

Q. Were you selected as a delegate to the district convention?
A. I was not.
Q. Where was that district convention held?
A. At the hall of the Daughters of Conference, in Selma, on Sylvan street.
Q. Were you there?
A. I went to the door.
Q. Why did you not go in?
A. I couldn't get in unless I had a ticket.
Q. Were none admitted except those who had tickets?
A. That is what I was informed.
Q. Were there not a great many there who had no tickets demanding to go in?
A. Yes, sir; a good many.
Q. Were any of that number delegates who had been chosen to the district convention?
A. I don't know.
Q. Didn't you hear them claiming that they had a right to go in as delegates, and were excluded because they had no tickets?
A. I heard them say they had a right to go in and couldn't because they had no tickets.
Q. How long was that convention in session before they announced that McDuffie had been nominated?
A. I don't know.
Q. Wasn't it talked in the crowd that it was an attempt to nominate McDuffie secretly, and that was the reason you all was excluded; and did not many of them declare then that if he was nominated that the Republican party wouldn't support him because it was reported among and believed by a large majority of the Republicans of the district that he had gone back on the Republicans in the State and county elections in Lowndes County?
(Contestant objects to the above question.)
A. It was talked then and is talked yet that it was an attempt to nominate McDuffie secretly, and that was because we were excluded; and they did say that if he was nominated that the Republican party would not support him on account of the Lowndes County matter, as mentioned above.
Q. When the nomination of Judge McDuffie was announced, didn't it give widespread and general dissatisfaction among the Republicans voters of the county and district in which you live, and didn't such dissatisfaction continue throughout the canvass for Congress in the district, and does it not still continue?
A. When the said nomination was made it did give such dissatisfaction as

above stated in the question, in my beat and in Selma, and it continued through the canvass, and still continues with some.

Q. Were you at the election on November 6, 1888, held in Selma; if so, who were the candidates for Congress?

A. I was at said election, and Mr. Turpin was the Democratic candidate, and Mr. McDuffie was the Republican candidate.

Q. Did you distribute tickets to the colored voters there that day?

A. I distributed them from Mabry street down to Church street.

Q. That is in one ward in the city, is it?

A. Yes, sir.

Q. Now, whose name was on the tickets for Congress that you distributed?

A. Mr. Turpin's.

Q. Was there any other colored man distributing the same kind of tickets that you distributed?

A. One to my knowing.

Q. How many tickets did you distribute?

A. I distributed 260.

Q. After you went to the polls that day did you see any of the voters to whom you distributed tickets vote them into the ballot-box; if so, about how many?

(Contestant objects to the above question.)

* * * * * * *

Q. Then you believe the most of the voters to whom you issued those tickets, from the way they talked to you, voted them, do you?

(Contestant objects to the above question because the answer calls for the opinion of the witness, without showing any fact to base said opinion on.)

A. I do.

Q. Did you have a conversation with J. H. McIlwain, chairman of the Democratic executive committee of the Fourth Congressional district of Alabama, before the election in November last; and, if so, did you not advise him to have tickets printed with the names of the Republican electors on them, and L. W. Turpin's name on them, for Congress; and did you not tell him that on account of the dissatisfaction existing in the Republican party against McDuffie you believed that a great many Republicans would vote such a ticket?

A. I had a conversation with Mr. J. H. McIlwain, as stated above; and I gave him the advice as further stated in the question.

And here is the testimony of another intelligent colored man, a Republican and a leader amongst his people.

Cornelious J. Crocheron:

Q. What is your name, color, and politics, and in what beat did you reside on the 6th day of November, 1888?

A. My name is Cornelious J. Crocheron; I am a colored man and a Republican; I resided in Valley Creek beat, Dallas County, on the 6th of November last.

Q. Was there an election held in said beat for a Congressman from the Fourth Congressional district of Alabama; and if so, who was the Democratic and Republican candidates, and what part, if any, did you take in said election?

A. There was such an election; L. W. Turpin was the Democratic candidate and McDuffie was the Republican candidate, and I issued tickets to colored voters on that day.

Q. Did you not issue tickets to the colored voters on that day; and were not the names of the Republican Presidential electors printed on said tickets and the name of L. W. Turpin as a candidate to the Fifty-first Congress from the Fourth Congressional district of Alabama; and, if so, state how many of said tickets you issued to the colored voters of said beat, and whether or not you issued them to the said colored voters at their instance and request, and if there was not a great eagerness on the part of said colored voters of the beat to vote said ticket as a means to express their dissatisfaction with the manner of and means by which McDuffie captured the nomination and their displeasure at his political trades and methods in Lowndes County?

A. I issued tickets to the colored voters on that day, and the Republican Presidential electors and L. W. Turpin's name were printed on said tickets; I issued about five hundred of these tickets, and I issued them to the said voters at their request, because they did not want to vote for McDuffie at all on account of the way he had acted in Lowndes County; they were dissatisfied; and that is why they voted for L. W. Turpin.

Q. Is it not a fact that the said J. V. McDuffie's support of what is known as the Bourbon wing of the Democratic party in Lowndes County created dissatisfaction with him as a leader of the Republican party throughout the district, and is it not a fact that his support of the said Democratic wing in Lowndes County created a split in the Republican party in Dallas County, one wing of which were his supporters and the other being unalterably opposed to him, and was not the opposition composed of the rank and file of the colored members of the Republican party, and was not the wing supporting him composed chiefly of so-called leaders and men who are in politics for the purpose of making money?

A. It is a fact that the said J. V. McDuffie's support of what is known as the Bourbon wing of the Democratic party in Lowndes County created great dissatisfaction throughout the district, and it also created a split in the Republican party in Dallas County, one wing of which supported him and the other wing was unalterably opposed to him, and the said opposition was composed of the rank and file of the colored members of the Republican party, and the wing supporting him was composed of so-called leaders and men who are in politics for the purpose of making money.

Q. Have you not been a life-long Republican, and are you not a leader of influence among your people, representing them in conventions and at times being a member of your county and district executive committees, and are you not well acquainted with the political sentiment and feelings of the colored people of your county and district?

A. I have been a life-long Republican, and am a leader of influence among my people, and I have represented them in conventions and have been member of the county executive committee, and I am well acquainted with the political sentiment and feelings of the colored people of my county and district.

Q. Are not the Selma Cyclone and the Southern Independent the leading organs of the colored people and the recognized exponents of Republican doctrines in this section?

A. They are.

Q. Has not the Cyclone a large circulation among the colored people in this district, and does it not have great influence in shaping the political sentiment of the colored voters of this district; and, while Republican in politics, did not the said paper during the recent canvass oppose the election of J. V. McDuffie and counsel the colored voters of said district to vote the Republican national ticket, but to vote for the best man for Congress regardless of what political party he belonged to; and did not the said paper support Turpin and advise the colored people to vote for him?

A. It has a large circulation in this district and it has great influence in shaping the political sentiment of the colored voters of this district; and, while Republican in politics, that paper did oppose the election of J. V. McDuffie and counsel the colored voters of the district to vote the national Republican ticket, but to vote for the best man for Congress regardless of what political party he belonged to; and I don't know whether it supported Mr. Turpin or not, but it did not support J. V. McDuffie.

Q. Is not the editor of that paper a Republican, and has he not been a life-long Republican; is he not recognized by all classes, black and white, as being a representative man of his people in virtue and intelligence?

A. The editor is a Republican and has been all his life; and he is so looked upon by all classes.

* * * * * * *

Cross-examined:

Q. You have said that you were a member of the Republican county executive committee of Dallas County. What beat did you represent, and what time did you so represent it?

A. I represented Valley Creek beat, and it was in 1888.

Q. How long were you on that committee?

A. Two years.

* * * * * * *

Redirect examination:

Q. Is it not a fact that nearly every colored Republican of influence, ability, and respectability in Dallas County was opposed to the nomination and election of J. V. McDuffie for Congress?

A. It is a fact that nearly all good and intelligent Republicans opposed McDuffie in the way that he was nominated in a dark convention, and it is a fact that they are to-day opposed to the steps that he has been taking with the Democrats in Lowndes County.

The record bristles with such testimony, and yet the chairman of the Committee on Elections insists that all the colored men supported McDuffie, and tries this case by the history of the district and by the census.

Why, the report of the majority of the committee begins by quoting not only the vote of the Fourth district but also the Tenth Census, and the chairman of the committee who made the report, not being satisfied with the Tenth Census, anticipates, with the wisdom of Solomon and the foreknowledge of a sage, the Eleventh Census also, and proceeds to enlighten the House by informing it how many more white and how many more colored men live in that district now than ten years ago. Now, Mr. Speaker, any man who knows anything about the development of the great State of Alabama knows that the negroes have removed from the Black Belt by thousands to North Alabama, where they have gone to engage in making iron and digging coal in that portion of the State.

Mr. STOCKDALE. A good many of them have gone to Mississippi.

Mr. TURPIN. Yes, great numbers of them have gone to Mississippi. When we are afflicted by bad crops hundreds of them go off to Mississippi and Louisiana.

Now, Mr. Speaker, if this case is to be tried by the Eleventh Census——

Mr. CRISP. If it is, you had better postpone it until after we get the census returns. [Laughter.]

Mr. TURPIN. Why, yes; it would seem at least a little fairer, but what is the use? The Committee on Elections have made it to suit themselves and the occasion.

But, Mr. Speaker, inasmuch as it is to be tried by the census—and the Eleventh Census, at that—I submit some figures from statistics sent me a few days since by the register of vital statistics of the city of Selma, Dr. J. A. McKinnan (who, by the way, is a Republican), showing the ratio per thousand, annual, of births and deaths for the months of January, February, March, and April, of the present year, of the two races in that city:

BIRTHS.	Per cent.	DEATHS.	Per cent.
Whites	104.45	Whites	31.14
Colored	72.71	Colored	91.46

How would those proportions affect the census in ten years? I leave it, sir, for the sage of Bloomington to figure on, and then, perhaps, he will abandon the idea of trying this case on the Eleventh Census. But enough, sir, of the general testimony of the district. Let us review briefly the action of the contestant at some of the precincts in the various counties, which shows conclusively the existence of this conspiracy with which I have charged him. Take my own county, Hale, with which I am familiar, at my home box at Newbern, where I live. He charges, in his notice of contest, as follows:

66. That at precinct No. 5, called Newbern, in said county and district, at the day and at the election aforesaid, all the inspectors were your friends; that the Republicans in said precinct refused to vote and did not vote; that there are not over sixty Democrats living in the precinct, and that there were not that number (sixty) of ballots cast there that day; yet these friendly inspectors of yours, in order to advance your interest and to defeat me, certified you had received at this precinct 215 ballots and myself none.

I shall, in this contest, insist that the vote as returned and counted for you from this precinct be thrown out and counted for nothing.

The returns gave Turpin 215 votes and McDuffie none, the Harrison electors 83, the Cleveland electors 131, and 1 for the Prohibition ticket.

Now here is a direct charge of stuffing the ballot-box by the inspectors right at my home, the place of all others I should certainly attack if I was contesting a member's seat and had made such gross charges against it. But what does he do? The law allowed him forty days to take direct testimony, and ten for rebutting testimony. He took testimony during the first forty days at Greensborough, only 9 miles from Newbern, at Uniontown, 10 miles distant, and at Marion, 14 miles distant, but examined not a single witness as to Newbern. Is it not reasonable to suppose that if there had been any truth in his allegations that he could have found at least one witness who would have testified he voted for him? The poll-list was at his disposal.

I ask you, gentlemen of the other side, what you would have done had you been in contestant's place? After the eighty days had expired and during the ten days allowed him for taking rebutting testimony he puts one witness on the stand, Jack Saunders, a man that did not

vote at all, and he is made to swear that the colored people opened a separate poll of their own; that two colored men took down their names, but does not say who they were. I shall insert all of this man's testimony in the record.

J. H. Saunders, being called by the contestant and sworn, deposes and says as follows:

Q. What is your name, age, occupation, and where [were] you on the 6th day November last?

A. My name is J. H. Saunders; I am thirty-four years of age; I am a school-teacher; I was in Newbern, Hale County, on the 6th day of November last.

Q. Was there an election in Newbern on that day; and, if so, for what purpose?

A. Yes, sir; there was an election in Newbern for Congressman.

Q. Were you present at the polls or near there; if so, how long?

A. I was present at the polls where the colored people voted that day; I was there an hour or two.

Q. Were you not around there nearly all day?

A. Off and on nearly all day.

Q. About how many white voters are there in Newbern precinct?

A. I can not tell; I do not know.

Q. Is there over 75 voters? Give me your best judgment as to the number.

A. There might be 75 and there might be over.

Q. Did the white folks open a poll there that day?

A. Yes, sir; they did.

Q. Did the colored voters vote at the polls opened by the white folks?

A. There might have been some voted there, but the largest crowd voted below Louder's store; two colored men took down the names.

Q. What did the colored people say about voting at the other box?

A. They got mad because there was no supervisor there and would not vote at all.

Q. For whom did the colored voters of that precinct want to vote for, McDuffie or Turpin?

A. A large majority wanted to vote for McDuffie.

Q. About how many colored voters do you know voted at the Democratic box?

A. There was not many that I saw.

Q. Did you see any vote there?

A. I did not see any vote there.

Q. Is it not a fact that a great majority of the colored voters of Newbern beat are Republicans and vote the Republican ticket; and was not J. V. McDuffie their choice as Congressman?

A. They were on the election day.

Q. About how many colored men do you [know] who live in Newbern beat who vote the Democratic ticket?

A. I do not know exactly how many are there in all; I do not know of more than five or six.

J. H. SAUNDERS.

Mr. HOLMAN. Did the Harrison electors receive any votes at that precinct?

Mr. TURPIN. Yes; 83 for the Harrison electors and 131 for the Cleveland electors, 215 for Turpin, and none for McDuffie. My recollection is that in the whole district McDuffie ran about 3,000 votes behind the Harrison electors.

Mr. Speaker, do you not know and does not every honest man know that if the ballot-box at Newbern had been stuffed with 150 or 160 fraudulent ballots it could have been proven by summoning some of the parties named on the poll-list, who, if they had not voted, would have said so?

The testimony of Jack Saunders is all there is about this box, yet the majority report of the committee says: "At this box there was no Republican inspector or supervisor and the Republicans refused to vote, but the Democratic inspectors counted them as if they had voted." Where did the writer of that report get that information?

I know the three men who acted as inspectors at that election. P. C. Jones is a colored man, and he is a Republican—a leading one at that—he is a man of influence in his party and a good stump speaker; I have heard him make many a Republican speech. He voted for the Harrison electors, so he told me, but said he could not and did not vote for McDuffie. If there was no Federal supervisor it was the fault of the contestant, for the chief supervisor is a Republican and has always made appointments to suit his party friends in this district. But this most wonderful report in many places says, "The inspectors were all Democrats," when there is nothing more to sustain such allegations than there is at this precinct.

I call your attention to the strange conduct of the contestant in another precinct with which I am familiar, Scott's precinct, Perry County, where I was raised. The contestant in this case took the stand twice in his own behalf, and he swore that he was unusually strong and particularly popular in this precinct, giving as a reason that a great many colored people had, a few years ago, moved over there from where he lived in Lowndes County, with Judge Smith. It is a fact that a great number of colored people came with Judge Smith over there from Lowndes County, and they are there yet. It is also a fact that they all voted for me. Now, what does he do at this poll, after all this swearing in his own behalf? He claims 261 votes more than the returns give him; he examines several witnesses, but *not one* of his *friends* from Lowndes. Uniontown is another precinct near where I live and with which I am familiar.

At this precinct the legally appointed inspectors were T. G. Fowler, T. S. Heylton, and Peter Jackson; two Democrats and one Republican. They were all present, and opened the polls promptly at 8 o'clock on the morning of election at the office of 'Squire Christian, in the business part of the town, where elections had been held for a dozen years or more. The election was regularly conducted according to law and returns correctly made to the sheriff of the county, showing the vote to be 2 for McDuffie, and 201 for me. No dispute about the honesty of the returns from this box, yet the committee count 953 votes for McDuffie. Where do they find them? Why, just as they have found many more and counted for the contestant in this case.

Dr. J. H. Houston and two or three negroes testify that they held another election (an election of their own) at Houston's office, an out-of-the-way place in the suburbs of the town. They had no more right to open polls or hold an election there that day than citizens of France or Portugal had, and any tickets or ballots handed in at that office can no more constitute a legal vote than if thrown upon the ground.

But the committee say there is some dispute about the hour of opening the polls. The laws of Alabama require the inspectors to be on the ground promptly at 8 o'clock in the morning, and that the polls shall be opened at each voting place between the hours of 8 and 9 o'clock.

Let us see what the record says about this. There were six witnesses examined by my attorneys. Colonel Fowler, T. S. Heylton, and Peter Jackson, the three inspectors, all testify that the polls were open exactly at 8 o'clock. J. J. Brown, J. M. Jeffries, R. W. Nicolson—I will not read all this testimony——

[Here the hammer fell.]

Mr. TURPIN. I ask unanimous consent to proceed.

Mr. COMSTOCK. I hope unanimous consent will be given.

Mr. ROWELL. How much time does the gentleman want?

Mr. TURPIN. About fifteen minutes, possibly twenty minutes.

Mr. ROWELL. I ask unanimous consent that the gentleman have fifteen minutes more in which to close his remarks.

There was no objection.

Mr. TURPIN. Mr. Speaker, as I have said, I will not read all this testimony, but without objection will insert it in the RECORD.

Testimony of Col. T. G. Fowler:

Q. What is your name, age, occupation, and residence, and how long have you resided there?

A. My name is Theophilus G. Fowler; I am sixty years old, and I am a life and fire insurance agent; I reside in Uniontown, and have resided there since 1860.

Q. State whether or not you held an official position in general or national election held in Uniontown on the 6th day of November, 1888, and, if so, what position did you hold?

A. I did hold an official position in said election. I was one of the inspectors of said election. I, Peter Jackson, and Thos. S. Hylton were the three inspectors appointed by the officers authorized by the laws of Alabama, namely: The judge of probate, sheriff, and clerk of the circuit court, of the county of Perry, to appoint inspectors. I and the others were duly notified according to law of our appointment as such inspectors. Ed. Glass was appointed returning officer by the authorities hereinbefore named, whose duty it was to appoint such returning officer, and as such he acted in that election.

Q. Who were the other election officers?

A. They were Thomas S. Hylton and Peter Jackson were the other inspectors; John M. Jeffers and Bernard Harwood were clerks, and Ed. Glass was returning officer.

Q. State if any of the inspectors were Republican. If so, who?

A. Peter Jackson was the colored inspector and he was a Republican.

Q. At what hour was the polls opened on the morning of the 6th of November, 1888, and at what place?

A. The polls was opened punctually at 8 o'clock at the office of J. B. Christian.

Q. Where is said office located?

A. Near the center of the business portion of the city.

Q. State whether or not said office is the usual voting place in said city.

A. All the general elections within my memory have been held at that place, with one or two exceptions.

Q. State all the circumstances in reference to opening the polls on the 6th of November last.

A. When I first reached the polling place that morning I went across the street and compared my watch with the regulator of J. C. Walsh, the city jeweler; it was one-quarter to 8 o'clock; in a few moments the other election officers were on the ground together; we roped up a rope barrier leading to the window through which the ballots were delivered, which was completed a few minutes before 8 o'clock a. m.; punctually at 8 o'clock a. m. the polls were opened by proclamation. I know this to be a fact, for I had my watch in my hand at the time.

Testimony of T. S. Hylton:

Int. What is your name, age, and occupation, and where did you reside on November 6, 1888?

A. Thomas S. Hylton; age forty-two; am a farmer; I resided in Uniontown, Perry County, Alabama, on November 6, 1888.

Int. Were you a qualified elector of Uniontown beat at that time?

A. I was.

Int. Was there a general or national election held in Uniontown on that day; and if so, were you ever one of the officers of the election?

A. There was a general election held there on that day, and I was one of the inspectors of the election.

Int. Were you or not appointed inspector of election for Uniontown beat by the officer authorized by law to appoint inspectors?

A. I was.

Int. At what time was the polls opened in Uniontown on that day, and where were they opened?

A. They were opened in Uniontown promptly at 8 o'clock a. m., on November 6, 1888, and were opened at the usual voting place, namely, Christian's office.

Int. Now, are you certain that the polls were opened there promptly at 8 o'clock a. m.?

A. I came by the jeweler's, Mr. Walsh's, store on my way to open the polls, and then examined his regulator, finding that it was five minutes before 8 o'clock. I then went across the street to Christian's office, where the polls were to be opened, which office was about 75 feet from the jeweler's, and the polls were immediately opened. I am certain the polls were opened there at 8 o'clock a. m. The ropes were stretched around the polls when I got there.

Int. Who were the other inspectors appointed by the officers authorized by law to appoint inspectors?

A. T. G. Fowler and Peter Jackson, colored. Ed. Glass was the appointed returning officer.

Int. Were all the inspectors present at the polls at 8 o'clock a. m. on November 6, 1888, at Christian's office?

A. They were.

Int. Did not all of them act on that day?

A. They did.

Testimony of J. J. Brown:

Int. What is your name, age, occupation, and residence, and how long have you resided there?

A. My name is James J. Brown; my age is forty-three years; my occupation, merchant and postmaster; reside in Uniontown; resided in Uniontown beat ever since 1880.

Int. Was there a national election held on the 6th day of November last; and, if so, who were the candidates for Congress at that election?

A. There was such an election held there on that day. J. V. McDuffie, Republican, and L. W. Turpin, Democratic candidate, were candidates for Congress.

Int. At what place in Uniontown was said election held on that day, and how far was it from your place of business to the post-office?

A. Said election was held at Christian's office on that day, which place was about 75 feet from my place of business and the post-office.

Int. At what hour on the 6th of November last was the mail train going east due at Uniontown?

A. It was due at Uniontown at 8.50 a. m.

Int. At what hour that morning and under that schedule was the mail-bag delivered by you to the carrier, whose duty it was to deliver it to the route agent on the train?

A. We delivered it to the mail-carrier on that day at 8.20 a. m.

Int. When the mail was delivered by you to the carrier on that morning were the polls open in Uniontown at Christian's office, and was the election progressing?

A. Prior to the time I delivered the mail-bag to the carrier on that day I heard the announcement made that the polls were open.

Int. When did you reach the post-office on that morning?

A. I am certain that it was by or before 6 o'clock a. m.

Int. Did you or not on that morning, prior to 8 o'clock a. m., see T. G. Fowler, Peter Jackson, or Tom Heylton at or about Christian's office?

A. I saw T. G. Fowler prior to that time; he came to my store to get some small rope, he said, for the purpose of making a rope barrier around the polls.

Int. State whether T. G. Fowler asked you to allow your porter, Robert Smith, who was the mail-carrier, to assist him in making the rope barrier around the polls; and, if so, did he assist him?

A. My recollection is he did ask him, and that he did so assist him.

Testimony of J. M. Jeffries:

Q. At what hour were the polls open on that day?

A. The polls were publicly declared open at 8 o'clock a. m.

Q. Do you know when the oath was administered to John Smith, as supervisor for the United States, by Esquire Nicolson, notary public, on the morning of the 6th of November, 1888?

A. I did not see John Smith myself, but heard him in Esquire Nicolson's office about 9 o'clock a. m., after the polls were open and the voting was going on. Esquire Nicolson's office adjoins the room in which the election was being held.

Q. Where was the election held on the 6th of November, 1888?

A. At J. B. Christian's office, in the business portion of the town, and on the main street.

Q. Where are the elections usually held in said precinct?

A. At the said Christian's office.

Q. Where is the office of Dr. J. H. Houston situated?

A. It is situated in the extreme eastern portion of the city, just within the corporate limits.

From testimony of Peter Jackson:

Personally appeared before me, R. W. Nicolson, notary public and commissioner, Peter Jackson, who being first duly sworn to speak the truth, the whole truth, and nothing but the truth, says as follows:

Q. What is your color, name, and age, and where do you reside?

A. I am a colored man, and I am forty-two years old, and my name is Peter Jackson; I reside in Uniontown beat.

Q. Were you or not an inspector at the general election held in Uniontown precinct on November 6, 1888; and, if so, were you or not appointed by the county officials?

A. I was an inspector at such election, and was appointed as the Republican inspector by those authorized by law to appoint the election officers.

Q. Are you or not a Republican?

A. I am a Republican.

Q. At what time did you, with the other inspectors, reach the polling place or the place where the election was held?

A. I was there and so were the other inspectors at ten minutes before 8 a. m. on the morning of the 6th of November, 1888. We then put up the rope barriers, which occupied five or six minutes.

Q. How long after the ropes were put up before the polls were opened?

A. The polls were immediately opened, it being then 8 o'clock a. m. exactly. The announcement that the polls were open was made promptly at 8 o'clock a. m. on the public street in front of the polling place.

Q. At what place was the polls opened on that day?

A. At the place where elections are usually held, namely, at the office of Squire Christian, on the main street of the town.

Q. Are you positive that the polls were declared opened promptly at 8 o'clock a. m.?

A. I am.

Q. State whether any voters were rejected on that day. And if so, were they white or black?

A. Yes; several white men were rejected because they had not been in the beat quite long enough. They declared themselves Democrats.

Q. State whether any colored men who offered to vote on that day were rejected.

A. There were none; all voted without objection.

Q. Was it not known to all that the polls were opened at Christian's office on that day?

A. All knew it; a great many colored people were on the streets in hearing when the announcement was made that the polls were opened; everybody knew it.

Q. What part of the city was the voting or election held?

A. At the most public place in town; in the business portion, and on the main street of the city.

Q. Did you or not know that the polls were opened elsewhere in said city?

A. I did not until late in the day.

Q. Did J. H. Houston, John Smith, offer to vote at the polls where you were an inspector, or did you see any of them about the polls on that day?

A. They did not offer to vote on that day, nor did I see any of them about the polls on that day. I heard that John Smith was there to be sworn about 9 o'clock, but I did not see him.

Q. Do you know Col. T. G. Fowler, of Uniontown; and if so, how long?

A. I do know him and have known him about thirty years.

Q. Has he, or not, occupied a prominent place in the county since you have known him?

A. He has been a public man, and prominent for many years; he has represented Perry County in the State Legislature, and has been a member of several State conventions.

Q. In what part of the city is Dr. J. H. Houston's office situated?

A. He lives and his office is located on the extreme eastern limit of the town, just inside of the corporate limit.

Q. Have you ever known an election to be held at Dr. J. H. Houston's office?

A. I have never known an election to be held there; all of the elections have been held at Christian's office.

The holding of this outside poll by Houston and a few unreliable negroes, without warrant of law, was a part of the programme, part of the conspiracy to assist McDuffie in this contest. Why, sir, this same Dr. Houston was appointed one of the United States supervisors of election for Uniontown precinct and resigned. I do not remember whether the record shows this or not. I had considerable difficulty in getting transcripts of the appointment of United States supervisors and my recollection is I received them too late for this to appear with the testimony.

But I have it here on my desk and it shows that Houston resigned on the 29th of October; refused to serve, and notified J. W. Dimmick, chief supervisor, who then appointed John Smith in his place. On the 6th of November, about a week after this, we find him acting as self-constituted inspector and judge of election, with no commission, no authority to act in that capacity whatever. A few months later we find him on the stand a witness in this case, and he swears that at his box McDuffie received 953 votes. J. W. Stewart, one of the negroes who assisted Houston at this election, swears McDuffie received 1,153. A few days later we find him neglecting his practice and acting as attorney for McDuffie in this contest, and later on we find his son is made postmaster at Birmingham, Ala.

Why, gentlemen, before I came here I had thought this contest an insult to the Republican party, but about this it seems I was mistaken. [Laughter.] It is truly said, "bought knowledge is the best." By such counting as this, as my distinguished friend from Georgia [Mr. CRISP] has said, "you can overturn 50,000 as easily as you have set aside 13,000 majority." Chief Supervisor Dimmick can revise his list of supervisors and nothing is said about it. Oh, no! nothing whatever. He is a good Republican. But when the same thing is done (the list of inspectors is revised) by the county board in Lowndes you howl and say it is an unheard-of proceeding. "First pluck the beam out of thine own eye." The Lowndes County board give good and sufficient reasons for the few changes made in their revision of inspectors (because they declined to serve, or said they preferred not to serve).

The same reason is given by Mr. Dimmick, in this transcript I now hold in my hand, for the changes made by him in supervisors. And the same, the very same, reason that prompted Dr. Houston to decline to act as a United States supervisor at Uniontown is the reason that prompted the negro school-teachers in Lowndes not to act with the regular and legally appointed officers of election. That was, that they might go off and hold elections by themselves, as Houston did in Perry County, and as these negro school-teachers did all over the county of Lowndes, and return thousands of illegal votes for McDuffie. I call your especial attention to one of these outside boxes, because it was at a county seat, and the laws of Alabama designate and provide a place at county seats where all elections are to be held. At Hayneville, the county seat of Lowndes County, the Republicans held one of these outside elections, and the committee count 272 of these kind of votes for the contestant, although the law of Alabama is explicit and says elections held at county seats are to be held in the court-house.

All this was done by partisan friends to support a weak candidate. In order to bolster up his case and make something like a show of his vaunted popularity this contestant took testimony in this county and near his own home surreptitiously during the forty days allowed me for taking testimony, and when the ten days allowed him by law for taking rebutting testimony only, he puts two or three notaries public on the stand, and they produce a number of printed forms, affidavits signed by as many ignorant negroes, who could not read a ballot, as evidenced by their signing their names to these ready-made affidavits by a cross-mark, giving me no opportunity to cross-question them, or even to ask if the affidavits had ever been read to them. How was this contest conducted in the county of Wilcox—a county of more than 5,000 qualified electors?

I cite a few instances. Take the precinct of Prairie Bluff in that county. The returns give Turpin 245, McDuffie 14 votes. He claims at this box 241 votes. He examined two witnesses from there—L. J. Sykes and Granville Bennett.

Now, I will ask any honest man on the other side of the House: If you were contesting for a seat in Congress, and claimed 241 at a precinct where the returns only gave you 14, would you, could you, be satisfied with examining only two witnesses? Would you not try to get at least fifteen electors to swear that they voted for you, and thus show a falsification of the returns? But the chairman of the Committee on Elections says we expected them to examine 18,000 voters. We did not expect anything like that, but where the returns gave the contestant only 9 or 11 or 13 and he claimed from 188 to 245 (and as the Committee on Elections have counted for him, and the majority in this House intend to count for him) he would at least have found a reasonable number of electors to swear they voted for him.

These two witnesses testify that they distributed and saw voted 240 McDuffie tickets. My attorney examined all three of the inspectors (two Democrats and one Republican). They swear the election was

fair, legal, and honest. They also prove that, within their knowledge, Sykes and Bennett did not distribute tickets that day; and yet, in the face of this testimony, the Committee on Elections change the returns and give McDuffie 241 and graciously leave me 13 votes. Verily, it seems that the other side of this House concede to the majority of the Elections Committee "that divinity which doth hedge a king."

Here is another instance of the gross mistakes of the committee: Geese Bend precinct returns give me 190, and McDuffie 15 votes. He claims 192, and examined only two witnesses, who swear to the "same old story"—they issued and saw voted 192 McDuffie tickets. These witnesses were examined in the absence of my counsel, and swear this in answer to leading questions, and the Committee on Elections count 172 votes for contestant, and, with charity that "surpasseth all understanding," give me 9. Cardinal virtues, "Faith, Hope, and Charity." Faith in the "nigger," hope in the Committee on Elections, and charity enough to vote a Democrat out whenever opportunity offers. Truly is it said, "But the greatest of these is charity."

I cite you only one more in this county, but the record is full of them. Canton precinct returns give to McDuffie 11 votes, and to me 223. McDuffie claims 188; examines only one witness, J. W. Durgans. He swears in his examination that McDuffie received 188 votes and Turpin about 25; that he was 75 yards away from the polls; that he kept a tally and saw the voters deposit McDuffie tickets with the inspectors.

On cross-examination he was asked:

You can not swear, then, that the electors who had shown you their tickets deposited a single one of them, either in the hands of the inspectors or in the ballot-box?

A. No, sir.

Q. You can not swear, then, that J. V. McDuffie received more than one vote on that day, can you?

A. No, sir.

And on this testimony the Committee on Elections give contestant 188 votes, and with proverbial magnanimity give me 11.

Why, Mr. Speaker, in this county even the carpet-baggers and scalawags would not support McDuffie.

W. J. Bonner swears there are ten or twelve white Republicans living in the county; that half of them live in Camden (the county seat), and that they not only made no canvass for McDuffie, but not a single white Republican in the town voted for him.

If there is no objection, I shall insert Mr. Bonner's testimony in the RECORD:

TESTIMONY OF W. J. BONNER.

Q. What is your age?

A. I am twenty-nine.

Q. Where do you reside?

A. I reside in Camden, Ala.

Q. What official position do you now hold in Wilcox County, Ala., and how long have you held it?

A. I have been clerk of the circuit court ever since the August election, 1880.

Q. Have you not always been a pronounced Democrat?

A. I have.

Q. Were you or not re-elected as clerk of the circuit court at the August election, 1886?

A. I was.

Q. What vote did you receive at the August election, 1886, as said clerk?

A. I received over 4,600 votes at said election as said clerk.

Q. Do you or not as said clerk assist in selecting the inspectors of all elections held in Wilcox County, Alabama?

A. I do.

Q. Have you not as a candidate for clerk of the circuit court of Wilcox County, Alabama, canvassed the county?

A. I have canvassed said county on two occasions.

Q. Are you not well acquainted with the citizens of said county from holding the position that you now hold and have held for the last eight years?

A. I am. I know nearly every respectable citizen in Wilcox County, Alabama.

Q. Please read the list of inspectors at the November election, 1888, that is attached to the deposition of J. J. Hawthorne, and marked Exhibit —. Have you done so?

A. I have.

Q. What is the character of the Democratic inspectors on said list and their social standing?

A. It is the very best.

Q. Are they or not among the best men in their respective communities, and do they not stand above reproach as law-abiding citizens and honest men?

A. They are among the best citizens, and they do stand above reproach as law-abiding citizens and honest men.

Q. About how many white Republicans are there in Wilcox County, Alabama?

A. Not over ten or twelve.

Q. Do not about half of said white Republicans live in Camden beat?

A. Yes.

Q. Did or not the white or colored Republicans make a canvass in Wilcox County, Alabama, for McDuffie?

A. They did not.

Q. Did or not the white Republicans in Camden beat vote for McDuffie on the 6th day of November, 1888?

A. Not a single white Republican voted on the 6th day of November, 1888, for McDuffie in Camden beat.

Q. Who is the leading colored Republican in Wilcox County, Alabama?

A. Elbert W. Lock.

Q. Was Elbert W. Lock a delegate to the national Republican convention in Chicago that nominated General Harrison?

A. He was.

Q. Was he or not on the Republican electoral ticket in this State in 1884, when Mr. Blaine was the Republican candidate for President?

A. He was.

Q. Did the said Elbert W. Lock vote for said McDuffie at the November election, 1888?

A. He did not.

Q. Did you have any conversation with said Elbert W. Lock on the 6th day of November, 1888; if so, where was it and what did he say?

A. I did have a conversation with him at his shoe-shop on the 6th day of November, 1888, and he said he was not taking any part in the election; that he was occupying his time making shoes.

Q. Was it not generally believed by the white people and the colored people in Wilcox County, Alabama, that Cleveland would be elected President and Turpin would be elected Congressman from the Fourth Congressional district in November, 1888?

A. It was.

Q. In what place was the election held in Camden beat at said November, 1888, election?

A. In the office of circuit clerk.

Q. You were out of your office all day November 6, 1888, were you not?

A. I was.

Q. Were you near the voting place?

A. I was.

Q. Did you see Henry Fairly and John Montgomery distributing tickets on that day?

A. I did not.

Q. Are not the colored voters allowed to vote as they please?

A. Yes.

Q. How many white Democratic voters in Camden beat?

A. Between 165 to 175.

Q. Have there not always been a large number of colored Democratic voters in Camden beat?

A. Yes.

Q. Have not the number of colored Democratic voters increased from year to year since the Democrats elected their ticket in 1880?

A. Yes.

W. J. BONNER.

This testimony shows that the white men who had before this been acting with the Republican party not only failed to vote for McDuffie, but refused or neglected to vote for Presidential electors.

They know, sir, and the intelligent colored men in the South have learned to know, what party is responsible for the money famine that has so long impoverished the American farmer; they know what party has legalized fraud by contracting the currency; they know what party is responsible for the constant increase of millionaires and paupers—the great enemies of republican institutions; they know that the Republican party has never been the poor man's friend. They have turned from you and will continue to turn away from you, because they not only know, but they realize the truth, and know what is to their best interest.

Wilcox is not the only county in the district where white Republicans have changed; it is so all over the five counties that compose the Fourth Alabama district. In Hale, my own county, I know of only one white man that votes the Republican ticket, and he is perfectly incompetent to organize a beat meeting.

I read from the testimony of one of the witnesses for the contestant, a colored man, Dick Crook, who in the good old days of carpet-bag rule was himself quite an active politician:

Q. How many white Republicans are there living in this county?

A. Bill White Jones is one; the only one that I know.

Q. Were you living in this county some years ago, when Dr. Blackford was judge of the probate court, and George M. Duskin was solicitor, and Bill White Jones tax assessor, or not?

A. Yes, sir.

Q. State how many white Republicans were living in this county at that time, as well as you can remember.

A. I know of thirteen or fourteen Republicans at that time.

Q. What office did Mr. Joseph Adkins hold in this county at that time, and what office did Mr. Frank Harris hold, and what office did Mr. Burrel Johnston, Mr. V. Gayle Snedecor, Mr. Sam Briggs?

A. Mr. Joseph Adkins, was county treasurer, Frank Harris was high sheriff, Mr. Burrel Johnston was tax-collector, Mr. Snedecor was register, Mr. Sam Briggs was deputy sheriff.

Q. Were they all elected on the Republican ticket?

A. To the best of my judgment, they were, except Sam Briggs, appointed by the sheriff, and V. Gayle Snedecor, appointed.

Q. Is it not a fact that after the Democrats redeemed the State by the election of George S. Houston governor that all of the above-named parties went over to the Democratic party?

A. Yes, sir; they all went over to the Democratic party.

Q. Is it not a fact that Mr. Ike Ryan, John Ryan, Mr. Stevens, and Marion Johnson went over to the Democratic party, too?

A. Yes, sir; they went over to the Democratic party.

Q. Is it not a fact that George M. Daskin, Dr. Blackford, and Major Spann moved out of the county after George S. Houston was elected governor?

A. Yes, sir; they moved away.

Where, then, is the Republican party of the Fourth Alabama district if the same percentage of change from Republicanism to Democracy is applied to the colored vote?

You gentlemen of the other side figure and count it as you please. You have already determined to count me out, but I shall appeal to the people, and the people will vindicate and return me to the Fifty-second Congress. [Applause.] One of the illustrious characters of this country has said, "You can fool all the people part of the time; you can fool part of the people all the time; but you can not fool all the people all the time." You can, as you are going to do, count for the contestant the illegal votes at precincts where double elections were held in violation of law, but in pursuance of the plan of conspiracy adopted by the contestant and his partisan friends. Count the so-called votes returned by men not officers of the election—in no manner officers—men in no way authorized to open polls, to receive or count a ballot, accept as proof witnesses clandestinely examined for contestant in the time allowed by law for me to take my testimony—do all this, as you are about to, and will do. Then announce to the world that the American Congress enact, but do not obey the law, and the people will read your decision with the same degree of consolation that the farmers of the Northwest now read the mortgages on their homes by the light of burning corn.

One more point, Mr. Speaker: It is alleged as a reason for contestant's not examining more witnesses that time was consumed by attorneys for me in cross-examining his witnesses at great length. The lamest of excuses. Why, sir, in none of these precincts in Wilcox County to which I have alluded did he ever *summon* more than three or four witnesses. The record shows he had a legal right to commence the taking of testimony after the 14th day of January, of which he availed himself in Dallas County, yet he never examined a witness in Wilcox until the 31st of January, seventeen days after. He did not commence in Hale until the 25th day of January, and in Perry even later than that. This argument of want of time is as flimsy and unsound as many others that have been advanced here, and if this case could be tried before a jury of disinterested men the whole case would fall of its own weight.

This case, Mr. Speaker, was born in fraud, conceived in conspiracy, and nurtured by suborned witnesses paid by the Federal Government, as the archives in the various Departments in this city will verify. [Applause on Democratic side.]

It has been reiterated on this floor that my friends inaugurated a row at Snow Hill, Wilcox County, for the purpose of suppressing testimony in this case and that one negro was killed and others wounded.

The facts as proved dissipate this charge and show that the deputy sheriff who committed the homicide was acting under orders of the sheriff, and the homicide was committed in self-defense and under circumstances which justified him, to save his own life.

It is submitted that no man on the floor of this House would have acted otherwise if he places any value on his own life. The testimony of contestant does not give the circumstances which led to this unfortunate homicide. A part of my evidence is given to show it was absolutely unavoidable. It is as follows:

N. O. Knight, sworn:

Q. What is your name, age, and in what beat and county in this Congressional district did you reside on the 6th of November, 1888?

A. N. O. Knight is my name; am thirty-three years old; I lived in Wilcox County, Snow Hill beat.

Q. Was there an election held in said beat on the 6th day of November, 1888, for a member to represent the Fourth Congressional district of Alabama in the Fifty-first Congress of the United States; and, if so, who was the Democratic and who was the Republican candidate?

A. There was such an election held; Turpin was the Democratic candidate and McDuffie was the Republican candidate.

Q. Was there an attempt on the part of colored Republicans, or a committee of such, to intimidate the voters of said beat or to interfere with the free exercise of the ballot or prevent the colored voters of said beat from voting for Turpin?

A. I think there was such an attempt made.

Q. If there was any disturbance at said polls in which any of the colored Republicans got shot, state what it was, how it came about, who did the shooting and who got shot, and give all the facts that you know about the shooting.

A. The deputy sheriff, acting under the instructions of the sheriff of the county, went to arrest the negroes who were keeping an outside tally-sheet, and was carrying the man that he had arrested off, and Mose Davis, a colored man, interfered and said that he was going to make the deputy turn him loose, and went up behind the deputy with a fence rail, and I hallooed to Mr. Harris, the deputy, to look out, the negroes would kill him. The negroes then knocked Harris, the deputy, down, and then another negro by the name of Banks jumped, together with a dozen or two others, on Harris; they were beating him with sugar-cane stalks, etc., and I again hallooed to Harris to shoot Banks, who was on top of him. Harris then threw Banks off, and when he started towards him again he shot him. After being shot the negro jumped on Harris and got him down again, and in the scuffle on the ground the negro got shot again, and at this time a young man by the name Moore pulled Banks off of Harris, and Banks ran off a few steps and fell dead.

Q. Was the rail with which Mose Davis hit Harris a weapon capable of inflicting death?

A. It was.

Q. Would not Harris, in your judgment, have been killed by the negroes if he had not fired?

A. Yes, sir.

Q. Is it not a fact that the negroes were a loud, threatening, and dangerous mob?

A. It is a fact.

Q. Do not some of the negroes of said beat vote the Democratic ticket?

A. Yes, sir.

Q. Was not Mr. Harris a regular deputy sheriff of Wilcox County?

A. He was.

Q. Did not Mr. Harris refrain from shooting on that day until it became absolutely necessary for him to shoot to preserve his own life being taken?

A. He did.

Q. Was not Mr. Harris very badly abused in the scuffle?

A. He was.

Q. Did not Mr. Harris in the melee receive a painful wound that was some time in healing, and has left his head bare of hair in that place?

A. Yes, sir.

N. O. KNIGHT.

Witness:
S. W. JOHNSTON,
Notary Public and ex officio Justice of the Peace.

Robert Hall, sworn:

Q. What is your name, age, and in what beat and county did you reside on the 6th day of November last?

A. Robert Hall is my name; am thirty-three years old; I resided in Wilcox County, Snow Hill beat.

Q. Was Deputy Sheriff Harris a man of good character and of peaceable disposition?

A. Yes, sir; so far as I know; I have never heard anything to the contrary.

Q. What was the reputation of the negro man who was killed?

A. It was very bad, from what I can learn.

Q. State what you saw of the circumstances of the killing.

A. When I first went to the door at my store I saw the deputy sheriff have a man by the collar, and backing from the crowd of negroes that was pressing up to him and waving to a man to keep back who was coming after him with a fence rail; the man raised the rail and as it was descending upon the deputy sheriff he fired; sheriff had backed away about 15 feet while I saw him; the rail hit the sheriff about the back of the head or neck and he fell and the crowd of negroes rushed in so that I could not see; after the crowd rushed on to him I heard two more shots.

Q. Was there any intimidation of colored voters there that day?

A. None that I know of.

Q. Do not the negroes at Snow Hill beat largely vote the Democratic ticket?

A. I have heard them say so.

Q. Were the Democratic inspectors at said place men of good character?

A. I think they are regarded as men of good character.

Q. Would you believe Nathan Scott, Daniel Carmichael, Mike Hunter, and Henderson Gully on oath?

A. I don't know anything at all about Mike Hunter, and the other three I would not believe on oath.

Q. What is your occupation at Snow Hill?

A. I am a merchant.

ROB'T HALL.

Witness:
S. W. JOHNSTON,
Notary Public and ex officio Justice of the Peace.

Judge John Purifoy, sworn:

Q. What is your name, age, and in what beat and county did you reside on the 6th of November last?

A. John Purifoy is my name; am 47 years old; I resided in Wilcox County, Snow Hill beat.

Q. What public positions have you held in Wilcox County?

A. Was judge of probate for six years; am now notary public and *ex officio* justice of the peace in my precinct.

Q. Do you know where Daniel Carmichael and Richard Palmer were when they were keeping a list of the voters on election day; from where they were would it have been possible for them to have told how any person voted or whether or not they voted the identical ticket they had received?

A. I know where they were; they could not have told.

Q. Would you believe Palmer and Carmichael on oath in this contest?

A. I would not.

Q. Were you present at the time the riot occurred?

A. I was not.

Q. What is the character of the negro man that was killed (William Banks)?

A. He was noted as having a turbulent character, particularly with white people; always ready to raise a disturbance.

Q. Were the Democratic inspectors and the deputy sheriff men of good character?

A. They were; all of them.

JOHN PURIFOY.

Witness:
S. W. JOHNSTON,
Notary Public and Justice of the Peace.

I would be glad to follow this case in all the precincts in my district, but my time has expired. I beg to say in conclusion that from the evidence on both sides it must appear to any unprejudiced mind that I was fairly and legally elected as the Representative of the Fourth district of Alabama, according to the laws of that State; that the committee did not and could not arrive at any other conclusion without doing violence to the evidence; that if the report of this committee is adopted by this House then my competitor will occupy a seat on this floor for the residue of this Congress which the people of Alabama did not give him, but which is awarded him by this House without a show of reason or propriety. [Applause on Democratic side.]

Silver-Bullion Certificates.

SPEECH

OF

HON. JAMES H. BLOUNT.

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 6, 1890.

The House having under consideration the bill (H. R. 5391) authorizing the issue of Treasury notes on deposits of silver bullion—

Mr. BLOUNT said:

Mr. SPEAKER: From 1792 to 1873 we had the bimetallic standard of gold and silver in our financial system. In 1873, without any agitation of the question in the press, in official utterance, or public debate in either branch of Congress, silver was demonetized. The act was so craftily drawn as to conceal the purpose from Representatives, Senators, and President, and was not known by them until some time after its passage.

The downward tendency in the value of the products of labor, the increase of all the indebtedness, public and private, throughout the land, was comprehensive and sudden. The scarcity of money clogged the wheels of industry, labor ceased to find proper remuneration, insolvency unprecedented came to the most careful in all the vocations of trade, manufacture, mining, and agriculture. A blighting curse came over all save the capitalist whose investments were in the public or private debts of the country. To him there came almost untold wealth without toil, or sagacity, or ordinary prudence. For five years the depression in values, the straitness of the masses, and the increased wealth of the moneyed classes grew side by side. Slowly the truth dawned on the public mind that silver demonetization had been the wand used by the magician of avarice to accomplish this cruel and fiendish situation.

In 1878 some measure of relief came by its partial remonetization. The Secretary of the Treasury was authorized to purchase bullion and coin not less than $2,000,000 per month nor more than $4,000,000 per month. The unused silver coin came forth again to animate in some measure the hopes and energies of men. The new though limited coinage contributed to the work of beneficence.

In 1880 we began to emerge from our situation. Who shall tell the story of penury, bankruptcy, and despair that marked this period of desolation? Our great civil war, with its destruction of life and property, was a pastime compared to it. When it had done its worst men took heart again, business revived, and a measure of prosperity appeared.

Why did this silver demonetization remain absolute until the act of 1878? Was there any disposition manifested by the money power to release its hold on the happiness and prosperity of the country? Did they not endeavor to maintain their advantage? Why was there not complete remonetization in 1878? This same power was able to say, "You can take this modicum or nothing." By some subtle influence over the legislative and executive departments of the Government, up to this hour nothing better has been attainable. Ay, from the date of that act until now we have been urged to repeal it because it would drive gold from the country, contract the circulating medium, and repeat the disasters of 1873 to 1880. Was avarice ever more impudent, audacious, cruel? Ye authors of all the woes of that period, swollen with ill-gotten gains, will ye, under the guise of patriots, with the soft tones of humanity, seek to lure your countrymen into your deadly coils again?

You tell us Germany demonetized silver in 1871. Well, what harm came to us from that? It touched not our prosperity. You tell us that France stopped silver coinage in 1874. But our disasters had then fully set in by reason of the same action antecedently on our part.

You tell us that bimetallism is right, but we must reach it by cooperation with Germany, England, and France. We have tried this to no purpose. England has had the single standard since 1816. Germany's demonetization never affected us. Ours preceded that of France, and therefore the action of the latter country proves nothing. Silver there is worth 15½ to 1; here it is 16 to 1. It is worth more in France than here. Why should it leave a higher market to come to a lower one? The same observation applies to Germany and Great Britain. Seven hundred million people have adopted silver as the sole standard of money; 187,300,000 have the double standard, gold and silver, and 92,800,000 have the gold standard. Nations move slowly. The sharp, sudden movements of the trader or of the commander of armies is not theirs. Especially is this true in relation to financial operations. I admit that the demonetization of silver in this country seems a singular exception. A close survey proves it a fraud in legislative proceedings and that it has occurred only once in our national life. It is not probable that the great populations using silver, seeing our country remonetize it, will part with it and place it on our market. The sudden contraction of their currency with its attendant disasters, illustrated after the act of 1873 among us, surely would admonish them otherwise. From 1792 to 1873 silver was our standard of value, but it did not tempt the silver from other lands. The demonetization of silver or gold by any country has never affected our legistative action hitherto. It ought not to do so now.

The crushing contraction of the currency by the demonetization of silver in 1873 and the partial relief by the remonetizing act of 1878, is not the end of this story. The Director of the Mint of the United States, December, 1883, gives us this information: In 1880 the population of the United States was 50,155,783. Its paper money, $884,002,074; its gold, $606,197,000; silver, full legal tender, $159,479,000; silver, limited tender, $80,920,000, total paper currency and specie, $1,730,598,074. Paper per capita, $17.63; specie per capita, $16.88; total per capita, $34.51. The population in 1890 we will assume to be 65,000,000. The Committee on Coinage, Weights, and Measures, in the report accompanying House bill 5381, say that the total volume of money of all kinds in circulation in this country March 1, 1890, was $1,426,104,391. From these data in 1890 the per capita circulation is less than $22. Our per capita circulation has fallen from $34.51 in 1880 to $22 in 1890. In ten years we have contracted our currency per capita more than 33 per cent.

This same committee in this same report tell us that last year our national-bank circulation was reduced by redemption of notes to the amount of $37,599,229. The currency contracts; the prices of wheat, corn, meat, cotton, fall. Could it be otherwise? The farmer toils, economizes, diversifies his products, improves his agricultural implements, utilizes the suggestions of science in fertilizing, etc. To his increased energy, his enterprise, his higher intellectual methods, there comes no adequate reward. The price of his products is constantly decreasing. His capital, his industry, yield him no satisfactory return. He seems to be toiling in vain, toiling for another. The semblances of freedom only seem to be his. His child is put to inexorable toil. His education is restricted, his hopes are depressed. From the independent farmer we have in the past been drawing the best brain, the intensest energy, the highest courage, in all the callings of life. The pitied peasantry of Europe has hitherto had no parallel here. It has had its discontents, commotions, revolutions, bloodshed. The American farmer has been the spring of conservatism, the guardian of law, the pride and hope of our free institutions. To-day he is in debt, to-day he is murmuring, to-day he is angry, and yet his natural love of peace and his habits of industry restrain him. Let me say, too, he is organizing. This is a novelty. It was once thought impossible. What will this organization do? It will become informed on public questions, it will learn the causes of the depression of its brotherhood, it will see its power, it will seize and exercise it. Already has this currency curse commenced to agitate it. Its injustice is felt. Extreme remedies are suggested. They are not as extreme as the evils of past legislation.

Let us not treat this as the story of an idle hour. The only safety for our political institutions, for our civilization, lies in just laws. With these and our pleasant land, peace, happiness, and high hopes shall sing eternally in every American home. Let us not say, "Your corn, wheat, cotton, and other products are low because of overproduction." Let us not say to the farmer, "You ought to diversify your industries," or make some other suggestion for his business conduct. Seeing the ever-contracting volume of the currency and knowing that this cause of itself is sufficient to produce a continual decline in prices, our first duty is to acknowledge this truth. The very next is not only to arrest this contraction, but to increase the per capita circulation until we shall revive not only agricultural but all other industries. Until you have done this you can not bring content to the people.

The Secretary of the Treasury seems profoundly blind to our financial situation. The following measure is recommended by him:

Issue Treasury notes against deposits of silver bullion at the market price of silver when deposited, payable on demand in such quantities of silver bullion as will equal in value at the date of presentation the number of dollars expressed on the face of the notes at the market price of silver or in gold, at the option of the Government, or in silver dollars, at the option of the holder. Repeal the compulsory feature of the present coinage act.

This is intended to stop the further coinage of silver. The present silver dollar is denounced as a 72-cent dollar. As no other can be coined under existing law, then the coinage of silver, according to the Secretary, with due regard to honesty, must cease. Only when silver reaches the value of gold can we expect the revival of its coinage. We have free coinage of gold and it is a legal tender for all public and private debts. This use bestows its chief value. Take this away and it would be worth very much less than silver. Give this function to silver and its value will be nearly on a par with gold. Under such conditions it will be worth sometimes a little more, sometimes a little less. In 1873, prior to its demonetization, it was worth more than gold. Until it is fully remonetized it can never be equal in value to gold.

Let us suppose the policy of the Secretary of the Treasury to be the law. Now he must buy and coin at least two millions a month. This gives it value, but it is to be abandoned and a downward drift given to silver. Its coinage into money is to cease. The owner of silver may deposit his bullion and get a "so-called Treasury note" for an amount of silver equal in the market to its gold value. This gold value of silver varies. To-day it has one price, to-morrow another, and so on to infinite uncertainty. When the note is taken for redemption the owner then finds out how much silver he can get for it on that day. What can he do with it? He can not use it as a medium of exchange. Sell it for gold? He may not find a ready purchaser or he may have to sell it below its value. He can not pay his debts with it. Is this money? Who wants it? Why should any one want it? Do you say he will take it because it is the best he can get? Can the Government justify itself thus? Will you tell me he can get silver dollars for his notes? How much? This depends upon the market for silver bullion. It may rush down or up at the beck of bulls and bears. You launch him on a restless sea, sometimes gentle in motion, then storm-beaten, but never at rest.

You say these notes shall be receivable for customs, taxes, and all public dues. This will answer the importer in paying customs, and the tax-payer once a year or as often as he pays taxes. This is a small money function. You say that these notes when held by any national-banking association shall be counted as part of its lawful reserve. They are then to be a legal tender for the banks. But why not for the people? Why not for the people, too? Why thus limit the money function of this note? Will you say you doubt the power to make them legal tender? This has been done and sustained by the Supreme Court. You admit the wisdom of making them legal tender if you had the power. The latter you can not deny, but will not use. Why? Because to give a legal-tender quality to these notes would decrease the value of gold. The monopoly by it of the money function would cease. The indebtedness of the debtor would be lighter, the owner of credits would encounter a decline in values. The silver dollar is denounced as a dishonest dollar. You issue a note based on silver worth par in gold and yet you refuse to make it a legal tender. This, too, when you know this function will insure the advance of that same silver and make silver worth more in the market than gold. Then your last argument, silver as a dishonest currency, will disappear, and free coinage of it is inevitable. This is the sticking point of the dealer in money.

It is proposed by the Secretary of the Treasury to redeem these silver notes in bullion by the issue of a certificate of deposit for the sum

of notes so presented, payable at one of the mints of the United States in an amount of silver bullion equal in value, on the date of said certificate, to the number of dollars stated therein, at the market price of silver in the leading markets of the world, to be determined by the Secretary of the Treasury; or such notes may be redeemed in gold coin at the option of the Government, provided that upon demand of the holder such notes shall be redeemed in silver dollars.

Why redeem in bullion? The only idea of redemption hitherto has been in coin or its equivalent, to make good the note by the assurance of its convertibility into the standard of value. The strain of war has been sufficient to change the rule as to the greenback, but in that case it was a legal tender for private debts and it was supported by the pledge of the Government for its final redemption in coin. In the plan of the Secretary the Treasury note is to be redeemed by payment in bullion. Its value varying daily in our market is not a standard of value. It is a commodity of merchandise. Why not issue notes on other commodities? Why not on corn, wheat, cotton, cotton goods, woolen goods, diamonds, etc.? This variableness of value makes it useless in the business transactions of life.

You tell me the Government can redeem in gold or the holder may demand silver. How much? Whatever silver bullion is worth at the time. So at last we redeem in an uncertain quantity. It is contrary to common sense, contrary to all just financial ideas in a country of unbounded resources and free institutions to create such a financial system. It is a Wall street conception. It is an emanation from the money power hostile to silver coinage. It is the scheme of the old enemy of the people, who demonetized silver. It rests upon the same pretended fears with which it has been sought to alarm the country for years with prophecies of evil over our meager coinage of silver. Their false prophecies in the past do not abate the oracular pretensions of the same persons to-day. I would as soon trust a sweet babe to the care of the ravenous lion, virtue to crime, christianity to infidelity, as the financial interests of the struggling masses of my country to those who build their palaces and burnish splendors upon their misfortunes.

On the 26th of March the chairman of the Committee on Coinage, Weights, and Measures reported from that committee favorably House bill 5381, substantially the proposition of the Secretary. On the 24th of April he introduced House bill 9678 and had it referred to the same committee. This bill seems to have emanated from a Republican caucus, which was not content with that reported by direction of the committee. It provides that the notes shall be redeemable on demand in lawful money; that no greater or less amount of notes shall be outstanding at any time than the cost of bullion then held in the Treasury purchased by such notes. Had the bill stopped here these Treasury notes would not only be worth par, but the Treasurer would have been compelled to keep them in circulation. By the amount of silver deposited we should have added so much permanently to the currency of the country. Two qualifications are added. First, the notes are not a legal tender for private debts, only for customs taxes and public dues. Second, upon demand of the holder of any of the Treasury notes herein provided for, the Secretary of the Treasury may at discretion, and under such regulations as he shall prescribe, exchange for such notes an amount in silver bullion equal in value at the market price thereof on the day of exchange to the amount of such notes. Why lawful money? All other forms of currency are redeemable only in gold and silver. There is a vague discredit thrown over the Treasury note by this distinction, which is wanton and useless.

You tell me this so-called Treasury note is redeemable in legal tenders, and these in turn in gold and silver. Then why not make them primarily redeemable in coin? If tendered to a creditor, he may decline them, and the debtor be placed at a disadvantage sometimes ruinous. You have not, then, made it good money. The fixedness of the amount of this new currency is destroyed by permitting owners of these notes to take the bullion from the Treasury in exchange. The silver-coinage countries buy our Treasury notes and take our silver from the country. The Treasury is a convenient mart for their agents. The domestic enemies of silver may buy it, not only for foreign markets, but to appreciate gold and public and private obligations in their hands. A distinct scheme for contraction is here well laid, and its consummation easily accomplished. Coin silver and make it a tender, and this can not happen.

A second Republican caucus bill is now brought forward by the gentleman from Iowa [Mr. CONGER]. It provides for the monthly purchase of $4,500,000 worth of silver bullion to be paid for in silver-bullion Treasury notes; that they shall be redeemable in coin on demand; that they shall be a legal tender for all debts, public and private, except where otherwise stipulated in the contract, and shall be receivable for customs, taxes, and all public dues, and when so received may be reissued. Up to this point the measure has merit. The legal-tender character of the note and its redemption in coin makes a good currency. The coin on hand may be sufficient for redemption purposes, and this, taken in connection with the compulsory silver-coinage act of 1878, will probably end silver coinage in this country, and slowly discredit it as a standard of value and create a situation favorable to a return to the gold standard.

This last bill also provides—

That upon demand of the holder of any of these Treasury notes the Secretary of the Treasury may at his discretion and under such regulations as he shall prescribe, exchange for such notes an amount of silver bullion equal in value at the market price thereof on the day of exchange to the amount of such notes presented.

Why shall the Government sell this bullion? The holder of the note is entitled to gold or silver coin. This is specie payment. This gives to the Government note its highest money value. It is manifestly intended to open the way for a contraction of the currency. Section 2 of this act declares that no greater or less amount of such notes shall be outstanding at any time than the cost of the silver bullion then held in the Treasury purchased by such notes. So when the Government sells bullion the Treasury notes in circulation are to that extent diminished. The demand for silver in other lands and the schemes of speculators may at any time reduce the silver bullion and the amount of Treasury notes in circulation. Will you tell me the Secretary of the Treasury will restrain sales? He may be hostile to this scheme and advance them. Why put the business of this country, so far as the amount of its circulation shall be, in the hands of any man? Why not fix it by law?

Why have we had so many propositions for a silver currency? Why has the Republican party in the Senate caucused so much? Why have our Republican brethren of the House discussed and caucused so much on this question? And why is there such a steady purpose to defeat the coinage of silver in any amount, even repealing the law of 1878? We are told that if this is not done the President will veto any bill that may be sent to him. He has determined against silver coinage, and his party in the House and Senate, to avoid differences with him, acquiesce in his position. He determined to stand against silver coinage of any kind. He has allied himself with the money power. His party, free from his opposition, would coin silver on some terms. Under it the Representatives of 65,000,000 people and the Senators from forty-two States quail into conformity with his wishes and the Wall-street influence. Where is our boasted freedom? Where is the power of public opinion? Where is the boasted equality of freemen? Congress under the control of the executive department! The President elected on a silver-coinage platform and fighting in the ranks of its enemies! The forces of the Government are tremulous, irresolute, submissive in their presence.

What a situation for popular discontent! What a mockery of our republican form of government! How instructive of the fallibility of all forms of government! How fertilizing to communism and anarchy! Our institutions can only be preserved on the foundation of justice and of laws begotten of regard for the people. Let us all rise to the emergency of the general discontent. Let us give assurance to our countrymen that we mean to be true and loyal representatives. Let us refuse to barter legislation with any interest for success in elections and follow the plain, straight ways of truth and justice. This done it matters not what party is in power. Hold up always the best thought and trust to right.

Much has been said by the majority side of the House against putting American laborers on a par with the pauper labor of the Old World. In this connection I quote the following extract from the speech of Senator TELLER on May 17 (CONGRESSIONAL RECORD, page 4987):

The low price of silver has stimulated the export of wheat from countries using silver or having a depreciated paper money, notably India, a silver-using country, and Russia, with a depreciated paper currency.

In 1880 India exported 4,000,000 bushels and Russia exported 36,000,000 bushels; total of 40,000,000 bushels.

In 1888 India exported 32,000,000 bushels and Russia 126,000,000 bushels; total, 158,000,000 bushels.

In 1880 the United States exported 180,000,000 bushels, and in 1888, 119,000,000 bushels; difference between 1880 and 1888, 61,000,000 bushels.

In 1889 we exported 88,000,000 bushels; difference between 1880 and 1889, 92,000,000 bushels.

During the last six years the average export of India wheat has been about 35,000,000 bushels. The increased export of India wheat is not due wholly to cheaper transportation, as is sometimes asserted, nor to cheaper wheat in India. The price of wheat in India is substantially the same that it has been for years. The India mints coin silver at a ratio of 1 to 15, and at that ratio the mints are open to all the silver offered for coinage. The purchasing power of coined silver is as great in India to-day as it was when silver sold in London for 62 pence per ounce.

An ounce of pure silver at the ratio of 1 ounce of gold for 15 ounces of silver is worth $1.376, and that is its mint value, less the small amount charged for mintage.

During the last year silver has sold in London for 92 to 95 cents per ounce. The holder of India wheat, selling his wheat in Liverpool for gold, buys silver bullion at 92 to 95 cents per ounce, takes it to the mints of India, coins it into rupees, and thus clears not less than 38 to 45 cents on each ounce. If he sells his wheat for enough per bushel to buy one ounce of silver, he has in fact received the value of the ounce of silver, after mintage, less the small charge for mintage and transportation; say, from $1.35 to $1.36 per bushel for his wheat.

The American wheat-grower must sell his wheat at the same price that the India merchant does and take his pay in the same metal, gold; but if he buys silver with the price of his wheat he can not coin it, and he can make no profit. So the India wheat-grower has the advantage over the American wheat-grower of from 38 to 45 cents on a bushel.

The business of Russia being conducted on a depreciated paper, the premium on silver in that country is a bounty to the Russian wheat-grower, and that is the cause of the large increase in Russia's export of wheat. This is true of Chili and other South American silver-using countries, who buy cheap silver and coin it into dear money.

Our financial policy applied to silver (a policy that we borrowed from Eng-

land) has put our farmers in competition with the ryot of India, the serf of Russia, and with the labor of all the countries of small wages and poor living.

It has put the farmer (outside of the vicinity of great cities) in the position of farming "not for profit, but simply for bare subsistence."

It compels him, in order to meet obligations assumed under different and better conditions, to raise and market from 40 to 60 per cent. more to discharge his obligations than he was required to raise at the time he incurred such obligations.

This illustrates the condition of the American cotton-grower too.

These suggestions are unheeded by the party in power. Let us take them to the people. Let us cast our fortunes with them in their struggle against class legislation. That may be called demagogism. So be it. Men have been struggling upward against avarice and tyranny. They have advanced more in the present century than in the ten preceding. The bonds are breaking; the clouds are rifting; the cheering light floats in the atmosphere around us; mind quickens and truthful inspirations call us to a higher plane of equal laws, honestly interpreted and fearlessly executed.

Silver-Bullion Certificates.

SPEECH
OF
HON. WILLIAM F. PARRETT.
OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 6, 1890,

On the bill (H. R. 5991) authorizing the issue of Treasury notes on deposit of silver bullion.

Mr. PARRETT said:

Mr. SPEAKER: My time is limited and I shall aim to be brief. There has been so much discussion and so many cogent reasons have been offered in favor of the remonetization of silver that it would seem to be almost a work of supererogation to attempt to say anything new on the subject.

The most prosperous ages of the world and the most prosperous periods under our own National Government have been times when there was the largest amount of substantial currency in circulation, and when the mines of the precious metals were yielding the largest quantities and the volume of this kind of currency was being most rapidly increased and put in circulation among the people. And in so far as the Committee on Coinage in their report express this view I fully concur with them; but I can not concur with them in the proposition that the principles contained in either the bill or the substitute before the House tend to the accomplishment of the end desired.

The currency of the world does not consist in sovereigns and pence, doubloons and francs, crowns and guilders, dollars and cents. Coins of any description are only used as representative values for convenience in the local governments or kingdoms where by law they are adopted, and their exchange value is fixed by the quantity of gold, silver, or copper they contain, that is, only by their intrinsic value. They are made legal-tenders according to their denominational values by force of the laws of the countries in which they circulate as currency; and in this respect the legal-tender quantity and quality of every piece of coined metal depends upon the fiat of the government which issues it. To this extent all money or currency is fiat money, that is, money because it is declared by the supreme power of each particular nation to be such; and it is treated as money only within the boundaries of the state or nation where it is coined. Everywhere else it is treated as bullion. In other words, the coins used for circulating as currency among the different nations of the earth are local in both their origin and intended use, and in no sense cosmopolitan. Their true locality and home is as much fixed as that of the citizen of any nation; and they rarely if ever go outside of their own territorial limits, all balances of trade with other nations being settled either by the exchange of commodities or in bullion. So that neither our gold nor silver coins are or could be intended for extensive circulation abroad; and when they do circulate beyond the limits of our own country, it is only according to their bullion value.

But in the locality in which the money coins are fixed and sanctioned by the government, the coin so set apart and named as money becomes a part of every contract, duty, or obligation to pay or receive dues of any kind, either by the government or by any of its citizens, and such coin, thus fully monetized, is all that the creditor has a right to require from his debtor.

Mr. Speaker, when the Government of the United States determined upon the resumption of specie payment and authorized a new issue of bonds, both principal and interest payable in coin, and declared all bonds previously issued payable in the same manner, the people became bound in good faith to carry this new agreement into effect.

To find out how much they had been swindled in the first instance by receiving for these bonds a currency averaging in value about 60 cents in coin, which had been disbursed to the laboring masses and soldiers for full dollars, and upon the basis of which millions of dollars of indebtedness among the people had been contracted, necessarily to be paid in coin or its equivalent, involves, no doubt, a mere arithmetical calculation.

But it is beyond the range of human ingenuity to devise any scheme or plan by which the millionaires who so greatly profited by this financial policy shall ever be compelled to make restitution to the impoverished masses of the American people. And while I am willing to let the iniquities of the past bury themselves, followed to their resting place only by the thousands of bankrupt and desolated households of the nation, so relentlessly destroyed by the lash of the monetary power, I yet earnestly desire to attract attention to the present and the future, and, if possible, to prevent any new wrongs from being perpetrated.

As I have said, it was settled that all debts, both public and private, were thereafter to be paid in coin consisting of gold and silver, and the constituent parts of a dollar in each of the money metals had been and was equally well fixed and determined; for at that time and during the long period of the free coinage of a bimetallic currency the two metals had maintained a substantial parity of value and the only result ever aimed at by the continuation of this system of coinage had been a liberal supply of money to the people.

Open mints and free coinage, under the bimetallic system, withheld from the Secretary of the Treasury many discretionary powers which he now exercises, and obviated for him much of his present trouble in the management of the finances of the Government. They also had a strong tendency to check, if not to prevent, the ideal Wall street from much of its intermeddling; and through them we gave the English financier and all his subservient adherents to understand that the United States had sufficiently maintained her independence since the war of the Revolution to declare and maintain her own national and financial system without the aid of Great Britain. And, had open mints and bimetallism been adhered to as our unalterable policy, the powers of Europe would have been constrained to follow our lead and to reopen their mints to the coinage of silver and gold upon equal terms until silver at 1 to 16 would have regained the position as a money metal heretofore occupied by it, if it did not at that ratio command a premium over gold.

In the name of common honesty and fair dealing I hold that the free coinage of our present silver dollar would not be a fraud upon any class of our people, but an act of simple, unmixed justice to all; and that instead of overflooding us with domestic money it would simply supply the volume of currency so earnestly demanded and so much needed by the people to infuse life, energy, and activity into the waning and drooping business of the whole country.

We all recognize the value of good character in the presence of calm and deliberative justice. Let us look for a moment at the history and character of the American silver dollar. Its intrinsic worth and purity have undergone no perceptible change since its introduction among the people as a circulating medium to assist them in the exchange of their diversified products. Under the act of Congress passed April 2, 1792, this dollar was made to contain 371¼ grains of pure silver, and whenever it has contained more than this the residue has been made up of alloy or baser metal.

The United States silver dollar was first coined in 1794 and weighed in gross 416 grains, but contained only 371¼ grains of pure silver. The act of 1837 reduced the gross weight to 412½ grains, being substantially the present weight, but it left the silver dollar containing the same quantity of pure silver that it had contained from the beginning. And after the lapse of nearly a century, certain it is that no one can for a moment be tolerated in saying that there either is or has ever been any deception about the value of the American silver dollar.

Facts are chiels wha dinna ding,
And downa be disputed.

And I assert that the demonetization of silver in 1873, an act which has deen denounced as the trick of greedy conspirators to double the value of their own possessions, was an unjustifiable invasion of the rights of the people and perhaps the greatest financial calamity that has ever befallen mankind.

And I assert, furthermore, that both the bill and substitute which are now under discussion are, in effect, nothing less nor more than a thinly disguised attempt to make what was then claimed to be an accident the perpetual policy of this Government; in fact, an attempt to demonetize silver for all time by making it a mere commodity, in spite of the clamor of the people for its complete remonetization; that the real intention is, in conformity with the views of the gentleman from Massachusetts [Mr. WALKER], to make less money, and so at once to make all debts, both public and private, payable in gold or its equivalent. Gold appreciated in value by being made the only standard of value as money and then measured by itself alone as to its value, and as a necessary sequence every other product and commodity, even including silver, correspondingly depreciated; in other words, to make the rich richer and the poor poorer.

Mr. Speaker, the demonetization of silver in the first instance was not the result of any necessity, either real or apparent; nay, it was the outgrowth of simple, naked cupidity. That policy was instigated by

the treachery and accomplished by the legerdemain of the millionaires here and elsewhere, who had already grown fat out of speculations in Government bonds and other forms of wealth drawn from the blood and sacrifices of all other citizens of the Republic in the day of its peril.

An opportunity was presented for converting their bonds and other accumulations into a form representing over twofold the actual amount of property and labor which, under an honest system of financiering, they had represented or ever could represent; and this opportunity was seized with the avidity of a hungry beast of prey.

By a system of rapid and unnecessary contraction the greenback legal-tender currency had already been substantially withdrawn from circulation and stricken out of existence. Moderate fortunes and accumulations had thereby been made great, and by a logical sequence the owners of these fortunes conceived the idea that by another and still more reprehensible and nefarious stroke their wealth might be increased more and more; and that by continued manipulation of the same kind it might be developed into colossal proportions. And so, by the demonetization of silver, one-half or more of the remaining currency of the country was eliminated in subserviency to their wishes.

It mattered not that the legitimacy and utility of this kind of money had been recognized by the organic law of the land and its exact relation to gold remained unquestioned and seemingly unquestionable from the day of the nation's birth; it mattered not that it had been co-existent as money with the beginning of civilization among men, and retained its position alongside of gold through all the stages of social development, Patriarchal, Egyptian, and Judaical, Oriental and Western; it mattered not that it landed on the shores of North America with the crew of the Mayflower at Plymouth Rock and had been recognized in every settlement by civilized men and women throughout the colonial period as a precious metal, designed by its very nature to be a medium of exchange co-equal and co-extensive with gold in every particular; it mattered not that it had been regarded and treated as such in the Book of Books from the earliest recorded exchange of values in the history of our race down to the closing chapters of the inspired writers, where we read the expression, "Silver and gold have I none;" it mattered not that the great mass of the people in this land of ours—the laborers, farmers, and merchants—had contracted debts in the light of all history as to the nature of the money with which those debts should be paid and in firm reliance upon the good faith and justice of their Government for the preservation of the historical and normal equality between the money metals. Blinded by avarice, the gold-bugs disregarded all this and by mingled fraud and deceit perpetrated the outrage of demonetizing silver. For, as it occurs to me, this was not the result of honest, broad statesmanship for the benefit of the whole people. There was no necessity for it confronting the country at the time. It can be justified only upon the supposition that laws may be enacted and repealed exclusively in the interest of the rich and for the further upbuilding of their colossal fortunes, even though by so doing all other classes are crushed, impoverished, and reduced to the condition of menials and slaves. If this be true, then that was good financiering. At all events, the effect of the act of 1873 was simply that the debtor class, comprising the producers and merchants and constituting, in effect, the people at large, were forced to gather up for their masters, the monetary powers, as quickly and as much from a half supply as from a full supply, the means of liquidating their debts, for the value of the currency was doubly appreciated, while the value of all the commodities in exchange for which it could be obtained was in a like ratio depreciated. The farm worth $5,000, which had been mortgaged for $2,000, must go, or else the owner must become virtually the tenant of his creditor and work on through his whole life, netting barely enough to keep down the interest, with the terrible certainty ever present to his mind that if he did not outlive his wife and children they would at his death become homeless beggars.

In this way, where it before took one horse to pay a debt it now took two; where it before took one cow or pig it now took two; where it took one bushel of wheat, corn, oats, or other farm products it now took two, and so on through the whole catalogue. No wonder that the farmers and other toilers, after an experience of seventeen years under this system, which has resulted in the constant depreciation of everything they owned or produced, are now showing not only a spirit of unrest, but almost a spirit of rebellion in respect to the course and policies of their would-be leaders, or that their attitude is especially threatening towards the money oligarchy!

No wonder that we hear an ominous growl, like that of an earthquake, rumbling through the land! History sometimes repeats itself. Like causes will always produce like effects, and we may well look into the past for a fitting interpretation of the present. Let us take a parallel case and see how the sleeping masses may be aroused by injustice till they resemble an infuriated lion that has broken his chains and scattered his keepers. And let us see how the oligarchy of wealth has been forced to deal with them.

At the end of the first Punic war the debtor class of Rome were in about the same situation that they are in here to-day. They were practically enslaved, but they had not forgotten that they had once been free or that they still had power enough to bring their oppressors to terms. They began to agitatate, to educate, to organize, as the masses of our own people are doing now, and their clamors against the oligarchy, which had, by reason of its wealth, usurped the political powers of the Republic, were so alarming that the Roman Senate was compelled to give them financial relief.

That body ordered the coin to be clipped to such an extent as to reduce the as, which was the standard by which the value of all other coins was computed, from 12 ounces of copper to only 2 ounces. In this way the Republic and the people were enabled to pay the debts which had been previously contracted; and in presence of the fearful clamors and bloody threats of the people this process was repeated until at the close of the second Punic war the same coin, bearing the same name and paying the same amount of indebtedness, contained in actual bullion only one twenty-fourth part of its original value. On this point I will quote a few lines from that great book, The Wealth of Nations, by Adam Smith:

In Rome—

Says he—

as in all other ancient republics, the poor people were constantly in debt to the rich and great, who, in order to secure elections and other favors, used to lend them money at exorbitant interest, which being never paid soon accumulated into a sum too great either for the debtor to pay or for any one else to pay for him. And in order to satisfy the people the rich and the great were often obliged to consent to laws both for abolishing debts and introducing new tables.

Let me warn the American plutocracy that the lessons of history are the laws of God, which can not be ignored with impunity.

When demands for relief come from the people, when we hear cries from the quivering lips of children for bread and from despairing wives and mothers for shelter, when the old-time roof of the American laboring man has been sold from over the heads of his family to satisfy taxes and mortgages which, but for legislation like this, he would have been able to pay, and the laborer himself, the real arbiter of the nation's destiny, turns like an exasperated lion at bay to defy his oppressors and persecutors, it is time to pause and reflect, to remember what responsibilities rest upon us, to consider whether we may not, in order to avert the evil consequences of laws, like the one now proposed, be driven to adopt that opposite and equally dangerous expedient referred to in the passage I have quoted; for I tell you that, as the world has always required a circulating medium co-extensive with the supply of both gold and silver, if we destroy one as a money metal, it will be necessary to supply the deficiency thus created by debasing the coinage of the other; and nothing ever proved more demoralizing to the people, and hence more disastrous to the rich and to society in general, than such a system of repudiation.

The province of wise statesmanship is, therefore, to remove all legislative restrictions upon coinage, to put gold and silver upon an equal footing, as they were in former times, without unfair discriminations against either. Do this and they will regain their normal equality of value. The small fluctuations occasioned by supply and demand and by other causes will become wholly inconsiderable, and I maintain that, without either disturbance or impairment of their mutual relations as the dual basis of a sound circulating medium, the coinage of both metals may be made perfectly free and that in this way, and in this way only, the much-needed increase in the volume of our money can be safely or honestly brought about.

Free Coinage of Silver.

SPEECH

OF

HON. ALEXANDER B. MONTGOMERY.

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 6, 1890.

The House having under consideration the bill (H. R. 5391) authorizing the issue of Treasury notes on deposits of silver bullion—

Mr. MONTGOMERY said:

Mr. SPEAKER: There is a widespread demand for the restoration of silver to an equal dignity with gold in the monetary system of our country. Throughout the entire South and West, where a different policy has brought the greatest suffering, this demand is well-nigh universal. It becomes us then to inquire whether the substitute offered by the gentleman from Iowa [Mr. CONGER], which a Republican caucus has determined shall be enacted into law, meets this demand, or whether, on the contrary, its effect will not be to leave these people wholly at the mercy of a Secretary of the Treasury hostile, not only to free coinage of silver, but to its use as money at all.

Previous to the passage of the act of 1873, which suspended the coinage of the silver dollar, silver had through all our history occupied a position of equal dignity with gold in the currency of our country. At that time statistics show that the aggregate indebtedness of

the world was greater than at any other period of its history. It seems then to have occurred to the owners and holders of the obligations representing this great indebtedness that if by legislation silver could be stricken down and driven from use for debt-paying purposes over one-half of the coinage of the world would be destroyed and the value of what was left correspondingly increased. They could thus secure payment in a dearer because scarcer and more valuable money.

In this country the holders of the bonds representing an enormous national debt incurred in the prosecution of the war had already secured legislation requiring the payment of their bonds in coin, a requirement not contemplated in the original contract when they purchased these bonds with depreciated greenback currency worth less than 50 per cent. in such coin. But they were not satisfied with more than doubling the value of their bonds. Hence they joined in the general conspiracy of the creditors of Europe to strike down silver so as to secure the payment of these debts in gold alone. Their part in this conspiracy was to secure the passage of the act of 1873, completely changing our monetary system by omitting the silver dollar in our coinage laws. The important provision which accomplished this was concealed in a long act, the title to which led to no suspicion that such an outrage was being attempted. So far as I can learn, every member of both Houses of the Congress which passed this act, who has discussed it, with the single exception of the Senator from Ohio [Mr. SHERMAN], has repeatedly, and I believe truthfully, denied any knowledge that it contained such a provision.

This act, however, did not fully satisfy those who had determined on the destruction of the silver dollar. It prohibited its further coinage, but it did not destroy those already coined and in use. When our statutes were revised in 1874 a clause was inserted that the silver dollars then in existence should cease to be a legal tender for any amount exceeding $5. This completed the demonetization of silver and drove it into the markets of the world to take its chances with other commodities, and to be cheapened as they were by the scarcity of money resulting from its own disuse as such. As soon as it was discovered that this fraud had been so mysteriously perpetrated and as soon as its ruinous effects on the debtor classes and the productive industries of the country began to be understood and felt, the struggle began and has ever since been kept up for the repeal of these laws and the restoration of the free coinage of silver.

In 1878 a partial advantage was gained for silver when the act of that year was passed, providing for the purchase by the Secretary of the Treasury and the coinage into silver dollars each month of not less than two million nor more than four million dollars' worth of silver bullion, and for the restoration of the legal-tender character of all the standard silver dollars then coined, and imparting this character to those to be coined under that act. This has been the law for the last twelve years, and under it the successive Secretaries of the Treasury have purchased and coined just as little silver as possible, limiting the amount to the minimum under the law of two millions a month.

It will be observed that this act of 1878 has none of the elements of free coinage, but forces the Secretary to coin not less than two and not more than four million dollars' worth monthly, and has been well denominated limited compulsory coinage. It is hardly necessary to call attention to the fact that, while under this law the Secretary of the Treasury has now and has had for the last twelve years the power to purchase and coin $4,000,000 worth of silver bullion monthly, he has during all this time purchased and coined only two millions per month, the amount the law forced him to buy and coin, thus availing himself of the discretion unfortunately left him in the law to furnish the people only half the silver money that he could have furnished.

Now, in order to see if we will be in a better or worse condition if we pass the proposed law, let us examine its leading provisions.

It provides in the first section that the Secretary of the Treasury shall purchase silver bullion to the aggregate amount of $4,500,000 worth monthly at its market price and issue and pay for the same Treasury notes of the United States.

The second section provides that the Treasury notes issued to pay for this bullion shall be redeemable on demand in coin and shall be a legal tender for public and private debts. But it does not stop here; it provides further—

That, upon the demand of the holder of any of these Treasury notes herein provided for, the Secretary of the Treasury may, at his discretion and under such regulations as he shall prescribe, exchange for such notes an amount of silver bullion which shall be equal in value at the market price thereof on the day of exchange to the amount of such notes presented.

So important is this section and so effectually can and in my judgment will the Secretary of the Treasury, under this provision, reduce if not destroy our present rate of coinage of silver that I have taken the liberty to quote it in italics.

Section 3 requires the Secretary of the Treasury to coin such portion of the bullion purchased under this act as may be necessary to provide for the redemption of the Treasury notes exchanged for this bullion. In other words, if he can not redeem these notes with money already coined, or, on the request of the holder of the notes, in the same bullion for which they were given, then he must coin silver to do so. And this is the only contingency in this bill where the Secretary of the Treasury is required to coin one dollar of silver. And this contingency may never arise and can successfully be prevented from arising by the Secretary of the Treasury, who has assured us in his last report that no more silver ought to be coined.

But the fifth section indicates the fearful price which we are to pay for this legislation:

SEC. 5. That so much of the act of February 28, 1878, entitled "An act to authorize the coinage of the silver dollar and to restore its legal-tender character," as requires the monthly purchase and coinage of the same into silver dollars of not less than $2,000,000 nor more than $4,000,000 worth of silver bullion, is hereby repealed.

This is the specific repeal of the act of 1878, which is now the law.

The sections referred to and quoted contain the substance of the bill under consideration. When taken together they propose that we shall repeal the law which now forces the Secretary of the Treasury to buy and coin monthly $2,000,000 worth of silver bullion and gives him full power, which he ought to be exercising, to buy and coin monthly $4,000,000 worth, and substitutes therefor a law requiring him to buy four and a half million dollars' worth monthly with Treasury notes, to be redeemed with coin or with silver bullion whenever he and those who own and control large volumes of our money and are in sympathy with him in their opposition to silver coinage may think it desirable to contract the currency in that way.

It will be readily seen that for the paltry privilege of buying half a million more per month than is now authorized to be bought we are asked to surrender the law which compels him to buy and coin $2,000,000 worth and gives him full power to buy four millions' worth and compels him to coin all he buys. He may, as we shall show, substantially evade either the purchase or coinage of silver under this bill. This law when passed enables him to exercise substantially unlimited power in contracting the currency. Experience and his own official utterances leave nothing to surmise as to how he will use this power. He may, to delude the people for political purposes and to keep the party in power that is willing to turn over into his hands their monetary interests, give temporary and partial relief. But he will never be willing to do anything which will tend to secure to the people a stable and sufficient currency based on the restoration of silver to its legitimate equality with gold in our monetary system.

Now, Mr. Speaker, to the people whom I represent, and, in my judgment, to the people of the whole country, there is but one question—the question of the measure and manner of levying tariff taxes—of more importance than this subject. It is conceded on all sides that there is great depression in all productive enterprises, and consequently great suffering and discontent amongst the laborers engaged in these enterprises. So serious has this condition become that it has awakened in the minds of the whole people, and especially in the minds of the farmers and laborers, who are the greatest sufferers, anxious inquiry as to the producing causes and the adequate remedies for this evil.

A careful investigation has disclosed to the thinking toiler, whether on the farm or in the factory, that, keeping pace with the contraction of the currency, which has been going on for the last quarter of a century, his condition has become worse; he has become poorer and less able to secure the necessaries and comforts of life. At the same time he has seen the same policy of contraction correspondingly enrich the bondholder and capitalist, who relies upon neither labor nor production, but upon fixed incomes, interest, or speculation for his profits. He has seen that two classes only of our people have prospered and grown rich under our laws as they now exist, the class who have been enriched by the contraction of the currency and the demonetization of silver, thereby doubling the value of their bonds and securities, and that other class who have been enriched by bounties levied on consumers under an iniquitous system of tariff taxation. He has seen that both of these classes have alike built up their fortunes by unjust exactions levied under the forms of law on the proceeds of his toil.

Having discovered the producing causes, he demands the very simplest remedies. He demands tariff reduction to the end that less of his earnings be taken for taxes and bounties. This his Republican representatives on this floor have a few weeks ago not only refused him, but instead have passed a law increasing his tariff burdens. And nothing now stands between him and the ruinous exactions of that law except the slender hope that there may be enough Republicans in the Senate who will not surrender their convictions, but will join the Democratic minority to defeat the unjust demand that the money advanced by the manufacturers to purchase the Presidency two years ago shall be levied upon their constituents. He demands that the policy of legislating for the contraction of the currency, making money dearer and harder to obtain and those who own and control it wealthy, and those who have to purchase it with labor or its products poorer, be reversed, and that we begin to legislate in the interest of the many poor instead of the rich few who have for the last twenty-five years been the sole recipients of the fostering care of those who have controlled our legislation.

And, Mr. Speaker, I desire to warn members on the other side who represent farming or laboring constituencies that, however they may cling to the hope that they may yet further deceive some portion of their people with the fraudulent pretense that they can better their condition by increasing their burdens of taxation, they need not delude

themselves with the expectation that they can on this subject deceive these people, who are a unit in their demand for complete remonetization of silver and its complete restoration to the position of perfect equality with gold, which it held under the Constitution and the laws of the country during our entire existence till it was stricken down by the passage of the act of 1873.

This act, which has been fitly denounced in this debate by Republicans and Democrats alike as the greatest legislative crime of the age, both in the manner of its perpetration and its disastrous effects on the farming, laboring, and debtor classes of our people, and which no man on this floor would have the hardihood to defend or condone, stood upon the statute-books completely outlawing silver as money until it was partially remonetized by the act of 1878. This act of 1878, containing all the reparation that has ever been made for the criminal desecration of our silver coinage in 1873, this Republican Congress by the bill we are now considering proposes to repeal.

If it was a crime in 1873 to demonetize silver and degrade it from the position it had always held in our system as the equal of gold for monetary purposes, and if it was wise legislation to partially restore it by the act of 1878, why will it be less a crime now than it was in 1873 to demonetize and strike it down again, as you propose to do in this bill by the specific repeal of the act of 1878?

Section 5 of the substitute which a Republican caucus has decreed shall pass this House at 3 o'clock to-morrow as completely demonetizes silver, as I have already shown, as did the act of 1873. Is it less a crime to do this now boldly and in defiance of the demands of the people than it was to do the same thing in 1873 surreptitiously or by fraud and conspiracy? Is the crime less now because it is done at the dictation of one man, who cracks the party whip over a caucus and compels Western and Southern Republican members, who say that they will be left at home if they thus betray their constituents? Is it less a crime because the bill is brought into the House under a special rule which gags the Democrats and a large majority of the Republicans, which cuts off all amendments and greatly excels in its vicious character the notorious code of rules adopted at the beginning of this session?

The boast of the author of those rules was that they enabled the majority to legislate. The boast of the same author of this rule may well be that it enables a minority to legislate; that it enables less than two-fifths of the members of this House to stifle the demands of the other three-fifths, backed by the almost unanimous demand of all the people, outside the influence of Wall street, for free coinage of silver, and give them instead a law completely debasing and destroying silver as a money metal and placing it among the commodities whose value is to continue to be measured and cheapened, as cotton, corn, wheat, oats, and labor have been and will continue to be by the single standard of the gold dollar, made dearer by its necessary scarcity and consequent insufficiency to supply the demands of the people.

But some of the apologists for this bill say that the Secretary of the Treasury must coin "such portion of the silver bullion purchased under the provisions of this act as may be necessary to provide for the redemption of the Treasury notes" used in the purchase of the bullion. Who is to judge of this necessity? The Secretary of the Treasury. This leaves it to his discretion to coin or not to coin. He is left ample room to evade the coinage of a single dollar. Indeed, he is left ample room, with the aid of the gold men, who share his views and are therefore his natural allies in controlling and contracting the currency of the country, to evade the purchase, even under this bill, of a single ounce over four and a half million dollars' worth of silver in the next century, if this bill should remain the law for that length of time.

The bill requires him to buy at the market price, in gold, four and a half million dollars' worth of silver bullion each month and pay for it in the notes of the Government. But he is given the discretion to redeem the notes he pays for this bullion in the same bullion for which they were exchanged at its market price if the holder of the notes demands it. So that every requirement of this bill can be met each month by the purchase of four and a half million ounces of silver bullion and the redemption of the same bullion during the same month by a return of the same notes to the Treasury. And this operation can be repeated month after month indefinitely, thereby not only effectually defeating any expansion whatever of the volume of currency, but destroying all further use of silver bullion, even as a commodity on which circulation can be based. Thus the Secretary of the Treasury and his confederates in Wall street, who insist that we have money enough and that silver is not fit for money, can under this bill defraud and deny to the people their just demands for more money as effectually as they are being defrauded by the Republicans of this House of their just demands for free coinage of silver.

My Republican friends from the South and West who are subserviently complying with the demands of Wall street and the bondholders, dictated through the Secretary of the Treasury and a Republican caucus controlled by the Speaker of this House, are ready to answer that the Secretary would not dare to thus defeat the demands of the people for an increase of the currency. Why? Do you suppose he is better than you? Do you suppose he will deal more honestly and more liberally with your constituents than you are doing, when by voting for this bill you not only refuse them free coinage of silver, but rob them of what little compulsory coinage they have? Will it be more daring or more shameful for him whose interests and convictions are in full sympathy with those who believe that nothing but gold should be used as a money metal and that we have enough if not too much money now, to so execute this law as to defeat both the expansion of the currency and the coinage of silver than it is for you to vote for this bill, thereby not only refusing your constituents free coinage of silver, but putting it in his power, not only to deny any increase, but to largely contract our present insufficient circulation?

All right-thinking people would have infinitely more respect for him executing the law in accordance with his known and avowed convictions to thus contract the currency far beyond what is possible under the existing law than it will be possible to entertain for you who, betraying the trust your constituents have confided in you and surrendering your boasted convictions, cringe beneath the party lash and vote to put this power in his hands.

The Secretary of the Treasury is not in sympathy with the demands of the great agricultural and laboring classes of this country for more and cheaper money and consequent higher prices for labor and the products of the farm. The policy of the Secretary is and will continue to be, so far as lies in his power, to so interpret and enforce all our laws and make such regulations pertaining to our finances as to contract the currency, make money dearer, and consequently more valuable to those who hold it or have fixed incomes from its loan or investment in interest-bearing bonds and securities. We are accustomed to complain that labor and farm products have fallen in price till they have become so cheap that the laborers and farmers receive no return for their toil and products; that the farmer is unable to realize the money with which to pay even the interest, much less the principal, on the mortgage he has been compelled to place upon his farm.

A little thought will convince us that we are not suffering from cheap wheat, cheap corn, cheap cotton, and cheap farm products of all kinds. These when compared with or exchanged for other untaxed commodities, silver included, have maintained a substantial equality in values. It is only when we come to exchange them for money that the great disparity in the amount received now as compared with the amount received twenty years ago, before contraction of the currency and demonetization of silver had wrought ruin to the agricultural interests, is fully appreciated. We are too apt to lose sight of two facts in the confusion of terms which we commonly use, first, that when the farmer or laborer needs money to pay his debts or clothe his family he must purchase the money with his labor or the produce of his farm; second, that when he goes out to purchase the money he will find it cheap or dear, accordingly as it is plentiful or scarce. In other words we overlook the fact that money like every thing else is cheap or dear as the volume in circulation is great or small.

The quantity purchased with (obtained for) a bushel of corn or wheat depends equally as much on the quantity of money on the market to be purchased with wheat or corn as it does on the quantity of wheat or corn on the market seeking exchange for money. If we will rid ourselves of the idea, which is the result of our customary methods of thought and expression, that money of any kind has a fixed, intrinsic, unchangeable value, much of the sophistry in which a simple question has been shrouded will disappear. A dollar, like everything else, has only a relative value. Its value is fixed and controlled, exactly as the value of a bushel of wheat is fixed and controlled, by the amount of other things for which it can be exchanged. If the amount of wheat in existence and seeking exchange for other things, money included, is small, wheat will be dear and in demand; that is, it can be exchanged for a large amount of money in the market. So, if the amount of money in existence and seeking exchange for wheat is small, money will be dear and in demand; that is, it can be exchanged for a large amount of wheat in the market.

Alison, in his History of Europe, has forcibly stated this relative value of money, and graphically describes our condition under a contracted and insufficient currency when he says:

> To perceive how this comes about, we have only to reflect that money, whether in the form of gold, silver, or paper, is a commodity and an article of commerce, and that, like all similar articles, it varies in value and price with its plenty or cheapness in the market. As certainly and inevitably as a plentiful harvest renders grain cheap, and an abundant vintage wine low priced, does an increased supply of the currency, whether in specie or paper, render money cheap as compared with the price of other commodities. But as money is itself the standard by which the value of everything else is measured and in which its price is paid, this change in its price can not be seen in any change in itself, because it is the standard; it appears in the price of everything else against which it is bartered.
>
> An increase in the currency when the numbers and transactions are stationary or nearly so is immediately followed by a rise in the money price of all other commodities; and a contraction of it is as quickly succeeded by a fall in the money price of all articles of commerce and the money remuneration of every species of industry. The first change is favorable to the producing classes, whether in land or manufactures, and unfavorable to the holders of realized capital or fixed annuities. The last augments the real wealth of the moneyed and wealthy classes and proportionately depresses the dealers in commodities and persons engaged in industrial occupations.
>
> But if an increase in the numbers and industry of man co-exists with a diminution in the circulating medium by which their transactions are carried on, the most serious evils await society and the whole relations of its different classes to each other will be speedily changed; and it is in that state of things that the saying proves true that the rich are every day growing richer and the poor poorer.

But members on the other side urge, in the interest of gold as the only money metal and standard of values, and the consequent limitation and contraction of the currency which have resulted from that policy, that the depreciation in the price of farm products results from their overproduction. They cite to sustain this argument the vast improvement in agricultural implements and farming methods as resulting in great saving of labor and great increase in productive capacity. Comparing statistics showing at the same time great increase in the crops raised and great decrease in the prices realized, they argue that to overproduction is due the depression in the prices of these products. If this argument, which I admit is well calculated to deceive, was founded on facts, it would lead to the conclusion that improved machinery, improved methods of farming, and increased production had proved to the army of our people engaged in agriculture a curse instead of the blessing we have been taught to consider it. But is there any surplus of farm products? If not, the argument fails.

What do these gentlemen mean by overproduction? No man would be so rash as to assert that more cotton, wheat, corn, beef, and pork are produced than are needed to comfortably clothe and feed the people of the world to whom they might be sold and who if they had the money would like to buy and use them. Want and poverty—the half-fed and half-clad laborers at home and abroad—rise up to confute such an assertion. What do they mean then by overproduction, of which they talk so glibly? They mean that the farmers produce more than the consumers, upon whom they must rely for a market, can obtain the money to buy at prices which will remunerate the producers for the labor and expense incurred in production. The result is that the farmers must, in order to sell, or rather in order to enable their customers to buy, all their products, reduce their prices to meet the money ability of those to whom they sell. They must sell wheat at 70 cents per bushel for which they formerly received $1. They received the $1 then because their customers had that much money to pay. They receive only 70 cents now because their customers have only 70 cents to pay.

The volume of the currency, by adverse legislation, culminating in the demonetization of silver and striking down more than one-half of the money metal of the world in 1873, has been contracted until its scarcity easily accounts for this disparity of the purchasing capacityof their customers. Instead of an overproduction of crops, there is an underproduction, so to speak, of money. By this I mean that the money supply has been contracted and decreased. It is agreed on all hands that exactly the reverse of this ought to have occurred. All reliable authorities on finance and all men who are interested in the prosperity of the country under a safe financial policy agree that the volume of the currency ought to keep pace with the combined increase of our population, commerce, and productive development. Low prices to the farmer result, not because he can and does produce more, but because vicious legislation has prevented an increased volume of currency from keeping pace with the growth of our population and productive power.

But it is again urged that, aided by this improved machinery and better methods, the farmer can as cheaply raise 100 bushels of wheat now as he could raise 70 fifteen years ago; that the 100 bushels now at 70 cents per bushel will bring him as much money as the 70 bushels then brought him at $1 per bushel. I deny the proposition that the farmer can as cheaply raise 100 bushels of wheat now as he could 70 then. Admit that he can raise the one hundred with the same labor and on the same land on which he raised the seventy then, he does it by the use of costly fertilizers and costly machinery; in other words, by investing more money in his farm and farming implements.

But, waiving this fact of increased cost and for the sake of argument admitting that the improvements in farming machinery and methods have enabled the farmer to so increase his yield as to counteract the decrease in the prices, who is entitled to reap the benefit of this increased production and who does reap it? Is not the farmer entitled to all the increase in production resulting from better machinery which he buys and uses and the advanced methods which he adopts? If he increases his crop in this manner is he not entitled to the increase? If he only gets the same amount of money for the increased crop that he received before he bought machinery and bettered his methods he is certainly no better off, even leaving out the extra cost. What inducement to him to make more if he gets no more for it?

But who has in fact received the benefit of this increase? It is manifest that the man who lives on a fixed income or loans money and owns bonds receives all the benefit. His income does not change; his Government bond or mortgage on the farmer's land is for the same amount of money and yields the same interest as before; but $70 of his property, which is money, has increased in value till it is equal to one hundred, instead of 70 bushels of the farmer's property, which is wheat. So that, compared with all that the farmer raises, he is $30 on every hundred richer and the farmer $30 poorer. Why is this? Manifestly it has resulted from a failure of an increase of money to keep pace with the increase in production; and this not because the production of silver and gold from the mines has not kept pace with the productive energies and enterprise of our people, but because adverse legislation has limited and curtailed the volume of our currency.

We produced from our mines silver of the coinage value of $40,800,000 in 1879 and $64,646,464 in 1889, an increase in ten years of over $24,500,000, or over 60 per cent. Comparing the production of gold for the same ten years, we find a decrease of over $3,000,000. Our production of gold for 1889 was $32,800,000. These figures, taken from the last report of the Director of the Mint, show that while the output of our silver mines increased over 60 per cent. in the last ten years, the output of our gold mines actually decreased during the same years about 9 per cent. They show further that our production of silver was within a fraction of double our gold production, the coinage value of the silver output for the year 1889 being $64,646,464 and that of gold $32,800,000.

Can any one with these facts before him fail to see the manifest advantage, indeed, the absolute necessity, of our using our vast production of silver as it has been used through all the ages, for money purposes? Two reasons impel to this: First, as I have shown, we are producing twice as much silver as gold. Second, the increased production of silver in our country is keeping pace with the combined increase of population and production so as to furnish, if permitted by free coinage to flow into the channels of commerce, as a standard of value and medium of exchange, that natural and constant increase which I have shown to be necessary to secure to productive industry fair prices and to labor just compensation.

But there is a still more important phase of the ruinous effects of this contraction of our currency on the farmers, especially of the South and West. In 1865 the victorious soldiers who had filled the ranks of the Federal Army and the young men of the North began without capital to settle and develop the fertile lands of the great West. The soldiers who had laid down the Confederate flag and buried their lost cause at Appomattox without money undertook the task of building up their cities, homes, and farms in the war-wasted and impoverished South. All the money needed for these herculean undertakings had to be borrowed from that class who had hung about the Treasury of the Federal Government during all the years of the war to feast and fatten on its necessities till they owned and controlled the bonded indebtedness on which, through a national-banking system, they secured the currency of the country to be based. So that these bondholders, who owned and have ever since the war controlled the currency of the country, became the creditor class to whom the struggling South and West became debtors.

Our money in circulation then averaged from $45 to $50 per capita for our entire population. It was cheap and plentiful, which implies the converse that all other property was high. On this basis was contracted not only the enormous national debt, rendered necessary to prosecute the war, but that even greater aggregate indebtedness, State, county, municipal, and individual, which after the war fed the cormorants of reconstruction in the South and built up our great railroad systems, cities, homes, and farms in the South and West. These debts were contracted and this money was borrowed with a view to the volume of money and prices of products then prevailing.

Who doubts that if the ratio of our circulating medium to our population and business had continued, maintaining for products the prices then existing, all these debts would have long since been discharged with the money realized from much less property than has been exhausted in the futile effort to lessen debt by payment as fast as vicious legislation increased it by contraction of the currency? The result to this debtor class, which is made up of the great body of the farmers of the South and West, has been that when by persistent industry and economy the interest has been met and half the nominal amount of the debt paid it will still take more of the products of the farm, cheapened as they are by the scarcity of money, to pay the other half than it would have taken to pay the entire debt at the prices prevailing when it was contracted.

It may seem a paradox, yet such has been the shrewd manipulation of our currency by the wealthy creditor classes that the more the debtor pays the more he owes and the more the farmer raises the less money he gets and the poorer he becomes. From a circulation of $45 or $50 per capita in 1865 we are reduced to a circulation of $20 per capita in 1890. And this notwithstanding the fact that during this period the volume of production, business, and commerce has increased more than twice as rapidly as our population.

Is it astonishing that under such a financial policy, supplemented by the exactions which tariff legislation enables the manufacturing interests to levy on them, there should be widespread dissatisfaction and distress throughout our agricultural communities? They are demanding through their organizations and through their representatives on this floor that no more such subterfuges as are attempted in this bill be resorted to, to cheat and deceive them, and turn them and their currency over again to the tender mercy and discretion of the Secretary of the Treasury. They have learned by sad experience that this means to turn them over to Wall street. They demand that you open the mints to the free coinage of the silver our mines are producing so bountifully and thus give them more money of the kind which history, experience, and reason have taught to be the best.

Mr. Speaker, the people demand that we shall pass laws giving them a sound currency sufficient in volume to transact the business of the country at remunerative prices for labor and production; that in order to do this you open the mints of the country so that all the silver we

produce can be coined into money for their use, as it was during all our history till 1873. They have sent representatives enough to this Congress pledged to do this to pass a free-coinage act by good majorities through both Houses.

But they made one mistake which, if you refuse them free coinage and pass this bill, they will speedily correct. A portion of these they sent here, relying on their pledges to do this, were Republicans. These cower beneath the Speaker's scowl and the party lash and betray their constituents into the hands of the Secretary of the Treasury, to be further fleeced by the policy of a contracted currency. We must suffer two years longer. The ground must be fought over again before the people in the fall elections. And if I mistake not the temper of the South and the West they will profit by this experience, be deceived no longer by Republican professions for free coinage, but send to the next House a clear majority of Democrats, pledged to the full restoration of our silver coinage, upon whom they know they can rely.

Silver-Bullion Certificates.

SPEECH

OF

HON. EDWARD LANE,

OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 6, 1890.

The House having under consideration the bill (H. R. 5391) authorizing the issue of Treasury notes on deposits of silver bullion—

Mr. LANE said:

Mr. SPEAKER: The measure under consideration affects the people I have the honor to represent more than any question that has come before this Congress. It is a measure cognate with the tariff. By this and kindred acts the money is passed from the Government to the people and by the tariff it is returned from the people to the Government, the protected industries, however, getting about $6, while the Government only gets $1 under our present system. Money is as old as civilization and its existence is necessary to society. The use of money is all the advantage there is in having it, yet money makes up in a measure all other wants in man. The greatest want of the commercial and business life of this country to-day is money. It is needed alike by the merchants, farmers, and laborers. The demand is more money, and of course it should be of the best.

Money is power, and so acknowledged the world over. It is the force that underlies our civilization and pushes it to the greatest possible activity. Money impels the merchant to his most venturesome daring, the mechanic to exploiting his most inventive genius, the farmer to endure the summer's heat and the winter's cold, and the toiler in every direction to the accomplishment of the most earnest effort for success. The power of money and the hope of its attainment is the incentive to nearly all humanity's most earnest and most honorable exertion.

What, then, is money and what are its uses? It may be stated in general that money is crystallized labor, labor accumulated and massed, and when so accumulated and massed it has the power of labor, or, in other words, money is a medium of exchange created by law by which the value of all commodities produced by labor is represented and exchanged. Labor creates wealth and money represents labor, but the value of money must be fixed by law.

I will repeat that nearly all wealth is produced by labor and the laborers would possess it if something did not exist to prevent this natural result. In this country, where the reward of labor is greater than in any other, some cause is operating with continued and growing effect to separate production from the producer. It is admitted on every hand that we are the most powerful country on earth; no ancient or modern empire can compare with our Republic in resources or extent. It is occupied by 65,000,000 of bright, brave, free, intelligent, industrious, and energetic people. It is filled with the natural resources of every zone: Gold, and silver, and copper, and lead, and iron from the mountains; cattle and sheep from the plains; cotton from the South; corn and wheat from the West.

Our farmers ought to be the most happy and prosperous in the world, as they under the circumstances ought to be the wealthiest. But do the people share in this bounty? Are the laborers of the land satisfied with existing conditions? Are they free from apprehension of the future? Does the farmer find his brow unfurrowed by the plow of care? Are the highways free from tramps and the poor-houses and prisons tenantless? Is the tax-collector driven from the door and want from the home? Alas! no; and what is the reason? Mr. Speaker, the wrong is evident and as a plain business man I wish to trace what I believe to be the cause to its proper source. The money of the United States on October 1, 1889, is shown by the following table, furnished by the Secretary of the Treasury:

The amount and kinds of money in actual circulation on certain dates from 1878 to 1889.

Year.	Date.	Total circulation.	Gold coin.	Standard silver dollars.	Subsidiary silver.
1878	March 1	$805,793,807	$82,590,163	.....	$53,573,833
1879	October 1	862,579,754	123,698,157	$11,074,230	54,088,747
1880	October 1	1,022,033,695	261,320,920	22,914,075	48,368,543
1881	October 1	1,147,892,435	328,118,146	32,230,038	47,859,327
1882	October 1	1,188,752,363	358,351,956	33,801,231	47,153,750
1883	October 1	1,236,650,032	346,077,784	39,783,527	48,170,263
1884	October 1	1,261,569,924	341,485,840	40,322,042	45,344,717
1885	October 1	1,286,630,871	348,268,740	45,275,710	51,328,206
1886	October 1	1,264,889,561	364,894,599	60,170,793	48,176,838
1887	October 1	1,353,485,690	391,090,890	60,614,524	50,414,706
1888	October 1	1,384,340,280	377,329,865	57,959,356	52,020,975
1889	October 1	1,405,018,000	375,947,715	57,554,100	52,931,352

Year.	Date.	Gold certificates.	Silver certificates.	United States notes.	National-bank notes.
1878	March 1	$44,364,100	.....	$311,436,971	$[illegible]8,888,740
1879	October 1	14,843,200	$1,176,720	327,747,702	329,950,938
1880	October 1	7,480,100	12,203,191	329,417,403	340,329,453
1881	October 1	5,239,320	52,590,180	327,655,884	354,199,540
1882	October 1	4,907,440	63,204,780	325,272,858	356,060,348
1883	October 1	55,014,940	78,921,961	321,356,596	347,324,961
1884	October 1	87,389,660	96,491,251	325,796,143	324,750,271
1885	October 1	118,137,790	93,656,716	318,736,684	311,227,025
1886	October 1	84,691,807	95,387,112	310,161,935	301,406,477
1887	October 1	97,984,683	154,354,826	329,070,804	269,955,257
1888	October 1	134,838,190	218,561,601	306,052,053	237,578,240
1889	October 1	116,675,349	276,619,715	325,510,758	199,779,011

These figures show that there should be $21.75 per capita in circulation, and this may be true averaging the whole country over, but as a matter of fact there is not $10 per capita in circulation in the West, and I think that amount much too small.

Why is this? Has any one ever observed any calamity resulting from the circulation of too much money? Is there any locality or era where there was too great activity among the producing classes? I never knew or read of any country where there were too many houses in process of erection, or too plentiful raiment, or too abundant food, nor where transportation of products was too cheap and rapid. Does any one recognize high prices of labor as leading to disastrous results anywhere? I presume no one would question the fact that if we had more money now in circulation among the people we would have much better times. Who, then, is to blame for the scarcity of money? Clearly Congress; and, if so, the Republican party, for the Democratic party has not had full charge of the Government for many years.

The market prices of land, of labor, and of commodities are regulated by the amount of money in circulation. When money is plentiful prices advance, and when money is scarce prices recede. The leading economic thinkers of the nineteenth century agree that a decrease in the quantity will always cause the wages of labor and the prices of land and all commodities to sink in proportion.

The law which experience has graven upon the tablets of time is that values must be measured by money and money must be measured by its own quantity in relation to values.

John Stuart Mill, the greatest economic thinker of Europe, says:

If the whole money in circulation was doubled the prices would double. If it was only increased one-fourth prices would rise one-fourth.

One of the greatest American writers on this subject has said:

The truth is that the most enormous power ever known to man or that ever can be his lies in money, in the increase or decrease of its quality.

The Report of the Silver Commission, Forty-second Congress, page 49, says:

By the end of the fifteenth century the currency had shrunk to less than $200,000,000. During this period a most extraordinary and baneful change took place in the condition of the world. Population dwindled and commerce, arts, wealth, and freedom all disappeared. The people were reduced to poverty and misery, to the most degraded condition of serfdom and slavery. The disintegration of society was almost complete. The conditions of society were so hard that individual selfishness was the only thing consistent with the instinct of self-preservation. All public spirit, all generous emotions, all the noble aspirations of man shriveled and disappeared as the volume of money shrunk and as prices fell.

Mr. Speaker, I could furnish a hundred or more such testimonials if I had the time; but it is wholly unnecessary, as every man who has been in business for the last twenty-five years is a witness for himself, and if he will divest himself of prejudice he will admit the truth of all I say.

There is no instance of commercial and industrial adversity within the last fifty years that has not been preceded and produced by a prodigious contraction of the operations and volume of the money power and no instance of prosperity that has not been preceded and produced by its expansion.

Wild speculation and disaster to the speculators may follow extreme

inflation of the currency, but extreme contraction distresses an entire people and makes them suppliants at the feet of the wealth-owners.

An instance can not be found in the history of civilization of an injury to commerce or to productive industry resulting from an increase of money. Inflation based upon an increase of standard money is an inflation which can be sustained, an inflation which has no refluent wave, and which must benefit producers. But inflation of the currency by issuing depreciated money, as was done during the war, which was good enough to pay the labor of the country, but which was not good enough for the bondholder, may sometimes work disaster. It was claimed, however, to be a war measure and was justified by the exigency of the war, and the people were humbugged into believing such a monstrous fallacy. But in 1873 we were visited by a financial panic largely due to the demonetization of silver by Congress, which was a bastard act, and no person in or out of Congress has ever yet been found who is willing to father that act. But I will speak of this hereafter. We should have more money, and what then should be the character of that money? Shall we adopt the doctrine of Thomas H. Benton and have no money but gold and silver, and will the unlimited coinage of silver supply a quantity sufficient?

Mr. Edward Atkinson, the economist and statistician, claims that if we keep the quality of our money good we may be sure that the quantity will take care of itself. It is very true that he sustains this proposition with some very sound argument. He claims that from July 1, 1879, to July 1, 1887, the value of our net imports of merchandise was $5,640,261,758, and in the same period the value of our exports of merchandise was $6,764,311,704. And he then urges that such an enormous volume of exports could not have been sold for payment in money only, since the standard of international commerce is coin or bullion. He claims that such a demand for gold or gold bullion in sole payment for our exports would have drained every bank in Europe, and we would have no domestic use for such an amount of coin, and therefore unless an exchange of domestic for foreign products had been possible the export could not have been made. The result of this argument is simply that a great percentage of international as well as domestic trade must consist in exchange of goods for goods, the balance being settled in gold or on credit. But this does not detract from the necessity of a sufficient quantity of money to do the business of the country.

It may be an admitted fact that four-fifths of the business of the country may be transacted on credit or by bill of exchange, bank-checks, or promissory notes, but the experience of the civilized world is that there must be money to carry on the commerce of the world; and why should we in this country have less money than those in other countries? For example, the French people have $14.67 in silver per capita while we have but $2.72, while we produce nearly one-half of the silver of the world. France has now $57 per capita in money, while we have but $21.75. Why should this be? I think, therefore, that the time has come when the people should declare through their Representatives what amount of money should be in circulation, how created, and the character of that money.

Is the present national-banking system to be a part of the financial system of our Government? I think every intelligent thinker must acknowledge upon a moment's reflection that our national-banking system in its present form should not be continued, for the reason that it rests on a national debt, while the holders of that debt are exempted from taxation on the money so invested and the people are taxed to pay the interest on such debt.

The solvency of the national-bank notes is based on the ability of the Government to liquidate the debt, and no sane person will contend that it is good policy for a nation or individual to postpone the payment of a debt after they acquire the ability to pay it; hence on true principles of financial economy we can not in justice to the people continue our national-banking system, for the reason that we should day the debt upon which it is based.

On the 28th of January last I submitted some remarks to the House on the question of the national-banking system and whether or not it should be continued.

The subject is not at all exhausted, but the people are becoming more convinced every day that the system in its present form should cease. In fact they are now fully convinced that the system was a fraud on their rights from the beginning and never should have been adopted. I do not care to repeat what I said before, but I will submit some figures before I conclude, which I think will convince any candid mind that the national-banking system, with its ally, Wall street, has robbed the people of millions of dollars in the last twenty years.

What are the facts? The Government issues its bond payable in twenty years, say for $100,000 bearing 6 per cent. interest payable semi-annually. Now, who is responsible for the payment of this bond? Clearly the Government, or, in other words, the people. Some capitalists, five or more, desire to organize a national bank, and what do they do? They take $100,000 in greenbacks or national currency and purchase the Government bond and then get a charter to commence the banking business, and when they deposit the bond with the Secretary of the Treasury he gives them $90,000 in national-bank currency that they may loan to the farmers and laborers of the country, in some of the States at a rate of interest as high as 10 to 12 per cent. per annum, and in addition to this the Government pays them 6 per cent. interest semi-annually on the $100,000 bond deposited with the Treasurer. Now, who was responsible for the payment of the greenbacks or currency which was used to purchase the $100,000 bond as well as the bond itself? Clearly the Government. That was the promise of the Government. Then who is responsible for the payment of the $90,000 national-bank currency given to the national bank? Clearly again the Government. It is the responsible party in all the transactions and must see that the bond, greenbacks, and currency are paid, and it is on the faith of the Government they are all issued and based, and the national bank is simply a middle-man between the Government and the people to put the people's money in circulation, for which they receive large interest at both ends of the line.

Thus national-bank corporations invest $100,000 in bonds and they are permitted to draw interest on $190,000. Is this just or right between man and man or the Government and its citizens whom it should protect? Under the law national banks are machines of robbery, and their issues are instruments of national death. They have raided the fields of industry and will pauperize labor. They contract and expand the volume of money at their will and thus fix the rate of interest and rent, the value of land, the price of wages, and products of labor, and are armed with full power to increase their wealth at will. The national banks should be changed at once from banks of issue to simply banks of discount and deposits. The Government should issue its own money without the assistance of middle-men. Thomas Jefferson was right when he said:

> And so the nation may continue to issue its bills as far as its wants may require and the limits of its circulation will admit. * * * Put down the banks and if this country could not be carried through the longest war against her most powerful enemy, without ever knowing the want of a dollar, without dependence on the traitorous classes (the capitalists) of her citizens, without being hard on the resources of the people or loading them with an indefinite burden of debt, I know nothing of my countrymen.

The Government should never have adopted the policy of farming out the right to issue money to national banks. The Government should issue the money direct to the people and thus save both interest and discount. Not only this, but the national banks, with the assistance of the gold bugs of the country, devised a scheme by which they depreciated the money of the country to less than 50 cents on the dollar, so that at one time a dollar in gold was worth $2.85 in paper money.

Looking back from this period we can hardly conceive how the law-making power of the Government was ever deluded into tolerating such an outrageous system.

I am unalterably opposed to allowing national banks to issue money to pay their debts or loan to the people. Such a policy makes it necessary to have a perpetual bonded debt, on which the people will be taxed to pay the interest. Such a policy gives them the power to inflate or contract the currency at will as the law now stands. They are now contracting the currency to allow moneyed men to secure the property of the farmers at half price. I think they are now preparing to inflate and unload at 50 per cent. profit. Banks have always robbed the people in this way and always will if allowed to issue currency in violation of the Constitution, which makes it obligatory on Congress to do and fix its value. The Government should issue all money, whether of metal or paper, and make it all a full legal tender. The people should have the right to demand full legal-tender paper money, in exchange for anything that now passes as money, with the free coinage of silver on the same terms as gold. Every Government bond can be paid as fast as it matures in coin, for no one would cast away silver nor take away gold when they could exchange it for greenbacks. Let us have banks of discount and stop paying interest on the banks' promises to pay.

Give us a new financial American policy of this character and no more panics can occur and no more hard times will ever curse our country.

That the demonetization of silver greatly depreciates the value of property as well as the wages of labor I think is now a conceded fact.

I find the following statement in one of the leading trade journals of the country:

> Ever since silver was demonetized in 1873 values have been falling. This fall of values will lead to bankruptcy and ruin, and the only remedy seems to be to restore free coinage, or, in other words, to right the great wrong. Let us look for a moment at the prices for wheat, corn, mess pork, and raw cotton in 1873 and in 1890.
>
> The average price of wheat in 1873 per bushel was $1.20; to-day it is 88 cents. Corn averaged in 1873 63 cents per bushel; to-day it is 32 cents. Mess pork in 1873 averaged $16 per barrel; to-day it is $11.55. Raw cotton in 1873 averaged 17 cents per pound; to-day it is 11 cents. Although the corn, wheat, and oats crops were much larger in 1889 than in 1888, yet prices keep falling so that the corn crop of 1889, although 125,000,000 bushels greater than that of 1888, brought $80,000,000 less money. The wheat crop of 1889 was greater by 75,000,000 bushels than that of 1888, yet it brought forty-three millions less money. The oats crop, although 50,000,000 bushels greater in 1889 than in 1888, yet it brought $23,500,000 less money.
>
> Is it any wonder the farms of the West are plastered over with mortgages and that the value of farm land has fallen all over the United States? And yet this is only one of the great miseries that the demonetization of silver has caused. Is it not strange that any American can be found to help England rob us in this way? And yet Wall street is full of them, and they live and fatten all over the land. They are traitors to American prosperity and they are all gold bugs.

The following table, compiled by the Bureau of Statistics, will more fully show the facts.

Annual average export prices of commodities of domestic production for each year from 1873 to 1889, inclusive.

Year ending June 30—	Corn per bushel.	Wheat per bushel.	Wheat flour per barrel.	Cotton (upland) per pound.	Leather per pound.	Illuminating oils, refined, per gallon.	Bacon and hams per pound.	Lard. per pound.
	Dollars.	*Dollars.*	*Dollars.*	*Cents.*	*Cents.*	*Cents.*	*Cents.*	*Cents.*
1873	.618	1.312	7.565	18.8	25.3	23.5	8 8	9.2
1874	.719	1.428	7.144	15.4	25.2	17.3	9.6	9.4
1875	.848	1.124	5.968	15.0	26.0	14.1	11.4	13.8
1876	.672	1.242	6.216	12.9	26.2	14.0	12.1	13.3
1877	.587	1.169	6.488	11.8	23.9	21.1	10.8	10.9
1878	.562	1.338	6.358	11.1	21.8	14.4	8.7	8.8
1879	.471	1.068	5.252	9.9	20.4	10.8	6.9	7.0
1880	.543	1.345	5.878	11.5	23.3	8.6	6.7	7.4
1881	.552	1.114	5.668	11.4	22.6	10.3	8.2	9.3
1882	.668	1.185	6.149	11.4	20.9	9.1	9.9	11.6
1883	.684	1.127	5.955	10.8	21.1	8.8	11.2	11.9
1884	.611	1.066	5.588	10.5	20.6	9.2	10.2	9.5
1885	.540	.862	4.897	10.6	19.8	8.7	9.2	7.9
1886	.498	.870	4.699	9.9	19.9	8.7	7.5	6.9
1887	.479	.890	4.510	9.5	18.7	7.8	7.9	7.1
1888	.550	.853	4.579	9.8	17.3	8.9	8.6	7.7
1889	.474	.807	4.832	9.9	16.6	7.8	8.6	8.6

The decline relates as well to real estate as personal property, and I think it is admitted on both sides of this Chamber that the decline was about one-third in value between these periods. Therefore the conclusion is inevitable that the farmer who is in debt in order to pay the same is now compelled to give three bushels of wheat, corn, or oats, three cows, horses, or sheep, or three acres of his land to pay the debt that two bushels of wheat, corn, or oats, two cows, horses, or sheep, or two acres of land would before the fall in prices. In other words, he is robbed of one-third of his property or labor, whichever you may please to call it, by such infamous legislation. Does the farmer see it? We will hear from him next November.

The Republican party seems to discriminate more against the farmers of the country than any other class.

The farmer not only receives low prices for his products, but he has gradually fallen behind more and more, until his farm and homestead is covered with mortgages and he is so in debt that, if the present state of things continues and there is no aid given him in the way of an increase of the currency of the country and putting it within his easy reach, a very large proportion of our farmers are doomed to bankruptcy and ruin.

The unequal taxation to which he has been subjected by our tariff laws, by which he has been compelled to sell his products in the free-trade markets of the world in competition with all similar products of the world, has compelled him to buy his supplies in the highest market in the world, restricted by tariff to prevent competition. The Republican party not only prevents the farmer from sending his products abroad, but stations a sentinel with a club at every port of the country to keep anything from coming in to exchange with him, but at the instigation of Wall street demonetized one-half of the currency which gives credit and value to his product.

What have the farmers of the country done to the Republican party to merit this treatment at its hands? From the American farm have come the best brain, the intensest energy, and the highest courage. The American farmer has been and is the guardian of law and the pride and hope of our free institutions. Eighty per cent. of the soldiers of the late war came from the farm and many of our greatest generals exchanged the plow for the sword and secured liberty for others only to be enslaved themselves by the power of plutocracy. The farmers of the country are now feeling the galling yoke of this monster, and are engaged in a deadly struggle with this their greatest enemy, and if they are true to themselves victory will crown their efforts. May God speed the day.

But, Mr. Speaker, to return to the subject, what is the measure under consideration and the legislation proposed?

The bill provides that the Secretary of the Treasury shall purchase every month $4,500,000 worth of silver bullion and issue in payment thereof Treasury notes of any denomination not less than one dollar nor more than one thousand dollars. These notes are redeemable in coin, which means, of course, gold, and are made a legal tender, or the holder of the note may have them redeemed in silver bullion, at his election. It also provides for the repeal of the coinage of all silver, or what is known as the Bland act of 1878, and further provides for the free coinage of silver when silver reaches a parity with gold, which it never will do under this act. This is, in substance, the bill before us.

Mr. Speaker, the report of the majority of the committee on this measure states that "no people can prosper without a liberal supply of money and that nation prospers most which has the largest circulation of the best." We will receive this statement as axiomatic; but will the measure under consideration if passed grant this desired result? It is thought by some of the best financiers of the country that it will not. What is the proposition now before us? That if we will repeal the act of 1878 requiring the coinage of silver the product of our own mines may be used as a commodity, to be deposited in Government warehouses and warehouse receipts, to be denominated Treasury notes, receivable for Government taxes, issued upon the gold price of the bullion, these notes to be redeemed by the Government on demand in coin. Why should this be done?

In what respect will the Treasury note differ from our present greenback? And, if in none, why make the change in our paper circulation? Silver should or should not be coined. There is no middle ground for it, and its present limited coinage almost amounts to prohibition, but if this act goes into effect it is thought that there will not be a silver dollar in circulation in this country within six months after its passage. The effect of passing the bill would be to suspend silver coinage and to totally demonetize this metal and to permanently establish for us the single standard of gold, and clearly that would have the effect to drive all silver out of circulation. The standard of the redemption of the silver certificate is fixed at gold, for we will have no coin but gold, and of course the purpose is to drive silver out of the market and to advance the price of gold. The act repeals the law of 1878, which partially restored silver as a circulating medium. Why not repeal the infamous act of 1873, by which silver was demonetized, if the purpose is not to set up a single gold standard and to advance the price of that metal? Omitting the several kinds of minor coins, the coinage in the mints of the United States from the organization of the Mint to June 30, 1889, was as follows:

Gold	$1,500,666,207.00
Silver	567,291,231.45

The annual output of gold in the United States is about $33,500,000, while that of silver is from $45,000,000 to $48,000,000. By act of Congress of 1792 the proportional value of gold and silver was fixed at 15 to 1, while by act of 1837 it was changed to 16 to 1. This was done, I presume, for the reason that the amount of silver in the world is about sixteen times that of gold, and in this proportion the two metals have been used interchangeably in obtaining the proportionate value of other products. Whether 25.8 grains of gold or 371¼ grains of silver were taken as the unit holding the unmeasured quantity of value did not matter. Each holding exactly the same quantity of value, either would serve as a unit for comparison, and they were interchangeable in that ratio the world over. Being interchangeable one for another at 16 to 1, the coinage or use of each being limited only by the demand for either, the unknown or unmeasurable amount of value held by all the silver in the world was exactly equal to the unknown or unmeasurable amount of value held by all the gold in the world, and no possible increase in the quantity either of the gold or of the silver, while freely interchangeable at agreed ratios, each being divided into the same number of units, would or could disturb this relation; each would continue to hold one-half the joint actual value of both. This union of the two metals, this blending of them into one standard for practical use, is improperly called a "double standard," for in reality it is a single standard of two metals, exactly as combination of the two in one, and both together in this ratio forming the standard of money, and the value of both metals was nearly equal in 1873, silver being but about 3 per cent. in advance of gold when silver was demonetized, and the price of silver went down from 28 to 33 per cent. lower than gold, which, of course, was the intention of that legislation.

This measure is the same old struggle of the vampires of wealth against the toiling masses, which began at the formation of our national-banking system and ripened into the demonetization of silver in 1873. The reason for the demonetization of silver was that it would increase the value of gold and bonds and other evidence of indebtedness, and increase the value of fixed incomes, and it would enrich the creditor class and those who owned money. This would, of course, in a corresponding degree increase the burdens of labor, as in the end labor must pay all.

I see it stated that the royal commission of Great Britain in 1886 investigated the changes in the relative values of the precious metals, and estimated that the reduction of the price of property generally by demonetizing silver was 33 per cent., and other authorities estimate the reduction from 30 to 35 per cent., and this would show a loss to the people of over $11,000,000,000 in the property of this country in 1873, as the wealth of the country at that time was over $33,000,000,000.

The wages of labor went down in very nearly the same ratio and thousands of laboring people were thrown out of employment and many of them were driven to the verge of starvation. But what did the gold-bugs of the country care? It increased their gold 30 per cent. in value as well as their bonds and stocks. It robbed the people out of untold millions, and, like a thief in the night, came and transferred, by mere operation of law, an enormous amount of values from one class of our people to another without consideration, in order to make the rich richer and the poor poorer and to make money dear and labor cheap. It has caused the sacrifice of thousands of homes and has entailed a vast amount of suffering and poverty on the people; and in the name of justice and right this system should be stopped here and now, and it can be done by restoring our coin money to what it was prior to 1873.

Congress can not and should not do any less justice than this. The people of the Northwest are organizing themselves into powerful bodies and discussing this question in all their lodges, public meetings, and at

their fire-sides. Capital, with the aid of Congress and the advice of Wall street, has wronged the people sufficiently already to warrant a revolution. Never before, perhaps, has such a condition of things existed in this country. The people are arraying themselves against the national banks and the right of the money power to further control the entire interests of the country. Capital has become arrogant from its continued triumphs in the past twenty years, and is year by year still encroaching upon labor and attempting to starve it into submission, and with equally resolute determination and energy the farmers and the laborers of the country are bent on overthrowing a system under which the rich are growing richer and the poor growing poorer, a system by which the wealth of the country is concentrated in a few hands and the masses of the people are penniless.

The issue is fairly joined. Capital is organized and combined with the holders of public securities in Europe and this country, and with a solid organization of national banks the fight is now being pressed to a finish. The holders of corn, wheat, beef, and cotton are contending against the holders of bonds and gold, as they should do; the producers of wealth, against the holders of wealth; the men who must pay the national debt, if it is ever paid, against the holders of such debts; the laborer and the farmer, against the bond-owner and coupon-clippers. Unjust legislation has imposed intolerable burdens on the bread-winners of the country, invidious discriminations have been made against them, and unjust tariffs have consumed their products. I think now that the people are thoroughly aroused, active, and vigilant, and their eyes are directed towards the national Capital and are anxiously watching to see whether or not the measure under consideration will be enacted into a law which will have the effect to further forge the chains that enslave them. There can be no question that it will practically stop the coinage of silver and convert silver into a commodity, and that is evidently the intention of the Secretary of the Treasury. When the Secretary was before the Committee of this House on Coinage, Weights, and Measures, urging the passage of this bill, he made the following statement to the committee, as I see by the report:

I was very much impressed the other day, Mr. Chairman and gentlemen, as I went through the mint in Philadelphia, with the wonderful transformation which suddenly took place. There are, perhaps, a dozen or more processes from the time the silver bullion is first taken up for manipulation in the mint until it is a finished dollar. I had never been in the mint before, and I followed it through all its various processes until it reached the form of a planchet—that is, a milled piece of metal of exactly the size and shape of a dollar, ready for stamping. I found it finally in a little basket, from which a lady sat feeding it through a hopper into a stamp. During all these processes this piece of silver was bullion, worth about 72 cents—the metal, I mean, was worth 72 cents. That piece of metal was put into a little hopper, and the stamp struck it, and in an instant that piece of silver, worth 72 cents, became worth 100 cents, according to general belief.

This statement proves the absolute truth of all that I have said in regard to the value of money. Now, would gold in the form of a "planchet" be any more money than silver? In all cases it requires the stamp of the Government to make it money, and notwithstanding the fact that the Secretary claims that he is friendly to silver the whole scheme shows that the purpose is to favor gold, and not silver. In fact the Secretary of the Treasury states in his report that national honor requires us to preserve the single gold standard. Silver bullion is a commodity, simply that and nothing more; it is a product of the earth, like corn and wheat; and now, if the owners of silver bullion have a right to bring it to the Treasury of the United States and get in lieu thereof at gold value certificates, notes, or money not to exceed $4,500,000 per month, why not permit the owners of any other commodity or merchandise to deposit the same in the Treasury of the United States and get certificates or money in lieu thereof?

The Farmers' Alliances of the South are insisting on a plan in regard to a subtreasury whereby they could deposit their cotton and other farm products in a warehouse and receive a warehouse receipt or certificate, which should pass current as money. If the principle of the bill under consideration is correct then the terms of the bill should be greatly enlarged so as to allow the deposit of any valuable commodity as well as silver bullion to be deposited with the Treasurer and money be issued thereon at something less than the market value of the goods. If it is security the Government wants for its money why not accept the proposition of the farmers in the West and let the Government loan money on the farms at one-third or one-half the actual cash value of such farms? Land is a great deal more stable in value than bullion. The Government ought to treat all its citizens alike. The Government has freely given money to national banks in the last twenty years and why not now make a change? The gold bugs, coupon-clippers, and money sharks of the country have had it their own way long enough.

The trouble is that the financial policy of the present Administration, as well as that of all its predecessors for the last fifteen or sixteen years, draws its inspiration from Wall street, and we will never have a sound financial policy in this country until the Treasury is put in charge of some person who will come from west of the Alleghanies.

Wall street and the Treasury think that the silver dollar is a proper legal tender in payment of labor rendered the Government and for payment of the Army and Navy and pensions, but that nothing but gold is good enough to pay the bondholders, and in reaching this conclusion the fact is forgotten that their bonds cost the holders but 50 cents on the dollar.

A few years ago the Secretary of the Treasury told the country that we could not stand more than $50,000,000 of silver, and the people have been warned that silver coinage would drive the gold out of the country. But silver has been coined up to $343,638,001 on the 1st of November last, and still gold and gold coin have increased from $213,199,977 in 1878 to $680,063,505. There is no good reason why the bill under consideration should become a law. The people do not favor it, but demand the restoration of the silver dollar exactly as it stood before 1873. They desire that silver shall be fully and freely coined and have no fears that it will become too plenty, and besides that it is as good to pay debts now as it was during eighty years of American history.

The Republican party demonetized silver, although that party denies it now with more emphasis than Peter used in denying Christ. If the Republican party did not knowingly pass the act demonetizing silver in 1873, why did they not as soon as they discovered the mistake correct the error? Why has not the Republican party restored silver to its former condition during the last seventeen years and why do they not do it now? The reason is apparent, for that party has for the last twenty years been legislating in the interest of wealth. The people are and should be sovereigns of this country. They confront the money power now, and if that power acts with wisdom it will stop and retrace its steps. It is confronted with a power greater than money, a free people thoroughly aroused to their interests, and they have joined hands in their own defense and will establish justice.

The condition of the country is teaching them a fearful lesson. The costs of producing farm products are greater than their value when produced, and proceeding in this ratio the next step is bankruptcy and then the poor-house. The country at this moment is in the gigantic grasp of the money power, and the money of the country, which is its very life-blood, is under the control of a few designing men who are making themselves millionaires, and the masses of the people are but simply mortgaged vassals to this gigantic power, and an imminent question now is, shall our institutions of government be preserved or shall they perish under the blighting influence of plutocracy?

In a republican form of government there ought to be no very rich and no very poor people. But the very opposite of this is the case to-day. The country is menaced by the presence on the one hand of men holding hundreds of millions of dollars, and on the other by a homeless, penniless horde of three millions of tramps begging for bread, and the millionaires or Dives are not even willing to give them the crumbs that fall from their tables. What a consolation are the words of Lord Byron when he says:

Time at last sets all things even.

For in the sacred record we read that when the tramp Lazarus died he was by angels borne into Abraham's bosom and the millionaire or Dives died and in hell he lifted up his eyes and asked for a drop of water that he might cool his tongue. Robert Ingersoll denies the existence of a hell, yet it seems to be a prepared place for a prepared people who will never receive justice until they arrive at that station. Robbery is none the less real because it is done under the forms of law, and the conspiracy, for such it was, to rob the masses by demonetizing silver in 1873, by which the destruction of one-half of the money metal of the world for the benefit of the rich was effected, was a gross outrage which should have subjected the offenders to penal punishment.

It was a fraud and a swindle practiced upon the people without their knowledge or consent, and when the silver dollar was destroyed the paramount question then was how much of the people's toil and sweat and suffering could be crowded into the gold dollar and how that dollar could be most effectively placed beyond their reach. The measure under consideration will in no sense tend to restore the circulation of silver. The notes to be issued under the act are not Government money, and it does not at all appear that they are intended for general circulation. The Secretary may issue them of any denomination above $1 up to $1,000. This discretion of itself would allow him to keep them out of general circulation. The national banks are to be allowed to use them as a reserve, and they are to be made receivable for dues to the Government.

The entire object of the bill seems to be to crowd the silver dollar out of circulation and to make silver a speculative commodity, with the Secretary of the Treasury controlling the price.

This is not what the people want. They want real money, gold and silver and paper money, all three to be as one, with equal purchasing power, and the one convertible into the other at the will of the holder, which could always be done, for the reason that one would be as good as the other.

With $500,000,000 of metal coin in circulation and nearly an equal amount in coin and bullion in the Treasury, a safe basis is afforded for at least three times that amount of paper money in some form, thus increasing the circulation of the country. In 1865 we had money in circulation to the amount of $33.94 per capita, as stated by Mr. Atkinson; others claimed it was $52, while in 1878 the Secretary of the Treasury says that it was but $16.50.

What the farmers of the West want is not to borrow money and mortgage their farms, but they want money to pay off the mortgage on their farms. The Alliances of the South do not want to put their products in Government warehouses, but they want a market in which to sell

their products. The laborers of the country wish to sell their labor and accumulate some capital for themselves. And this can all be done if Congress will utterly destroy the power of mammon and plutocracy which now bears sway in this Capital and then establish for the people a financial policy as unchangeable as the laws of the Medes and Persians, with gold and silver as a basis and paper money interchangeable therefor at the pleasure of the holder. The question of paramount importance is to have good money, and next a sufficient amount of it to do the business of the country. Plenty of money will increase the price of lands and the products of the farm as well as the price of labor.

In 1873 the farmer whose estate was worth $4,000 was robbed of one-third of it and left but $2,666, and this was not done by a thief in the night, but by the American Congress in the full light of day by demonetizing silver. Facts and figures can be produced to prove that American silver-demonetiznation laws have cost the wheat-growers and cotton-producers of this country nearly $5,000,000,000 since 1873.

No people in the world have ever been wronged as the American people have been in the last twenty years by the money power of the country, the foundation of which was first laid in inducing the Government to issue a paper money that was not a legal tender for all taxes and debts, public and private, and for customs duty. For this reason the Government was compelled to pay out of the people's money in interest and discount more than $2,000,000,000, which was just that amount of money thrown away. Then in 1869 Congress changed the contract of the bondholder so that the debt which was payable in currency was made payable in coin, and the refunding acts passed by Congress all together increased the debts of the people more than $2,000,000,000 more, and then the creation of the national-banking system robbed the people out of nearly $18,000,000 annually since 1867.

If all the money that has been wrongfully paid out by the Government in the last twenty years to the money power could be collected it would make enough to refund all pensions paid to the soldiers since the war, pay all the mortgages on the farms as well as the present national debt, and there would be enough left to do all the business of the country.

Mr. Speaker, time will not permit me to go further into detail in these transactions, but suffice it to say that the bill under consideration is a step in the same direction. It is in the interest of wealth and will afford no substantial relief to the people.

We must abandon this system and return to the principles of the founders of our Government. Gold and silver should be equally valuable as money. They were so used for over three thousand years and down to 1873. They served together as the money of ancient and modern civilization. They were good enough for Abraham in his day, and Christ himself used coin, not silver-certificates, to pay taxes when He was on earth. Gold and silver adorned the temple of Solomon, and for centuries they have sustained commerce and navigation. They are blended together in the Constitution of our common country and recognized there as money, and they should not be divided now.

The two metals are wedded together, so to speak, by the common consent of mankind and are the handmaids of civilization, and if we restore silver to its proper place as money and place it side by side with gold, where it belongs, it will at once increase the value of property, both real and personal, and afford employment to every idle man. It will increase the wages of labor and the prices of the product of labor, and it will increase the debt-paying and tax-paying power of the people, and I think will restore general prosperity to our whole country.

Can any intelligent person be surprised at the depressed condition of agriculture and the labor of the country to-day when he reads the history of the financial policy of the Republican party for the last twenty-five years? I will mention but the transactions of a few years.

In 1868 the Government destroyed $473,000,000 of currency, and there were 2,608 failures in business, with a loss to creditors of $36,-774,000.

In 1869 something over $500,000,000 was destroyed by the Government; there were 2,799 failures, with a loss to the creditors of $75,-054,900.

In 1870 there was $67,000,000 of the currency destroyed, and there were 3,551 failures reported, with a loss to creditors of $88,242,000.

In 1871 there was $35,000,000 retired and destroyed, with 2,915 failures and loss to creditors of $85,250,000.

In 1872 there was $12,000,000 of currency destroyed and retired, 4,069 failures in business, and loss to creditors of $121,058,000.

In 1873 there was retired and destroyed $1,609,000, with 5,183 failures and a loss to creditors reported of $228,499,000.

In 1874 there was retired and destroyed $171,579,045 currency, with 5,832 failures and loss reported to creditors of $155,239,000.

In 1875 there was destroyed and retired $40,817,418, with failures 7,740, and loss to creditors of $201,060,000.

Thus the contraction of the currency was carried on by the Republican Administration until the amount of money in circulation, which was $33.94 per capita in 1865, was reduced to $16.50 in 1878.

No other country in the world but this could stand such contraction in the volume of its money. It will be remembered that during all these years the wages of labor were constantly being reduced, and a million or more laborers thrown out of work, and hunger stared men in the face, and tramping became a sort of profession.

There always has been and ever will be a conflict between the thousands who labor and the hundreds who enjoy the fruits of such labor, but it is the duty of the Government to see that the faces of those who labor are not held too closely to the grindstone. This Government paid in the years 1862 to 1865, inclusive, $1,326,000,000 in interest and discount alone, and many more millions since for the same purpose. What would be thought of a man who would give his note bearing interest, or discount his note, to pay his debts if he had the power to make money? He would be regarded as insane and a fit subject for an insane asylum. Yet, this is what the Goverment did and is now doing, while it has full power to create money and compel its acceptance, and should not pay one cent of interest or discount.

Mr. Speaker, this afternoon the gentleman from Arkansas [Mr. McRAE] made the following statement on the floor of this House, which has not yet been successfully challenged:

> For a long time the people have been under the false impression that the act of 1873 demonetizing silver was surreptitiously and secretly passed. I so stated in 1886. I made that statement because the President who approved the bill and many prominent men who were in Congress at that time disclaimed all knowledge of the demonetization feature. This has been accepted as the truth until recently.
>
> But yesterday it was clearly shown by Senator SHERMAN in his speech that such is not the fact; that it was a premeditated, well organized scheme on the part of the Republican Administration and the leaders of the party in the House and Senate at that time to strike down the silver money; that it was the policy of the Republican party to do exactly what was done. He wants it understood that he knew all about it. He wants the party to take credit for the act. The bill was drawn to conceal it from the few Democrats then in Congress. They struck down silver when it was at a premium and because it was at a premium; and now they have the audacity to declare that there was no mistake about it; that they intended to do it; that they were responsible for the legislation.

The gentleman mentioned further that a Mr. Seyd, of London, was here at that time in the interest of the measure. In the Bankers' Magazine of August, 1873, the following notice will be found:

> In 1872, silver being demonetized in France, England, and Holland, a capital of $500,000 was raised, and Ernest Seyd, of London, was sent to this country with this fund, as agent of foreign bondholders and capitalists, to effect the same object—
>
> Demonetization of silver—
>
> which was accomplished.

The CONGRESSIONAL RECORD of April 9, 1872, also shows that he was here. So the people have two factors, money and the Republican party, to blame for the demonetization of silver. Judas betrayed his master for thirty pieces of silver, but those who betrayed the interest of the people in this case evidently received much more. The reason why England was interested in demonetizing silver in America was that some $100,000,000 of our 4 per cent. bonds were held there, and this act would increase their holdings of the bonds $30,000,000, a very good exchange for $500,000. I state facts; let every man draw his own conclusion.

Mr. Speaker, I wish now to point out some special objections to this bill. Under the law as it now is the Secretary of the Treasury is authorized to purchase not less than $2,000,000 and not more than $4,-000,000 of silver bullion every month and coin it into silver dollars.

Silver bullion is worth now on the market 72 cents on the dollar, and if he would coin the full amount authorized by existing law it would make $61,440,000, or just double what he is coining now. In this way the people would gain the seigniorage, or gain 28 cents on every dollar. In other words, the people gain 28 cents on every silver dollar that is coined under existing law, and if the Secretary would coin all the law authorizes him to coin it would consume about all the silver produced by the mines in this country. Under the proposed bill he is authorized to purchase $4,500,000 of silver bullion in each month at the market price and give in exchange silver certificates or warehouse receipts for the same.

If he should purchase up to the full letter of the law it would amount to only $54,000,000 annually, or $6,000,000 less than the present law, and it is admitted on every hand that there should be an expansion of the currency. The people would also lose the seigniorage, which would be a clear loss to them of about $20,000,000 annually.

Then, again, there is no question about the constitutionality of the existing law; the Government has the right to purchase bullion for the purpose of coinage. The Constitution authorizes the Government to coin money and regulate its value, but what right has the Government to purchase bullion and store it away in a warehouse? In the case of Juillard vs. Greenman, 110 United States Reports, 421, the Supreme Court held that Congress had the right to issue money to pay the debts of the Government, and of course that only meant its legal debt. But it is a question what right the Government has to go on the market of the world and purchase a commodity—because silver bullion is a commodity—and issue money in payment for it. If it has the right to do this, then it follows by parity of reasoning that it can purchase wheat, oats, corn, and cotton, as they are a product of the earth, and place them in warehouses and issue money in exchange for them. And also it has the right to lend money to farmers and take mortgages on their farms or other security therefor. The one seems as reasonable as the other.

There is another reason why this bill should not become a law. It will be remembered that there are about $1,400,000,000 bonds of the Government now outstanding, and some of them will fall due next year and all the balance in a few years later. Now, these bonds are

all payable in coin, not in paper money or silver certificates. This bill stops the coinage of all silver, so that these bonds must be paid in gold.

There is not half enough gold in this country to pay these bonds. What, then, will be done? I presume something like what was done in 1875 when specie payment was resumed. At that time fifty million of twenty-year 5 per cent. bonds were sold for the necessary silver and the silver was coined and made redeemable in greenbacks. Thus it will be seen, starting in with paper money, the people are taxed $100,000,000, $50,000,000 principal and $50,000,000 interest, to change the form of paper money into silver; then the holder of the silver is permitted to change it into greenback money even up. Did you ever see such jugglery?

Yet this was a clear, clean-cut steal of $50,000,000, and the Republican party is directly chargeable with the crime. Is it proposed to do the same thing again only on a grander scale? Must this robbery go on forever? When this bill becomes a law it will stop the coinage of all silver and that will leave the single standard of gold, and as the outstanding bonds are payable in coin only of course this will advance the value of the bonds, it is safe to say, more than $100,000,000. Another plum for the gold bugs and thieves who have been plundering the people for the last twenty-five years.

But, Mr. Speaker, there is still another objection to this bill. By section 2 of the bill it is provided that "upon demand of the holder of any of the Treasury notes" the same may be redeemed in silver bullion at the Treasury. What might be the effect of this provision? Suppose Wall street does not wish an expansion of the currency, as it is safe to presume it does not. What then may be done? Simply at the first of each month they will sell to the Secretary of the Treasury $4,500,000 of silver bullion and receive therefor $4,500,000 in Treasury notes, and then at the end of the month they will surrender the notes for the bullion, and the next day sell the bullion and receive $4,500,000 in Treasury notes, and keep this up from month to month, and this would absolutely prevent any increase in the circulation of the currency.

Gentlemen on both sides of the House admit that this might be done, but our Republican friends on the other side of the Hall say that the Secretary would not do this; that in his discretion he would honestly administer the law. But what assurance is that to the country? In his discretion he could now under the law purchase $4,000,000 of silver bullion per month and coin it into silver dollars, but he abuses that discretion in favor of Wall street and against the people. We can only judge the future by the past, and judging the future by the past the people can not expect an honest administration of the law from a Treasury that is dominated by Wall street.

The fact is the financial policy of this country should not be trusted to the discretion of any man. It is a fundamental principle of jurisprudence that that law is best which leaves the least discretion to the judge, and the interest of 65,000,000 people is too great to be trusted to the discretion of any one man. Let the law state what is meant and then compel its faithful execution. This is the only hope of the country. Gentlemen on the other side of the Chamber assure us that this measure will increase the circulation, but we have no assurance of that.

There is no doubt that Wall street would prefer the measure under consideration to one for the free coinage of silver. Nearly all the moneylenders of the country would. This bill, to a great extent, is a struggle between those who borrow money and those who lend it; between the bondholder and the plow-holder; between the debtor class and the creditor class. On the one side is arrayed Wall street, with all the national banks, gold, stocks, bonds, and mortgages, and on the other side the suffering, toiling masses, who do all the labor of the country and who have laid the foundation and erected the grand structure of empire in the mighty West, and many of whom are now about to lose their homes by foreclosure of mortgages.

These are the forces that favor and oppose this bill. The man who votes for this measure votes to strike down the silver dollar, votes to strike down the dollar of our fathers and the dollar of our Constitution, the dollar which bears the impress of the American eagle and the expression of our christian faith, "In God we trust." The man who votes to do this votes against the interest of every laborer and farmer in this broad land, and he will make that discovery. If there is a farmer in the land who would support a man for Congress who was in favor of demonetizing silver and contracting the currency, then such a farmer is entitled to no sympathy when the sheriff sells his possessions to satisfy the insatiate greed of the usurer.

This measure is in line with all the legislation of the vampires of wealth in this country for the last twenty-five years. Plutocracy is now the greatest menace to popular government in this land. The people of this country are now in the very grasp of a soulless money power, who worships gold, and gold only, as the children of Israel worshiped the golden calf. Gold usurps the sovereignty of the nation and through the party in power dictates its policy.

In Barrett's Life of Lincoln one of his messages is given, in which this language is used:

Monarchy itself is sometimes hinted at as a possible refuge from the power of the people. In my present position I could scarcely be justified were I to omit raising a warning voice against the approach of returning despotism. There is one point to which I ask brief attention. It is the effort to place capital on an equal footing with if not above labor in the structure of government.

Again, about the close of the war the following was published at the time as a part of a letter written by Mr. Lincoln to a friend. He said in the letter:

As a result of the war, corporations have been enthroned and an era of corruption in high places will follow, and the money power of the country will endeavor to prolong its reign by working upon the prejudices of the people till all wealth is aggregated in a few hands and the Republic is destroyed. I feel at this moment more anxiety for the safety of my country than ever before, even in the midst of the war. God grant that my suspicions may prove groundless.

The suspicions were not groundless, but were prophetic of the present.

But, Mr. Speaker, I must bring my remarks to a close. The condition that confronts us is industrial depression in agriculture and in all the fields of labor. Three billion dollars farm mortgages, $1,400,000,000 national indebtedness, with more than $5,000,000,000 State, municipal, and individual indebtedness, and only $1,400,000,000 in circulation in the whole country to pay it all. The cause of this condition of things is not overproduction, as some claim, but rather vicious legislation. What, then, is the remedy and how are the mortgages on the farms to be paid? Clearly in but one way, and that is to reverse the policy which has produced this condition of things. We must return to the principles of the fathers. Thomas Jefferson said:

Bank paper must be suppressed and the issue of the circulating medium restored to the nation, to whom it belongs. Banking establishments are more dangerous than standing armies.

The free coinage of silver should be established now and here. This would increase values 30 per cent. as well as the wages of labor and enable the farmer to pay that per cent. of the mortgage on his farm. If this is not done then the full amount of silver authorized by existing law ought to be coined into silver dollars, and this would expand the currency over $30,000,000 annually. In addition to this the present national-bank currency should be gradually retired and the notes of the Government as full legal tender, bottomed on the entire wealth of the country, having a sufficient coin basis, issued in lieu thereof, and the circulating medium should be gradually increased until we should have at least from $33 to $35 per capita, nearly one-half of which would be in coin, which would be ample to enable the Government to sustain commercial relations with the nations of the world. This increase in the circulation would add at least 20 per cent. more to the power of the farmer to pay the mortgage on his home and drive the sheriff from his door.

In addition to this, Mr. Speaker, there should be a reduction in the tariff. The tariff tax under existing law averages 47 per cent., and by the McKinley bill, if it becomes a law, it will be 51 per cent. There should be a reduction of at least 26 per cent., which would leave an average tariff tax of 25 per cent., and this would raise an ample revenue to pay all the expenses of the Government economically administered and leave 26 per cent. in the pockets of the people. Add these several percentages or sums together, which would be a gain to the people, and there would be no trouble in paying the mortgages on the farm and furnishing a market for labor and all farm products.

I present these views, Mr. Speaker, as authorized by the people who commissioned me as their representative on this floor, and I think they will be approved by thousands of my countrymen on labor's side who wear the galling chains of slavery burdened with debt, and who toil incessantly to pay rent, interest, and profit on watered stock, and who are taxed in some form or other at every step they take to create a fund upon which monopoly can feed and fatten.

One man or class of men should not be enriched by legislation while others are pauperized, but the law should give every man an equal chance in the race of life. I fear, Mr. Speaker, that this measure, in its present form, will give no substantial and permanent relief to our people, who need it so much. But the remedy is in their hands; for they, and they only, can make and unmake Presidents, Senators, and Representatives. To their impartial judgment I submit this important question.

Silver-Bullion Certificates.

SPEECH

OF

HON. FRED. T. DUBOIS,

OF IDAHO,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 6, 1890.

The House having under consideration the bill (H. R. 5391) authorizing the issue of Treasury notes on deposits of silver bullion—

Mr. DUBOIS said:

Mr. SPEAKER: The silver question, as we understand it in the West, is a very serious one. With us the question of its full restoration is not one of policy or expediency, but one of justice and absolute necessity. We look upon the conspiracy which culminated in the demoneti-

zation of silver as the most gigantic robbery of modern times. We think the injury that it has already inflicted upon the nation more terrible, so far as mere property is concerned, than would have been an exhaustive war with some first-class foreign power.

I do not stand here to-day to speak in the interest of silver mines; they can bear the loss that the unrighteous robbery inflicts upon them; but the people at large, and more especially the producers of the East, can not much longer stand up under the shrinkage which has already driven all profits from the farm and shop. A board of State officers reported last spring that the mortgages on the farms of the State of Illinois, one of the very richest and most convenient to market of any of the States, had increased since 1880 more than $100,000,000. Why should this be so in a country increasing in population as our country is increasing?

Why, since 1880, the amount of money paid out for the construction and equipment of railroads in the United States has been equal to the revenues of an empire. This has been distributed among the people, and yet in that time the increase in the mortgages on the farming lands of the country between the Atlantic and the eastern base of the Rocky Mountains has been more than the cost of the mightiest wars recorded in history. In the mean time, too, population has increased 27 per cent.; or, in other words, there are fifteen millions more people eating the food that grows on the farm than there were in 1880.

The farmers made a profit by their labor all through the great war; they continued to prosper for eight years after the war closed. But then a blight came upon them. What was it? What caused it? The chief function of silver, that of money, the perfect measure of values, was taken from it. So soon as that dishonor was cast upon it, as compared with gold it began to fall in value. Since then it has seemed to fall in value 2 per cent. per annum. But silver is a royal metal, and as it has gone down it has carried every other product of industry with it in precisely the same ratio. In 1872 silver was rated above par as compared with gold. An ounce of it at that time bought just a bushel of wheat in New York City. Compared with gold it has fallen since then 33 per cent., but the ounce of silver, not in the stamped dollar, but in the bullion, will still purchase the bushel of wheat. The same is true of every other product of farm or plantation measured in any of the world's great markets.

A man the other day was upbraiding the silver men in my presence as swindlers who were seeking to cheat the people by palming off upon them a short-weight dollar. At last I asked him what his business was. He answered that he was a cotton-planter. I asked him what a 400-pound bale of cotton was worth in 1872. He told me. I asked him what it was worth now. He told me. "Why," said I, "that is a difference of 33 per cent. It seems your cotton is as much short-weight as a silver dollar is."

This happened in the smoking-room of a sleeping-car. A third person who was present interposed and said, "Cotton has fallen because there has been great overproduction. The demonetization of silver has nothing to do with it." I asked him his business. He said he was an Ohio farmer. I asked him how much his wheat and corn were worth this year; he told me. I asked him what they were worth, respectively, seventeen years ago; he told me. "Well, then," I said, "there must be the same overproduction in wheat and corn that there is in cotton." He admitted that it was a little strange that all those products should fall in price in the same ratio. I asked him then how long he had been farming in Ohio. He answered, "I bought my farm in 1870." I asked him how much he paid an acre at that time. He answered, "Sixty dollars an acre." I asked him what it was worth now. With a sickly laugh he answered, "I was offered $38 a few days ago." "That is," I replied, "you bought it with greenbacks which were a little under par. Add that discount to the 33 per cent. which your land has fallen, even as silver has, and deduct that percentage from $60, and it leaves $38, does it not?"

You will find that the rule will work on land, on products, on nearly everything except the fancy prices which real estate in cities is bringing. This decline has now reached a point where the farmer is not making $1 per day for his labor. He has turned off the hired men and brought the boys home from school and set them to work, and still he barely lives. If there is any mortgage on his home he can not reduce it; in many cases he can not meet the interest. I tell you this comes from the demonetization of silver, and the loss will never stop until the wrong shall be righted.

You all know that were a new gold field to be found in Alaska and in the next half dozen years there should be shipped to New York and New Orleans $600,000,000 from it, as there was from California between 1849 and 1858, there would happen again just what happened then. All the property between the coast and the Rocky Mountains would feel the thrill and would advance 15, 25, 50 per cent. in value. If this is true when the measure of values increases why should not the rule work exactly in the obverse ratio when by senseless legislation half of the real money of the world is destroyed? The West produces about 60,000,000 ounces of silver annually. On this the miners lose about $18,000,000. Now, take the value of all your wheat and cotton and corn and all that the workers of the East produce and add 30 per cent. to it and you will understand what the East is losing through this same legislation that demonetized silver. The men of the West can bear it longer than the men of the East can. I charge that by that legislation of 1873 a loss was inflicted that up to this date exceeds the cost of a mighty war, and that because of it the majority of the producers in the Eastern States are working for less than a Chinaman's wages.

Think of it. At the time this legislation was passed England was sending here and paying a premium in gold for all the silver we would spare her. But our Congress suddenly, and without fair warning, passed a law which left no legal status to silver as money and left the silver-miner no market for his product except such as London brokers would furnish. The metal, so far as legislation could make it so, was changed from being money to mere merchandise. Our nation produces half the annual supply of silver, and yet a banker in my own Territory of Idaho dare not buy a bar of silver until the wires flash to him the amount that the London brokers have concluded they will, on that day, pay for it.

Suppose we were to use it as the world prior to 1873 had used it for 3,000 years; suppose as fast as produced our Treasury and mints would receive it and issue certificates upon it and permit those certificates to circulate as money, how long before England would again be sending to us to buy it? She has to have a large amount annually to send to her India colony. Where would she get it? She has none except in coin which is coined 15½ to 1 of gold. Neither has any country of Europe. Suppose we were to absorb our own product and that of Mexico, it would be sufficient to give each voter in the United States only $6 per annum. Is there any gentleman here that would be ruined to have that amount added to his exchequer?

When the law of 1873 was passed this country had an interest-bearing debt of two thousand millions of dollars. The States and cities owed as much more. The railroads owed nearly as much more, and the private debts of individuals were probably as much more. In three years silver fell 20 per cent. The Bland law partially restored it, but it has again declined until, instead of commanding a premium over gold, it now is rated at a discount of more than 30 per cent. What does that mean? Why, simply that all who owe debts have had those debts increased 30 per cent., and their capacity to pay debts has almost been taken away. I mean, of course, the producers of the country. That was the object of the legislation. It was to make the debts of the world perpetual, and to draw, in interest to the creditor class, the money first and later the fixed property of mankind.

So we see mortgages increasing; the sheriff is selling out the best farms of the country, the millions are fast becoming paupers, and the men, the few men, who are drawing to themselves the earnings of the people rub their hands in glee and assure us with a wise look that were we to dare to remonetize silver all the gold would disappear and ruin would succeed. I fear that unless this wrong shall be righted you will see panic, ruin, and riots inside of three years sweeping from the sea to the base of the Rocky Mountains, for when things reach the pass that the producers of a country can not, with all their labor and capital, keep even, ruin is not far off.

In 1872 the farmer in Missouri could buy a dollar with which to pay a debt with 60 pounds of wheat. He has to enlarge his bushel to 80 pounds to buy a dollar now, and all the profit of his work in 1872 was between the 60 and the 80 pounds. He has no profit now. I venture to say that were this Congress to send out and call in a dozen of the so-called prosperous farmers of any State and let one after the other take the stand, and ascertaining, first, the cost of their farms, then the labor performed this year, reckoned at $1 a day, and then the value of their crops, it would be seen that not three out of twelve had cleared 2 per cent. on the capital invested. And this is in a land where there are two million fresh mouths to be fed annually. Well, what is the remedy? The first thing is to pass a law that the Treasury shall coin at least $4,500,000 monthly. The second is to so frame the law that the infamous legislation which demonetized silver in 1873 shall be wiped out and that the Treasury and mints of the United States shall be compelled to receive all silver offered and to receipt for it, which receipts shall be a legal tender for all debts.

There will be no surplus of their certificates, never fear. All the silver that we have heard so much lamentation over as cumbering the vaults of the Treasury is at this moment, either in coin or certificates, in actual circulation among the people, except less than $5,000,000. There will be no surplus, because the experiences of three thousand years demonstrate that to dig 412½ grains of silver from its rocks cost in labor a full dollar. That rule is not changed, and it is not going to be changed. On even terms silver is a steadier metal than gold, and all that can be produced of both metals is but a drop compared with the volume of business which the world handles with these metals as a basis of values.

The West is pouring in upon the East $95,000,000 annually in gold and silver. That has been a steadily swelling stream for forty years. What would your country have been without it? You might have had one railroad to St. Louis or Chicago now, and your business would have been swapping loop-holes for tobacco and burning corn for fuel as of old. I do not speak of this boastingly at all, but recite it as a fact. Well, how do you receive the favor? The silver dollar that sparkled like a diamond upon your fathers' eyes, when they occasionally obtained one,

is sneered at as a short-weight dollar, and the men who in the far West wrench these dollars from the rocks are compelled to send them to some pawnbrokers in London for a market.

You were glad enough to get them in the great war. They upheld your credit; they made resumption possible after the war.

I wish the supply could be shut off from the East for a bare two years. The East would then fully appreciate that this is a matter of far more serious import to their prosperity than it is to the prosperity of the West or even the silver-mine owners.

The bill under consideration is faulty in some particulars and will scarcely be an improvement of the present law.

I regret, on account of my constituents first, that I have not a vote on this very important legislation. I regret, on account of the country at large, that I have not a vote, in the second place, because I am firmly convinced that a vote in aid of silver is a vote in the interests of the people of this country.

If this bill could be so amended as to strike out the bullion clause, it would be satisfactory and would soon lead to free coinage. By permitting the notes issued on the bullion to be redeemed in bullion you place a dangerous power in the hands of unscrupulous men and reduce silver to a commodity. Why not treat silver fairly and make the notes redeemable in coin? Do you think the silver advocates unjustly suspicious when they claim that a syndicate of money-holders and money-lenders might present $4,500,000 of certificates at the end of the month and get for them $4,500,000 worth of bullion from the Treasury, which bullion they would deposit at the beginning of the next month and receive certificates for it, and that they would repeat this process monthly, thus keeping the purchase of bullion down to whatever amount they desired? If you do, review in your mind the past and recent history of silver in this country, and you will admit that we have at least a right to ask for such legislation as will put it out of the power of any set of men to juggle with this important subject.

The gentleman from Missouri [Mr. BLAND] has a right, as I understand from the Speaker's ruling, to offer an amendment or a substitute for the pending bill. I trust he will not offer a free-coinage substitute, for it can not pass. As many Democrats will be found voting against free coinage as Republicans voting for it, and it will be lost. We want legislation of a practical kind, which will be effective, and this we can get by striking out the bullion clause of the bill under consideration. My colleagues all around me will vote for that, and we can carry it, and it will quickly pass the Senate, and relief and prosperity will follow immediately. If the gentleman from Missouri makes a motion to recommit the bill, with instructions to the committee to report a free-coinage bill, I should, if I had a vote, cast it in favor of his motion; but in my judgment the vote would be much more effective if cast in favor of striking out the bullion clause.

Silver-Bullion Certificates.

The demonetization of silver was a national crime which will never be condoned by the American people.

REMARKS

OF

HON. GEO. W. E. DORSEY,

OF NEBRASKA.

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 6, 1890.

The House having under consideration the bill (H. R. 5391) authorizing the issue of Treasury notes on deposits of silver bullion—

Mr. DORSEY said:

Mr. SPEAKER: I feel sure that this House realizes the importance of the great question now under consideration. From the Atlantic on the east to the Pacific on the west, from the Great Lakes on the north to the Gulf, the people have sent to this Congress their petitions and resolutions, giving us the views entertained by every constituency represented upon this floor in reference to this question. These expressions show that the country is aroused and awakened and that the attention of all thinking men has been called to this subject, and the action taken by this Congress will affect, beneficially or to their detriment, sixty-five millions of people. It is our duty, then, to give to this matter the most earnest and careful consideration, and to my friends on this side of the Chamber I would say that, as the great party we represent will be held responsible for the legislation enacted here, the results attained will either strengthen that party or in case disaster follows our action or our refusal or failure to act the people will hold us to a strict accounting.

It has been said, and most truly, that the demonetization of silver in 1873 was a national crime, and the feeling that this is true exists to-day, and will continue to exist until that wrongful act has been repaired, until the white metal is given its proper place and the mints of this country are opened to the coinage of silver the same as gold. We all remember that after the demonetization of silver in 1873 came the greatest financial disaster that this country has ever experienced, and, while the panic of 1873 may not be chargeable directly to the demonetization of silver, there is no question in my mind that the action of Congress had much to do with causing the failure of so many of the large monetary institutions and the period of depression which followed.

To-day the people of the country are aroused as never before upon this question, in evidence of which witness the thousands of petitions and resolutions which have come to this Congress from all sections, all of which demand the restoration of silver to its proper place and advise the passage of a law giving to the metal free access to our mints for coinage. The western portion of the country especially feels the necessity for this action; witness the number of resolutions passed by the Legislatures of all the States west of the Mississippi River and the action of the State conventions of both political parties declaring for favorable legislation regarding silver. Must we not give heed to such demands? Every one admits that there is an insufficiency of the circulating medium. If we compare the amount of currency in circulation at different periods of our history, as per the following table, we will find that during the years that we had the largest amount of circulating medium per capita the greatest prosperity was experienced by our people:

Circulation per capita January 1—		Circulation per capita January 1—	
1854	$17.04	1879	$17.02
1856	15.68	1881	21.60
1858	13.27	1883	22.37
1860	15.33	1886	20.84
1862	22.69	1888	21.18
1864	58.72	1890	21.66
1866	52.01		

This estimate is based upon the best available data as to our population, claiming in 1889 65,000,000 of people. If we can restore to the country the prosperity that we experienced from 1866 to 1873 by an increase of the circulating medium to $50 per capita, as urged and petitioned for by all laboring classes throughout the country, would it not be wise on the part of this Congress to take prompt and speedy action?

Mr. ALLEN, of Mississippi. I want to understand the gentleman's position. He expressed himself just now as in favor of restoring the white metal to its proper place. Is he really in favor of that or does he, like most of his Republican colleagues here, say he is in favor of it, while he is going to vote the other way?

Mr. DORSEY. If my friend from Mississippi will sit down and listen, I am sure he will understand my position.

Mr. CONNELL. As one of the "Republican colleagues" of the gentleman from Nebraska, I want to be excepted from the remark of the gentleman from Mississippi.

Mr. DORSEY. Mr. Speaker, some of our friends on the other side of the Chamber have charged that by the failure on the part of the Secretary of the Treasury to coin the maximum amount of silver allowed under the Bland-Allison bill the Republican party is derelict in duty and that at our doors can be laid the charge for all the evils of which we now complain; but I would remind our friends on the other side that the present Administration is no more open to this charge than was the late Administration, to which they are accustomed to point with pride. We all know that before President Cleveland had taken the oath of office he wrote a letter to Mr. Warner, of Ohio, then a member of this House, saying in substance that if Congress passed a bill for the free coinage of silver it would bankrupt the nation, and that during the four years of the occupancy of the White House by Mr. Cleveland, had Congress (this House being controlled by the Democratic party) passed a bill for the free coinage of silver, it would have promptly met one of the vetoes for which this illustrious gentleman was noted. We also know that no man who held the office of Secretary of the Treasury during the Administration of Mr. Cleveland could be induced to coin the $4,000,000 per month of silver, the maximum amount provided for by the Bland-Allison act. On the contrary, the minimum amount required by law was all that was given us during the four years of Democratic rule.

Mr. Speaker, many eminent men have occupied the great office of Secretary of the Treasury since the act was passed demonetizing silver. I might name them now, but as some of them are still in official life it might not be courteous or parliamentary to do so. Not one of those distinguished gentlemen was ever friendly to silver and not one of them but interpreted every act passed by Congress in a spirit as unfriendly as was possible under the law. In my judgment had Mr. Windom upon taking the office of Secretary of the Treasury authorized at once the purchase and coinage of $4,000,000 per month and continued to coin this sum each month up to the present day, there would have been no need for this discussion of the silver question [applause], and such an order by him would have strengthened the Administration of President Harrison with the people of the country more than any one thing it was possible for a Cabinet officer to do.
